Organization of California's Dairy Industry

Written for Pacific Rural Press by R. H. Whitten, Los Angeles

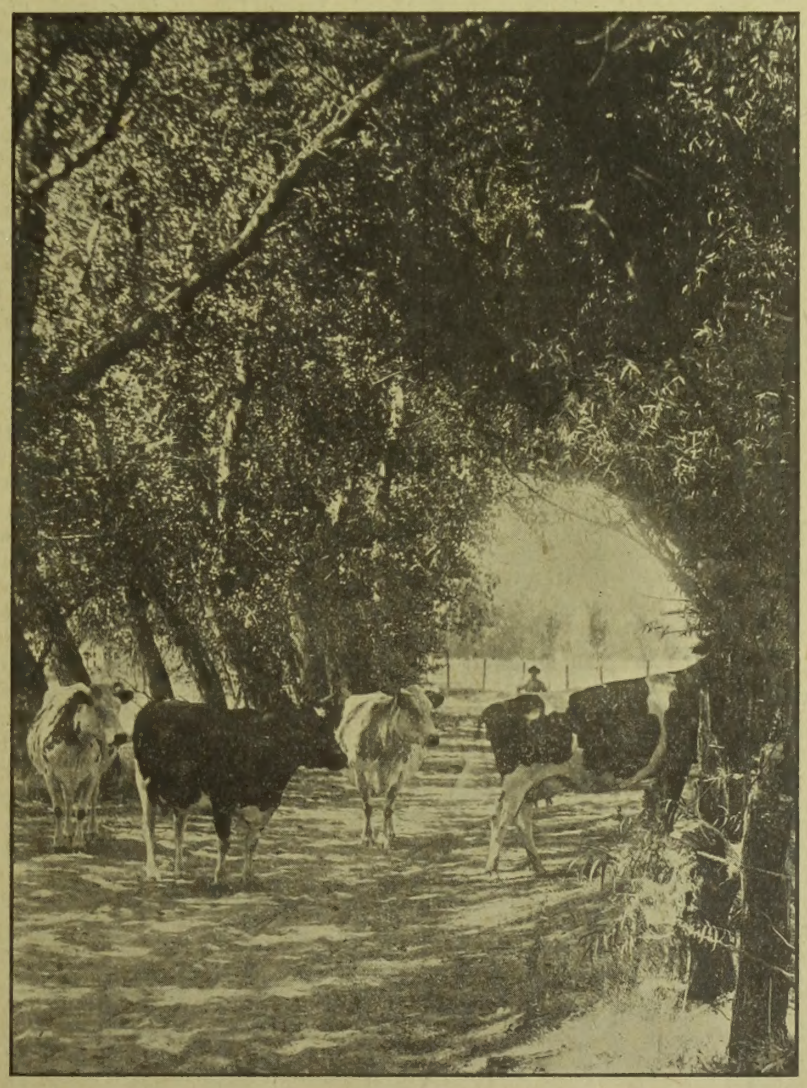
ELBERT HUBBARD once visited an insane asylum, and in walking over the grounds he came upon an attendant in charge of twenty-five patients. This attendant was a little chap, not more than half as large as some of the patients. The comparison aroused Hubbard's curiosity, so he asked the attendant: "What's to hinder a half dozen of those big fellows from mobbing you and fleeing to the woods? If they should get at you together, you wouldn't stand a ghost of a show. There is no help within a half mile, and you are not armed." The attendant smiled and replied: "You belong right with this bunch of nuts, old man. What is to hinder them from getting together and putting up a job on me? Why, the fact is, if they had enough brains to get together they wouldn't be here. That's just their trouble."

Organization a Chart and Compass.

Commenting on the incident, Hubbard said: "The badge of sanity is the ability to organize and that organization is a modern policy. The organized man is a power; he moves shoulder to shoulder with his brother. The unorganized man is merely a part of a mob, with no chart or compass to guide him. Organization is the spirit of progress, and the spirit of progress is the greatest asset a business or an individual can have." The business of the world today is done largely through organized interests. The individual can no longer expect to accomplish the results that can be obtained by united efforts. No matter what the line of business may be, where there is co-operation you will find that the greatest advancement is being made and the greatest success achieved.

Farming as Susceptible of Organization as Other Industries.

This applies to farming as well as to commercial industries. As long as we work individually and independently of each other, just so long will we be at the mercy of others in the conduct of our business. The long accepted theory that farmers cannot successfully organize and work together is disproved by the accomplishments of the many co-operative associations right in this State. However, it is a lamentable fact that many of the so-called co-operative creameries are not in any sense co-operative. They are incorporated under the joint-stock company law instead of the co-operative-organization law.



A sylvan scene suggesting poetry to the beholder and needed shade for bossy.

What a Real Co-operative Organization Means.

A joint-stock company is organized with the interests of the stockholders in view, and each stockholder gets profits according to the amount of stock he buys, instead of the amount of butterfat he produces. But a real co-operative organization is incorporated without capital stock and is not conducted for profit. All of the receipts above the operating expenses go to the members in the form of increased prices for their products.

However, there are real co-operative creameries in this State, and they have done an immense amount of good. They have been properly organized and through wise management they have enabled the dairymen to secure a higher price for their butterfat. But their aim has been mostly in reducing the cost of production, with practically no thought of developing wider and more profitable markets. True, some of the creameries maintain selling organizations in the marketing centers, but this is done on a comparatively small scale, and the old cow—the cornerstone of agriculture—has no real sales department for her products.

Dairymen Today Are Facing Serious Problems.

Land, feed, labor, cows—all are higher and contribute to the increased cost of producing milk or butterfat. Legislatures have enacted laws designated as public health measures, and in complying with them the dairymen again find production costs mounting, for it takes real money and lots of it to build new barns, buy new equipment, pasteurize milk, test cattle and do other things necessary to produce milk and butter that will meet the requirements of the law.

Probably these things are all right—for the consumers. But how about the producer? If the public must have a better quality of dairy products, produced under more costly conditions, who is going to pay the bill? The poor dairyman certainly can't, for he is only one lap ahead of the sheriff as it is. It is no more than reasonable that the consuming public, whose interests are now guarded by law in the matter of dairy products, should pay for the labor that is done in its behalf. It is no more than right that the dairyman should be paid a price for his products that will leave him a fair margin of profit.

A Prey to Changing Conditions.

But how can this be brought about with the dairy industry unorganized, and prey to whatever market conditions may be imposed upon it? The answer to the question stands out clear and well defined—more co-operation. Just as the dairymen need to bind themselves together in co-operative creameries and milk producers' associations to handle dairy products up to the time they are ready to be marketed, so these creameries and associations need to join together in one State-wide association to handle the marketing end and stabilize the industry. Stabilize the industry! That is what we need. It should be put upon the same stabilized basis on which the citrus, raisin, peach, walnut and other California industries have been placed by organized effort.

A Splendid Example of Co-operation.

Take the California Fruit Growers' Exchange as an example. It acts as a clearing house through which 6500 growers distribute and market their fruit. The exchange embraces 115 local associations, all of which, as well as the central exchange, are conducted on a non-profit, co-operative basis. We all know what has been accomplished, and most of us know that Federal investigation of these marketing methods has resulted in encouragement of co-operative marketing.

Do you say that we ought to have the same thing in the dairy industry? Why, bless you, we already have it. Not operating so extensively

A POEM ON PINK BEANS.

IT IS gratifying to note that Food Commissioner Merritt is doing all that he can to clear up hold-over staples and open the way for smoother and more reasonable trade for this year's production. He is urging upon consumers the desirability of eating up the beans which are now on hand and is assuring the public that pink beans are greater luxuries than pink ice cream and pink lemonade and are as handsome on the table as a cherry pie pinked circumferentially with the finger-tips of rosy-fingered dawn and much more fit to make a man fight for his country. And this causes us to be very happy, for we helped to educate Mr. Merritt for an imaginative poet and he is coming through with both feet (metrically speaking) on pink beans, and that will help to sell a lot of them. Besides, Mr. Merritt says he will be doing business again for the allies this fall and expects to pay as much as last year for a great many beans, and that ought to encourage growers whose fields are not yellowing from drouth or pink spider, as we fear too many unirrigated fields will be doing.

BARLEY TO REGULATE ITSELF.

IN THE matter of barley there is another promise of rational dealing in this year's crop because the Food Administration has definitely announced that the new barley crop will not be handled by the Government, nor will prices to the producers be fixed or stabilized by the Government. And this is related to the other announcement made some time since that all purchases for the allies in this State will be made by Mr. Merritt, therefore the fictitious value placed last year on barley because of indiscriminate purchasing by buyers for the allies, which sent prices sky high will not be possible this year. Of course, these two things may reduce the gambling points for barley growers who may wish to hold their crops on the chance of skyrocketing, as the law allows them to do if they desire, but it is a safeguard for barley feeders that as dealers' gambling is ruled out the price of barley will be determined by the demand for it, and the cards will all be on the table for as close a calculation as anyone can make at any time, and a feeder can buy from hand to mouth or to the limit of his storage capacity, according to his best judgment. This fact ought to help to sustain values and, taken in connection with what Mr. Merritt will need to buy to help load the outgoing new ships, which we are beating the whole United States in building, barley ought to be worth good prices and the profits will go to the growers, as they did not last year.

MORE FREEDOM FOR WHEAT.

THE LOCAL sale of what wheat we have this year will also be less troublesome than last year, for the millers will be free to grind all they can get by buying from sample direct from growers and need not observe the Grain Corporation's grades, and can pay as much as they like—providing it is not less than $2 per bushel f. o. b. shipping point. On this point the Food Administration's Grain Corporation says:

This being a minimum price, dealers and millers are permitted to exceed it, if they so desire, and as the Grain Corporation guarantees to pay only the minimum price at terminals it is expected that mills located at interior points will be able to pay more than this minimum figure in order to retain wheat grown tributary to the mills, rather than have it moved to tidewater.

In the case of wheat sales to the Grain Corporation, this institution is prepared to purchase wheat reaching terminals in San Francisco bay and Los Angeles at $2.20 per bushel based on No. 1 hard wheat, Federal grades and standards. It will not buy wheat this season which grades lower than No. 3. It will assume all terminal charges, making settlement as to grade, and will allow 9c per bushel on wheat arriving in new sacks. The rate of $2.20 per bushel for first grade is 10c higher than last year. As No. 1 hard wheat is not much in California's line and as we need the utmost activity of our local mills not only for flour but for feedstuffs, the greater freedom of operation granted to millers in this district ought to work to the advantage of our producers in several ways.

PROHIBITORY TARIFF DEPLORED!

THE HEARING on the problems of California production of semi-tropical fruits, raisins, prunes and other cured fruits and eggs, as related to importation of competing supplies from foreign production, made a contribution to the wisdom of the United States Tariff Commission which will doubtless have an influence toward legislative enlightenment of Congress in due time. Leading producers attended the meetings in Los Angeles, Fresno and San Francisco, which were duly held according to schedule in the Pacific Rural Press of June 8, and set forth in detail the facts which limit the profitability and safety of their enterprises. Their statements, so far as we have seen outlines of them, correctly cover the considerations which will affect the post-war development of the unique and characteristic industries of California, and we hope they will have much weight in determining the attitude and policy of the Government toward American products which have practically no competition from within our own national boundaries. Such facts will command more respect when set forth in the reports of the Tariff Commission than they do in our local publications, which are naturally held to be ex-parte, but such setting forth makes them neither more true nor essential.

What will the outcome be? No one can tell until the war is closed and another national election is held, perhaps. But conditions are now more favorable for rational protection to promote home production than formerly. The nation will need more money to pay its obligations and it will have a keener realization that that money will come faster from prosperous home production than from paying bills abroad for imports. The reporters say that W. S. Culberson of the United States Tariff Commission, who held the hearings in this State, indulged in prophecy to this extent:

Commissioner Culberson said a revision of American tariff laws would take place as the war draws to a close and that the revision probably would be upward, especially as to manufactured articles. He said he believed a competitive tariff should replace the prohibitive tariff.

We rejoice in the truth of Mr. Culberson's statement. What we need is a tariff which will not prohibit our own producers from competition on an equality of vantage with foreign producers. The school of economists which came into power in 1913 were so upright against prohibition against foreign producers that they leaned backward into prohibition against our own! We agree with Mr. Culberson that such a prohibitive tariff as that should be done away with. We cannot afford to get up another war to demonstrate a proper American attitude and we should learn all we can from this one!

ANOTHER BANK SCRAP IN BERKELEY.

IT HAS been observed that many people who are nice and companionable while plain become cantankerous when fortune smiles upon them. We are thinking that it is also that-a-way with towns. When we began to follow the footpaths across the Berkeley fields, seeking the postoffice with the aid of a lantern, two people meeting each other were so polite that both tramped in the wet grass and their dogs saluted each other on the path between them. That was forty years ago. But Berkeley has grown populous and rich—especially rich in banks—and you can have a scrap any time by trying to move on the wrong side of the pavement, either on foot or in an auto or in a bank. Therefore, we are not surprised that another ruction has broken out in the Berkeley Federal Land Bank: it seems to be the normal penalty of getting rich and sassy, and constitutes Berkeley another exemplification of the truth of the old hymn—"Where every prospect pleases and only man is vile." And that is just as true of the social and financial as of the natural landscape. For instance, we believe it is perfectly true that, as President Joyce recently said:

The Berkeley Land Bank is in fine condition and its business record is exceptionally good: $6,700,000 had been loaned to farmers in California, Utah, Nevada and Idaho since the bank was organized a little more than a year ago. A total of 2203 loans is represented in the amount. As another evidence of the bank's condition the institution's income now exceeds its expenses.

And we desire to have these things clearly understood as an offset to the impression which may be produced by gossip-mongers among those who are participating in the affairs of the bank as borrowers or who contemplate such connection—because the borrowers in this bank are the managers of it. They vote for directors and they have responsibility for its standing. It is, therefore, essential that they should not be misled by any camouflage as to the standing of the bank. It is our conviction, then, that the trouble is not in the bank as such but among the people in the bank. The occasion for the outbreak seems to be the firing of John J. Fox, formerly Horticultural Commissioner of Napa county, who was appointed one of the appraisers when the Land Bank was first organized. Of Mr. Fox, President Joyce is reported to have said in a recent interview:

Mr. Fox is a fine man, a good worker, conscientious, capable and hard-working, but he is not amenable to suggestion. For the good of the bank it was found necessary to ask that he be removed.

Thus the issue seems to be personal and not related to the soundness of the bank, though it may be directly related to its method of operation—particularly in the attitude of the higher-ups toward the experts who must be employed as valuers of lands on which loans are to be made. We know from experience that agricultural specialists and experts are as scrappy as musicians and as touchy as a magnet. We have handled as many as fifty of them at a time. We lost every hair but saved our scalp in getting through it. We know that they must be treated reasonably and not arbitrarily and when they disagree in their work they must not be stood apart for a fight, but their heads must be knocked together until they see stars—the stars of authority in the firmament above them. They should not be fired for anything but incapacity, but they must sometimes be overruled until it gets on their professional conscience and they say "good-bye" in good will. Our experience is that real experts can be held to team work in spite of personal animosities by two spiritual forces: one is the spirit of the institution or enterprise and the other is the personal spirit of the authority above them. When the spirit of the institution sheds the clear light of its beneficence upon their souls they will make sacrifices to serve it, and when they see devotion and ability in vested authority and feel the warmth of the spirit of personal interest and kindliness which should imbue such authority, descending in a flood upon their rebellious hearts, there will be few experts indeed too cantankerous to carry on.

Thus we have drifted into a homily to explain the ground for our conviction that, in the case of Mr. Fox, as in most other cases, unamenability to suggestion has resulted in some measure from the spirit and manner of authority over him, and that the treatment of his recalcitrance was unwise and should be re-cast in more considerate form. It is best to be reasonable ahead of trouble because it generally averts it—but if not then, it is better to be reasonable afterwards than not at all.

HOMOLOGIZATION.

WE ARE driving along in our issue of this week toward our previously declared objective, viz.: to accomplish wide and influential organization of California farmers for all purposes by federating those already organized for particular purposes. Mr. Whitten takes a full, steady gaze at the all-purpose organization for dairy production and we take a half-look, on another page, at the developing organization of alfalfa growers—intending to sight the other half at another time. We choose these two phases of special organization at this time because they are related to each other in their kind of agriculture and because their kind is not that which has made California famous in the line of co-operative organization. Our fame for progressive good sense in organization certainly rests on the achievements of the fruit growers. Citrus, walnut, almond, raisin, peach, prune, apricot and pear growers have risen historically to co-operative mastery of their selling and supply problems in about the order we have named them, and that mastery has been practically achieved in all of them, though they may vary from 60 to 90 per cent in signed-up membership of producers. And these are not all, for we have the fig, the olive and other groups coming along. But all these are the fruit lines and if the man on the street is held up with the question, "Are California farmers organized?" he will say, "Of course they are: have you not heard what our fruit growers have done in getting on their feet and staying on their feet—with one leg free to kick the old trade autocrats who formerly robbed and oppressed them?" And this answer is right and reasonable, for the fruit growers started first and came through first. We recognize and rejoice in their leadership and the demonstration of feasibility which it furnishes. We have, in a way, almost a parental affection for it, for we have worked for thirty-three years this very summer to bring about special-product organization, which we conceive to be the only enduring foundation for all general organization.

But fruit associations are not the only shining pebbles on the California co-operative beach against which non-producing greed and gambling can roll their breakers vainly! And that is the reason why we are this week directing Mr. Whitten's flashing pen and our own stub pencil to the elucidation of the fact that there are others. And the undertakings of the dairymen and the alfalfa growers are not the only others. We only yank them out into our spotlight at this time because they happen to be handy for the hook. Away from fruit lines there are also poultry associations, which have passed within the federation circle, bean associations which should be near to it, and many other local co-operative movements which should become general, each of its kind, and thus fitted to take places in federation of State-wide producing activities!

But some reader asks: "Why are you trying so hard to get in your barrage of federation?" It is rather a hard question and we were not at all sure about the answer until we looked in a big dictionary to see where we were at and found there that our purpose was homologization and that our function was that of homolographer, because to homologize is to determine correspondence in a homologous manner and a homologue is that which is identical in nature, make-up and relation, and the party who points it out is a homolographer! Therefore, all these separate organizations being identical in nature, make-up and relation, as indicated by their mutuality of methods and purposes, must, for the wide attainment of these purposes, be homologized—and the Pacific Rural Press is the agency that can help them do it!

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Did Bluestone Kill the Barley?

To the Editor: Is a five-to-one solution of bluestone too strong for barley? Some have had failure in their barley sprouting and it is said it was bluestoned too strong.—Grower, Paso Robles.

It may have been too strong or the grain may have been soaked too long. There is more danger of it with barley because the adherent chaff holds the bluestone up to its killing longer than with a bare grain which more quickly dries off. The safety of the seed is insured by a subsequent treatment with lime, which makes more trouble, but is much more effective and safer. The following is the formula adopted by W. W. Mackie of the University Experiment Station after much experimentation:

The smut balls in wheat and smut masses in barley may be cleaned out in fanning mills or floated out in water and skimmed. Place the cleaned seed in half-filled sacks tied at the end. Immerse these sacks from three to four minutes in a bluestone solution made by dissolving one pound of bluestone in four gallons of water. Drain the sacks until dripping no longer occurs, then dip them for three minutes in milk of lime made by slaking one pound of quicklime in ten gallons of water. The lime prevents injury to the germ from the bluestone. If quicklike cannot be secured, air-slaked lime, one pound to eight gallons of water, may be used. After this treating, the grain should be laid out to dry, after which it may be planted or stored.

Cause of Fruit Dropping.

To the Editor: What makes oranges drop in June? My six-year-old trees have dropped all their oranges. The prunes on some of my trees are drying and falling off. The trees have been watered twice this year.—W. A. B., Orland.

The tremendous drop of oranges during June, 1917, caused such a deficit in the crop that systematic investigation into causes thereof was made by Dr. Coit and Mr. Hodgson of the University Experiment Station, and their preliminary report can be had by sending to the station at Berkeley for Bulletin 290. Briefly it may be said that the chief drop, from the setting of the fruit to a diameter of about an inch, is caused by conditions which exhaust moisture from the attachment of the fruit faster than the roots can supply it. That attachment is a weak point and it parts when robbed of enough moisture. High heat, dry wind, lack of soil moisture and lack of protection from excessively arid aerial environment are all causes of deficient moisture at the weak point of the fruit; the attachment breaks and gravity does the rest. The remedy is apparently more regular and adequate irrigation; soil cooling by summer cover-crops; exclusion of hot winds by windbreaks, etc. It may be the same way with your prunes. It is not the number of times you water a tree which satisfies it: it is the maintenance of a soil reasonably and regularly moist enough for the good of the plant.

Growth of a Tree Malva.

To the Editor: I am enclosing the seed of a tree. I planted it the first of April, 1917. It was then three inches tall, the stem was as thin as a straw and there were two leaves on it. By July it was five feet high and now it is over ten feet high and about ten feet in circumference. The children gather the seed and say they are good to eat. Is there any food value in them? If not, could I graft the tree to some fruit, and what kind?—W., Redondo.

Your plant is a tree malva (lavatera) which we have several times mentioned as especially desirable for quick shade in a chicken yard or for a screen-row for unsightly objects in a garden. Your record of the growth of it is interesting. The seed pods of the tree malva, and of the herbaceous malva also, are what the children call "cheeses" and they find them attractive for the mucilagenous material they contain before ripening. They are undoubtedly nutritious, but we are not aware that their food value has ever been determined. The tree will probably not be long lived. It is not available for grafting to any fruit.

Feeding a Few Beets.

To the Editor: I came from Georgia last September. This spring I planted different things to see what will grow best. I planted a half acre of sugar beets. The largest is about the size of a quart measure. They came up in February and now the tops are drying up. Please tell me what to do now to keep and feed them.—Subscriber, Dixon.

If you do not wish to use the ground to grow a midsummer crop with irrigation, the beets can be left as they grew—to be plowed or dug out from time to time, thus feeding the land out by the time of the early rains. The roots will hold plumper in the ground than in storage and will not change much, unless the gophers and ground squirrels get after them, until the first rain starts a second growth. If the land must be cleared up now, store the beets in a rat-proof crib or shed. Feed the beets just as they grow, in connection with hay or dry pasturage. Do not over-feed and if any derangement appears lessen the daily ration. The sugar beet you describe is of fair size. Sugar beets are not much grown for stock, because large stock beets can be got out of the ground with so much less labor.

HAS YOUR SUBSCRIPTION EXPIRED?

(7-6-18)

The yellow label explains. Keep the channel clear.

ALIENIST NOT REQUIRED.

"It is a relief to read the **Pacific Rural Press**, whose editor seems to be sane enough to give the farmers credit for having sense and patriotism." C. R. Watson, Hanford.

"Those editorials, contributions to literature and brave championings of the farmers, are above price." Jean Blair Barber, Livermore.

"I consider it (the Press) part of my business. It is a true friend of the farmer." Frank G. Desmond, Madera.

* * * * * *

The channel through which flows this stream of sanity, sense, patriotism, literature, championings and good business should be kept clear.

A check, a money order, a dollar bill or postage stamps will keep the channel clear.

DO IT WHEN YOU GO TO THE POSTOFFICE FOR YOUR WAR STAMPS.

Elizabeth McHugh, Subscription Clerk

Lead Arsenate for Cutworms.

To the Editor: Is an arsenate of lead spray protection against cutworms, and what strength should be used on melons, tomatoes and such tender plants.—M. J., Paso Robles.

Why, yes: in a way. That is, one pound of neutral lead arsenate to 25 gallons of water will hurt no plant and will kill any bug that has jaws to bite it. But having it on a plant near the place the bug bites but not right on the spot does not get him. Cutworms choose to bite on the vertical and not on the horizontal; that is, they bite the side of the stem and not on the top of the leaf and it is hard to get the poison on the side of the stem. It is simply a question of serving such as might arise if you had a dinner guest who insisted on eating his soup off the wall of the dining room instead of from the table. Therefore, it is better to poison cutworms before they get to the plant, by spreading the poisoned bran described for grasshoppers on page 806 of June 29 issue on the ground around the plant and not try to kill cutworms with an arsenate spray.

Teparies Not Pole Beans.

To the Editor: Kindly tell me the average height that tepary beans grow and also the best method of trailing them.—B. S., Calistoga.

Although the tepary is something of a runner where there is soil moisture enough to encourage it, it is not grown as a pole or trained bean. It is grown in bush form and allowed to flatten out if it desires to do so. There is, therefore, no recognized method of training. Teparies are especially adapted to hot interior valleys rather than to coast valleys, but perhaps your place may be hot enough to suit it. Still we imagine you will not indulge largely in teparies. You can grow many better beans.

Sex in Blackberries.

To the Editor: Are there a male and female wild blackberry? I have three vines; two bear and one does not.—C. B., Durham.

Yes: there are wild blackberries which have only pistillate flowers. Whether there are plants only staminate we do not know. Go at the flowers of your barren plant with a magnifying glass and they will tell you.

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., July 2, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm
Eureka	T	T	.01	68	48
Red Bluff	...	....	....	112	74
Sacramento	...	....	....	104	56
San Francisco	...	....	....	66	50
San Jose	...	....	....	88	54
Fresno	...	....	....	104	70
San Luis Obispo	T	T	....	78	52
Los Angeles	.08	.08	....	78	58
San Diego	T	T	....	72	62

Co-operation in California Alfalfa Growing

Written for Pacific Rural Press

IT HAS BEEN previously maintained in these columns that of all the kinds of plants grown in California, including kinds of fruits and everything else which has achieved greatness under our favoring natural conditions, no single kind of plant has attained such aggregate value of product as has alfalfa. Nor is this fact really as unique and startling as it may at first appear to a people whose thought and talk was anciently of wheat and wool and both anciently and continuously of fruits and most recently of barley and beans. The greatest single crop of the world is grass and the world's greatest single cured product is hay. It is only reasonable then that California's greatest product should be forage, and that California's greatest forage plant, by virtue of its satisfaction with our exceptional conditions for its growth and by virtue also of its nutritive content, should be alfalfa.

But great as has been the service of alfalfa in the development of California agriculture during its more than sixty years' growth in this State, its importance is still but scantly recognized and the employment of its potentiality of product-value has been thus far only entered upon. And yet alfalfa is great as indicated, not only in its direct production of commercial value but through its entrance into the fabrication of nearly all other agricultural products. Even those who realize that our cows squeeze from alfalfa the greater part of their milk products, our sheep their wool, our hogs their pork products, our cattle a part of their juiciest steaks and roasts, and even our hens their eggs, do not realize that our fruits has been mostly driven to perfection by alfalfa power and, no matter how much we propel them by gas motors in the future, they will still be always pushed to a large extent by burning alfalfa hay in the automobiles which Adam named in Eden.

And then, in addition to the products of which alfalfa is the first cause there is the opportunity to produce much more alfalfa for export to the outside world, which is always short of hay, and alfalfa, baled or ground, will be ere long a much larger item in the export trade of California. Though it is true that any country will do better for itself and its soils by shipping hay products rather than raw hay, the world needs hay and is willing to pay well for it, and it is our good fortune that we can ship hay with the least possible draft upon soil fertility because alfalfa is of all plants in the hay trade the best aviator and its aerial activity is the best of all in the warfare of soil maintenance against exhaustion by cropping.

PROBLEMS IN ALFALFA PRODUCTION.

It is, of course, to be expected that in pursuit of such a great industry problems should arise. There are problems in production for the college experts in soils, cultures and farm management. There are problems in implements and appliances for production in which our designers and manufacturers of farm machinery are most efficiently meeting. There are problems in cost of production and in trade in the product which the growers are themselves best qualified to solve, and on the proper solution of which the future of alfalfa growing rests. All these problems have become more pressing through the exigencies of war, but the dawn of peace will not end them. It is practically assured that the re-awakening of a spent world to recuperative industry will not only open opportunity for greatly increased forage production but will multiply the problems which progressive producers must meet and solve by their own insight, energy and power.

IS IT POSSIBLE TO REGULATE ALFALFA TRADE?

It surely is. The State of California says so and the State of California knows! The Legislature of 1917 passed a new law defining the duties and functions of the State Market Director, which empowers him "to promote, assist and encourage the organization and operation of co-operative and other associations and organizations for improving the relations and services among producers, distributors and consumers and to protect and conserve the interests of the producers of such products."

And in accordance with this law there strides into the alfalfa field a tall man of military figure, as befits the times, who grows no alfalfa on his chin and does not over-crop his scalp with it either, but whose brain box is stuffed with alfalfa, from which come a vision of the future of the plant in the development and population of California and a faith that the vision will come true if the alfalfa growers will come together and strive for it as the State provides. For Colonel Weinstock tells this writer that as he has gone out into the wide valleys of the State during the last few weeks to make their opportunities for securing their rights in production known to alfalfa growers, he has looked from their green expanses upon adjacent vacant areas and has seen those great oceans of scantly-producing land made more productive and more valuable and he is assured that when such land is improved, stocked and populated with prosperous people through their productions and requirements in connection with related industries one-third of the present population of the continental United States could find honorable activity and prosperity in California—if alfalfa, the great basic plant of California agriculture, is given opportunity to do its perfect work and to properly reward the growers of it.

ORGANIZATION WILL DO IT.

To lay a firm foundation, upon which such a structure may in time arise, it is necessary that present growers of alfalfa should sweep away the troubles which now beset them and get their production into shape to properly reward them for their producing effort and investments. To this end local organization began in Southern California some weeks ago and is now being promoted throughout the State, which has been divided into five districts to facilitate proceedings and in the final form of organization all districts will be fairly represented. The purpose of this writing is to call general attention to the movement and to urge all our readers who are growing alfalfa to look into it. Detailed information concerning the plan of organization and the expected operation of it can be by application to the State Market Director, 525 Market street, San Francisco, or to any member of the committee which has been appointed to undertake the preliminaries of organization, as follows: Arbor Barth, Escalon; W. E. Cole, St. Helena; A. S. Bomberger, Lathrop; J. M. Bomberger, Modesto; J. L. Farrar, Riverside; H. R. Moses, Perris; A. W. Haley, Newark; Hulett C. Merritt, Tagus; Roy Seiple, Fresno; Ralph Crowther, Brentwood; Edward P. Haupt, Pasadena; and George I. Lytle, Perris. This organization committee may elect new members, elect its own chairman and secretary and take such steps as it may deem advisable in order to secure members and to organization the association.

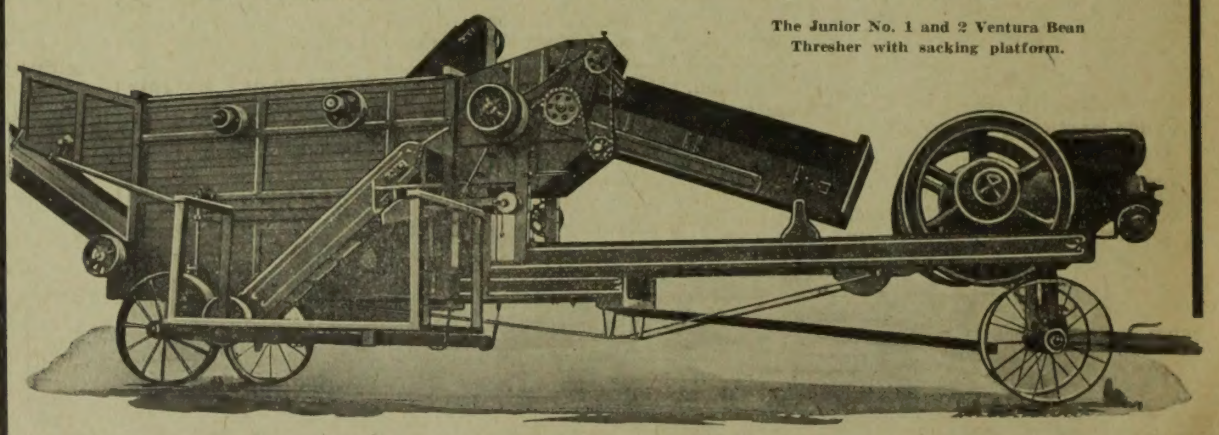
We expect to make another cutting in this field before long!

Labor Saving Bean Threshers

FOR EVERY GROWER'S NEED

The new Junior No. 1 and 2 are especially built for stationary work, and also with sacking platform for traveling over the field.

An economical seven man outfit for threshing from windrows.



The Junior No. 1 and 2 Ventura Bean Thresher with sacking platform.

To meet the threatened shortage of labor, the New Junior No. 1 and 2 **VENTURA BEAN THRESHERS** have been developed each with a sacking platform and extra long bagger. Mounted and with portable power and long drop feeder, four horses or a small tractor will pull this light machine between windrows operating with only 7 men. It is sold with or without engine.

The No. 1 is equipped with 22x32 inch cylinders. The No. 2 with 26x38 inch. No. 1 requires a 10 horse power engine, No. 2 requires a 12 horse power. Each machine is constructed on the same scientific practical lines as the large machines that we have been building and that have given satisfaction everywhere for the past 22 years. The same high grade material, workmanship and construction goes into each machine and each will thresh **EVERY VARIETY OF BEAN**, including horse beans.

Our factory, located at Ventura, assures purchasers that parts and extras are always close at hand, which means a great deal in our short bean threshing season with large crews. **VENTURA BEAN THRESHERS** are made to do a maximum amount of work properly with a minimum of help and power.

Write us for information about **BEAN THRESHING MACHINERY**, telling us your acreage, how many sacks per day you would like to turn out, the kind of beans you have, what horse power engine or tractor power you have, the make of engine or tractor, and we will furnish you free, information as to your most economical and satisfactory requirements. We make six sizes, from the Junior No. O, which can be operated by two or three men, to the Ventura Senior No. 2, which has a record of threshing 3000 sacks per day.

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

SNAPDRAGON RUST.

To the Editor: What makes my snapdragons go to the bad as the specimen shows? And what can I do for them?—G. A. F., Concord.

[Answer by Prof. W. T. Horne.]

The snapdragons are affected with a snapdragon rust which attacks, so far as I know, all varieties of snapdragons. It is one of the most destructive and fatal rusts we have. It does not, however, attack any other plant so far as my information goes. I think the only way that you can manage to save your plants is to clean up and destroy all of the affected plants as soon as they get rusted so as to be unsatisfactory, then do not grow any more snapdragons for some months in the neighborhood. After this, young plants may be started in a seed bed and can probably be grown for some time without getting rusted. I do not know how long the spores of the rust will live in the ground, but I think that by this procedure you will be able to have some nice flowers before the plants become infected and are lost.

I have seen snapdragons come through to maturity without getting rusted in green houses where the plants were affected the year before, and very often they will come on nicely in the garden and will not get diseased until rather late in the season, so that they have time to develop and give considerable pleasure before they have to go. I have at various times recommended people to try spraying repeatedly with some of the standard fungicides, such as Bordeaux mixture, diluted lime sulphur or ammonia copper carbonate, but have not had time to carry out the experiment myself, nor has anyone else done so so far as I know. It would probably help somewhat when the first infections are seen if the diseased leaves were picked off and the plants thoroughly sprayed.

University of California, Berkeley.

[In our garden in Berkeley we have a great deal of joy with snapdragons in spite of the rust. As Prof. Horne says, it comes on rather late and in the early part of the season the blooms are fine, and we let them grow along year after year, getting the early bloom and let the rust take the hindmost.—Ed.]

SUBIRRIGATED TREES UNPRODUCTIVE.

A block of ten-year French prunes on subirrigated ground bore an immense first crop for E. C. Spear of Napa county, but did not do well since then. He figured that the trouble was in the ground-water preventing the roots from going downward. The summer cultivation cut off surface roots. What was left to support the fruit? Trees about the house that had not been plowed in fifteen years had borne regular heavy crops. Lime, heavy pruning, etc., had been tried on the unproductive block and the trees had simply bloomed without setting or dropped what they did set. This season Mr. Spear is not cultivating this block, but is letting it grow up to alfalfa, rye grass, barley, and alsike clover.

A permit has been granted by the State Water Commission to the Chicago-California Development Co. of Sacramento for 410 second feet of the Sacramento river in Sutter county, for the irrigation of 32,545 acres, of which approximately 10,000 acres are for rice culture. Cost of the project is given at $530,000.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Causes of Wasted Grain.

If a threshing machine fails to separate all the grain from the straw it usually is because the machine is not being run at its proper speed, is being crowded beyond its capacity, the cylinder fails to thresh all the kernels out of the heads, the separating mechanism is not level, or the blast is not adjusted properly.

Methods of preventing these and other causes of waste are given in Farmers' Bulletin 991, "The Efficient Operation of Threshing Machines", just issued by the United States Department of Agriculture.

Cracked grain is another source of waste which may become serious. Cracked grain may be due to excessive speed of the cylinder, to the cylinder being too close to the concave teeth or to grain being returned in the tailings elevator and run through the cylinder repeatedly. Loss both from poor separation and cracked grain can be largely prevented by proper adjustment of the machine and attention to it while in operation.

Rust-Resitant Asparagus.

Asparagus rust is a fungous disease which weakens the summer-growing bushy tops and prevents their storing food in the roots for next season's crop of shoots. Prof. R. E. Smith advises selection of seed from rust resistant plants. This is what J. B. Norton, a plant breeder of the U. S. Dept. Agr. has done for ten years, introducing, testing, and hybridizing asparagus from all parts of the world. Now Mr. Norton has a highly rust-resistant strain, more uniform and more productive under his conditions; and it recently sold in commercial quantities in Washington for more than double the price of other asparagus.

Pure Seed Law to Be Framed.

A bill for inspection and certification of truck crops grown for seed and another bill to provide adequate inspection for purity, germinating power, and adulteration of truck crop seeds on the market are to be framed at a meeting soon to be called by the State Horticultural Commissioner G. H. Hecke at San Luis Obispo where lives Senator Rigdon who attempted to introduce a pure seed bill in the last Legislature. This is a move much needed in the interests of greater production per acre and deserves the boosting of every seed user.

Seed Potato Selection.

Every potato in a hill has the same inherent possibilities because it has the same heredity. But in selecting seed potatoes from a bin, perfect specimens may have such poor heredity that the acre yield may be reduced a great many sacks. The only way to select seed potatoes to prevent their running out is to select hills that produce plenty of uniform typey potatoes. Prospective good hills are staked and the potatoes from them kept separate from the field run.

Plant for Fall Vegetables Now.

July is the month to plant vegetables for late fall and winter use. Do not water the seed after planting until they are well up. This means that the ground must be wet deep and worked fine before planting. If watered after planting it will bake in the July sun and the seed cannot come up properly.

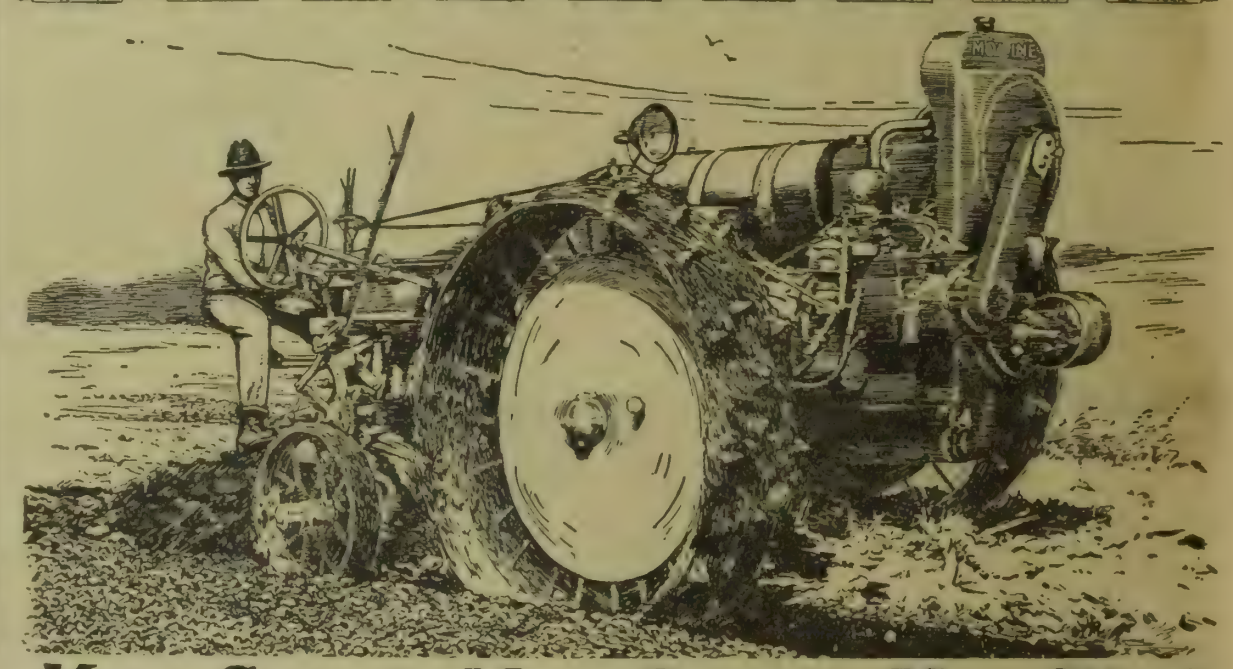
ALFALFA WEEVIL CONFERENCE.

Alfalfa weevil, the chief enemy of the alfalfa industry and therefore of the livestock industry, may at any time be introduced into California. On June 20 and 21 representatives of the Western States interested in the alfalfa industry and in the prevention of the introduction of the weevil, met in Salt Lake City to discuss the many phases of the problem as presented in their respective States. One of the questions which has troubled the officials of a number of States is that of the importation of salt grass. Since the United States entered the war the scarcity and increased price of excelsior has caused a greatly increased demand for salt grass for packing purposes. Utah, in the immediate vicinity of Salt Lake, produces ample quantities of this grass and naturally desires to fill all orders for it if possible. The alfalfa fields of Utah are known to contain the alfalfa weevil. To prevent its introduction into California the State Commissioner of Horticulture has, since 1912, maintained a quarantine against all products, including hay and straw, liable to carry the weevil from Utah and parts of Idaho and Wyoming. As a result, during the past few months very determined efforts have been made to cause the modification of the California alfalfa weevil quarantine to the extent of permitting the entry of salt grass.

Finally, at the suggestion of State Commissioner of Horticulture G. H. Hecke, invitations were sent to all the States interested to send their representatives to Salt Lake City for the purpose of arriving at some mutually satisfactory solution of this question, and the recent conference is the result. Colorado, Montana, Idaho, California, and Utah officials responded to this invitation. Chief Deputy George P. Weldon represented California. The conference took a field trip to obtain first-hand knowledge regarding the territory where the salt grass is grown and how it is handled. Mr. Hecke will later make known the provisions adopted.

Kills Prairie Dogs and Gophers of all kinds. Endorsed by State Experimental Stations. 1000 tablets prepaid for $1.25 Warranted. Raticide Tablets 25c. Ask druggist or send direct. Booklet Free. F. D. Chemical Co., Ft. Dodge, Ia.

ONE MAN OPERATES BOTH TRACTOR AND IMPLEMENT



More Speed-More Power-More Work

EVERY farmer who sees the new Moline-Universal Model D plowing is astonished at its speed, the splendid quality of work and the ease at which it operates. After seeing the Moline-Universal work, you will realize that the number of plows pulled is less important than the amount of work accomplished.

Great Capacity for Work

Speed, power and light weight are combined in the new Moline-Universal tractor to a remarkable degree. As a result, under any ordinary plowing conditions, the Moline-Universal pulling 2 plows at 3½ m.p.h. will plow 9 acres in a 10-hour day—equal to a 3-plow tractor traveling 2¼ m.p.h., the usual tractor speed. Thus the Moline-Universal gives you large capacity for heavy work, ample power for all belt work on the average farm, with these distinct advantages over other tractors—light weight; greater economy and ease of operation; ability to do all farm work, including cultivating, and ONE-MAN control of both tractor and implement from the seat of the implement, where he must sit in order to do good work.

Does Better Plowing

An advantage of speed plowing is the better quality of the work. With properly shaped moldboards and the Moline-Universal tractor plowing at 3½ m.p.h. the soil is more thoroughly pulverized and compacted than at slower speeds. It is left in such a level and fine condition that furrow marks are hard to distinguish.

Positive Reliability

And keep this in mind always—the Moline-Universal is built for positive reliability. The powerful 4-cylinder, overhead-valve, vibrationless engine delivers full 9 h.p. at drawbar and 18 h.p. on belt; unusually large bearings lubricated under 35 lbs. pressure; Remy electric starting, lighting and ignition system with governor generator; all moving parts completely enclosed; 15 Hyatt roller bearings; 5 adjustable ball thrust bearings; 7 splined shafts; differential lock; heat treated and steel cut gears—these give "positive reliability," and make the new Moline-Universal the best tractor money can buy.

Self Starter and Electric Lights

Self starter relieves the back breaking strain of cranking, makes tractor operation easy for non-robust help. In fact, many women and boys are successfully running Moline-Universal tractors. The self starter is a feature every operator will appreciate. Electric lights increase the working capacity of the Moline-Universal so that you can use the tractor night and day in the busy season. It gives you an emergency power always available to make up for any unavoidable delays.

Free Tractor Catalog

Your copy of our new tractor catalog which completely describes the Moline-Universal Model D is now ready. A postal will bring it to you, also the name of your nearest dealer. Address Dept. 97.

It Solves The Farm Help Problem

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Fruit Shipping News.

This has been the best cherry season in the history of California, according to Manager J. L. Nagle of the California Fruit Exchange. The crops have been heavier than last year and the prices fine. Apricots are small but clean and have carried well until about two weeks ago. The Exchange secured $4,200 for a car of mixed fruit last week.

Total shipments of all fruits all spring have totaled less than on corresponding dates of last year, but the total on June 29 of about 1000 carloads had overtaken the record of last year on that date.

The shook situation is good. The market on pine has been very active and box shook has been made from the odd sizes. The car situation has been satisfactory; but the recent advance of 15 per cent in freight rates means, according to Mr. Nagle, an additional annual tax on California fruit producers of about $10,000,000, as based on last year's tonnage. As the intention of the Government in increasing rates was not to discourage food production but to make consumers pay the freight, it is considered inequitable on the fresh fruit industry. About 70 per cent of California fresh fruit is sold to the highest bidders on eleven big Eastern auction markets. The bidders will not be influenced by the freight rates until the freight rates reduce production, which is not the object of the Government. Perishable products like deciduous fruits cannot be priced from the California end under present conditions. Fancy buyers generally buy in large lots. A habit of some growers of breaking up their shipments into small lots each of which had to be sold separately on the auction has caused great loss of time in selling and congestion on the floors. It has been arranged that, beginning July 1, certain kinds of fruit, including cherries, peaches, and plums, shall be sold in lots of not less than 60 packages, averaging the price to all producers in such lots. Other fruits, including pears, will be sold in minimum lots of 40 packages.

Liquid Cyanide Still Making Good.

Liquid cyanide for fumigation of citrus trees as described in previous issues of the Pacific Rural Press is available, according to former State Horticultural Commissioner J. W. Jeffrey at a cost of about $5 per gallon of the liquid, of which one ounce is required per 100 cubic feet of space inside the tents. The crystal cyanide costs 34 cents per pound in 200-pound cases and can be liquified at a cost of $4 per case. This makes 14 gallons of liquid cyanide. Prof. H. J. Quayle of the Citrus Experiment Station is demonstrating the liquid.

French and Imperials Together.

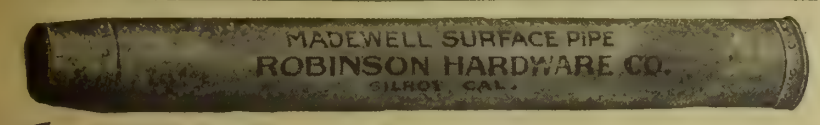
Imperial and French prunes work well together on the ranch of E. C. Spear in Napa county. While the Imperials are slower to dry, they start to ripen earlier than the French and more of the trays are available at that time. Most of them are off before the French prunes need the trays. Better help can be obtained for the longer season's work. It is well to bear this in mind when ordering trees for next winter's planting.

The Farm Labor Situation in California

[By J. P. Dargitz, Field Representative of the State Council of Defense Farm Labor Committee.]

Up to the present moment all crops are being harvested with but little loss as far as we can learn, excepting some large acreages of asparagus for lack of labor. Many thousands of acres of crops were not planted because no labor was in sight to make and harvest the same, which otherwise might have contributed to help win the war. The women have responded well for the orchard and fruit work. They are proving effective and show a fine spirit. The grain harvest is progressing well. We do not know of any machines standing idle for lack of men to run them. However the very light crop in many sections of the State, many fields not being cut at all, must not be lost sight of.

If any fruit farmer is in need of labor the Woman's Land Army stands ready to furnish the same. If all farmers would call on the free public employment bureaus when in need of laborers they would find the State and the U. S. Employment Service both ready to aid them in every possible way.



Lock Seamed and Soldered

There is a tremendous difference in surface pipe. This is appreciated most by the man who has wasted time and money on inferior makes. If you want absolutely the strongest and best surface pipe you can buy, select

Madewell Surface Pipe

It has many distinctive important advantages you can't afford to overlook. **The Madewell Long Lock Seam** is made doubly sure and strong by soldering the entire length. A better seam can't be made. **The Madewell Lock Seam Sleeve**—used in Madewell pipe only—is decidedly stronger and smoother than the old fashioned lap and riveted seam used in other pipe. This feature alone puts Madewell Pipe in a class by itself.

SAMSON GMC SIEVE-GRIP TRACTOR

10 HP ON THE DRAW BAR—25 HP ON THE PULLEY

The Samson Sieve-Grip Tractor embodies all the features which years of painstaking effort and experience have approved. It is not an experiment. It is a demonstrated success of years' standing. Its enthusiastic owners are numbered among nearly all civilized nations on the globe.

In construction, it is very simple. In strength, all that its name implies. Built to meet the most exacting demands, day in and day out.

Its Sieve-Grip Steel Wheels, skeleton-like in construction, give greatest traction with least weight. They do not slip. They do not pack the soil. They assist cultivation.

Its Nodust-Moisto-Rizer cleanses all air entering carbureter and crank case vent. All working parts of the motor are protected from dust and grit.

Its lubricated roller pinions reduce friction to a minimum. They deliver maximum power to the draw bar.

Its ball and disc type Governor assures simplicity of operation and prevents racing of the motor. Adjustment, made from the driver's seat, secures any desired set speed, regardless of load, to the tractor's maximum capacity.

We court the most rigid investigation.

It will be our pleasure to give you a demonstration at any time, without obligation on your part.

Ask any customer or write for information.

Dust in the Eyes of Walnut Foe

[Written for Pacific Rural Press.]

In the Pacific Rural Press of June 15 we gave an outline of Prof. R. E. Smith's [illegible] experiments in dust-spraying for aphis or leaf blight and perhaps for other pests affecting walnut trees. Although we are interested in any progress that has been had of the efficacy of dust treatments of the walnut blight, the method is very expensive and not only for cleaning the foliage of the walnut but of fighting the same pests on other fruit trees. For these reasons we compile from Prof. Smith's latest statements many details of preparation and application of dust-mixtures which will be helpful to many readers who have provided themselves with dusting machinery of good force and compass.

METHOD OF WORK.

With some dusting machines the operator is supposed to stand on the wagonbed and direct the dust onto the tree. As the walnut aphids are entirely on the under side of the leaves, however, it was found difficult actually to hit them with the dust by this method of application. Slight, changing wind currents also made the work slow and rendered it difficult to cover all sides of the trees thoroughly without too much driving around and loss of time. For these reasons it seemed very desirable that the operator should be able to stand on the ground under the trees and walk about to some extent while dusting, and hit the under side of all the leaves with the dust in less than one minute per tree. Two men only are required, one to drive and run the machine and the other to dust. One horse can easily pull the outfit, although a team would be better for steady work all day. It is advisable for the operators to wear eye goggles and nose guards (aspirators) to avoid discomfort

LIMITATIONS OF STRAIGHT SULPHUR.

As to blight, the sulphur did no good and no positive results were obtained in the control of the disease; furthermore, during a sudden spell of extremely hot weather, trees which had recently been sulphured were badly burned, so that for either the control of blight or for diluting tobacco dust sulphur appears to have no use on walnut trees. We do not believe, however, that the burning mentioned would occur during ordinary seasons, and for the control of red spider on walnuts would still suggest trial of dusting sulphur diluted with some other material, 30 per cent sulphur in kaolin might be tried. Straight sulphur is commonly applied to grapes, almonds, beans and other crops even in the hot interior valleys of California without serious injury.

MIXTURES OF TOBACCO DUST.

It has been shown that in making mixtures of tobacco dust a power-driven mixing machine must be used. Simply shoveling over or hand mixing is not sufficient.

When tobacco dust was thoroughly applied to the under side of the leaves the walnut aphis was controlled. The tobacco dust which was used analyzed about one per cent nicotine and was effective when diluted with 50 per cent or even 60 per cent sulphur or lime. Furthermore, the mechanical advantages of this method are so great, on large trees at least, that it seems worth while to continue the search for an effective germicide or fungicide and to attempt to perfect the method in other respects.

NEW METHOD OF GETTING TOBACCO INTO DUST.

There is a wide choice of materials for making insecticides, germicides or fungicides if they could only be gotten into a satisfactory dry condition. Previous attempts to combine them with lime by grinding and mixing have been most crude and unsatisfactory. The method now being developed by Prof. Smith consists in dissolving the material in water, mixing this water with kaolin, evaporating off the water and repulverizing the kaolin. The nature of this material is such that after wetting and drying no grinding is required, but it pulverizes again into an impalpable dust with very slight pressure. Somewhat less water than kaolin by weight makes a very easily handled mixture. To make a dust containing one per cent bluestone, for instance, the old method would have been to grind the material as finely as possible and mix it with lime. With the finest possible grinding many of the particles of bluestone would have been comparatively large and the number of particles of lime would have been enormously greater than those of bluestone. By the present method one pound of bluestone would be dissolved in about ten gallons of water and this mixed with 99 pounds of kaolin. The material would then be allowed to dry until the water is evaporated off, after which the kaolin is readily pulverized into the original powder, with a certain number of molecules of bluestone contained in each particle of kaolin. A dry Bordeaux mixture can be made by putting in as much lime as bluestone or by using the proper amount of soda instead of lime. The material called kaolin is an extremely fine, white, earthy powder. It blows well, sticks tightly to foliage and has other advantages.

REINFORCING TOBACCO IN DUST MIXTURES.

For the control of aphis the use of tobacco has certain serious limitations. Among these are the more or less uncertainty of supply, the unknown and often very small percentage of nicotine, the necessity of grinding, the comparatively high cost and, above all, the fact that even the pure dust is not strong enough to kill many kinds of aphis. The walnut aphis seems to be especially susceptible to nicotine. The rose aphis is one of the most resistant. For these reasons a nicotine-kaolin dust has been developed by the method above described which seems to avoid all these objections. Using "Blackleaf 40" as a source of nicotine, a dust of any desired strength can be made by diluting the blackleaf in water, mixing with kaolin, drying and repulverizing. This is

DUNHAM
CULTI-PACKER
TRADE MARK REG.

More Wheat--
Less Labor

Plow your field, follow at once with the harrow and then the Culti-Packer. You can pull the two together if you have a tractor.

In nine soils out of ten, you will then be ready for seeding without further work. The Culti-Packer crushes all lumps, firms out the air spaces, and stirs the surface soil, leaving a mellow mulched bed for the drill.

Put the Culti-Packer right back of the drill and you will firm the soil around the seed, hasten sprouting and get the most even, sturdy stand of wheat you ever had.

The Culti-Packer has paid for itself on wheat alone for thousands of farmers, and it is just as good on every other crop you raise—corn, oats, alfalfa, beets, potatoes, rice, cotton, sugar cane.

Fifteen minutes work in the field will prove these claims and show you how to get more wheat with less labor.

Phone Your John Deere Dealer Today—
Make Sure of Your Culti-Packer

The Culti-Packer

A sturdy simple farm tool. Just two rows of semi-steel wheels, mounted on 1 3-4-inch axle and fitted with dust-proof roller bearings. Wheels quick detachable for straddling corn.

Soil Sense

A 48-page book on soils with over 100 field photos. Ask your John Deere dealer or write direct.

The Dunham Co., Cleveland, Ohio Factories at Berea, Ohio

considerably cheaper than tobacco dust of the same nicotine content and can be made in any desired strength up to a very high concentration. We have made a 20 per cent blackleaf dust, although at this strength the mixture begins to become rather sticky.

COMBINED INSECTICIDES AND FUNGICIDES.

The possibilities of making combined insecticides and fungicides by this method will naturally suggest themselves. Various chemical reactions will take place, intentional or unintentional, desirable or otherwise. One thing the writer has found is a well-marked increase of the aphis-killing effect of blackleaf 40 when combined with certain substances. This happens, for instance, with potassium permanganate and with sodium carbonate (soda ash), but seemingly not with sodium hydrate or bicarbonate.

A MIXTURE FOR APHIS KILLING.

Black Leaf 40	2 lbs
Soda Ash	½ lb
Water	10 gal
Kaolin	100 lbs.

Dissolve the soda in the water, add the blackleaf, mix thoroughly with the kaolin in a shallow tray, dry off the water with gentle heat (the nicotine compound is not especially volatile) and repulverize the kaolin cake. It is believed that this will kill any species of aphis very promptly so long as a small quantity of the dust actually comes into contact with the insect. A less amount of blackleaf, even five-tenths per cent, is effective with some aphids when soda ash is used in the mixture. For an extremely deadly mixture 5 per cent may be used. Where large amounts of materials are necessary, as in dusting walnut trees, it is very desirable to use the least effective strength of nicotine, as this is by far the most expensive ingredient. This strength can be determined by experiments with the particular species of aphis under consideration. At present prices each per cent of blackleaf in the mixture represents a cost of about one cent per pound. The exact amount of soda necessary is not based upon any exact determination or principal.

Dusting sulphur may be used in place of kaolin in the above mixture, making an excellent combination for mildew and aphis on roses, beans, peas and other plants.

A NICOTINE-BORDEAUX DUST.

(a)	Bluestone	3 lbs
	Water	5 gal.
(b)	Soda Ash	3 lbs
	Water	5 gal
	Black Leaf 40	2 lbs
	Kaolin	100 lbs

Dissolve a and b separately, then mix with each other and with the kaolin, dry and pulverize. This is really the so-called Burgundy mixture and makes a very smooth dust. The strength and proportions given have not been thoroughly tested as to possible injury to delicate foliage.

PRESENT COST OF SPRAY DUST.

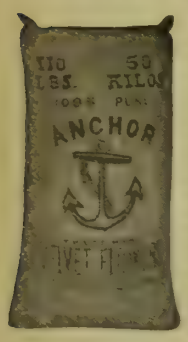
For dusting the largest walnut trees about five pounds of material per tree is required; small trees take less, down to about two pounds. At present prices the mixture of tobacco and kaolin recommended for walnuts should cost about five cents per pound. It is believed that by the new method of using tobacco extract, mixtures can be made considerably cheaper than this. Labor and other expenses of application should not amount to more than five cents per tree. This saving of labor and time is the most essential part. The material should not be too strictly economized, although it must at all times be well distributed and put where it will do good. To simply fill the wind with a great cloud of dust or even to cover the upper side of the leaves has no effect upon the aphids tucked away underneath.

KEROSENE EMULSION FOR INSECTS.

To control aphis and other garden insects, a kerosene stock emulsion may be made in the following proportions and kept indefinitely, to be diluted with eight to ten parts of water when used. The weaker spray is for the more tender plants. Stock solution: Dissolve ½ pound hard soap in a gallon of hot water. For safety, take it away from the fire and mix in two gallons of kerosene while the water is still hot. Mix it vigorously until it becomes a thick creamy mass.

From returns received by the Bureau of Crop Estimates to date from 1246 firms and individuals engaged in canning or otherwise manufacturing tomatoes, or about 74 per cent of the total number reporting in 1917, it appears that 186,348 acres of tomatoes have been contracted for thus far this season. California reports 13,731 acres.

SULPHUR



Fleur de Soufre, Anchor Brand; Velvet Flowers of Sulphur and Eagle Brand.

Packed in barrels and double sacks; are the fluffiest and purest Sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, leaving no ash.

Try our new brand of sublimed 100 per cent pure Ventilated Sulphur for making Paste — Atomic Sulphur.

For Lime Sulphur Solution, use our "S" Brand Refined Flour Sulphur, which we will furnish at a price so cheap that you cannot afford to purchase ready-made solutions.

We are equipped to make immediate shipment. Send for illustrated booklet; also price list and samples

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

"Better Farming" is all that the name implies. It tells you how to do a hundred and one farm jobs cheaper, quicker, easier and better.

This pocket farm library is published by a company with more than a half a century of experience in making explosives especially to meet western agricultural conditions. You should know the low cost and thorough methods by which they have cleared western land and boosted yields of crops and fruits. Whether you blast or not, you need these 52 pages, fully illustrated, of modern, improved farm methods.

"Better Farming" is sent, you free of charge, postpaid. For the price of a postage stamp you get something it has cost us thousands of dollars to prepare. Merely fill in and mail this coupon, or send postal mentioning this paper. Write now.

General Agricultural Review

Field Crops.

Good hay and grain crops are reported in the vicinty of Paso Robles.

The annual report of the California Packing Corporation places the value of the California rice crop at $8,343,750.

Growers and shippers of cantaloupes in the Imperial Valley estimate the value of the crop this season at $3,500,000.

The Siemer Bros., who farm several hundred acres about Sebastopol and Santa Rosa, will cut about 50 acres of their oats for grain. They are well pleased with the crop.

The Dodge Land Co. at Butte City reports splendid progress on its 300 acres of cotton. A great deal of interest is being taken in this cotton experiment by the whole valley.

About 750,000 sacks of grain, two-thirds of which will be wh..., is estimated to be the harvest dus season that will be had off ...ut aphi... borders Tulare Lake.

The Sutter, Butte an... side of t... Canal Companies have be... found di...n by the State Railroad ... with ...on to furnish water from La... application for irrigation to 65,00... rrents a... of contiguous land. ...rendered

Harvesting is on in full ... of ...n the whole Sacramento Valle... ...n most places the barley crop is ...st about half what it was last year, the grain being pretty badly pinched. Wheat is about the same.

In the Indian Wells Valley, Kern county, there has been a large acreage of cotton planted, all of the Durango variety. This is the first year that cotton of any commercial sense has been raised in the county.

The conference of rice growers held in Sacramento last week decided that the cost of production for 1918 could not be determined at this time and therefore it was impossible to set a price for the new crop.

William D. Jones of Bloomfield, who usually cuts most of his hay for grain, will make hay of it this year, because of the difficulty and uncertainty of getting help to harvest it for grain. He has 245 acres of very fine oats.

Every available acre in the Lompoc and Santa Ynez Valley is under cultivation and 95 per cent are planted to beans. From Los Olivos to Lompoc thousands of acres are planted to small whites and all are in good condition.

Rice has been making rapid growth since the extreme heat has struck the Sacramento Valley, and where water can be secured promises a bumper crop. A large acreage that was graded and seeded has had to be abandoned on account of water shortage.

General plans for the protection of the hop industry in California were taken up by growers representing 20,000 bales of hops, who met in Sacramento last Saturday. They decided to ask the support and cooperation of California's representatives at Washington.

Fifty thousand acres of Sacramento Valley bottom lands above the confluence of the Sacramento and Feather rivers have been planted to beans this year, according to Manager George F. Maddux of the Sutter Basin Company. White beans were the kind planted.

For the present no more licenses will be issued for the exportation of beans to Cuba owing to congestion of supplies in the island, which has led to a large number of rejections of shipments recently, it was announced by the United States Food Administration for California today.

There is very little trouble in getting harvest hands in the Sacramento Valley. One correspondent says that in all his travels he only saw one harvester held up on account of help shortage and that was temporary on account of a breakdown and the men got impatient and quit.

A crop report showing the condition of alfalfa and other hay for the State as a whole and perhaps by counties was proposed by E. E. Kauffman of the U. S. Department of Agriculture, to be published through the California Cattlemen's Association. The offer was received with great favor.

Recent statements to the effect that the army and navy would not be in the market for any further supplies of pink beans this year gave a wrong impression to producers and the trade. While the requirements of these two branches of the service have been filled for the present, further supplies may be necessary.

Deciduous Fruits.

Carlot shipments of apples are now going out from Yuba City.

The canning of peaches in the Visalia district will begin about the middle of July.

The growth of the fruit industry in Merced county, as more acreage is brought into bearing, has necessitated the erection of several new packing-houses.

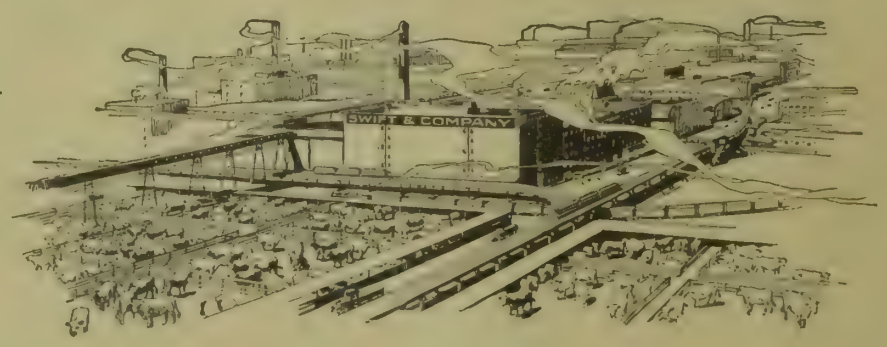
Peach growers of the state were to receive between $750,000 and $1,000,000 this week as the final settlement money for the 1917 crop, it was announced.

Apricots from the Porterville district, are being shipped to San Francisco for canning. Because the Porterville Canning Company was organized after the sugar orders went into effect, no requisitions could be honored for sugar sufficient for the pack.

The Geo. H. Hooks Cannery at Watsonville has opened for the season. The first fruit to be put up are loganberries and mammoth blackberries, this company having contracted for the larger portion of Pajaro Valley crops of these two varieties.

Yolo county peaches and apricots, because of the heavy demand and the comparatively small yield, are bringing good prices this season. Many contracts were made at top figures of $65 a ton for Tuscan and Phillip clings, and $40 a ton for freestones.

It has been recommended by the executive committee of the Canners' League of California that canners generally adopt a scale of rental and sales charges on their lug boxes to growers. A rental charge of 1 cent per box is suggested to be made to growers for the use of standard



A business
that is as big as its job

KEEPING a nation of over 100 million people regularly supplied with meat and meat products is a big and complex job.

And a still bigger job when to it is added the needs of the American soldier here and in Europe and of the Allies as well.

It is a job of converting the live stock of the West into meat and meat products and distributing them in perfect condition over long distances to the consuming centers —the North, South, East, West and abroad.

A job of supplying with *unfailing regularity* products that in the main are perishable, in the exact qualities and quantities needed, to the smallest out-of-the-way village as well as to complex and congested metropolitan centers.

Only organizations like that of Swift & Company, with its highly-specialized methods of meat-dressing, its hundreds of branch-distributing houses, and its thousands of refrigerator cars, could have handled such a job efficiently and at a minimum of expense in the present war emergency.

Today American meat and meat products are the recognized standard of the world.

And the economy with which these products are produced is indicated by the fact that today the meat of a steer, dressed, is sold for less than the cost of the steer on the hoof! The proceeds of by-products, made out of what once was waste, have made this possible.

The size of the job has dictated the size of America's packing industry. And America's packing industry has proved itself to be equal to its job.

Swift & Company, U. S. A.

A nation-wide organization with more than 20,000 stockholders

lug boxes, and a charge of 25 cents for each standard lug box to growers who retain boxes at the close of the season.

The Placer County Farm Labor Committee has arranged a schedule of wages in fruit work considered just and equitable to employers and employees. They are as follows: General farm work, 30c per hour; Picking cherries, 2c per pound; Packing cherries, 15c for 12 rows or less; Packing cherries, 18c for over 12 rows; Packing plums, 6c per box; Packing peaches, 3c per box; Packing pears, 7c per box.

Citrus and Semi-Tropical.

Butte County Horticultural Commissioner Earle Mills estimates the orange crop of the Oroville district at not to exceed fifty per cent of normal on account of continued hot weather.

This year the production of the citrus orchards near Porterville which have received consistent care apparently will be fair. Trees that have received little water show a small setting of fruit.

The movement in Australia to place a ban upon the importation of California citrus fruits has been averted, and there will be no further effort made to change the agreement reached in 1916, it is reported.

The same unusually hot weather which came on very suddenly early in June in the Porterville district killed practically all the citricola scale on the trees. As a result of this, not more than 200 acres of orange groves of the entire district have been listed for fumigation this fall.

At the late hearing before the members of the U. S. Tariff Commission in Los Angeles it was stated that this country has a practical monopoly on the ripe olive pickling industry, as olive growers along the Mediterranean borders were ignorant of the American process of pickling the ripe olive.

Orange growers in the Lindsay district are preparing a protest against the proposed increase in citrus fruit freight rates, which according to the Citrus Protective League will cost the orchard owners of the State more than $8,000,000 annually. The general increase of 25 per cent of tariffs applies to oranges, lemons and grapefruit.

Grapes.

At the grape institute held at Merced last week action was taken to raise the standard of packed grapes by the elimination of fruit affected by the mealy bug and of grape varieties showing stem mildew. The question of uniform method of fruit inspection was earnestly discussed.

Miscellaneous.

The gentle sex is answering the call for help in the cotton fields near Bakersfield, where they will take the place of men. The girls were recruited from the high school and have had considerable experience in farming.

It is reported that the U. S. Shipping Board finds that the rate of $3.50 per ton upon wheat from Pacific coast ports to the Atlantic has proved to work out at a loss, and that the board will find it necessary to advance the rate.

By agreement between Food Administrator Merritt, and representatives of the canning industry and employees of canneries, the minimum wage scale for male adult employees for 1918 will be 35 cents an hour for a ten-hour day, and 42 cents an hour for overtime and on holidays and Sundays.

Articles of incorporation of the Western Bee Farms Corporation, capitalized at $100,000, were filed in San Francisco last week. The corporation expects to establish a string of bee farms from Santa Cruz to San Diego. More than 15,000 stands of bees will be maintained, and the estimated yearly production of honey will be 1,500,000 pounds.

The following scale of wages is set for this season in Merced county, as reported in Merced county Farm Bulletin: Per day—Haying, $3.00; Corn and bean harvest, $3.00; Irrigation, $3.00; General farm work, $2.50; Header bed driver, $4.00; Loader, $5.00; Header driver, $6.00; Derrick man, $4.00; Derrick boy, $3.00; Sack sewer, $5.00; Hoedown man, $4.00; Fork man, $5.00; Sack jig, $4.00; Tractor engineer, $6.00; Separator man, $5.00—$7.00; Engine swamper, $3.50; Milker (per month) $70.00.

The following application for a permit to appropriate water has been filed with the State Water Commission: The U. S. of America (U. S. Reclamation Project at Orland, California), 250 cubic feet per second of the waters of Stony Creek in Glenn County, Colusa and Tehama Counties, tributary to the Sacramento River, for the irrigation of 30,000 acres. This is the south diversion of the Orland Project, and it is proposed to enlarge the old canal 5.8 miles and build 17.44 miles of new canal. The amount of water to be stored is 104,000 acre feet, and the estimated cost of the proposed work, including purchase of right of way, is $2,200,000.

APPLETON Silo Filler

New models save you every way.

Here's the best value in a silo filler ever offered you. We say this from 47 years farm machinery manufacturing. We *know* that the new Appleton, with its *important new features*, will prove the biggest labor-saving, time-saving and money-saving machine you ever bought.

Built on the same quality basis as all the Appletons—the same tremendously strong, everlasting frame and trouble-proof construction; big capacity and light running qualities that make the Appleton always *outdo* and *outlast* other silo fillers. Sizes for 6 h.p. and up. Don't wait until you are ready to order. Write today for

Assured Quality Engines

GENERATIONS know that the name-plate "Fairbanks-Morse" on any product assures quality.

This is the famous "Z" engine — all sizes with more than rated power — that over 150,000 farmers have backed with $10,000,000—to do their work best. No farm engine ever before has made such a record.

Cuts fuel costs in two — the 3 and 6 H. P. engines giving more than rated power on *kerosene* at *half* gasoline war-time prices.

You Also Get This Local Dealer Service

Go to the Fairbanks-Morse Dealer. He is in position to render you prompt and personal service. He has exactly the "Z" for your need in stock and can make quick delivery. See it in operation on his floor.

The 3 and 6 H. P. sizes are built to use kerosene, distillate, stove oil, tops or gasoline. The 1½ H. P. size uses gasoline only.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles

ORCHARD TRACTOR CHEAPEST POWER.

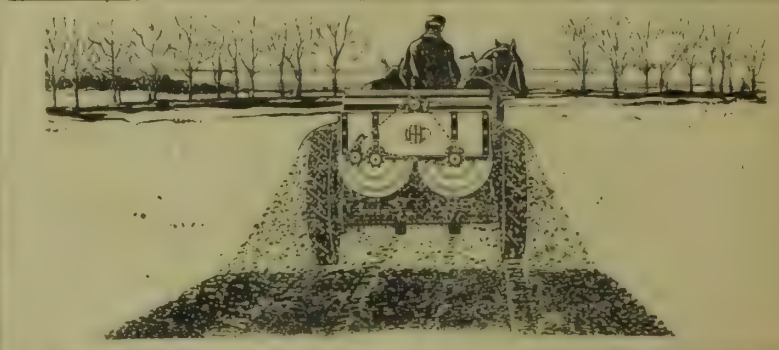
"We must motorize our orchards. Hay will be short and will cost a lot. I used to handle my 26 acres of apricots and prunes with horses, but I found I couldn't do the work. Hot weather, flies, and work put the horses in bad condition before the end of the season. Both of my sons enlisted and I got a Bean tractor." Thus Dr. Guy Huntley of San Benito county explained the fine tilth of his orchard at a time of labor scarcity. He used to pay $40 for additional horses besides the four-horse team to plow the 26 acres. Last spring the tractor plowed it with 100 gallons of distillate at 11c and eight gallons of oil at 61c. Among young trees he plows eight inches deep within two feet of the rows, but not so deep among older trees, whose roots were not thus trained to go deep. The Huntley orchard had just been double-disked by the tractor, a much finer job than one done nearby with horses. The tractor works the soil into a mulch as much as six or eight inches deep. Neighbors have similar tractors and all were satisfactory. Danger of tipping over is nothing to a reasonably careful driver, as Dr. Huntley's machine had never tipped over, though crossing a multitude of dead furrows.

TRACTORS FOR ORCHARD AND BEANS.

"When I saw that tractor coming, it was to laugh," said W. G. Smith of Sacramento county regarding a Wallis tractor which had come to his river ranch to show its ability on freshly irrigated soft black land which had to be turned quickly after the grain was off in order to plant beans. "The long angle-iron extensions on the wheels looked like nothing so much as two windmills coming up the road. When we saw the machine closer we all wondered if it could get across the field alone, say nothing about pulling the plows. But there she is, humming right along with four 14-inch moldboards, going four or five inches deep and the ground so wet that water seeps into the furrows. If she can keep up that pace, I must have her, because I have 150 acres yet to plow for beans. The other tractor I have is a small Holt. It is a little slower, but it keeps going all the time. I plowed about 500 acres of orchard with it this spring. Plowed most of it twice, disked all of it twice and part three times, and rolled it. Couldn't keep the place going without the tractors."

SPREADS MANURE EIGHT FEET WIDE.

The manure spreaders we used to operate threw the fertilizer directly back of the wagon and we had to do a lot of driving over more or less soft ground to get it covered. Now comes the International Harvester Co. with a manure spreader only three feet wide which breaks up the manure and spreads it in a strip



eight feet wide, as illustrated above. The toothed cylinder throws manure against two disks set so they revolve in a direction cross-wise of the wagon and throw the manure beyond the sides. Curved metal wings over the disks regulate the distance manure can be thrown sidewise.

CHEAP REFRIGERATION.

A $375 installation run by a ½-horsepower electric motor freezes small pans of ice for E. C. Rand of Sonoma county and keeps a large refrigerator so cold that drinking water left in it cannot be swallowed hurriedly. It may be installed on any refrigerator. The motor is used to compress ammonia repeatedly and force it through pipes, where its evaporation and expansion produce the freezing. The vapor is compressed and evaporated repeatedly. Mr. and Mrs. Rand are enthusiastic about it.

COMBINE DID NOT THRESH GYP.

An effort to thresh gyp corn with a combined harvester did not work for the Liberty Farms Corporation of Kings county last year, though perhaps the trouble was only a matter of adjustment. They headed the corn and threw the heads into windrows. A combine was then driven through and two men pitched the heads onto the draper. Whole heads went through the machine; so hauling to a stationary thresher was deemed necessary.

POWER NOTES.

Blue smoke in the exhaust does not necessarily mean too rich a mixture. Black smoke or a red flame does. A snappy exhaust means too lean a mixture and prolonged burning.

The F. H. Poss Co. of San Francisco has eight carloads of Avery tractors of all sizes in stock, ready for quick delivery when fall business shall begin. The company has sold sixteen of its 5-10 horsepower motor cultivators.

Miller & Lux has installed 19 Smalley alfalfa cutters in 1917 and 1918. These include one 26-inch machine, four 20s, and fourteen 36-inch machines. The Globe Mill Co. of Los Angeles is equipping its ranches with 40-inch Smalleys.

A 10-horsepower electric motor on skids can be moved from one job to another on the Maplewoode Ranch, near Calistoga. Among other work, it pumps water from a concrete sump in the creek through a six-inch centrifugal pump for the alfalfa.

Hamilton & Nickell of Sacramento report the fall demand for their Trundaar tractors already picking up strongly. They have only recently become able to make immediate deliveries. The general manager of the Buckeye Mfg. Co. of Indiana, who make the Trundaar tractor, has just returned from a visit to the Pacific Coast.

E. B. and W. M. Symons of Illinois have bought 320 acres near Bakersfield, where they expect to go into the sorghum business. They are developing water on the place, having put down a 24-inch well to a depth of 160 feet, with 12 inches below, and have installed a 50-horsepower motor direct connected to a 100-foot 24-inch Layne & Bowler pump. They will irrigate the entire tract from the one plant, which is developing approximately 1300 gallons of water per minute.

The Answer to the Farm Labor Shortage

THE farm labor situation is serious. And little relief is in sight. The new draft will take more men. More horses and mules must go. But, in the face of these handicaps *production must be increased*—and it can be if you adopt the right means.

The Cleveland Tractor has shown the way on thousands of farms. It has successfully replaced muscle with machinery. It has proved itself the modern "Man-of-all-Work."

The Cleveland Tractor plows as much ground as *three* good 3-horse teams and three men—eight to ten acres a day.

It actually does the work *better*. And it harrows. It plants. It reaps. It cuts ensilage, fills silos, turns saws, hauls manure spreaders and road machinery, drags logs, and does the hundred and one chores that mechanical power can do about the farm. It delivers 12 horsepower at the drawbar and 20 horsepower at the pulley. But it weighs less than 3200 pounds. The

Cleveland Tractor

travels on its own tracks, like the giant "tanks" on the battlefields of Europe, and will go practically anywhere. With 600 square inches of traction surface constantly on the ground, it goes through mud, sand, clay and gumbo without miring, floundering or packing the soil.

It steers easily—by the power of its own engine,—and will turn in a twelve-foot circle. It is so small that it can readily be operated under and among small fruit trees. It requires less housing space than a horse.

Rollin H. White, the well-known engineer, designed the Cleveland Tractor. It is built under his supervision—from the best materials. Gears and tracks are protected from dirt and mud, and are specially built for long service.

Let this modern "Man-of-all-Work" fill the gaps on *your* farm. Let it help you produce larger crops, with less help—and incidentally make greater profits for you. Write us now for detailed information and the name of the nearest Cleveland dealer.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

Henderson Camp Ranch of Lockeford is preparing now for official tests this fall. It has 250 purebred Holsteins.

The Bonita Stock Farm of Lodi has 145 head of registered Holsteins and is preparing to make some good records this fall.

Last year 15 acres of rather poor land not on the river bottom yielded 181 tons of milo silage on the Hopland Stock Farm in Mendocino county.

The branch house of Petaluma of the California Central Creamery handles about 3000 gallons of cream per week and about 70 cases per day of eggs.

Dairy Inspector C. A. Peairs of Tulare county declares most of the dairymen in the county are making money and able to proceed nicely with development work.

Sunshine Farm, Merced, has purchased a new herd bull, a great grandson of Sophie 19th of Hood Farm. They expect to line-breed with him and their present herd bull, Lorna's Exile King.

Gotshall & Magruder of Ripon received by express lately Mabel Haskins, a two-year-old heifer, from J. H. Harlan Co. of Woodland. She is a daugtter of a 32-pound cow and has a 33- and 32-pound sister.

H. E. Cornwell of Modesto thinks he found a bargain at the last Sacramento sale in the heifer, Ester Hengerveld of Lenwood. He is very proud of the first calves from the bull, Johana De Kol Ragapple. They will show at Modesto.

J. H. Harlan Co. of Woodland has four daughters of King Mead that averaged 22.75 pounds of butter in seven days, one being a junior two-year-old with a record of 23.9 pounds of butter in seven days and 279.47 in ninety days.

Of the 45 daughters of Ragapple Imperial Korndyke which are owned by the Palo Alto Stock Farm, the first to be tested made 23 pounds as a three-year-old. The bull is now owned by Brown & Daniels of the Baden Stock Farm, Colma.

The wholesale price of certified milk from the Sleepy Hollow Ranch at San Rafael is forced to go up five cents per gallon to meet increased costs of production, according to P. H. Davis. Baled alfalfa is costing $16 to $19 per ton plus freight to San Rafael. Suremilk costs $46 per ton plus freight from Stockton, men to put up the grain hay on the ranch cost $4 per day, and milkers in proportion more.

E. Fiaccadon, manager of the Parmesan Cheese Co., Valley Ford, says they made more cheese in the three months while there was green feed than in the other nine months of the year. In May they handled 40,000 pounds milk, but in June they would not handle more than half that amount. This company has just shipped out three carloads valued at about $30,000. They keep this cheese in storage for one to two years before shipping.

The Register of Merit certificate for the Jersey cow, Interested Jap's Santa 296928, owned by the University of California, has just been received from the American Jersey Cattle Club, showing that she produced during the lactation period ending January 3, 1918, 13,308.5 pounds milk and 805.72 pounds butterfat, average per cent 6.05, at four years two months at beginning of test. But for a setback owing to throat trouble, her record would doubtless have been much larger.

The chances are favorable for T. S. Glide of Davis to show some of his fancy young Shorthorns at all of the fall fairs. The splendid new two-year-old bull, Count Amaranth, will not be on exhibition except at home, where he is being used on the foundation stock, but some of his sons and daughters are fine specimens for the purpose. A red bull calf by Knight's Perfection and a white heifer, two years old, by the same sire, are slated for show. Some yearling heifers and young bulls already indicate winning type and condition.

Swine and Swinemen.

J. W. Wakefield of Acampo will show about fifteen head of Poland-Chinas at the State Fair.

W. H. Browning of Woodland, breeder of big type Poland-Chinas, shipped on the steamer City of Para, going to Peru, one gilt and one young boar.

H. L. & E. H. Murphy of Perkins are fitting two Berkshire boars for the State Fair. They have a white Shorthorn bull calf that will make a real show bull if handled properly.

Young & Clark of Lodi have recently received a fine boar from Audubon, Iowa. This boar's name is Golden State King and is sired by the famous Golden Gate King. He will be shown along with twenty more at the State Fair.

A. L. Tubbs of Calistoga hopes to show at the fall fairs 25 or 30 Yorkshire hogs and pigs, including a couple of junior yearlings, some senior pigs, get of sire and produce of dam, but no senior yearlings.

The only daughter of the Duroc boar, Defender, in California is owned by F. M. Johnson of Napa, who has a litter of pigs from her sired by his boar, Johnson's Defender, the 1917 State Fair junior champion. Defender blood has become very popular in California.

Thirty-three head of weanling gilts were recently sold to the Sutter County Farm Bureau for the Pig Club. Anchorage Farm is offering a prize of a grandson of Star Leader to the one who makes the best record with their pig. A Star Leader gilt was sold to A. N. Blackmer of Utah.

F. M. Johnson of Napa says he will take a dozen Duroc pigs to the State Fair, but practically no sows, as he is breeding them to increase the herd as rapidly as possible. He now has six sows, five of them winners at last year's State Fair. He expects to get three more and to raise for his own herd three of his best gilts.

The Highland Stock Farm of Fair Oaks has recently sold a Chester White boar to Ren Featheston of Lompoc, also two gilts to the Misses Joeger of Clarksville, a gilt to E. C. Phoenix of Fair Oaks, two gilts to George Knoth of Susanville, two gilts to Frank Maderas of Fair Oaks and two boars to G. L. Stock, Napa.

Purebred Durocs of high breeding and fine type were recently observed eating barley from the ground in a dust that was stifling. The feeder wasn't a German, but he was helping Germany by wasting good barley possibilities and weakening good hogs. Grain hay and alfalfa made beds of ease for the hogs over a considerable part of the yard.

George V. Bukman & Sons have 350 medium type Poland-China hogs on their ranch near Lodi. They recently sold a boar to J. B. Bare of Lodi for a very good figure. They also shipped two cars of fat hogs to market which dressed 81 per cent, bringing them a premium of a little over $3 per head, which goes to show that purebred stock pays even for butcher purposes. They expect to have a nice show herd at the State Fair.

Beef Cattle.

A. H. Clough of Los Molinos reports plenty of feed for his 750 head of beef cattle.

Dr. H. S. Elberg of Woodland has 100 registered Shorthorns and expects to show at San Francisco.

Seven hundred and fifty head of Shorthorns are owned by J. J. Kennedy of Red Bluff. Mr. Kennedy is satisfied with feed conditions.

D. M. Horn of Hornbrook has 500 head of Herefords. He uses registered Hereford bulls and reports plenty of feed to run them this year.

H. D. Ogden of Alpine has 300 head of registered Herefords and reports the sale of 30 registered Hereford cows to Foster Bros. of Ramona, Cal.

Hearst Estate of San Luis Obispo county has 3000 head of Shorthorns and Herefords. They are in very good condition. The Hearst Estate always uses purebred bulls.

B. W. Smith of Mrs. E. H. Ewards' herd of Lone Pine reports good feed for their 500 head of Herefords. They received recently 12 registered bulls from Kansas.

W. E. Miller of Sierraville, Cal., informs us that in Sierra Valley there are about 20,000 head of cattle and feed conditions are the worst in thirty years. Hay crop 33 1-3 per cent of normal.

White & Tarry of the Glenwood Ranch, Sacramento, have sold 16 registered Shorthorn yearling bulls which averaged $225, some going to Nevada and Oregon, others to other parts of the State. They have about 60 head of purebred Shorthorns. Their head sire was imported from Rapp Bros. of St. Edward, Neb., and won first as junior yearling the only time he was ever shown.

Sheep.

E. C. Spear of St. Helena cuts one crop of hay from his unirrigated alfalfa and then lets sheep run on it. They do well on the stubble.

JERSEY BREEDERS

Get one of my Jersey bulls to increase the production of your herd. They are rich in the blood of the great cow,

GERTIE OF GLYNLLYN.

Visitors welcome. Correspondence solicited.

California Breeders Sales and Pedigree Co.
SACRAMENTO, CAL.

A Marvelous Double-duty Silo Filler

Fills Silos Quickest! Cheapest! Easiest!
Makes TEMPTING, High Grade MEAL

Write at Once—Wonderful New Smalley Book Free

This book shows how thousands of shrewd farmers are fattening hogs, cattle, sheep and poultry with meal made quicker, cheaper, easier, better than ever before—how they're selling their A-1 hay, milling off grades—how they're making clover, corn stalks, snapped corn, straw, bean straw, pea vines, oats, rye into corking good combination feeds—how they're cutting down their feed costs 1/5 to 1/3—with the famous Smalley and the patented Recutter Attachment—two machines in one!

Astonishing capacity! 600 to 900 lbs. per hour with Junior Mill and 6 to 8 h. p. engine. Cracks peas, corn or velvet beans. 1080 to 2340 lbs. of meal per hour on sizes 12 to 26.

SMALLEY SILO FILLER

Chain Drive—Force Feed Grip Hooks

Powerful grip hooks save man-labor. They catch the corn—shove it automatically under the paddle roller and the swift revolving, lawn-mower-like, bevel-edged knives do the rest! No grinding—no pounding—no waste. Turns out fine, uniformly-cut ensilage of unbeatable richness. Increases tonnage! Four sizes of alfalfa cutters with top apron.

Chain Drive Blower, a big power saver! Does away with belt wear and belt slippage. Blower operates independently of knives. Speed up fan or slow it down—speed of knives remains the same. That means more power saved. 1-5 to 1-4 saved in power alone—and with a machine that operates easiest, gives best results, is the most economical buyable!

If you're ever going to SAVE on Ensilage and feed, NOW is the time! So write for free book at once—now—before you close up for the night! Free sample of meal with book!

PACIFIC IMPLEMENT CO., Gen. Agts., San Francisco, Cal.

SMALLEY MFG. COMPANY, Dept. 63, Manitowoc, Wis.

The C. H. & O. B. Fuller Co. has bought the Jalama ranch in Santa Barbara county, which they had previously leased five years from the Dibblee people.

LIVESTOCK DIRECTORY.

FEED FOR STOCK may be had on 640-acre homestead and adjoining land or Indian land. For free particulars write Joseph Clark, Sacramento.

Red-Hot Cattlemen's Convention

[Written for Pacific Rural Press.]

For a real convention where real producers really discuss their problems and really accomplish what they went for, the California Cattlemen's Convention at Davis, June 27 and 28, stands out as one of the most successful farmers' conventions held in California. Permanent organization was accomplished, with Acting President L. A. Nares and Secretary D. J. Stollery to continue in office until the first election next fall. The State is divided into five districts, each of which is to have a vice-president and a manager. The meetings were red hot. The discussions came spontaneously from men who knew what they were talking about. The rest of the delegates paid strict attention to the speakers and voiced their approval or disapproval with perfect democracy.

RESOLUTIONS WITH TEETH.

The resolutions as finally adopted have real teeth in them and they fairly represented the great majority of the delegates present from the various local cattlemen's associations from Siskiyou to Imperial counties. These resolutions will surprise many people and we print them in the brief space allowed for this report. Other reports of the papers and discussions will follow in later issues.

The dominant and frequently recurring note throughout the convention was that the first purpose of the cattlemen is to win the war; that to do this, as well said by former President D. B. Heard of the National Livestock Association and now a member of the Livestock Committee of Five in the National Food Administration, to win the war we must keep all essential industries in a prosperous and profitable but not profiteering condition, and each industry must consider its relation to the others.

Resolutions were as follows:

In favor of arranging the price of cottonseed cake and meal on the basis of so much per each percentage of protein it contains.

In favor of dehorning cattle because on those shipped East the value per hundred pounds is reduced 50 cents to $1.50 on account of horns.

In favor of charging condemnations of tubercular cattle to their owners rather than to the industry at large, as is done at present.

In favor of requiring that all bulls sold within the State be tested and free from tuberculosis.

Against planting so many cantaloupes in Imperial Valley and in favor of using the land for alfalfa or grain. Over three times as much labor is required for cantaloupes as for grain.

In favor of putting all the public domain under control of the U. S. Forest Service to handle by similar rules to those now applying to the forests.

Against the importation of Chinese labor.

Against turning any bulls except purebreds onto the open range. (Definition of purebred bulls to be covered in separate article.)

Against burning or using as fertilizer the straw from grain, beans, or rice this season and next, and for use of such straw as feed.

For hearty co-operation with the State Cattle Protection Board in early full enforcement of the Hide and Brand law.

For the return of Yosemite and Sequoia National Parks to park uses only, after the war emergency has passed. Over 15,000 head are now grazing these parks.

Against the auctioning of carloads of fat cattle, as recently attempted.

American Guernseys 22 Generations

To the Editor: Although the present popularity of Guernseys in America is a matter of comparatively recent growth, so that our animals shortly trace back to Island stock, still there were Guernseys in this country as early as 1840, and it may be interesting to note that some of our present day animals can be traced back twenty-two generations to them, as is evidenced by the following from the American Guernsey Record Books:

Name—	Born
Nellie Tostevin of Hidden Valley	1918
Sired by Argie's Prince (41398)	1916
Sired by Dairymaid's Prince (26353)	1913
Sired by Dairymaid's Pride of Iowa (14941)	1909
Out of Dairymaid of Pinehurst (24656)	1906
Out of Dairymaid of Elm Place (14197)	1898
Sired by Penwyn (4500)	1895
Out of Viotress (5626)	1889
Out of Victorine 4th (2547)	1885
Sired by Tabasco (451)	1881
Out of Fustic (481)	1880
Sired by Jeweller (117)	1877
Out of Worthy Beauty (295)	1868
Out of Pert (294)	1865
Sired by Coal (111)	1863
Out of Daisy B. (35)	1861
Out of Fanny B. (19)	1854
Out of Winny (18)	1852
Sired by General Taylor (3)	1849
Sired by Gibson's Bull (2)	1844
Sired by St. Patrick (1)	1841
Out of Imp. Fenella (2)	Imported Sept. 26, 1840 in the schooner Pilot to N. Y. with Jeanne Deans (1), dam of Gibson's Bull.

How very far back this goes can be brought to our minds when we consider that if one were willing and able to write a complete pedigree of Nellie Tostevin of Hidden Valley back to and including the generation of Imp. Fenella, he would have the rather arduous task of writing 4,195,303 names. If a human generation were counted as twenty years, an equal number of generations would date back before Columbus' discovery of America.—A. J. Welch, Hidden Valley Farm, Redwood City.

K P TOLA JOE RECORD.

K P Tola Joe is now the second highest record three-year-old daughter of The King of the Pontiacs for 30 days and fourth highest of all of the King's daughters. This has come from her record recently finished by Gotshall & Magruder of Ripon of 123 pounds butter in 30 days and 31.92 in seven days. K P Tola Joe made 27.15 as a two-year-old, which is still the State record. She is now being bred to W. J. Higdon's bull, King Korndyke Pontiac 20th, for a $500 service fee, as Gotshall & Magruder offered at the sale when Higdon got the bull. Her daughter was sold as a seven-months calf for $1,450 to John Benoit of Modesto. Her recent calf is also a heifer.

JUDGE RAMS BY LAMBS.

Judge a ram by his lambs, is the philosophy of Robert Gibbons of Mendocino county. He was much dissatisfied with a Rambouillet buck lamb obtained from a Napa breeder, until the lambs developed. In shearing them the effect of this ram was so noticeably good that he and his neighbor also went back to the Napa breeder for more.

Humboldt county, even, is feeling the effects of the drouth to some extent. Last month 47½c was paid for butterfat.

MORE GRAND CHAMPION
SHORTHORNS
have been bred by myself and used on my range herds than any other breeder on the Coast has used on his foundation herds. That is strong language. Here are the names:

Hillcrest Hero	Grand Champion, State Fair, 1904
King Edward	Grand Champion, State Fair, 1905
King Edward	Grand Champion, State Fair, 1906
King Lancaster	Grand Champion, State Fair, 1909
King Lancaster	Grand Champion, State Fair, 1910
King Lancaster	Grand Champion, State Fair, 1911
Greenwood Knight 2nd	Grand Champion, State Fair, 1912
Greenwood Knight	Grand Champion, State Fair, 1913
Greenwood King	Grand Champion, State Fair, 1914

All of these except Hillcrest Hero and King Edward were of my own breeding and all except King Edward have been used on my range herds, all of which have always been purebred since the foundation of registered stock was obtained by my father in 1872. Service bulls from these grand champions and other bulls of almost equal merit are for sale now.

Clean and Clear as Water
For Contagious Abortion

Awarded Gold Medal Pan.-Pac. Expo.
Thorough use of B-K as outlined in our Bulletin 52, "Contagious Abortion," is the surest means known of controlling Contagious Abortion, preventing Barrenness, and removing Retained Afterbirth.
Complete irrigation of the uterus and vaginal tract is easy with B-K. B-K kills the infecting germs and foul odors—heals the uterus—removes the slime and acid—no irritation—no straining. B-K is much more effective and safer to use than lysol, carbolic acid, Lugol's solution or coal-tar disinfectants, which do not cleanse the uterus, but make it more acid.
If your dealer does not have B-K, send us his name.
FREE BULLETINS: Send for complete information—"Special trial offer" and bulletins No. 52, "Contagious Abortion," and No. 136, "Calf Scours."

Organization of California's Dairy Industry

(Continued from first page.)

yet, but making the right start and destined to become just as powerful a factor in its field.

The Associated Dairymen of California—that's the official name. But this name is rather misleading, for it is not an association of individual dairymen. It is an association of creameries and milk producers' associations—the central organization for the State, with headquarters at Sacramento.

LOCAL MILK PRODUCERS' ASSOCIATIONS.

But let us first consider the local associations. The State is divided into districts according to geographical lines and the bovine population, and in each district a milk producers' association is organized. The purebred breeders and dairymen are appealed to and almost without an exception they become the incorporators of the association, which is formed on a non-profit, co-operative basis. Solicitors are then sent out in the field to explain the movement to dairymen and give them an opportunity to join. Each one who joins pays a membership fee of $5 for each cow owned by him, provided he has at least ten cows, as the minimum fee is $50. If his herd is afterwards increased he pays on the increase at the rate of $5 per cow, but not until after the herd contains ten cows.

Very liberal terms are allowed for the payment of the membership fee. Only 10 per cent is required at the start, and of the remaining 90 per cent one-half is payable in one year and the other half in two years, with interest at 6 per cent, payable semi-annually. Provision is made, however, for paying these amounts off at the rate of five cents per 100 pounds of milk or one cent per pound of butterfat sold by the member; also for refunding the membership fee if the dairyman goes out of business.

MISUSE OF FUNDS CAREFULLY GUARDED AGAINST.

To prevent the misuse of funds, the by-laws stipulate that only the 10 per cent of the membership fee paid by a member when he joins may be used for organization, promotion and general expenses. The entire remaining 90 per cent must be used only for the purchase of property or equipment or investments of a similar nature.

The property rights of each member are in the same proportion as the amount of the membership fee actually paid by him bears to the total of all membership fees paid by all members of the association. But the voting powers of all members are equal, so that the small producer has just as much voice in the management of the association as the large one.

The general affairs of the association are in the hands of a board of directors consisting of eleven members, one of whom is the State Market Director or someone named by him. A manager is appointed by the directors.

The expenses of maintaining the association, such as rent, salaries, taxes, insurance, office and inspection expense, advertising, etc., are distributed over the entire volume of business done, and charged to each member according to the amount done for him. The association decides where plants are necessary, and if one is already in operation at a point decided upon an effort is made to buy it out. A fair price is offered, but if it is not accepted a new plant is built.

EXPANSION OF ACTIVITIES.

However, the new plants erected are more than mere creameries and milk depots, and the creameries purchased will be enlarged so as to turn out a variety of dairy products. For instance, the Northern California Milk Producers' Association, which covers the Sacramento Valley, has announced that it will build a large plant at Sacramento at a cost of $150,000, and each of the seven other associations in the State will soon follow suit. The Sacramento plant, and probably each of the others, will have a capacity of 20,000 pounds of butter daily and will be able to handle from 50,000 to 100,000 pounds of milk. Also it will put out cheese, sugar of milk, canned skim milk, powdered skim milk, condensed buttermilk, albumen, casein and other products that may be made from milk.

It is natural to suppose that with such plants the associations will be able to control the dairy industry of the State; in fact, it is claimed that in every district so far covered from 75 to 90 per cent of the dairymen have joined the movement.

BENEFITS OF MEMBERSHIP INNUMERABLE.

And why shouldn't they? For the benefits to be derived from a membership are almost innumerable. Each association will help its members in the proper breeding, feeding, housing, and handling of their herds; the best methods of milking and caring for milk and cream so that a proper standard of quality may be maintained and the consumer can be assured clean, wholesome, pure milk, cream, butter, cheese and other dairy products.

With the aid of the central organization—the wheel within the wheels—the association will make a careful study of the dairy industry in all its phases; carry on an educational campaign which will cause the consuming public to have a better appreciation of the food value of dairy products, and increase the demand for them; standardize the products and market them upon a more uniform plan, which will reduce the selling expense and return a better profit to the producers.

A FORCEFUL, HELPFUL PERSONALITY.

It is said that every institution is but the lengthened shadow of one man, and it is unfair to close this article without paying a tribute to Mr. J. M. Henderson, Jr., of Sacramento, whose foresight, judgment, skillful planning and tireless energy have been largely responsible for the success of the movement. Although he is president of several banks and a man of large interests, Mr. Henderson has found time, not only to sit at directors' meetings, but to get right out into the field, address gatherings of dairymen, show those present by carefully prepared figures that they were not making enough money, and convince them that he had the right plan to bring them a greater measure of Prosperity.

The name of Mr. Henderson as president of the Associated Dairymen of California is a guarantee of the success of the movement, but aside from this it is founded upon such sound business principles that it is bound to sweep the State like a tidal wave, revolutionizing the dairy industry and put it upon a stable, highly profitable basis.

This is a 750-pound latest style

DE LAVAL

CREAM SEPARATOR

Acknowledged by cow owners the world over to be the closest skimming, the easiest running and the longest wearing separator

360 pounds of butter would have been needed to buy this machine in 1914.

255 pounds of butter will buy it now.

96 bushels of wheat would have been needed to buy this machine in 1914.

55 bushels of wheat will buy it now.

139 bushels of corn would have been needed to buy this machine in 1914.

87 bushels of corn will buy it now.

There never has been a time when you needed a De Laval so much. There never was a time when you could so well afford to buy it. Don't waste food and money and time trying to get along without a cream separator, or with a half-worn-out or inferior machine. Order your De Laval NOW when you need it most.

Why not see the nearest De Laval agent at once? If you do not know him write to the nearest office for new catalog or any desired information.

OAKWOOD STOCK FARM Lathrop, California

Green Feed and Housings for Hogs

[Written for Pacific Rural Press.]

Succulent feed the year around is provided by F. M. Johnson of Napa for his Duroc sows and pigs. Golden Tankard beets fill the gap when grain and alfalfa fail. From one acre last year Mr. Johnson took 30 tons of the Tankards. The alfalfa and grain are provided in enclosures into which the pigs are moved from the farrowing house at the age of two or three weeks—not sooner because some of them would get lost. The feed alley runs along one edge of an alfalfa field at the base of a hillside. This is disked and sowed to oats for winter pasture. The hillside is planted to grain and fenced off in lots about 50x150. Two of these will open onto each alfalfa lot 100 feet wide.

An A-type house is located in each grain patch. The idea for the houses was obtained from Guilford's California Hog Book. They are about square, with roofs sloping from the floor to the peak. Redwood lumber was used, being tongue-and-grooved for the roof. Four men can pick up a house and carry it off. The bill of lumber for each is given us by Mr. Johnson as follows: 15 pieces 2x4, 8 feet long; 3 pieces 4x4, 8 feet long (for skids); 64 feet 1x12, 16 feet long; 300 feet 1x6, tongue-and-groove.

The skids keep the house off the ground and permit easy moving to fresh locations. The front is half open. The floors are solid. The lumber cost $26 for each house. Six more are to be built.

Soft Corn for Hogs

[Written for Pacific Rural Press.]

We used to mix old Indian corn with the new crop when commencing to feed the latter to hogs, because we thought digestive disturbances would follow a sudden change. But R. F. Guerin of Tulare county and C. T. Brooks of Kings county are among those who have had no ill results from feeding soft corn without a gradual change. Mr. Brooks has only a few, but to these he has fed roasting ears in September without injury and has fed soft corn through the fall until it ripened. During the past three years Mr. Guerin has fed milk and barley to hogs until silage cutting, when he picked ears from the stalks, threw them in a pile and fed pigs nothing else all through silage cutting and for a week after. The pigs did fine, though there was no gradual change. M. Bassett of Kings county turns registered hogs into his corn field when it is a little too mature to cut for silage, but when it would be cut to shock for fodder in the East. R. H. Frazer of Stanislaus county took two-thirds of the ears from corn cut for silage and fed them to hogs.

COLT HAS BLADDER TROUBLE.

To the Editor: Am mailing you in a small container under separate cover a sample of a formation found in a yearling colt's bladder. We have lost one or two every year with the same thing. They are all right, apparently, when turned out on grass and in a short time, usually about a month, begin to get poor and stay alone and just keep going down until they die.—J. V. C., Canby.

This condition is known as cystitis, or catarrh of the bladder, but we believe this to be secondary in nature. The primary condition is most likely to be found in the intestine of the abdomen. The tissue you found in the bladder is a fibrous membrane of the bladder that has formed due to irritation, and is later sloughed off. The treatment is absolute rest, non-stimulating food, and plenty of fresh water. Sixty grains of urotropin should be given in 24 hours, divided in two doses and continued until improvement takes place, when the dose may be cut down to 15 grains morning and night. Give at all times large quantities of thick flaxseed tea.

RED CROSS BULL CALF BROUGHT $3,900.

The typey young red Shorthorn grandson of Whitehall Sultan, donated by the Butte City Ranch to be auctioned for the benefit of the Red Cross at the California Cattlemen's Convention, Davis, June 28, was first sold to the Inyo County Cattlemen's Association for $2,200. The Inyo people donated him back at once and the Trinity Cattlemen's Association bought him for $1,700. The new owners have asked that he be kept at University Farm to be auctioned at the State Fair for the Red Cross. If he is donated back there, he will be auctioned at Oakland, Los Angeles, and San Francisco shows so long as the buyers redonate him.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

PREPARING FOR FALL HATCHING.

I am wondering how many are acting on the advice given about fall hatching. With eggs now at 38c case count in Los Angeles the story of shortage is read between the lines. There have been several reports this season tending to show that as soon as storage eggs were all in prices would slump, but such has not been the case. Prices have held in spite of everything. So it would seem as though we should take all the reports we hear with a grain of salt. This war is educating people in food values and just about everything but eggs and poultry, and it seems that someone with voice enough to be heard should speak up for the poultry and egg business. With careful feeding and strict culling it is possible to make money with poultry at present prices, even though they go no higher; but at fifty cents, which eggs ought surely to bring during the late fall and winter months, a man cannot only live but make enough to pay him to stay in the poultry business.

GIVE PLENTY OF SUCCULENT FEED.

Plenty of green feed, not too watery but just succulent and tender enough to be relished, is the one great aid in the production of cheap eggs, and this cannot be repeated too often, because new readers are all the time looking for some way to help out the high cost of feed. A good stand of alfalfa will feed a good many hens, especially when it can be cut into small lengths in a feed cutter. Mix it with the mash and moisten slightly, and every bit of it will be cleaned up.

The next best green feed is kale or rape. These are rapid growers when supplied with water, and can be cut in the feed cutter and served the same way as alfalfa. Anything that grows quickly is always better than a slow-growing green feed. The latter is nearly always tough and contains so much fibre that it is hard to digest. Hens cannot use fibre; it merely taxes the system to get rid of it. A small patch, well irrigated and kept in good shape, will go much farther in food value than a larger patch that is dry and tough.

SUGAR BEETS OR MANGELS FOR FALL FEEDING.

For fall feeding a good patch of sugar beets or mangels are the best thing for molting hens; and it is not too late to plant yet if you have water. Soak the seeds and sow in moist soil, lightly covered, and they will be up in a few days and grow very rapid these warm days. Mangels are superior to other vegetables for molting hens. Last year somebody complained that mangels caused sickness in their chickens. If they did it was probably because they had been stored and had become dry and indigestible.

WRY-NECK OR LIMBER-NECK.

To the Editor: Several of my chickens died lately with wry-neck or limber-neck. It would take more than a day before they would finally die. They were two and three-year-olds and appeared perfectly healthy before the attack. I was feeding freely of corn and they also got some smutty corn. Do you think the corn could have caused it?—E. J. A., St. Helena.

Smutty corn and hot weather are a combination that will do almost anything. One man in this locality lost a number of chickens and ducks both with moldy corn; and smut is about on a par with mold. There have been quite a number of complaints this season of smutty feed killing chickens of all ages and sizes. In cases of wry-neck or limber-neck I know of only two things that cause it, though the wry-neck is of itself only a symptom or sign of putrid animal food, generally maggots; and ergot, the poison from smutty or moldy grain. Unless you can stop the feeding of these things, remedies are of very little use. You might try giving a tablespoonful of castor oil to each sick bird, then keep warm and feed nourishing feed for a few days. Wry-neck is more directly a symptom of nerve or brain irritation than limber-neck, hence it is more difficult to treat. Limber-neck irritates the whole intestinal tract. Neither are contagious, and prevention is the best cure.

DISAPPROVES INTENSIVE POULTRY FARMING.

Edward Brown, president of the International Poultry Association and a resident of London, England, evidently does not believe in intensive poultry farming. Mr. Brown emphasizes the poultry-farm idea upon which to maintain a balance between plant and animal life. He would recommend a flock of 180 birds on a 60-acre farm. The growing stock to forage for much feed, and the breeders to be given wide range on new soil yearly. He stated that his investigations in the Vineland district of New Jersey showed the average life of the strictly intensive commercial poultryman to date to have been three years. He believes this condition will change only when breeding stock is farm grown, with wide range.

Mr. Brown believes in breeding from the high average producer, and not from the phenomenal layer. He places emphasis upon both the female and male strain in breeding for eggs, and recommends generally out crossing.

A PUZZLING CASE.

To the Editor: I have trouble with my three-months-old chicks. Some get sick over night and die in a day or two. They have a soft crop. Their comb gets almost black. When I hold their heads down water runs out their crop. Their gall-bladder is three times the normal size. Why is it that the young chicks eat so much of their own droppings?—P. S., Oakley.

Your description is not very clear, but the chicks evidently have some form of indigestion. Give the flock ten drops of tincture of nux vomica to one quart of water. You can give all the water they need, but use this proportion of nux vomica, and keep that up for a week, feeding as much green alfalfa or other tender greens as possible, and see that the chickens have a good feed of solid grain at night. Poverty of blood sometimes is to blame for this trouble. The chickens may have worms or be hungry when they scratch and eat their own droppings.

Poultry Breeders' Directory

Rates in this directory, 3c per word each issue.

BIRTHDAY ANNIVERSARIES.

My Dear Friends: In these abnormal times it seems to rest largely with the mother of the household to keep the home life normal. The observance of all the holidays in which a family have a special interest is a duty and a privilege no mother should overlook. This is especially true of birthdays. We never grow so old that it doesn't bring a glow of feeling to be remembered on that natal day by pleasant wishes and something in the nature of a little celebration. It may be nothiug more than a favorite dish or a simple cake, but it can carry with it a message of affection.

THE CAKE.

In our own household a birthday would hardly be worthy of the name if there were not a birthday cake for the dinner. These cakes can be made quite festive in appearance by a little ingenuity and patience. Plain white frosting can be decorated with either pink or chocolate, or a chocolate frosting could have the name or date in white frosting with a delicate tracery of pink. This decorative frosting must be put on through a pastry tube and stiff white paper, rolled cornucopia shape makes a very good article to work with. If you want only a straight roll of frosting to ooze out, cut the end to make a small round opening, but if you want it to have it flow in a lined design, cut the end upward in four short slits. Then after you fill the tube and exert gentle pressure the design may be worked out to suit the individual. The cake frosting should be set before you begin with your decorations, or the whole thing may run and upset your well-laid plans. If you use a boiled icing, it needs to be a little stiffer than ordinary and personally I think the safest kind to use for that kind of work is the unboiled icing made from the white of egg and powdered sugar. You can buy all kinds of vegetable pastes for coloring so that your frosting may match your candles or the flowers used.

CANDLES FOR THE CAKE.

The small paraffine candles come in all colors—36 in a box—for 15c, and they may be pushed through the frosting if you do not own the little flower-like holders that are sold for that purpose. There are also large decorated cake boards on the market where the receptacle for the candles extends around the edge surrounding the cake. If the cake is for a grown-up, many times only one large candle is used—placing it in the center of the cake in a hole cut for that purpose.

If cake decorations seem too arduous, you can buy candy roses in various colors at two dozen for 15c that will make a very pretty cake.

ROSABELLA BEST.

THE AMERICAN LARDER.

WHEAT.

Home consumption of wheat flour must be cut to one-third of normal; and those who can do so are urged to give up wheat entirely.

MEAT.

The demand for beef for our army and the armies of the allies is beyond our present supply.

THE HOME CIRCLE

PERISHABLES.

Every meal in rural communities might well be made a garden party, using the home grown garden products to release the staple and concentrated foods for shipment.

CANNED GOODS.

It is not patriotic now to use canned goods when fresh products are available. Commercially-canned goods must be reserved for our soldiers. Every home can help by eating fresh goods and canning all they need for themselves.

DAIRY PRODUCTS.

Milk, cream and butter, with cheese, should be used freely to make up for the shortage of beef and supply the necessary protein and fat to balance a diet of fresh vegetables.

FRUIT SYRUPS.

Syrups made from grapes, apples and other fruits can be used in cooking or on the table to replace sugar to a great extent.

To clarify the fruit juice, heat to boiling and filter through a jelly bag until clear. Divide into two lots, representing one-fourth and three-fourths of the juice. To three-fourths of the juice add two ounces (three level tablespoons) of precipitated chalk per gallon. Heat to boiling and allow to stand over night. Filter through a jelly bag to remove the chalk. To the filtered juice add the one-fourth of the untreated juice. Boil the juice down to a syrup and seal boiling hot in bottles or jars. This syrup is low in acid and is suitable for use on griddle cakes, making gingerbread, etc.

Precipitated chalk can be bought from any drug store. If chalk is not used, the syrup will be very sour.

Visitor—My good man, you keep your pigs much too near the house.

Cottager—That's just what the doctor said, mum. But I don't see how it's a-goin' to hurt 'em.—Punch.

To the People of California:

★ ★ ★

TO CLEAR up any confusion that may exist in the minds of housewives concerning food conservation, the following definite program of food saving is issued with the explanation that frequent changes are made necessary according to the needs of the Allies and our own people:

1. All kinds of staple foods, especially wheat, meats, fats and sugar should be most economically used. Use substitutes for these four commodities.

2. No food should be hoarded. Hoarding is the holding, contracting or arranging for food by any person in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time. This does not refer to stocks of home-grown vegetables and home-canned or preserved fruits.

3. All householders who can entirely eliminate the use of wheat until the next harvest, about September 1st, should do so.

4. Householders who are obliged to use wheat should not use more than a total of 1½ pounds of wheat flour or prepared wheat, in any form, per person per week, including the wheat flour in Victory Bread, and including the wheat flour or prepared wheat in crackers, pastry, macaroni, breakfast and other foods.

5. Victory Bread is bread manufactured by bakers under the rules of the United States Food Administration. In estimating flour consumption, 1¾ pounds of Victory Bread may be considered equal to 1 pound of wheat flour.

6. In buying wheat flour an equal weight of other cereals as substitutes for wheat flour must be bought pound for pound. This is the 50-50 Rule. In buying mixed flours, the substitutes in them may be counted so that a smaller proportion of substitutes may be bought with these flours than with white flour. In buying graham and whole wheat flours (containing not less than 95% of the entire wheat) 6/10 pounds of substitutes shall be purchased with every pound of such flours.

7. Wheat flour substitutes are hominy, corn grits, cornmeal, corn flour, edible cornstarch, barley flour, rolled oats, oatmeal, rice, rice flour, buckwheat flour, potato flour, sweet potato flour, soya bean flour and feterita flour and meals.

8. Householders in towns and cities may not buy more than ⅛ of a barrel of flour or 2 pounds of sugar at any one time. Householders in rural districts may not buy more than ¼ of a barrel of flour or 5 pounds of sugar at any one time. In no event shall any purchaser have more than 30 days' supply of either on hand.

9. Householders should not use more than ¾ pounds of sugar per person per week.

10. In addition to the above, however, sugar may be used for home canning, and will be available to the householder for that purpose upon signing a certificate that such sugar is desired and will be used only for that purpose.

11. No wheat flour, or prepared wheat in any form, should be used for any purpose other than human consumption.

12. Meats of all kinds, particularly beef, should be most economically used, eliminating all waste.

13. Fresh milk and milk in evaporated and condensed form and cheese may be liberally used.

14. Butter may be used for normal consumption.

15. To save transportation local supplies should be grown and used.

The Little Red Flag with its One Blue Star

A million flags are flying all o'er this mighty land,
The stars and stripes of freedom are seen on every hand.
But there's another emblem, with its meaning deep and true:
Those service flags of crimson, with their stars of heaven's own blue.

Each star means a hero, a boy of yours or mine,
Fighting, suffering, dying, somewhere along the line;
And the flags that mean the most, no matter where they are,
Are those little flags of crimson, with a single bright blue star.

I saw a little farm house out on a Western plain,
Surrounded there on every side by fields of waving grain;
And shining in its window, like a beacon light afar,
Hung this little flag of crimson, with its one blue star.

I saw a city tenement, dirty, bleak and drear,
Drenched and drowned with gases from the factories near;
But from an upper window, like a golden gate ajar,
Flew this same dear flag of crimson, with its one blue star.

I saw a city mansion, a home of wealth and ease,
Surrounded by green hedges, flower beds and trees;
But just beside the portal, hanging from a golden bar,
Hung this flag of crimson, with its one blue star.

So when the bands are crashing, and the flags are waving high,
And you're laughing, waving, cheering, as the troops are marching by,
Don't forget the dads, and mothers, and these homes, where'er they are,
Where these service flags are flying, with their one blue star.

—Will Creasey.

A Pernicious Habit.

Whoever makes a habit of depending on drugs to cure constipation—and there are myriads of such—is confirming rather than curing a diseased condition.

What Is a "Calorie"?

The word "calorie" is frequently seen in popular medical literature and has been in common use now for several years past. We tried to give a brief explanation of the term not long since in these columns. Among the numerous attempts at making the meaning of the word clear to the lay mind we have seen nothing quite so elucidating as the following: "When fuel is thrown on a fire under a boiler, heat is produced. This heat is required in order that the engine may perform its work. To do work of any kind requires energy. Food used or burned in the human machine produces energy to maintain the normal heat of the body and to do its work. Work done by the body comprises not only that which requires muscular or mental exertion, but also involuntary exertion such as the beating of the heart, the expansion of the lungs, etc. The chemical process within the body which transforms our food into energy is similar in nature to the process which takes place when fuel is burned over fire—though, in the body, the burning takes place very slowly and in every tissue, instead of in one central place. The value of food is determined by the amount of energy it yields to the body; and it also has a building and regulating function. It was necessary that a unit be established for measuring the amount of heat produced when food was completely burned. The unit chosen or universally adopted as the unit for measuring fuel value or energy value for any kind of food is called the calorie. It represents the same principle in measuring as the inch or foot, the unit of measuring length; the pint or gallon, the unit of volume; and the ounce or pound, that of weight. The calorie is the amount of heat required to raise the temperature of one kilogram of water 1 degree C., or one pound of water approximately 4 degrees F. Our requirements of food, so far as the amount is concerned, can therefore be expressed in the number of calories needed for each person per day. It must not be forgotten that the calories must be derived from the proper kinds of food."

Cinnamon as a Household Remedy.

We lately made mention of the oil of cinnamon as a remedy for warts. Since then we have seen a reference to this aromatic remedy in a medical publication, which would indicate its wider therapeutic use. One correspondent, pointing out its value as a preventive in certain cases, says it is efficacious in warding off colds and as a remedy for colds when contracted. The oil, dissolved in spirits, is a very popular remedy in some districts in the East and in England in the winter time. Cinnamon in powdered form is said to safeguard children against measles. Where in one case a certain number of children had been exposed to the contagion of measles and had been afterwards given about a quarter of a teaspoonful of powdered cinnamon morning and evening, no outbreak developed. Cinnamon is a strong antagonist of the germs of influenza and measles.

Remedial Powers of Citrus Fruits.

The antiscorbutic properties of all varieties of citrus fruits are not as widely known and appreciated as they should be. Orange juice is almost indispensable to young children who are, through force of circumstances, restricted to a dietary of sterilized milk. Even for adults citrus fruits in some form are an important article of diet. As a "blood purifier" dilute lemon juice, in the form of lemonade, has no peer. It keeps the bowels sweet and aseptic, clarifies the blood current and clears the complexion.

Some people still seem innocent of what adenoids are. They are soft, fleshy lumps or nodules (really swellings of the lymph glands) growing between the back of the nose and the upper part of the throat. They interfere with the breathing and should be removed.

Agricultural Summary

What Will Barley Bring?

Barley growers are not exactly satisfied with the result of their conference with Food Administrator Merritt last Friday at Davis. They asked a $3 per 100 pounds minimum guarantee, which Mr. Merritt informed them would not be given, as there was a sufficiency of wheat in sight for the requirements of the army and navy and for the governments of England and France, and that wheat, when obtainable, is preferred to barley. He intimated that $2.25 would be a fair price. It is said that some of this season's barley is already being contracted for at a $2.30 rate. A large barley grower said this week that at $2.25 the farmer would lose no money. Another man, a large grain broker, stated that he had sold a quantity of barley to a customer at $2.25, deliverable at any time between now and January 1, 1919, at the option of the seller. Per contra, another San Francisco man intimately familiar with the barley situation, predicted a higher price for the coming crop than the current quotation of $2.50, San Francisco delivery. He based his optimism on the steady advance of barley prices as revealed by statistics for the past seventeen years. In 1900 No. 1 feed barley on the San Francisco market was worth 74c per hundred. On June 20, 1917, this grade of barley (December, 1917 delivery) was worth $1.93. The average price of barley for these seventeen years was $1.25, or exactly half of the San Francisco price today.

If, as is claimed, there will be but a small outlet for California's barley crop, growers must depend in large measure upon cattle, horse, poultry and hog men and other local users for its sale. In the last three years the home consumption has not been much over one-half of the crop grown, the balance being exported East and to foreign countries. If export movement is curtailed, as seems likely, and growers are restricted to the demands of the local market largely, that fact may exert a depressing influence on the selling price. We are not advised at this writing what the barley production of Minnesota, Wisconsin and the Dakotas (the leading barley States, after California) is; but inasmuch as the crop there was a very profitable one last season, it is probable that a large acreage has been sown this year, which will come into competition in the Eastern markets with California's crop. It can be seen, therefore, that the immediate future of barley is anybody's guess and nobody's hard and fast secret. It is reasonably certain, however, that no grower will go broke on barley this year.

Foothill-Grown vs. Valley Peaches.

Peach growers of the foothill section at a recent meeting held at Oroville recommended that a price of 16c a pound for dried peaches be asked this season. There was some dissatisfaction expressed over the failure of the State Peach Growers' Association to give the foothill growers a higher price than paid for the valley peach. Under the competitive system of selling, the foothill peach, it is contended, always brought a higher price than was received for valley-grown peaches, which served to offset the advantage that the valley growers enjoy because of the larger tonnage per acre.

Bulk of the Fig Crop Contracted.

The Fig Growers' Association issues the statement that the larger part of the White Adriatic figs are under contract for 7@8c and Smyrnas 10@12c a pound, leaving a very small remainder in growers' hands that may become subject to action taken by the Food Administration.

Wool Nearly All Commandeered.

The National Sheep and Wool Bureau announces that a large part of the present raw wool stock in this country, and all of it to be produced or imported to about June 20, 1920, will be required for military use.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, July 3, 1918.

WHEAT.

At a meeting of the Food Administration Grain Corporation, held in New York, the new base price for wheat was fixed and it was announced that the Pacific Coast terminal price for 1918 wheat crop will be $2.20 per bushel at terminal markets—which are San Francisco, Los Angeles, Portland, Seattle and Tacoma. The Grain Corporation will support these prices by purchase of wheat offered within its jurisdiction, which includes California, Nevada and Arizona. The prices are subject to dockage deduction, so that farmers would probably receive slightly higher prices by selling in their own territory. Prices are so adjusted, however, that all farmers shall receive a net of at least $2 per bushel of 60 pounds. Wheat sent to the Grain Corporation in San Francisco will receive an additional allowance of 9c per bushel when arriving in new sacks. Flour millers are not compelled to buy from the Corporation and may pay a higher price.

Following are the prices for different grades which the Grain Corporation has fixed:

Hard White—	
No. 1	$2.20
No. 2	2.17
No. 3	2.13
Soft White—	
No. 1	2.18
No. 2	2.15
No. 3	2.11
Club and Sonora—	
No. 1	2.16
No. 2	2.13
No. 3	2.09

BARLEY.

The State Food Administrator has announced that the Government will not fix prices on barley. Little barley has been shipped to this market and no sales of any considerable amount of new barley are reported. The local dealers say that the new crop should open at about $2.45 or $2.50.

Choice feed, per ctl	$2.45@2.50

OATS.

There are practicaly no new oats on the market and quotations are nominal.

White feed, per ctl	Nominal
Red feed, per ctl	Nominal
Red seed, per ctl	None

CORN.

Corn is nominally unchanged. There is very little supply on hand and practically no demand.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked	$3.85@3.90
Milo maize	3.85@3.90
Egyptian	3.95@4.00

HAY.

Receipts of hay for the past week were 1457 tons, compared with 2116 for the previous week. This falling off in receipts is undoubtedly due to the inability of the farmers to get their hay baled as well as difficulty in getting cars for shipment. Practically all receipts have been of the new crop. The farmers are still holding their crops at unusually high figures. Considerable hay in the bay sections that is usually shipped by water will soon be coming forward, as they are now baling in these districts.

Wheat No. 1	$21.00@23.00
do. No. 2	18.00@19.00
Choice tame oat	23.00@24.00
Wild oat, new	17.00@20.00
Barley, new	17.00@20.00
Alfalfa, new cutting	15.00@20.00
Stock	14.00@16.00
Barley straw	50@80c

FEEDSTUFFS.

The market for feedstuffs is very quiet. The only change in quotations noted this week is the advance of $1 a ton on coconut meal.

Beet pulp, per ton	None offering
New alfalfa meal, per ton	$28.00@30.00
Coconut cake or meal	$43.50
Cracked corn	$86.00@88.00
Middlings	Nominal
Oilcake	$75.00@76.00
Rolled barley	54.00@56.00
Rolled oats	57.00@58.00

POTATOES, ONIONS, ETC.

The potato and onion market was stronger, with better demand for both. Tomatoes are stronger. The demand for vegetables has been good throughout the week, with most prices steady. Corn is coming in in greater quantity and is somewhat lower in price.

Peas	7@9c
String beans, per lb.	8@10c
Wax beans, per lb.	8@10c
Asparagus, per lb.	4@8c
Carrots, per sack	50c@$1.00
Rhubarb, San Jose, per box	$1.00@1.50
do, Strawberry, per box	85c@$1.00
Summer squash	75c@$1.25
Cucumbers (hothouse), per box	$1.25@1.50
do, Los Angeles, lugs	1.50@1.75
Eggplant	5@6c
Lettuce, Sacramento, crate	$1.25@1.50
do, Los Angeles, per crate	1.75
Tomatoes, per crate—	
Merced	$1.00@1.75
Los Angeles	1.00@1.75
Potatoes—	
Garnet Chile	1.75@2.00
Whites	1.50@1.90
Onions, Australian browns	Nominal
River Reds	85c@$1.00
do, Yellows	$1.25@1.35
Garlic	3@4c
Green corn, Alameda, per sack	$2.25@2.75

BEANS.

Acting on the advice of Food Administrator Merritt, the city of San Francisco is now buying its beans by the month instead of by the year. This action did not have a tendency to strengthen the market, which was already weak. Blackeyes, cranberries, pinks and Mexican reds were quoted at lower prices and the entire list was weak.

Bayos, per ctl.	$ 8.25@ 8.50
Blackeyes	7.25@ 7.50
Cranberry beans	11.50@12.00
Limas (south, recleaned)	11.00@11.25
Pinks	6.90@ 7.00
Red kidneys	11.50@12.00
Mexican reds	7.75@ 8.00
Tepary beans	8.50@ 9.00
Garbanzos	7.50@ 7.75

POULTRY.

The poultry market shows some advance on broilers, all sizes selling readily at 36c, with the small sizes under 1¼ pounds bringing a slight premium. Hens are in good demand and good, large colored stock has been sold above the market quotations. Ducks and geese are firm. The weak spot in the market is Belgian hares.

Turkeys, live, per lb., young	28@30c
do, dressed	32@34c
Broilers, 1½ to 2 lbs	36c
do, 1¼ lbs	33c
do, ¾ to 1¼ lbs	36@37c
Fryers	36@45c
Hens, extra, per lb., colored	30@31c
do, Leghorn	26@28c
Smooth young roosters, per lb. (3 lbs. and over)	45@48c
Old roosters, colored, per lb	20@21c
Geese, young, per lb	25@27c
do, old, per lb	22c
Squabs, per lb	38@40c
Ducks	25@27c
do, old	23@24c
Belgian hares (live)	14@15c
do, dressed	17@18c

BUTTER.

Butter has been strong throughout the week. Shipments are showing a falling off and the reports are received on the exchange that the long, dry hot spell is affecting the production of milk. If the price continues to advance, it is expected that storage butter will be withdrawn earlier this year than usual.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	47	47	49	48½	48½	48½
Prime 1st	46	46	47	47	47	47
Firsts	46	46	46	46½	46½	46½

EGGS.

Eggs are coming in in smaller quantities than usual at this season and the market is strong. The egg market is affected by the same weather conditions which have advanced the price of butter. Pullets closed very strong on account of the trade turning to them after the advance in extras.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	43½	44½	44½	45	45½	46½
Extra 1sts			Nominal			
Firsts	40½	40½	40½	40½	40½	41
Extra pullets	39	40	40½	40½	40½	44
do, Firsts	38½	38½	38½	38½	38½	38½

CHEESE.

While there was a slight recession in the price of Oregon triplets, fancy, the cheese market as a whole is strong. The falling off in the milk supply is affecting cheese in the same manner as butter. While the demand for cheese is not so great as a year ago, when the price was lower, the supply is less, and this keeps prices firm.

Y. A.'s	25c
do, Firsts	24½c
Fancy California Flats, per lb	25½c

do, standard	2.25@3.00
Watermelons, per lb	2½@3c

CITRUS FRUITS.

The demand for citrus fruits continues steady. No change in price is noted this week.

Oranges:	
Valencias, fancy	5.00@7.00
Valencias, choice	4.50@5.50
Lemons:	
Fancy, per box	$8.00@9.00
Choice	5.50@7.00
Standard	3.50@4.00
Lemonettes	5.50@6.50
Grapefruit, fancy, new	2.00@3.00

DRIED FRUITS.

A base price of 11c, average grades, has been suggested by the peach growers to the Food Administration as a fair price for this season's crop of peaches.

HONEY.

The California Honey Producers' Exchange was organized at a meeting held this week in the office of the State Market Commissioner. Twenty delegates from the ten local exchanges of California beekeepers were present. It is expected that the new exchange will stabilize prices of honey. Over 75,000 colonies are said to have been signed with the new association.

RICE.

Prices for the 1918 crop as agreed upon with the Food Administration range from 5¼c per pound for screenings to 8¾c for fancy stock.

LOS ANGELES

BUTTER.

Los Angeles, July 2, 1918.

There was a sharp upward turn in this market the past week. The production is running lighter than a year ago and the consumption is holding up fairly well. The receipts the past week were 264,500 pounds against 342,900 pounds the same week last year, a falling off of 78,490 pounds compared with a year ago. To make up this shortage there was withdrawn from cold storage during the week 42,088 pounds, while the same week last year there was taken into cold storage 17,642 pounds. Extras advanced under this showing 4c during the week.

We quote:

California extra creamery	47c
do, prime first	46c
do, first	45c

Daily quotations—

1918	Tues.	Wed.	Thu.	Fri.	Sat.	Mon.
Extra	45	45	45	47	47	47
1917						
Extra	36	37	37	37	37	37

EGGS.

There was a further falling off in receipts the past week, being lightest for a long time; hence higher prices and good demand. Receipts by rail for the week were 1,759 cases against 3,174 cases the same week last year, a falling off of 1,415 cases. The arrivals by truck were about double the railroad receipts, making the supply for the week about 5,200 cases

Daily quotations:

1918	Tues.	Wed.	Thu.	Fri.	Sat.	Mon.
Extra	40½	41	42	42	42	43
Case count	38	40	40	41	41	41
Pullets	38	36½	36½	36½	36½	39

POULTRY.

Not so much coming in and the tone of the market the past week was a little better. Broilers were up 1c and in fair demand and fryers and heavy hens sold fairly well at old prices. Light hens hard to move. Turkeys and ducks steady but slow sale.

We quote from growers:

Broilers, 1¼ to 2 lbs	30c
Broilers, under 1¼ lbs.	26c
Fryers, 2¼ to 3 lbs	29c
Hens, over 4 lbs.	24c
Hens, under 4 lbs	18c
Ducks	24@25c
Geese	18c
Roosters, 3 lbs. up (soft bone)	29c
Old roosters, per lb	15c
Turkeys, heavy, 12 lbs. and up	30c
Turkeys, light	27@28c
Squabs, live, per lb	30c
do, dressed, per lb.	35c

FRUITS.

The market was very well supplied the past week and demand good for most offerings. Cherries coming in less freely, firm and in good demand. Plums are coming in more freely, steady and in fair demand. Apricots dull and lower. Peaches steady but slow sale.

Cherries, Tartarians, per lb	10@15c
do, Soft White, per lb.	7@8c
do, Royal Ann, per lb	13@15c
Apricots, per lb.	2@?e

Special Citrus Market Report

Los Angeles, July 2, 1918.

On California Valencias at the principal distributing points in the East there is noted little change, though a wider spread between good and poor stock developed. Valencias are now about the only orange that figures on the markets, as the Florida season is nearly closed up, which amounted to only about half of last year's crop. Fancy grade of Valencias sold at from $5.75@7.50, other lower grades from $4.00@5.50.

The crest of the price wave on lemons seems to have been reached in the Eastern markets the past week, as they have become prohibitive to some, and others are deterred from buying as freely as they did when more moderate prices were asked for the fruit. The new sugar regulation curtailing sugar consumption is also a depressing factor, and the result is a material falling off in demand and an easing off of prices. High prices, however, are still obtained, prices ranging from $7.50 to nearly $10 a box, according to grade.

The total carload shipments at the close of last week were: Southern California: Oranges, 11,537; lemons, 3889. Central California: Oranges, 2534; lemons, 115. Northern California: Oranges, 203.

The prevailing high prices on all varieties of citrus fruits in the California markets is an index of the keen demand. Oranges are firm at from $6 to $7.50 per box and lemons are soaring beyond even the record figures of recent weeks. There is an embarrassing scarcity of fancy fruit, and inferior grades are not plentiful.

Figs, Black Spanish, per lb. .....10@12c
Peaches, per lb. .....5@6c
Gooseberries, per lb. .....10@12c
Beauty plums, per lb. .....8@9c
Prunes, Sonoma, per lb. .....5@6c
Climax, per lb. .....5@6c
Tragedy, per lb. .....7@8c

BERRIES.

There was a better movement the past week, but strawberries were a little lower. Blackberries, raspberries and loganberries were a little higher and in good demand.

We quote from growers:

Strawberries—
Fancy, per 30-basket crate....$1.65@1.75
Poor to choice, per 30-basket crate ..... 1.45@1.55
Blackberries, per 30-basket crate 2.00@2.10
Raspberries, per 30-basket crate 2.15@2.25
Loganberries, per 30-basket crate 1.50@2.00

MELONS.

Not so many cantaloupes in the past week. The heavy run of Imperial Valley melons, it is thought, is now over, and as home-grown have not yet come on the market prices were advanced a little and demand good. Watermelons were in fair supply, slow sale and weak.

We quote from growers:

Cantaloupes—
Standard crates .....$2.00@2.25
Pony crates ..... 1.75@2.00
Watermelons, per 100 lbs..... 1.65@1.75
Honey Dew melons—special 2.00
do, do, flats..... 1.25

VEGETABLES.

There was a better tone to this market the past week than for some time. Receipts were not so heavy and most prices showed an upward tendency. Potatoes were offering less freely and brought a little more money. Tomatoes are higher and in good demand.

Potatoes, new, per lug.....40@50c
New potatoes, per cwt. .....$1.25@1.35
Onions, Imperial Valley Bermuda, yellow, 50 to 60 per crate....90c@$1.00
do, white, per crate.....$1.25@1.50
Garlic, per lb. .....5@6c
Cabbage, per 100 lbs.....$1.00@1.25
Bell peppers, per lb. .....8@12c
Chile peppers, per lb. .....6@8c
Peas, Northern, per lb.....10@12c
Asparagus, per lb. .....7@10c
Summer squash, local, per lug.....50@60c
String beans, per lb.....1@4½c
Tomatoes—Imperial Valley—
per 4-basket crate, good stock..$1.25@1.50
Tomatoes, home-grown, per lug..75c@$1.00
Eggplant, Imperial Valley, per lb....5@6c
Cucumbers, home-grown, per lug....$1.00
Corn, per lug of 3 doz.....75c@$1.00

BEANS.

Little or nothing doing in beans the past week and in sympathy with lower markets north of us prices were lower during the week on everything save whites.

We quote from growers—
Limas, per cwt. $10.00
Large white, per cwt. 12.50
Small white, per cwt. 12.50
Pink, per cwt. 7.50
Blackeyes, per cwt. 7.00
Tepary, per cwt. 8.50

HAY.

More in the past week and the market was less active. Under the influence of the increased supply buyers were disposed to hold back. Prices show no quotable change. Grain hay was both dull and weak, while alfalfa was steady and in fair demand. We quote f. o. b. Los Angeles—
Barley hay, per ton .....$24.00@26.00
Oat hay, per ton ..... 25.00@27.00
Alfalfa, northern, per ton .... 21.00@22.00
Alfalfa, local, per ton ..... 22.00@24.00
Straw, per ton ..... 9.00@10.00

COTTON.

There was more speculative life in the New York market the past week than for some time. Monday, July 1st, started the new week bullish under continued reports of hot weather in Texas and Oklahoma, and there was fair buying in New York of July at 28.15c the early part of the day and October 25.30c. Later the market broke under the influence of a lower Liverpool market and a number of selling orders, and July closed at 27.62c and October 24.97c. Spot quiet. In New Orleans middling closed Monday at 31c, the same as a week ago.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, July 1, 1918.

Though the offerings of cherries a week ago were the heaviest of the season, this past week shows a noticeable increase, the result being that the market ruled considerably lower. The demand for good quality and condition stock was active, but the market receded on poor offerings from 35c to 50c under the average.

Apricots arrived wasty from some sections and on account of the fruit being small it is not attractive. Good stock is meeting with ready demand and averaging the forepart of the season. The bulk of the offerings of cots have ruled decidedly lower than the week previous on account of the condition.

California peaches are not meeting with favor in the far Eastern markets on account of the heavy supplies of Georgias and other Southern stock. Shipments from Georgia are increasing daily and Georgia shippers find it necessary to extend their distribution to points farther West than they have been doing in the past.

Despite the increased shipment of plums from this State, the demand is in keeping with the supply and the prices ruling high, with practically little fluctuation.

Average for the week:

New York: Tartarian cherries $1.02, Bing $1.76, Royal Anne $1.28, Republican $1.43, Bigarreau $1.23, Oregon $1.17; Royal apricots $1.58, Newcastle 75c; Beauty plums $2.61, Formosa $2.84, Clyman $2.13, Climax $2.75, Apex $2.60; Triumph peaches 60c, Alexander 77c.

Boston: Tartarian cherries $1.30, Bigarreau $1.34, Bing $2.23, Oregon $1.69, Royal Anne $1.49, Republican $1.51; Beauty plums $2.44, Climax $2.22, Clyman $1.83, Formosa $2.45; Royal apricots $1.35.

Chicago: Bing cherries $1.95, Royal Anne $1.58; Tartarian $1.23, Bigarreau $1.58, Oregon $1.22, Republican $1.60; Royal apricots $1.52; Moorpark $1.30; Clyman plums $1.99, Beauty $2.33, Burbank $1.61, Santa Rosa $2.46, Shiro $2.05. Formosa $2.70; Alexander peaches 81c, Triumph 95c.

Shipments by cars from June 22 to 27, inclusive: 18 cherries, 143 cots, 89 peaches, 160 plums, 2 pears. Total to date, 1918, 884 cars; same date, 1917, 910 cars.

Special Livestock Market Report

San Francisco, July 3, 1918.

CATTLE—Good cattle are getting scarce in California. There has been a heavy shipment of the best stock East and many trainloads of feeders have gone to the Central West to be finished for the Eastern markets. Feed is so scarce that many more must go. There is little demand in California for feeders, as most cattlemen are scraping hard to locate enough feed to carry their breeding stock and young stuff. The fact that it is a crime to burn grain straw or bean straw or to use them for fertilizer may relieve the situation considerably. Meanwhile cattle arriving on California markets are not well finished.

Grass Steers—
No. 1, weighing 1000 to 1200 lbs.....12c
No. 1, weighing 1200 to 1400 lbs.12@12½c
Second quality .....10@11c
Thin .....8@9c
Cows and heifers—
No. 1 .....8½@8¾c
Second quality .....7½@8c
Common to thin .....4½@6c
Bulls and stags—
Good .....6@6½c
Fair .....5@5½c
Thin .....4@4½c
Calves—
Lightweight .....10@10¼c
Medium .....9@9¼c
Heavy .....7@8c

SHEEP—Good fat sheep are somewhat scarce. The heavy arrival of lambs has ceased and the supply will be short until Nevada and mountain lambs come.

Lambs—
Yearlings .....11½@12c
Milk .....14@14½c
Sheep—
Wethers .....11@11½c
Ewes .....9½@10c

HOGS—Hogs are not very plentiful and will not be for four to six weeks until stubble hogs come. The quality is not generally good, due to the desire of feeders to cut down on the quantity of high-priced feed required for a full finish. Condemnations for tuberculosis have been heavy.

Hogs—
Hard, grain-fed, 100@140.....16c
do, do, 140@300.....15½c
do, do, 300@400.....15½c

Los Angeles, July 2, 1918.

CATTLE—The past week was dull and uninteresting in this market. But few choice fed steers arriving and they were steady and in fair demand. Most of the offerings, however, were of the poor and medium class and they sold very slowly and prices weak.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs..$10.00@12.00
Prime cows and heifers..... 8.50@ 9.50
Good cows and heifers..... 8.00@ 8.50
Canners, per cwt..... 5.50@ 6.00
Calves, per cwt..... 8.50@ 9.50

SHEEP—Receipts continue light, yet enough coming in to supply the limited demand. Killers the past week paid steady prices for what few wethers and ewes were wanted, but lowered their bids on lambs a dollar a cwt. and were not anxious buyers at this decline.

Per cwt. f. o. b. Los Angeles:
Prime wethers .....$9.00@10.00
Prime ewes ..... 8.50@ 9.50
Yearlings ..... 9.50@10.50
Lambs .....12.50@13.50

HOGS—Receipts continue light and the market the past week showed no change. What few arriving being taken by killers at old prices for the fresh meat trade. No buying for curing purposes.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 275@300 lbs..$14.00@14.50
Mixed, 225@275 lbs..... 14.50@15.50
Light, 175@220 lbs..... 14.50@15.50

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

North Portland, July 1, 1918.

CATTLE—Receipts today 1650, which run in a general way from good to choice quality and are selling steady to strong at following quotations: Good to choice steers, $11.00@12.00; medium to good steers, $9.00@10.00; fair to medium steers, $8.00@9.00; common to fair steers, $5.00@8.00; choice cows and heifers, $8.50@9.00; fair to medium cows and heifers, $4.50@7.50; canners, $3.00@4.50; bulls, $6.00@8.00; calves, $8.50@11.50; stockers and feeders, $7.00@9.00.

HOGS—The hog market is showing considerable life today, all offerings selling readily at an advance in price of 10c to 15c over last week's prices. Receipts today, 1500 head. Quotations as follows: Prime mixed, $16.10@16.90; medium mixed, $16.50@16.70; rough heavies, $15.70@15.90; pigs, $15.50@16.00; bulk, $16.60@16.65.

SHEEP—Receipts today are not large. The market is holding steady at quotations. East of the mountain lambs, $13.00@13.50; valley lambs, $12.00@12.50; yearlings, $7.00@8.00; wethers, $7.00@7.50; ewes, $5.00@7.00.

MISCELLANEOUS.

REMANUFACTURED PIPE. All sizes standard pipe and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. **Weissbaum Pipe Works,** 160 Eleventh street, San Francisco.

CO-OPERATION (not operated for profit) reduces living expenses. Particulars and catalogue from Co-operative League, Commercial street, San Francisco.

TO REDUCE THE HIGH COST OF LIVING, send for our Wholesaler to Consumer Catalog. Smiths Cash Store, 106 Clay street, San Francisco.

PATENTS THAT PROTECT are procured through Pacific Coast Patent Agency. Savings and Loan Building, Stockton, California. Established fifty years.

ALL SIZES OF PIPE and screw casing, both new and second hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

FOR SALE.—2 canvas irrigating hose, 3c per ft.—700 feet, 100-ft. lengths, slightly used; first-class condition. Ogden Balton, Jr., Rt. 4, B. 447, Santa Rosa, Cal.

COUNTRY LANDS.

A FINE OPPORTUNITY.—I own an alfalfa and dairy property near Modesto, also some very fine Holstein cows that have been selected with great care. Owing to pressure of my large law practice I am unable to give the matter attention. In order to make a quick sale of the property and dispose of the land and cattle I will offer the land in full stand of alfalfa at $250 an acre in parcels to suit purchasers; 10 per cent cash, balance 3, 4, or 5 years; low rate of interest to bona fide purchasers who will go on the land. I will sell them the cows on the same basis and loan purchasers the necessary farming implements. Under these conditions a man can go right on the place and make a good living at once, be independent and make money and pay for the land out of the land. Address box 1170, Pacific Rural Press.

ATTENTION, POULTRYMEN — Modern (stocked) plant, small orchard, bungalow home; all conveniences; big income producer; $1,500 will handle. Will bear investigation. Write for particulars. George Ellison, Campbell, Cal.

BE PATRIOTIC—Raise stock on productice Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento.

WANTED TO HEAR FROM OWNER of good ranch for sale. State cash price, full description. D. F. Bush, Minneapolis, Minn.

GOVERNMENT LAND, Oregon, California. Booklet. Joseph Clark, Sacramento.

WANTED.

WANTED: TEACHERS AND CIVIL SERVANTS.—The Western Normal prepares you efficiently, saving two years time and money proportionately. Over 1,000 graduates now employed in California. Also prepares for Government positions. Initial salary $1,100 up. All our students passed the Spring Departmental examinations. Many now in Washington, D. C., at $1,200 per annum. Address: Western Normal, Stockton. Fall term opens August 26.

SUBSCRIPTION SOLICITORS—We wish to secure a good woman solicitor in every county in California. Salary paid. All or part of time may be given to work. Address Pacific Rural Press, 525 Market St., San Francisco.

WANTED—Man to take charge of purebred cattle; experience in fitting and showing desirable; steady position for right party. H. M. Barngrover, Santa Clara, Cal.

POSITION WANTED by capable farm manager or outside man; good organizer and successful in handling men; twelve years' experience in livestock and fruit, eight years' business experience; best of references; bond furnished for position of trust bringing good salary. Box 1140, Pacific Rural Press.

PRINTERS WANTED—Good ad. men and pressmen can secure paying jobs by addressing Box A, Pacific Rural Press.

WANTED—Position with grower of purebred hogs and cattle by young married man—exempt. Chance to advance imperative. Box 1150, Pacific Rural Press.

COMPETENT orchard and ranch foreman, married, wishes position. Understands cattle. Some tractor experience. Box 1150, Pacific Rural Press.

SEEDS, PLANTS AND TREES.

CAPRI FIGS, $1.50 PER 100; 500 to 1,000, $1.25 per 100; 1,000 or more, $10.00 per 1,000. Cash with order. Will last till July 15th or later. Tribble Bros., Elk Grove, Cal.

TO MAKE your garden grow, apply Morse's pulverized fertilizer and mulcher, $1.50 per barley sack. Write C. C. Morse & Co., Seedsmen, San Francisco.

CORN, SORGHUM, Sudan Grass, Mangel Beets and all other kinds of seeds; immediate delivery. C. C. Morse & Co., 727 Front street, San Francisco.

SUDAN SEED FOR SALE — First-class home-grown seed, 20c per pound in 100-pound lots f. o. b. San Joaquin. San Joaquin Valley Farm Lands Company, San Joaquin, Cal.

Even Your Wife Knows-

That good overalls are the most economical work-garment you can buy.

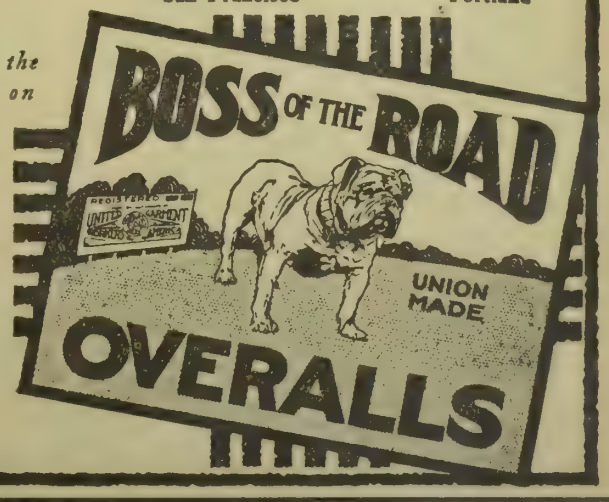
For work-comfort and clothes-economy you can't beat Boss of the Road Overalls. They meet the tug and strain of everyday wear.

As good as the toughest indigo blue denim, and the best union workmanship, can make them. Double-stitched seams; hold-fast, patent buttons; reinforced strain points.

That's why it is *always* economy to buy Boss of the Road Overalls—*a Neustadter product.*

NEUSTADTER BROS.
San Francisco Portland

Look for the Bull Dog on the label. It is your protection. Never has this trade mark meant so much to you as it does today.



ALFALFA LAND for DAIRYING

Bringing the Farm to the Railroad

Since the coming of the motor car, the remote farm is no longer remote. Distance has been conquered. Miles have been shortened. Minutes have taken the place of hours spent in transportation.

In this transformation, the most important advantage to the farmer is in being brought next door to the railroad.

Milk and other perishable products can be marketed quickly. Needed supplies are more available. The farmer is in direct touch with the world.

Using his car largely for business, the modern farmer treats his car as a business proposition. Equipment is purchased with extreme care and judgment. Values are studied. Mileage records are kept carefully.

That is why the sales of United States Tires are increasing so fast in prosperous farming communities. They have demonstrated not only long-mileage qualities but greater reliability. They make your car more useful. They give a bigger return on your investment.

United States Tires are Good Tires

Wherever you live or whatever car you drive, there is a United States Tire built especially to fit your conditions. You have a variety of treads and types from which to choose but the quality and values are always United States standards.

Any United States Sales and Service Depot will cheerfully aid you.

For passenger cars—'Usco', 'Chain', 'Royal Cord', 'Nobby' and 'Plain'. Also Tires for Motor Trucks, Motorcycles, Bicycles and Airplanes.

United States Tubes and Tire Accessories Have All the Sterling Worth and Wear that Make United States Tires Supreme.

'Usco' 'Chain'

California Pear: Great Fruit with Problems

Twenty-seventh of the Editor's series of historical and analytical sketches of California farming

IT WAS THE PEAR which constituted the connecting link between the sanctified pomology at the California Missions and the commercial pomology of the American Occupation. And there were at least two reasons for this:

First, the pear was the best of the deciduous tree fruits which the padres had at the time of their greatest prosperity a century ago, and the pear trees were those which survived neglect and came through in best shape with fruit to refresh the American trappers and traders who preceded the gold discovery and the argonauts who followed it.

Second, though there were oranges at the missions, the American pioneers had never seen oranges on trees before, and though there were plenty of grapes they had never seen grapes growing on bushes and of such strange forms, colors and flavors! But the pear trees they recognized at first sight and hailed as old friends.

—ancient pear trees that with springtime burst into such breadth of bloom!

And later on they climbed into these old trees, gathered the fruit to sell for as many dollars per pound as they had for cents in their old homes; brought scions from the old home trees of better varieties to graft into them and were convinced that the gold country was a fruit country like that of their boyhoods—but in every way more abundant.

Glimpse at a row of young bearing Bartletts in a Sacramento Valley orchard—showing need of a good pruner next winter.

The Pioneers and Their Pears.

But to the pioneers the pear was greatest in its symbolism. What they found in the wrecks of the old missions taught them not so much to plant pears as to discern California's adaptation to other deciduous fruits of greater charm or serviceability. In 1856 there were growing, as compared with pears, ten times as many apples, king of deciduous fruits, and twenty times as many peaches, queen thereof—and it is interesting to note that though during the sixty-odd years since that time the pear has gained notably in ratio it has never excelled, for we have still about one-third more apple than pear trees and three times as many peach trees.

And in pioneer days pears were chief exponents of size in California deciduous fruits. Seckels grew so large, under favorable soil and moisture conditions, that even growers doubted their truth to name. Many notable weights and measurements of pears are in the early records. One which was set forth with much glee by Californians and was received with incredulity at the East was that of a Sacramento Bartlett pear which measured 13¼ inches in girth and weighed 27 ounces. Incredulity was met by the publication in the California Culturist of December, 1858, of a life-size outline of the fruit.

But probably even more astonishing was a pound pear sent to an Eastern fruit show in 1871, which was officially reported to weigh four pounds and nine ounces and of which a life size portrait was with difficulty squeezed into the first page space of the Pacific Rural Press of November 8, 1873.

Two things were characteristic of pioneer pear growing, viz.: thirst for large collections of varieties and passion for dwarf trees—both of which have been quenched by experience, though possibly capable of revival in some degree. In 1858 B. S. Fox of San Jose, a nurseryman who gave much attention to pears and won Wilder medals for his seedlings, was regularly propagating for sale 110 varieties, while our largest California nurseries of the present day do not list more than one-quarter as many and probably do not largely propagate more than a quarter of their list. In the Santa Clara Valley were situated the largest and the greatest number of nurseries, while wide-variety planting was the policy, and that may be one of the reasons why that valley now commercially grows more varieties of pears than any other section of the State.

While California was beginning with fruit growing there prevailed in New England and the Middle States a passion for growing dwarf pears, and pioneers from those regions brought it to California with them; but it soon burned out and wide-distance planting for standard trees became practically universal. Recently interest has reawakened in dwarf pear trees, largely based upon the commercial success and endurance of the A. Block pioneer orchard at Santa Clara and the demonstration in a thirteen-year-old orchard of the Swetts in Alhambra Valley, Contra Costa county. On the basis of this experience, Frank T. Swett, horticultural commissioner of his county, favors planting trees on quince roots 14 feet apart on the grounds of earlier bearing, lower trees to facilitate all orchard operations, and resistance of the quince root to root aphis, though it is not immune to blight and oak-root fungus. It is likely that dwarf pears will receive more attention henceforth than they have for the last half century. But it must be remembered that the Bartlett, which we chiefly desire to grow, should not be worked directly on the quince root. The Beurre Hardy has proved a good connecting link between them.

The Ascendancy of the Bartlett.

But though we may thus, in some measure, return to the pioneers' ideal of dwarf trees, it is probable indication that Californians will always think there is just one pear—just as most men (in their youth, perhaps) think there is just one peach. And the Bartlett is that pear. In his recently published monograph on "Pear Culture in California," in which Deputy State Horticultural Commissioner G. P. Weldon has made a distinctly valuable contribution to our pomological literature, it is calculated that "probably between 80 and 90 per cent of all the pear

(Continued on page 30.)

EDITORIALS

FARMERS AND POLITICS.

TO THE EDITOR: While I often differ with your politics, I still like to read your editorials, for two reasons, viz.: you have not lost your sense of humor under present extraordinary conditions, and, further, you have the faculty for expressing your views without unnecessarily offending the other party—which is a gift of God!

One of your principal contentious seems to be that farmers should not enter politics as a class but only organize industrially. In my judgment this will not be enough. Where will we be when peace comes, with our abnormal war markets gone and unorganized farmers at the mercy of vote-controlled officials?—K. S. Harlow, Imperial.

Bless your sweet heart: where did you get the idea that we were advocating organization of farmers with no political objective? If many readers have been thus blinded by the camouflage on the forces we have been trying to rally for the very drive which you indicate, we have certainly ring-streaked and spotted those forces too much. Let us say plainly again, what we have declared before, that agricultural mastery in politics, to the extent of its own protective needs and to safeguard the whole country against the destruction which anarchistic organization now threatens, is exactly what we are aiming at. In this country the only way to kill bad votes is to smother them with good votes, and that is why we prescribed the bolster for the bolsheviki.

* * *

FROM INDUSTRY TO POLITICS.

IN OUR judgment the only efficient and durable basis for political action by agriculture, for itself and for the country, is industrial organization, which gives agriculture power and solidarity through its mastery of its own interests in production and in trade. Organization of farmers as a class is not only vague and vain, but it is at enmity with principles of our State constitution, which prohibits class legislation. Organization of an honorable industry to insure its prosperity is to lay foundation stones for all prosperity because it supports the proper correlation of all beneficent industries—which is the ideal of national strength through attainment of individual rights and rewards for work. Clear sight and devotion to resolute pursuit of this ideal are starting points from agriculture to political action.

It is our notion that the reason why numerous efforts on the part of farmers have always failed to command political influence and power is to be found in the fact that such efforts have proceeded from claims of class martyrdom and not from demonstration of business rights and privileges, such as broad and powerful industrial organization is able to enforce upon national attention and to secure by political action. Recall a few of the efforts at class organization of farmers during the last half century. The Grange began with a loud cry of martyrdom of farmers. It made a strong effort to right wrongs and it accomplished several great things; but its constitution prohibited political action and most of its once great membership fell away because they thought it did not get anywhere. The Farmers' Alliance went to the other extreme. It exalted politics and sought the curing of class-martyrdom through commercial ventures which failed of proper support in industrial organization. Next came the Populist movement, which was class politics with neither the social force which the Grange had and without the commercial force which the Farmers' Alliance tried to get. It held that getting offices, even on the basis of economic fallacies, would lift farmers to their proper place in the national scheme of things. Its chief attainments were the sending of a sockless Senator to Washington and the political bedevilment of William J. Bryan. And there are many other movements which have aimed to organize farmers as a class which have accomplished no more than those cited, and, in our opinion, such efforts never will achieve more.

* * *

WHY FARMING-CLASS ORGANIZATIONS FAIL.

WE HAVE two reasons: first, there really is no "farming class" in the sense that there are some other "classes" in our population. There are farmers in all the so-called "classes"—whether you segregate people into classes by standards of ancestry, literacy, wealth, religion, morals, or by any other thing in which people may resemble each other or differ. A conception of a "farming class" is therefore a dream, because there are no ruling characters or characteristics which qualify for membership in such a class. This explains why all efforts to solidify a "farming class" have never achieved anything more than local, limited and temporary success.

The second reason why such efforts at organization, even when they at first do rally large numbers of farmers for a class-drive, seldom reach any notable objective, is because there flock to their banners all the socialistic and economic visionaries, all the doctors with sure-cure recipes for public evils, all the get-rich-quick financial theorists and all the lame-duck seekers for public office. And when the really understanding and level-headed people who may cross the gang plank at first see with what a crew they have shipped they jump overboard and the cranks and the candidates soon run the craft on the rocks.

* * *

WHAT WILL GO IN POLITICS.

MUSING on such marine disasters for some years has brought us to the conclusion, which we have been very freely announcing of late, that a class organization of farmers as such to secure the ends which all the dreamers hold to be good for farmers will never get anywhere in national politics and will never get far in anything, but that organizations for the promotion and protection of the business of farming can do more and get farther than any "class" organization can—and of course we realize and urge that it must do much of it in politics. And when men and women who have their livelihoods in farming realize it, too, they will come from all "classes of society" to joint efforts to do what those livelihoods and properties require to be done. It may be to buy and sell, to get and regulate labor and wages, to secure capital and interest rates, to place and determine taxes or a dozen other things which the business of farming requires to be done for its very existence and for the future feeding of the world. When such things need to be done farmers will come together in the product-groups possessing the same specific needs and knowledge, and will do things needed there. When things arise which reach beyond the group and are vital to all farming business, a convention of delegates from all groups will deliberate and act. A farming assembly will not be then, as it is apt to be now, a group of shame-faced farmers with their backs to a wall in front of a firing-squad of office-holders and office-seekers—all eager to plug them to gain the favor of voters of adverse interests and policies!

It is our conviction that the most inane and useless thing that can now be undertaken is to try to isolate farmers as a class—not only because it is vain, for the reasons already stated, but because the times demand exactly the opposite action. It is not alone necessary that farmers should come together from all the "classes" to which they belong for joint action on the business of farming. It is just as necessary that they go back to their places in all the "classes" and take back with them the agricultural point of view on all public questions and work not to get all the "farmers' votes," which they never can get, but to get recognition for the real needs of farming from our whole American citizenship. We have surely had enough of efforts to herd farmers, by themselves like cattle, upon a political pasturage of social and economic fallacies thickly set with the thistles of anarchy! We need efforts to get farmers into all kinds of politics which are decent and of good repute and for the welfare of the country.

And so you must see, our Imperial friend, that we are for industrial organization with politics!

* * *

READY-MADE FARMS ACTIVE.

WE USE the language of the market to indicate that an agricultural commodity which the State of California is offering is in brisk demand. And that commodity is farms ready for cropping—not farms which are made ready while cropping waits for the settler to chop a little, scrape a little, build a little, and get weary and discouraged and in debt to the storekeeper and finally gets off the land wiser and poorer: in four cases out of five, as the records of unaided and misdirected colonization enterprises indicate. Our readers already know from our frequent allusions to the subject that the California Legislature of 1917 passed a law providing for putting on the market, not raw land, but farms ready for cropping, with plenty of time to pay for them, as a demonstration that that is the right way to cater to settlers who have farming ability, character and about as much money as old-time subdividers take from their settlers and pay over to their selling agents for the camouflage which they paint on the projects. And the State put this new line of State business in the hands of the State Land Settlement Board, of which Dr. Ellwood Mead is director. And now we say that this business is brisk. Practically all the ready-made farms in the Durham project are taken and that covers 6500 acres of the 10,000 which the State authorized to be used in such a demonstration as it desired to make, and now comes a land owner in the San Joaquin Valley and offers the board land enough to fill the 10,000 acres which it is authorized to handle; offers also money enough to turn this open land into farms ready for cropping—water on the land, buildings on the land, work stock in the stable and tools in the shed, and everything else ready to put in a crop this coming winter to help beat the kaiser and pay the settler for bringing it through. And the owner of this land does not require the State to buy it: he will simply chuck it in with the money to get it ready and take his repayment as the settlers turn it in, according to the terms of repayment which the law of 1917 provides. Of course, we shall have more about this new aspect of State land settlement just as soon as the censor takes his foot off the details of it. At the moment all we can say is that the action is now in progress somewhere in the San Joaquin.

* * *

THE ROAR OF THE BIG GUNS.

THAT California is doing something new, not only to get the right kind of busy men on the idle lands, but to make it possible for them to stay on the land, is clear enough from the racket which the big Eastern publications are making over our land settlement activities. The swell farm journals of the Atlantic side are covering their pages with proclamations and pictures of cutting up California's oak-shaded plains into ready-made farms, with made-to-order farm cottages and outbuildings nestling under the oaks, and their praise of the desirability of such fractions of paradise is as picturesque as their art work. And the publications claiming to do higher-up farming are not the only ones which are going to this new way of making more farms and farmers like a hop-toad to a June bug. All the high literary, economic, socialistic and publicistic publications are trying to beat them to it. It looks as though California would have to fit up such ready-made farms by the thousands to meet the demand which such free advertising will create. We surely never had such a fine line of attractive, humanistic advertising before, and it is development advertising which we could not get by paying for it, even if we offered never so much hard cash. California is getting on the heart and firing the imagination of the American people

as never before, and this means that American heart-throbs and humanistic visions will make the world wonder and pursue. The result will be that the California plans and achievements for safe farm homes in the glorious sunset land of the world's safest democracy will kindle fires of desire in all the trenches, dug-outs and billets of the allied fronts—for all accounts agree that the chief talk of the brave defenders of humanity is of the victorious end of the war and "where do we go from here?" And when they read of California's plans for their home-making in a land free from the weather-stress and distress of northern Europe and find the choicest foods of their mess tables bearing California labels and discern that proclamations and products support each other, it is not difficult to foresee that if business in our ready-made farms is now brisk it is really no circumstance to that which will come when great liners begin sailing direct from all European ports to San Francisco via Panama. And all who live to see that day, which we believe is not far distant, will also see a new birth for California!

LIGHT-BOMBS IN OUR OWN SKY!

BUT NEARER than the effects which we have thus anticipated and important as preparatory to the realization of such anticipations is the effect produced in California by the widely known fact that business is now brisk in farms ready for productive occupancy. There probably never has been a piece of development legislation which has acted so quickly and beneficently as has the land settlement policy which California adopted in 1917. Before the board then created can make its first biennial report, the practical operation of its plan and public endorsement of it have come. Of course we know that it will take a decade perhaps to figure results in a scientific, economical way, but the public is sure enough already to be deeply moved and to enter upon pursuit of the same plan and operation by private and collective enterprise. The announcement is now made by W. B. Wellman of this city that the State Development Board (after getting into wide operation the Stanislaus plan of short loans to producers, described on page 670 of our issue of May 25) may undertake to apply the Stanislaus plan to land settlement. Mr. Wellman writes:

There may be attempted the creation of county land settlement enterprises modeled after the State land settlement project at Durham, to be financed and administered in a manner similar to the Stanislaus plan. Land settlements by a county unit plan would accomplish important results, among which are the more rapid increase in food production and the providing of desirable farms for returning soldiers on favorable terms of payment, with the added provision of helpful suggestion and practical advice.

The suggestion certainly opens a delightful vista of local interest and helpfulness in building up the counties by community funds and credit employed in turning idle lands into well-equipped farms. And this is doubly important because engendering such an attitude toward developing new farming is likely to improve the community attitude toward those who have previously developed farms by their own service and sacrifice and have hitherto been awarded more taxes than thanks. In a way the State land settlement demonstration is designed to show that general prosperity results from a community standing in with the farmer, and the more demonstrations we have of that fact the better.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Growing Alfalfa Seed.

To the Editor: I have a variety of alfalfa from which I would like to grow a seed crop. How shall I proceed? How separate the seed from the straw? What length of time is required to grow a crop for seed? My fourth crop is almost ready for cutting. I am of the opinion that the seed should be grown from the last crop of the season. I generally cut a crop on the 9th of each month.—G. E. S., Lodi.

Waiting to make seed from the last cutting is as a rule altogether too risky in the line of rain or frost and the growth is apt to lack vigor from other causes perhaps. There may be places where few cuttings are made or where autumn months are sure to have the requisite heat and drouth that the last growth of the season might make seed, but it is usual to make one or two cuttings to clean the stand and take seed from the second or third growth. Harvesting seed in August is a good schedule and as it takes as a rule a month to get the seed after blooming and about three weeks to get the next bloom after cutting, the growth for seed should start in May or June. The crop should be cut when about three-quarters of the pods have become brown and the plant cut with a mower with a swath-laying attachment or a self-raking reaper, gathered into windrows and well cured in shocks. It can be threshed with a grain separator with concaves close down and special alfalfa screens, or, better still, with a regular alfalfa huller designed for such work.

Pear Mite Knocked: Slug Comes On!

To the Editor: I sent you samples of infected Bartlett pear leaves some time ago and you told me it was "blister mite" and advised me to dust them with sulphur. This spring it reappeared and I sprayed with the "Peerless." It appeared to be effective: very few leaves had any spots on them, and those had become marked before we sprayed, as they were the first ones to put out, and I waited till all the leaves had appeared. The trees presented a fine, healthful appearance, until a few weeks since, when many of the leaves began to turn brown, and now there are so many of them that I have become alarmed and would like to know the cause and the remedy. I send some of the affected leaves. I notice some gummy insect on some of them and suspect that it is the cause.—C. H., Honcut.

Your trouble is the pear slug—the slimy caterpillar which you have caught at his work on the leaves. The treatment is a spray with lead arsenate—the same as used for the codlin moth, applied as soon as you see the first work of the slugs on the leaves. It can also be checked by a dust spray applied very plentifully so as to cover the leaves well. Adobe road dust can be used on a few trees by simply throwing or blowing it upon the leaves. It sticks to the slug and he falls off. Probably a plentiful dust spray with lime-hydrate or with kaolin would act in the same way. The slugs now at work will not work much longer, but another brood may appear later in the year. The same pest hits the cherry. Always hit back when you see the first injury.

French and Robe Prunes.

To the Editor: I have ten acres of French prunes; half were two years old and half one year old last winter. I intend to have the one-year-old trees budded over to Robe de Sergeant, as I have been told they bear just as well as the French, have a larger fruit and ripen from two to three weeks earlier, which would distribute the work of harvesting over a longer period. But a friend urges me not to do this, but leave them all in French. He says I will set the trees back at least one year and very likely two years and are very apt to get the young shoots from the buds burned by the hot sun and run a chance of losing them altogether. I have about five acres of open land which I intend to plant out also in prunes when the older ones get to bearing.—P. D., Tudor.

Well-grown Robes are apt to be larger than French and to sell better, but we should count them only one to two weeks earlier than French and not two to three weeks. They are usually less productive than the French. Your friend does not exaggerate the dangers and vexations of budding over in the orchard and the difficulty of getting a good stand and uniformity in the worked-over trees. If we had good French trees in second year we would not monkey with them. Meantime look into the behavior of Robes in your region more carefully and plant your remaining acreage with them if you finally find their record good.

Alfalfa Under an Umbrella.

To the Editor: I have a small stream running through my place, which dries up about the first of August. Should I sow some alfalfa and water it up to August 1? Would it hold over until the first rains, which usually come in October? I only wish to put out about one-fourth or one-half acre for green feed for chickens and thought perhaps that, should I cover it with straw after my water played out, it would help to conserve the moisture and keep it from burning out the first year. I am told that I would have no trouble after the first year. Is this a fact?—S. E., Ukiah.

If you wet the land now down to the bottom, then dig or plow, rake and sow and put on a light covering of straw right away for partial shade, you ought to get a good stand. There would be nothing gained by any further irrigation up to August 1, unless you were rigged for sprinkling over the straw. To flood the young seedlings would probably do more harm than good by baking the soil, and to put on straw after doing that would do less good than by covering from the start. The soil ought to take water enough now to keep moisture coming up for a month, and with the partial shade the plants will hold on for the early rains in your part of the State. If you get a stand, the plant will go on after the first year with whatever water you can give it or with none—if the gophers do not eat it all up.

HAS YOUR SUBSCRIPTION EXPIRED?

(7-13-18)

The yellow label will tell you.

COMPARISONS ARE ODIOUS, BUT—

"As a new subscriber, of several farm papers I take, yours is by far the best." L. D. Miller, Tuolumne.

"Am getting three agricultural magazines, but yours has given me the most information." Mrs. F. E. Kley, Sebastopol.

"I consider it indispensable to me in my ranch operations." Geo. B. Pearce, Aetna Springs.

"Consider your paper one of the most helpful on the market for farmers." H. V. Dwyer, Westley.

We take this opportunity of thanking the many subscribers who write similar appreciative letters, and to assure them that nothing will be overlooked to increase the usefulness of the Press to the California farmer.

A check, a money order, a dollar bill or postage stamps will keep it coming

BEST. MOST INFORMATION. INDISPENSABLE. MOST HELPFUL.

Elizabeth McHugh, Subscription Clerk.

Did Feterita Do It?

To the Editor: Is feterita poisonous to cattle at any stage of its growth? My milch cow ate about a dozen bites of it and in fifteen minutes was dead. She seemed stiff in the hind legs, bloated some, chewed her tongue. I can not find any weeds that are poisonous where she was. How about "gyp" corn and wheat—they are of the same family as feterita?—F. M., Santa Margarita.

We cannot be sure that feterita did it, but it is well established that feterita and other sorghums can do it, and when they do they are very quick about it, for the poison is hydrocyanic acid. It may be present in the very rank growth, either first growth or second growth, after cutting, and it disappears from such growth when cut and wilted or partially dried. If your observation is correct as to amount eaten, your cow must have been very hungry and took very large bites. Green sorghum should always be tried after the cows are well filled with something else. Though it is always well to be careful, it is fortunate that fatal feeding on sorghum is rather rare.

Distances and Crops of Mission Figs.

To the Editor: How far apart should Mission figs be planted on good soil? How long before they bear a paying crop? About what is the average crop produced per acre for bearing trees?—H. J., Winters.

Mission figs are very free growing trees and should finally have all the space they can get with planting at 40 feet each way—with fillers between, to be taken out before crowding interferes with growth. Figs begin to bear early, but do not get to full crops until ten or twelve years old, when two or three tons per acre is a reasonable expectation.

Cutting Sudan for Hay.

To the Editor: When is the proper time to cut sudan grass to be used as horse feed?—A. S., Denair.

We presume you mean when to cut for hay. Cut when in full bloom, not before. It may be cut somewhat later without losing nutriment, for the leaves remain green longer than what are known as "hay grasses" do, but late cutting is coarser and less attractive in flavor.

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., July 9, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm

Don't Let Tuberculosis Get Your Hogs

Written for Pacific Rural Press by R. H. Whitten, Los Angeles

I ONCE had an Irishman working for me who told about having the grip the previous winter. To draw him out I asked: "What is the grip, Pat?"

"The grip," he replied. "Don't you know what the grip is? Why, it's a disease that makes you sick for six months after you get well."

I thought of this incident as I listened to the different addresses and discussions at the recent annual meeting of the Swine Breeders' Association, and I was convinced that unless a good many California hog raisers take immediate steps to stamp tuberculosis out of their herds the disease will make them sick for about six months after they market their hogs—sick because of the loss from condemnation which they will have to stand.

DEMONSTRATION AN EYE-OPENER.

Tuberculosis of hogs received more consideration than any other subject; in fact, one would almost think that the meeting had been called to consider this matter, for while there was a varied program, almost every speaker said something about tuberculosis before he finished. And to cap the climax Dr. F. M. Hayes gave a demonstration that was an eye-opener. By special permission from the United States Bureau of Animal Industry he secured the first and only condemned carcass that has even been sent out from a San Francisco packing house. And when he had finished his work with that diseased carcass he didn't need to add anything to convince us that the disease really exists and that we have a serious problem to solve.

A prominent breeder who sat near me noticed on the program the subject for the professor's talk, and whispered to me that he thought this condemnation business was all bosh. He didn't think there was any such thing as tuberculosis of hogs, and he felt that the packers who reported condemnations were simply skinning the poor hog raisers. But after Dr. Hayes had finished his demonstration, this same breeder gave me a nudge and said: "I'll take it all back. That carcass was enough to convince a wooden Indian. Awful serious matter, isn't it? We must awaken the masses of hog raisers to its real importance and to its effect upon them individually if they don't get busy."

CONDEMNATION RULING SERIOUS.

Yes, it is an awful serious matter—the most important problem that we have to solve. The relative prices of grain and pork, co-operative selling organizations, and all such matters dwindle into insignificance as compared with the way the new condemnation ruling is going to hit thousands of hog raisers very soon.

Too many of us are like the snake that two men killed. They pounded the head to a pulp, but the tail continued to wiggle. "Isn't he dead?" gasped one of the men. "Yes, he's dead all right," answered his companion, 'but he ain't conscious of it." Many of us are going to be hit mighty hard when this new condemnation method is put into operation, but we are not conscious of it. We keep right on feeding our hogs unpasteurized milk and taking no steps to check or overcome the disease in our herds—taking no thought for the future.

But if we don't want to lose heavily we must rouse ourselves from this lethargy. We must realize the seriousness of the situation, particularly as it will affect us, and we must take the necessary steps to make the future secure. So let us see what this new condemnation method is, and then find out how tuberculosis gets into a herd of hogs, and what steps must be taken to stamp it out.

CONDEMNATIONS CHARGED BACK TO SHIPPERS.

Last winter, when J. P. Cotton, head of the Livestock Department of the Food Administration, was out here, he endeavored to get all of the packers to agree to a minimum price on hogs that would be one cent under the Chicago minimum. The packers complained that condemnations were running high, and objected to signing the agreement unless condemnations could be charged back to the shippers, so the agreement was finally made on that basis.

This worked out all right in handling carload lots from individual shippers, but very few farmers in this State raise hogs on a large enough scale to market a carload at a time. The bulk of the hogs come from the little fellows who have six or twelve or twenty to market at a time. These farmers had been selling to local buyers, and as the buyers had to stand the risk of loss from condemnation they were obliged to work on a broader margin, which resulted in lower prices to the farmers. Naturally this brought forth a big howl.

HOW THE FARM BUREAU AUCTION WORKED.

At about the same time the plan of marketing through Farm Bureau auction sales developed momentum, but here again trouble was experienced. After one sale the County Adviser was charged back over $200 by the packers to cover condemnations. He paid the amount out of the general fund of the swine department, but naturally many of the consignors of stock objected to this. They believed that their herds were free from tuberculosis, and they did not feel that they should be made to stand any part of the loss occasioned by disease in other breeders' herds.

The matter was taken up with the Federal Livestock Commission and it was decided that the only satisfactory way would be a system whereby the condemnation on a particular hog would be charged back to the consignor of that hog.

So for several weeks the members of the Livestock Commission have been working with the packers and the Government inspectors, trying to devise a satisfactory method of identification. The hogs are not inspected until after they are scraped, and as the scrapers handle hogs pretty roughly, especially the ears, it has been difficult to devise a satisfactory way of identifying the animals after being condemned. Tattooing, branding on different parts of the body, ear notching, ear tagging—many methods are being tried out. And as soon as a satisfactory method is found the farmer who markets a tubercular hog—no matter whether he ships it direct to the packer, sells to a local buyer, or consigns to a Farm Bureau sale—that farmer alone is going to be made to stand the loss.

PENALIZE THE FARMER WHO GREW THE HOG.

As Prof. True of the Livestock Commission puts it, "The penalty for a diseased carcass will be placed upon the man who grew the hog—where it rightfully belongs."

Perhaps you feel that this won't hit you, but don't be too sure about it. The annual loss in the United States from tuberculosis is $25,000,000. Of 40,000,000 hogs slaughtered in 1917 under Federal inspection, 3,974,000 were affected with tuberculosis — almost 10 per cent. Coming nearer home, from 15 to 25 per cent of the entire kill of hogs at San Francisco is tuberculous, and at Los Angeles during the first four months of the year, out of 63,482 hogs killed, 4253 were affected with tuberculosis.

This does not mean that all of these animals were condemned. During 1917 the condemnation at San Francisco was 3.14 per cent. During the first four months of 1918 it jumped to 4.68 per cent, and the condition is getting worse all the time.

DAIRY DISTRICTS MOST PROLIFIC OF DISEASED HOGS.

This is particularly true in dairy districts, where hogs are fed unpasteurized skim milk from untested cows or unpasteurized buttermilk from creameries. Government records show that during one year only 2.4 per cent of the hogs slaughtered at Fort Worth were tuberculous, most of these having been fed on alfalfa and corn, without milk. During the same year 25.1 per cent of the hogs slaughtered in one of the cities of a leading dairy State were found tuberculous.

To show how easily hogs contract tuberculosis when fed on skim milk from tuberculous cows, a lot was given such milk for only three days, and the post-mortem examination held 107 days later showed that 83.3 per cent of the hogs had become tuberculous. When hogs received such milk for thirty days and were allowed to live fifty days longer, 100 per cent of the animals had developed generalized tuberculosis.

SOURCES OF INFECTION.

At the Swine Breeders' meeting Dr. Hayes gave seven sources of infection, in order of their importance, as follows:

1. Milk from tuberculous cows.

2. Manure from tuberculous cattle. It is a common practice to allow hogs to follow cattle about the feed lot, where they work over the manure and feed upon whatever portions of food have passed through the cattle undigested. In healthy herds this method may be commended because of the economy, but where there are tuberculous cows the danger of infection is great.

3. Slaughter house offal. It is very unwise to buy carcasses of animals that have died from unknown causes, or unedible parts of slaughtered animals, and feed them uncooked to hogs. This, however, does not apply to tankage, which is cooked and therefore sterile. It is an excellent—in fact, a necessary—substitute for skim milk.

4. Uncooked garbage. Records show that hogs fed upon uncooked garbage contract disease far more frequently than those fed upon cooked garbage. From a sanitary standpoint there is no objection to the feeding of garbage to hogs, provided it is thoroughly cooked and is

(Continued on page 41.)

Grape Stem Mildew Banned

[Written for Pacific Rural Press.]

Stem mildew was the chief trouble discussed at a grape standardization meeting held at Merced, June 27, on call of State Horticultural Commissioner G. H. Hecke, as reported by O. W. Newman, who acted as secretary. Forty-two delegates, including twelve county horticultural commissioners, attended the meeting, whose principal purpose was to standardize the inspection, testing, and requirements for shipping grapes from the various counties. Everybody agreed on the basis of two seasons' experience that no grape mildew on the berries should be shipped. But on stem mildew, which Deputy State Horticultural Commissioner Geo. P. Weldon said was believed to be the same fungus in a different stage, varying opinions were expressed. Tulare packers said that no grapes should be shipped with mildew on the stems. Fresno packers had reported to Fresno Horticultural Commissioner F. P. Rouillard that stem mildew did not affect grape berries before they were sold in New York. C. B. Bills of the Pioneer Fruit Co. said that berries dropped from bunches at New York due to mildew on the stems when they left California. His company had allowed it, but would eventually discontinue the practice and he favored universal condemnation of such. F. J. Johnson of Fresno had sent test shipments of Malagas east and the stem-mildewed ones brought higher prices than the rest of the lot. L. G. Haight of Fresno had a similar experience in 1915.

It developed that late grapes are very little affected; and Sacramento Deputy Horticultural Commissioner F. C. Brosius said stem mildew did not affect Tokays much in his territory. San Joaquin Horticultural Commissioner H. H. Ladd said he did not condemn grapes for mildew. But infected Tokays were claimed by Geo. W. Ashley to drop badly, while Emperors and Cornichons held all right. Mr. Bills agreed. The final sense of the meeting was that all grapes except Emperors and Cornichons should be practically free from stem mildew when packed, and that in no case should infection exceed three per cent.

FRUIT PROPAGATORS, ATTENTION!

Under the State law, "any person who ships, sells, or handles nursery stock, trees, plants, shrubs, or vines for planting or propagation purposes within this State shall register with the State Commissioner of Horticulture, who shall issue to each applicant a special license number, and all shipments by such licensee shall have his license number affixed to the package." Rubber stamps are this season provided by the State Commissioner of Horticulture, Sacramento, for the license numbers. All licensees are requested to state the nature of their operations. A directory will then be made of great value to all interested. Registration is now in progress.

NITRATE OF SODA FOR SICKLY PLANTS.

Nitrate of soda in its commercial form resembles coarse salt in appearance. It contains about 15½ per cent of nitrogen in the nitrate form in which plants take it up when dissolved in soil water. Excessive quantities are injurious, but 100 to 400 pounds per acre, evenly broadcasted and harrowed in just before an irrigation or evenly distributed in numerous furrows containing standing water, shows almost immediate improvement in growth of sickly plants.

California Pear: Fruit With Problems

(Continued from first page.)

trees in California are Bartletts." We incline to the higher figure. We do not know just when the leadership of the Bartlett was first conceded. It was only mentioned with others as worth planting during the '60s and '70s. The records of overland shipments early in the latter decade do not distinguish it as more desirable than others, but about 1880 the Bartlett began to be recognized as supreme in sales in Eastern markets in the choice of the California canners and as superior in the early efforts at sun-drying after sulphuring. These facts, coupled with its long season through difference in ripening dates in different districts, constituted the Bartlett the kaiser of California pears.

CALIFORNIA PEAR PROBLEMS.

No fruit commercially great in California has been carried through greater difficulties than the pear—though perhaps other fruits have met as many and as bad menaces—save one. Scale insects, slugs, codlin moth, scab, aphis, mite, thrips and others have been shown to be amenable to control and are, by all diligent growers, kept under it. But no fruit has an enemy so relentless as the "pear blight." The apple, quince and loquet share in its ravages, but are usually less strongly hit. This blight is worse than others of similar bacterial character because it virulently attacks twig, branch, trunk and roots and can kill the tree outright and not merely destroy some of the smaller growth and the fruit of it. And there has been thus far demonstrated no escape from the pest except by eternal vigilance and unremitting surgery—although good progress is being made toward protection of trunk and root by putting immune wood in those parts. Immune varieties which would make the whole tree resistant are at present out of the question because there is no sign that any of them can produce a fruit which may be substituted for the Bartlett in the uses we make of it. Therefore, to keep the blight out of the trunk and root and to everlastingly fight it in the top of the tree is at present our best pear program. Hard as is this task and great as is the cost of it, there is wide confidence among California planters that they can successfully defend their blighty Bartletts and the recent increase in acreage of new plantings has been large. Mr. Weldon shows that California, Washington and Oregon are the only States of the Union in which the pear industry is on the increase, and therefore in the Eastern pear markets Pacific Coast pears have an expanding opportunity.

COMMERCIAL PROBLEMS OF PEAR GROWING.

Although the California pear and its products have a total value only about one-fifth of that of the grape, the orange and the peach, one-fourth that of the prune and only about the same as that of the apple, apricot and lemon (each fruit valued by itself in all cases), this State is ranked first in the Union in the commercial production of pears. The 1917 pear crop, the largest ever produced in this State, is estimated to have been 90,000 tons, used in the following ways:

For Eastern shipment, 57,500 tons green;

For canning, 25,000 tons green;

For drying, 7,500 tons green.

The figures are not to be taken as exact, but relative, and they show that the issue in selling pears lies between selling to the canners and to the Eastern shippers and that drying is a safety-clutch—except in Lake county, where, because of distance from rails, an independent reputation has been achieved for a primary product of dried pears.

Last year Eastern shipment was 4798 carloads as compared with 3701 carloads in 1916, and the increase of a thousand carloads was largely due to the attitude of the canners, who painted a mournful camouflage of sans trade, sans tin, sans boxes, sans cars, sans everything over their canning situation and cut their price to the growers to $35, a reduction of $15 per ton. Fortunately a Pear Growers' Association began to be talked up in 1916 and the 1917 drive of the canners awoke it to action and to actual existence as a co-operative selling organiaztion. It has force enough to seize the alternative of Eastern shipment as a trench-knife against the canners. Pears were diverted eastward and the canners, in order to get any pears, had to change their face-long lines to curves and go out hunting pears with a camouflage of smiles, paying perhaps as high as $50 per ton in some cases and not getting pears enough to fill orders, which they declared they had no hope of getting, and Eastern markets went short on California canned pears. Meantime growers who would not accept their $35 bid pocketed $50 to $60, and in some instances as high as $80 per ton from Eastern shipments.

Of course, we are charitable enough to believe that the canning outlook may have changed somewhat after the canners had pulled down their jaws to a $35 per ton expression, but to see them saying anything about it to growers after such contracts were signed passes our imaginative resources.

WHAT THE ASSOCIATION IS DOING THIS YEAR.

It is different this year, for the Pear Growers' Association has both power and pears. It has about 90 per cent of the pears signed up in the Sacramento river and Contra Costa districts and 75 per cent in the Santa Clara Valley—these three districts furnishing most of the canning pears. It also has 50 per cent signed in Sonoma and 60 per cent in Alameda counties, where much of the product goes into local trade from small orchards. It does not enter the large shipping districts at present nor does it undertake anything with pears that are dried.

It has, we understand, reached some sort of an agreement with canners that $70 per ton is a fair price for the best canning Bartletts this year, in view of increased cost of production, and it is trying to do something to help growers under term contracts to secure a price which will keep them off the scrap heap. It has established an open house for pear growers at 238 Consular building, opposite the Custom House, in San Francisco, where all people who have pear problems on their digestions can get relief from President Frank T. Swett and Secretary J. S. Bailey, according to their needs.

And of course the Pear Growers' Association has entered the Federation of California Co-operative Selling Organizations—which we have mentioned several times lately as the possible universal solvent for all agricultural problems if the producers will support and develop it toward that end.

PEAR GROWERS' CONFERENCE.

A conference was held Tuesday afternoon between a committee representing certain pear growers whose crops are under term contract and a committee of canners. The growers were represented by E. Bowles, J. S. Brown of Santa Clara and Frank T. Sweet of the California Pear Growers' Association. Nearly all the canners were represented. Figures were presented showing that with the increase in cost of labor and materials due to the war it was no longer possible for the grower to properly care for his orchard and maintain it at a price of $30 to $35 a ton.

The canners met the situation in a broad-minded and fair spirit and voluntarily raised the price for this year on all term contract pears $10 a ton, to a figure not to exceed $47.50 a ton on pears 2¼ inches to 2¾ inches in diameter.

While the meeting was held at the invitation of Mr. Miller of the Food Administration, the liberal action of the canners was entirely voluntary, as the Government has no authority to abrogate contracts on unlicensed foodstuffs. While prunes and peaches are licensed, pears, owing to the comparatively small tonnage, are not under license.

Everybody went home happy—the canners because they had done a good and wise act, involving a raise of $60,000, and the growers, who will now be able to care for this season's crop and prepare for the 1919 crop.

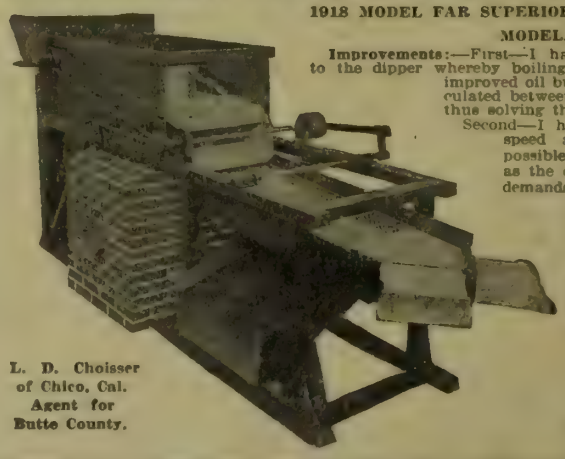
LOS ANGELES, STOCKTON, VISALIA

PERFECTION PRUNE DIPPER AND GRADER

1918 MODEL FAR SUPERIOR TO ANY PREVIOUS MODEL.



Improvements:—First—I have added a circulator to the dipper whereby boiling water (heated by an improved oil burner) is constantly circulated between circulator and dipper thus solving the hot water problem.

Second—I have installed an extra speed attachment making it possible to speed up or down as the condition of the prunes demands. Hard prunes require more scalding and must remain in the hot water longer than soft ones.

A call and inspection will convince you that this dipper and grader is second to none on the market.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Spray Late Apples Now.

A light crop of late apples is invariably accompanied by a heavy crop of codling moth, says Sonoma County Horticultural Commissioner O. E. Bremner. The same number of worms distributed among one-third the number of apples means three times the percentage of apples containing worms. We are confronting such a condition this year, and an extra effort must be made if we are to maintain the standard of our fruit. The first generation of worms is now leaving the apples; the second generation will hatch and enter the apples during July (the time varying with the relative earliness of the district). It is safe to say a spray applied between July 10 and 20 will prove effective. In applying this spray, care must be given to covering the apples evenly with the arsenate of lead, as the worms enter mostly from the side, particularly where two apples touch, or a leaf or limb comes in contact with the fruit. They may also enter by the stem or blossom end. If a spreader is used, the arsenate of lead is given a more even distribution over the surface and is prevented from producing the concentrated cakes of material. The best spreader we have used is a commercial flour paste. Next to this is dry glue. Use 6 pounds of flour paste to each 100 gallons of water. If glue is used, dissolve ¼ pound dry flake glue to each 100 gallons of water. Use arsenate of lead at the rate of 2 pounds dry or 4 pounds paste to the 100 gallons of water. Sulphur paste may also be used in combination with the spray if mildew or red spider is present.

Southern Insectary Showing Results.

The State Insectary branch in Southern California is proving its great value to the citrus industry, acording to the new secretary of the State Horticultural Commission, Avery S. Hoyt, by the results from its liberation of multiplied thousands of insects which prey on scales affecting the citrus trees. These insects include ladybirds and new internal parasites recently imported by the State Insectary. Until the branch insectary was established these preying insects and parasites were not available in really effective quantities for the work as a whole.

Boys on Berry Ranch.

Camp Perkins was established sixteen years ago on Mrs. L. E. Barlow's ranch in Sonoma county, and is occupied each summer by the boys of the Boys and Girls' Aid Society of San Francisco. George C. Turner, the manager, now has 118 in camp. Here are some interesting figures Mr. Turner gave of last year's work: The boys picked 300 tons of berries, 265 tons of prunes; earned $6,015, $4,000 of which was paid out to the boys as soon as they got back to San Francisco, and the balance turned into the general expense fund.—W. P. Brown.

One Picking for Prunes.

Three-fourths of prune growers in Tulare county have to use more lye in dipping their crops than they should, according to a well-known prune grower, who has another orchard in Santa Clara county. Excessive lye is required because they pick all of the prunes on a tree at once. Then enough lye is used to check the ripest and nearly peel the greenest.

Trees Will Be Defoliated.

When the color of leaves of prunes, almonds, apples, plums, etc., turn grayish white and silky spider webs may be found irregularly over them, you may look for them to drop soon unless you apply a sulphur paste spray or give them a good dusting with a dry dust sprayer. The enemy is red spider and you will see trees defoliated by it in midsummer in neglected orchards. This will reduce next year's crops as well as preventing the present crops from maturing properly.

Box Storage of Dried Peaches.

Dried peaches stored in boxes in an open shed from late August to March 1 by Brooks Bros. of Kings county sweated and dried like chips in the fall, then absorbed moisture from the air to a depth of three or four inches where circulating air could reach them. They lost a great deal of total weight, which was not so bad as if they had become wormy by exposure in bins.

CALIFORNIA STATE FAIR. 1918.

The Rural Press has received a copy of the premium list of the sixty-fourth California State Fair, to be held August 31 to September 8. In presenting the list the State Board of Agriculture declares that it has made an earnest endeavor to formulate a classification to meet war conditions. It announces that it subscribes to the resolution adopted by the American Association of Fairs and Expositions in 1917, which commits the managing board to the "dedication of all the agencies and instrumentalities of the association to the country's weal in the highest sense." The premium list is liberal, and embraces a wide range of products. Special county exhibit prizes are offered for agricultural, horticultural, viticultural, mineral, manufacturing, and other industrial products, ranging from $25 to $600. The premiums in the livestock exhibit total about $30,000.

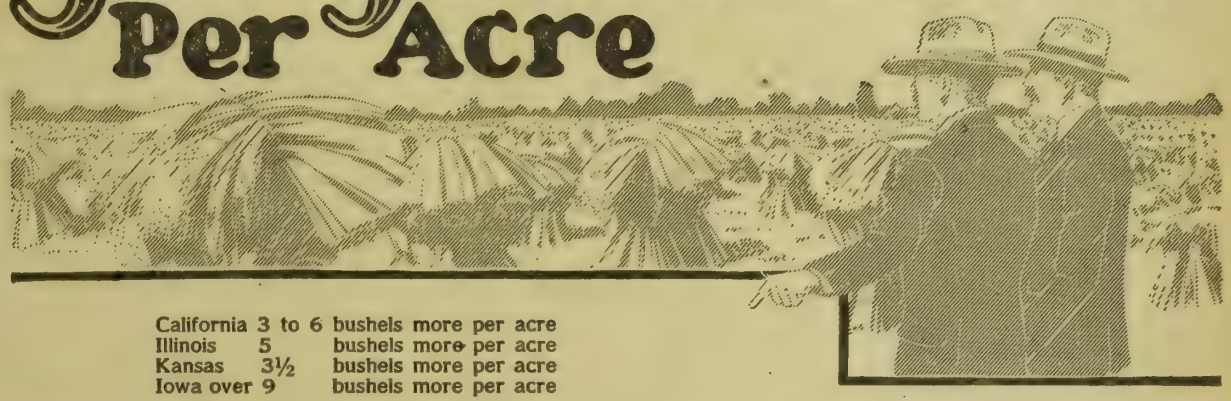
3 to 9 Bushels More Per Acre



California	3 to 6	bushels more per acre
Illinois	5	bushels more per acre
Kansas	3½	bushels more per acre
Iowa over	9	bushels more per acre

These are actual increases in yield per acre obtained on big farms in those states for several years by drilling instead of broadcasting. You gain both in yield and in seed saved by using a

John Deere-Van Brunt Grain Drill

Plants all the Ground—No Costly Bare Spots

Coarse, medium size or very small seed can be planted with this drill. The force feed used on Van Brunt drills has a patented gate, adjustable to handle any size seed from alfalfa to large bearded oats, peas and beans.

All the ground is seeded—no choking up in the seed box. Change in quantity of seed by the feed shifter lever is exactly the same in each and every feed. The force-feed compels the seed to leave the seed box in even, continuous streams, but the seed is not crushed.

No clogging up—the Van Brunt successfully plants seed in mud, gumbo or trash. The seed is protected from the time it leaves the seed box until it reaches the bottom of furrow.

Disc bearings guaranteed to last the lifetime of the drill. The furrow openers, the hard-working part of any drill, are made of highest quality of steel.

Grass seed attachment can be furnished. It sows broadcast or in drills, as you desire. Van Brunt Drills are furnished in sizes and with equipment that will meet your requirements.

JOHN DEERE, Moline, Ill.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Can You Beat It?

Joe Fox of Salida has had things coming his way, according to C. E. Capps of his town. In January, 1917, he planted 15 acres to barley and harvested it in June. He got 321 sacks which weighed 105 pounds. This was sold for $2.30 per 100. Then he flooded and disked the land and planted to tepary beans on the 2d and 3d of July, which yielded 115 sacks of 107 pounds and were sold October 1 for $9.50 per 100. Then the fall rains brought the volunteer barley up, so he turned 15 calves out to pasture, but the barley kept on coming and it was decided to take calves off and save for hay. Later the barley averaged 25 sacks per acre. Then Joe sold the land for $400 per acre.

Wasteballs for Squirrels.

The serious shortage of wasteballs for carbon bisulphide operations last winter and spring caused an inquiry to be made by the Rodent Control Division as to the possibility of obtaining these jute balls from the State Prison at San Quentin. The answer was from the State Purchasing Department: "We beg to state in regard to jute wasteballs that we can furnish them at $2.75 per thousand, the only difference in make-up being that they are tied with jute instead of white thread."

Wheat, Barley, and Bean Stocks.

Stocks of wheat in Port Costa, San Francisco, and Stockton warehouses had been increased to 17,156 tons, July 1, 1918, as against 9497 on the same date last year and 9593 a year before that, as shown by Chief Inspector Henry C. Bunker of the San Francisco Grain Trade Association. Figures for barley on corresponding dates were 7251, 4956, and 31,965 tons. For beans, the figures for corresponding dates were 128,985, 72,454, and 110,444 sacks.

Avoids Shattering Bluepods.

To avoid shattering bluepod beans from their pods while harvesting, R. Featherston of Santa Barbara county begins with a sled cutter about midnight and quits about 8 o'clock the next morning. A fog usually rolls in from the ocean in the afternoon until late at night. Three men follow the sled to fork the vines into small piles, where they cure a short time.

Dust Explosions.

Explosions were recently staged by Dr. H. H. Brown of the United States Department of Agriculture, using corn starch dust, wheat flour dust, and grain smut dust ignited when mixed with a quantity of air. Smut was shown to be especially dangerous when sparks were made in a cloud of the dust. Mills and threshers are much safer if dust is not allowed to accumulate and if sparks or flames are kept away from them as much as possible.

Gallons Per Miner's Inch.

To the Editor: Please state how many gallons of water are running per minute when one miner's inch is running.—J. L. S., Placerville.

[Answered from "California Fruits."]

A miner's inch varies slightly according to the vertical width of the slot used to measure the flow and according to the depth at which water is kept above the center of the slot. If the slot is one inch wide vertically and the water is kept four inches above its center, the discharge will be normally 8.976 gallons per minute.

Straw Must Not Be Burned.

To the Editor: Under the President's proclamation, the burning of bean straw, as well as other feed products, will be considered a crime. Our county food administrators have been advised of this and other means taken to notify the general public, and any complaints coming in from county food administrators of inattention to the proclamation will be dealt with by this office as may seem fit to the State Administrator.—L. A. Nares.

Potato Storage Over Running Water.

If your potato crop is not salable at good prices when dug, what then? Do you have a cool, ventilated, dark place in which to store them? Look around the ranch. A storage house built over a running stream should prove quite satisfactory, but the stream must be led out to the side, where the building will be protected from washing out in winter.

Poultry Manure Made Grain Hay.

One-third greater yield per acre of grain hay is estimated by Walter Cook of Alameda county as the reward for spreading 18 loads of poultry manure over a considerable part of ten acres. The manure cost $9 plus the hauling, and Mr. Cook estimates the increased crop to be worth $200 extra due to the manure.

Leaf-Eating Insects.

For leaf-eating insects in the garden, dust the plants with a mixture of sifted hydrated lime ten parts and paris green one part. This may be put into a coarse sack and shaken over the plants or used in a blower.

We Object to the Non-Partisan League

To the Editor: In your June 29th issue your editorial on "What Is the Non-Partisan League?" does an injustice to that organization.

In the early days of the Grange, when its members did collective buying, I was a member and bought my farm supplies through it and paid about 50 per cent of the prices my neighbors who were not Grangers paid, and from the same dealers. This created such a furor that the powers of business thought it wise to crush the Grange, and every profiteer vociferously cried that the Grange was a dangerous organization and berated and ridiculed grangers in every way.

In the interest of harmony, the Grange gave up the pernicious habit of collective buying and thereby regained its standing with the profit-takers. Since that time (about forty years ago) we have dutifully handed over the 50 per cent in addition to a reasonable profit to the profiteers. Since that day I have been in favor of some live organization of farmers that could unhorse their feudal masters.

I am not a member of the Non-Partisan League, but am familiar with its work and its aspirations, and I know you do them a great wrong when you repeat the cry of the business interests and call the League "disloyal."

You may not know that the League was organized before the war and that great prosperity had

overtaken the farmers when they got rid of fraudulent grading of wheat and other methods of robbery, and that they were bitterly assailed by the profiteers before the war. When the war came the profiteers availed themselves of the opportunity of the war hysteria to cry traitor, pro-German, disloyal.

The farmers had discovered that when the business interests got more the farmers got less; and the business men discovered that when they got less the farmers got more. As in the old days, when the Grangers were accused of being socialists (and they were to a small degree), so today the League is charged with the same sin. The League will hardly deny this charge, for in every step in our civilization some measure of socialism is adopted. Otherwise there can be no progress. Every other tendency is reaction.

Business interests are very ready to scent danger and were prepared to meet the wicked farmers and brand them with disloyalty, or with tar and feathers, but this time they started too late.

The principal newspapers of the land are owned by the same men that own the banks and factories and mines and railroads and elevators, and they, with their aids, the small business interests, took the contract to crush the League.

If you will take pains to inquire of the Federal Government at Washington the status of the Farmers' League, you will be told it is as loyal as the Masons or as the American Medical Society.

After your attack on the League, I trust you will do me and the League the justice to publish this defense. A. E. BRIGGS.

Sacramento.

[Surely we condemn nothing unheard; but in the nature of things we shall not give much space to defense of an organization which carries on open flirtation, if not closer relations, with the I. W. W. Any organization which gets as close to the verge of anarchy as that had better get back from the edge of the gulf as fast as it can. As for what you say of the experience of the Grange nearly half a century ago, there is truth in it; but the Grange did not suffer in vain. Our California co-operative product-selling organizations are now co-operative supply-buying organizations also, and that is one reason we are urging them to broader and closer federation. Giving your time to a professional career, as we happen to know you have, you probably do not know what has been going on in our California co-operative organizations for the last twenty years, and especially during the last decade. Manufacturers and wholesale dealers in supplies do not hesitate to deal with co-operative associations now because they know that they can get along without them if they refuse—even if they have to buy sawmills to get out their own box lumber, etc. And we have a good equipment of smaller co-operative buying and distributing organizations also. Therefore we claim that the Grange did not suffer in vain forty years ago, for it was the progenitor of other organizations which are now so powerful and efficient in this State that no interest can counter-attack either their product-selling nor their supply-buying enterprises. We are now urging wider joint action among them because they are sane and patriotic and they have the power to exclude all other organizations which cast side-long glances at Bolshevikism, such as you seem inclined to defend. We know that the Non-Partisan League has done good things, but nothing to compare with what our California organizations have done for the farmers of this State—and they are not doing good that evil may come.—Editor.]

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

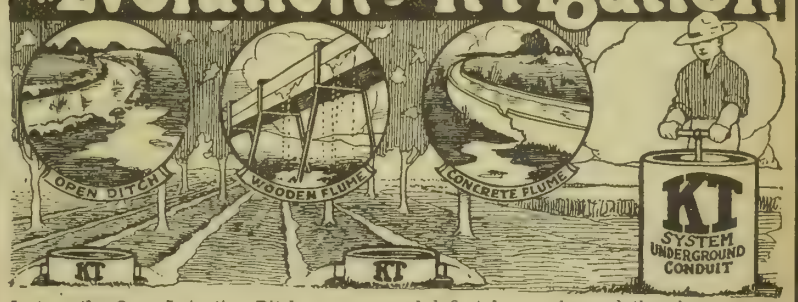
The Evolution of Irrigation



Just as the Open Irrigation Ditch was superseded first by wooden and then by concrete flumes, so were the latter in turn forced to give way to the "K-T SYSTEM" of underground conduits, equipped with gates and valves. This provides for a perfect distribution of the water at the exact spot required, and at just the time it is needed. It also eliminates the constant losses resulting from evaporation, seepage, and ditches choked with weeds—wasting land, water, time and money.

We are prepared to make immediate deliveries at the present time but cannot promise prompt shipments during the entire season, because of the uncertainty regarding raw materials, labor and other factors of manufacture. Forewarned is forearmed. Place your orders now when you can get the goods. Don't wait until conditions make prompt deliveries impossible.

KELLAR-THOMASON COMPANY 1234 East 28th Street Los Angeles, Cal.

"Originators of the Valve System of Irrigation."

Scenes of Prosperity

are common in Western Canada. The thousands of U. S. farmers who have accepted Canada's generous offer to settle on homesteads or buy farm land in her provinces have been well repaid by bountiful crops of wheat and other grains.

Where you can buy **good farm land at $15. to $30. per acre—get $2. a bushel for wheat and raise 20 to 45 bushels to the acre** you are bound to make money—that's what you can do in Western Canada.

In the provinces of Manitoba, Saskatchewan or Alberta you can get a

Homestead of 160 Acres Free

and other land at very low prices.

During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to the acre. Wonderful crops also of **Oats, Barley and Flax. Mixed Farming** is as profitable an industry as grain raising. Good schools, churches, markets convenient, climate excellent. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

Field Crops.

Barley hay is being sold for $18 per ton f. o. b. Byron.

Hay brought in Santa Rosa last week $25 per ton f. o. b.

The hay crop in the King City and San Lucas sections is estimated at 3000 tons.

The first shipment of cantaloupes from the Turlock district was made this year on July 5.

James Martin of Bloomfield says his nine acres of black oats will yield at least five tons per acre.

Farmers generally are reluctant to sell their hay or place a valuation on it until baling operations commence.

The sugar beet crop is now on in California. The yield and quality are said to be good, also the marketing prospect.

An increase of 20 per cent in the acreage above last year's planting is estimated for the bean industry of Merced county this season.

A report comes from Clarksburg, on the Yolo side of the river, south of Sacramento, that barley in that section of the county will yield from 30 to 40 sacks to the acre.

Balfour-Guthrie report that they are receiving $20 a ton for their alfalfa f. o. b. Brentwood. This price is being paid by dealers who are buying for the Government.

The packing of tomatoes in Tulare began there on July 10, with the Italian Products Company of California anticipating one of the best runs in the history of the Tulare cannery.

It is announced from El Centro that the first of the Imperial Valley crop of cotton for 1918 was picked June 1. Picking for commercial purposes was expected to begin early this month.

Grain harvesting is nearly over in Contra Costa county. No labor trouble has been experienced. The yield has been about two-thirds of what it was last year. The largest yield was 20 sacks per acre.

The United States Census Bureau fixes the final figures on the 1917 cotton crop at 11,302,375 bales—less than a normal crop. California and Arizona, however, showed a notable increase in the production of this staple.

The Kern County Growers' Association, representing about 800 to 1000 acres of cotton, plans to have a cotton gin in operation by September 1. It is estimated that there are 1000 acres planted to cotton in Kern county and that the yield will be half a bale to the acre.

From ten to twelve carloads of vegetables from Sacramento Valley and upper San Joaquin truck farms left Sacramento daily last week, eastward bound, according to the California Vegetable Distributors. Potatoes are being sent as far East as Chicago, and onions to Boston and New York.

Harvest of the tomato crop of the Porterville district began this week, for delivery to local canneries. According to estimates the output of this section will be about 2000 tons, contracted for at about $15 per ton. Packers say that practically their entire output has been contracted for delivery to buyers for the Army.

The sugar beet harvest is now under way in Kern county. At Conners and Buttonwillow several thousand acres of beets are being harvested. The crop is turning out well, according to reports, conditions having been favorable for extra heavy yields in many fields. Seventy Mexicans are helping to harvest the crops.

While no agreement was reached between the rice men and Food Administrator Merritt at the Davis conference, indications are that favorable consideration is being given the growers' contention that California rice should bring more than the $4.16 2/3 figure fixed in the South. The price will doubtless be settled at another conference.

The commercial stocks of wheat reported to the United States Department of Agriculture in a food survey for June 1, 1918, amounted to 17,068,487 bushels. This refers to stocks actually reported and does not represent an estimate of the total commercial stocks of the country. Neither do the figures include stocks on farms on June 1, for which no data was available.

A. C. Houston, president of the Yolo Water and Power Company, announces the completion and operation of the newly installed pumping plant at Clear Lake, in Lake county. The plant has begun to distribute water for 10,000 acres of Yolo county rice fields and 5000 acres of other grain. It has a capacity of 225,000 gallons a day and means a $2,000,000 rice crop in Yolo county.

Deciduous Fruit.

The first dried apricots of the season were delivered last week at the packing houses at Hanford.

Word comes from Sebastopol that the apple crop of the Sonoma Valley Apple Growers' Union will total 30,000 boxes this year.

According to H. M. Van Tassel, horticultural inspector for the West Sacramento district, the pear crop in the West Sacramento section will make about a 70 per cent crop this season.

San Benito county has raised and is busy harvesting, packing and shipping 1800 tons of apricots, 3000 tons of prunes and 30,000 tons of hay. Women supplied the large part of the labor in the apricot and prune orchards.

F. B. Bill, manager Sebastopol Berry Growers' Association, says the berry crop is fine, but that they are shipping little more than one-half as much as last year, owing to inadequate shipping facilities. They are being canned.

A dollar apiece for cherries is the price paid by the members of the Mount Diablo Park Club for the Belgian Babies' Relief, after the box had been auctioned off for $50.50. The cherries brought in all $127, believed to be a record.

Packers and dealers of licensed dried fruits, which include apples, prunes, raisins and peaches, were authorized by the Food Administration to commence buying last Wednesday (July 10). Packers, however, will not be permitted to sell prior to July 15, as previously announced. Maximum prices down the line from grower to consumer have already been set by the Food Ad-

Golden Gate Weed Cutter
Kills the Weeds and Cultivates the Soil
Greatest weed killer on the market. Cuts them off clean, under the surface, close down to the roots. Besides, it breaks up the ground so thoroughly that one user says he saved $200 in a single season because after cutting the weeds he did not have to plow. Cuts seven feet or less. Weighs but 230 pounds. Cut adjustable to any depth. Constructed of steel throughout. No other implement like it.
WRITE FOR CIRCULAR which illustrates and describes the Sigurd Weed Cutter and contains letters from many users.
C. G. Sigurd, Manufacturer
Capital Ave. and McKee Road, San Jose, Cal.

BEST IN THE LONG RUN
FAIR TREATMENT
Like a Hambletonian Horse

THE all-around usefulness of the Hambletonian Horse is proverbial on the farm. A fine looker, yet a husky worker. At the plough he pulls with the best; in a neat roadster he steps a gait with the speediest. He rides fine, or he will carry a load. You know him, you men of the farm, for a Kentucky thoroughbred, and a pulling horse in one.

Goodrich Tires are the Hambletonians of tires. Fine lookers, speedy, yet husky workers for heavy loads and rough going, they fit all-around service of the farm as no other tires.

Like the Hambletonian Horse, they have pedigree. The scientific and workmanship skill of the oldest and largest rubber factory is in them. Like the name Hambletonian, Goodrich stands for prestige.

But Goodrich does not ask you to buy on blind faith. It proves its tires for you as an assayer proves gold, or a chemist food, before it assures you the tested service of—

GOODRICH
SERVICE VALUE TIRES

That word, *tested*, is the last word in tires for the farmer. It means that Goodrich Test Car Fleets, six of them, throughout the year 1917, battled Goodrich Tires from state to state, mauling them over sand, gravel and rock roads through mud, snow and frozen slush; and the tires proved their durability in mileage that ran to 4,178,744 tire miles.

Think of it, more than 4,000,000 miles of mileage vouch for the sure service of Goodrich Tires. The roads of every region of our country—perhaps the roads that run by your own farm—vouch for their strength.

These tires coin themselves into real money for you, the same as your ploughs and your reapers.

Whatever tires you need; for an automobile large or small, for your truck, bicycle, or motor cycle, the Goodrich brand is your guide to sure service. You know it of old from the service of the Goodrich Hipress Boot.

The husky, generous size of Goodrich Pneumatic Tires tell you their strength at a glance. Actual working tests show Goodrich Truck Tires outwear steel.

ministration, except on apples, because of the diversity of area on which they are grown. Prices to the public must show no profiteering.

The monthly crop report of the State Commission of Horticulture is just received. It gives the condition in percentages of the fruit crop as follows, based on State averages: Almonds, 63; apricots, 74; figs, 99; peaches, 73; pears, 82; plums, 74; prunes, 69; walnuts, 78. The berry crop averages very high, ranging from 70 to 100 per cent. The grape crop also runs high, ranging from 75 to 110 per cent.

Citrus and Semi-Tropical.

It is reported that a number of orange trees in an orchard in the Lindsay district have been killed by irrigation water containing a large percentage of salt.

The Placer County Farm Bureau is urging Placer olive growers to co-operate and pickle their own fruit instead of shipping their olives to Los Angeles, where they are pickled down and put on the market as a Los Angeles product, it is claimed.

Representatives of the California orange and lemon growers held a conference lately to protest against the recent order of Mr. McAdoo increasing freight rates on orange, lemon and other shipments 25 per cent. They formulated a petition to have the increase cut down to 11c per 100 pounds.

Grapes.

Wine makers are offering as high as $40 per ton for grapes this year in Sonoma and Napa counties, it is reported from Santa Rosa.

The Stewart Fruit Company has commenced the erection of a large grape packing house along the Santa Fe right of way at Fresno.

In Sonoma and Napa counties it is reported that $45 and $50 a ton have been refused for grapes. In Santa Clara county the highest price thus far offered has been $36.

Miscellaneous.

The scarcity of sacks and the consequent high price for bags will hasten the general use of grain elevators throughout California.

Grasshoppers sweeping through the northern Sacramento Valley are threatening serious damage to crops, according to reports from ranchers.

Rice growers of the Sacramento Valley are working toward a $4.50 basis for paddy rice, an advance of about 40c a hundred on last year's price.

Several counties have officially announced their intention of participating in the Pacific Coast Land and Industrial Exposition to be held in Oakland this fall.

It is reported that the United States Reclamation Service is preparing plans for the expansion of the Orland Reclamation District by about 30,000 acres.

Reports from Santa Clara Valley are to the effect that the wells in the district are running very low. This being the second year of comparative drouth, it is keenly felt.

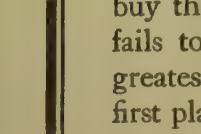
Mrs. L. E. Barlow of Sebastopol has recently completed an up-to-date fruit dryer to handle the excess fruit from her 200-acre ranch and also that from the Sebastopol Apple Growers' Union.

The Board of Supervisors of Santa Cruz county has appointed a successor to W. H. Volck, who left the service of the county some time ago. Donald D. Penny, laboratory assistant, State Insectary, received the appointment. Mr. Penny took up his new work July 1st.

Increased freight rates are driving the heavy shippers in the vicinity of Oakdale to the use of automobile trucks, as requested by the Government, in so far as the short hauls of freight are concerned. With the minimum rate of 50 cents per shipment, and with the local rates doubled, practically, between local points, use of cars for shipment are almost prohibitive.

LOS ANGELES FARM WAGE SCALE.

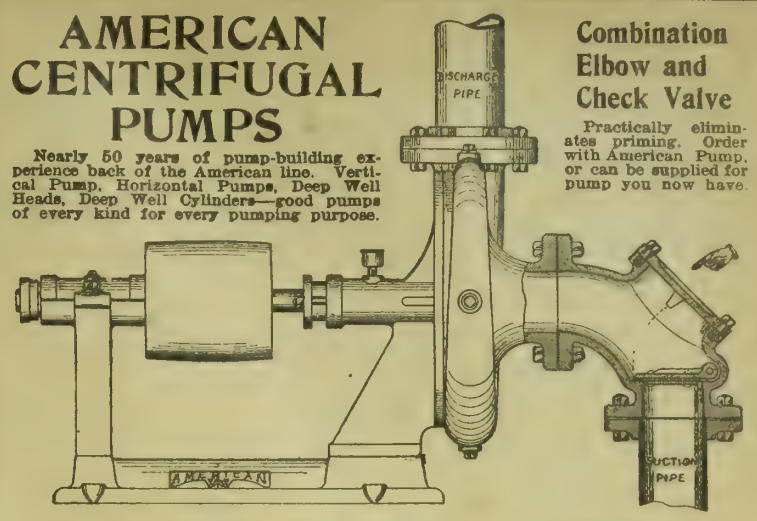
Last month the Los Angeles County Farm Bureau, after a discussion of the labor situation, prepared an average wage scale, which, while obligatory on no one, has been presented with the thought that, where the members of the Farm Bureau keep the scale in mind, there will be fewer wage inequalities and less variation between the different centers and as a consequence less dissatisfaction and moving around of laborers. The scale is as follows: Workers in hay harvest, $3, without board; tractor drivers, $4 small, $5 large, $150 month, 50c an hour; teamsters, $2.75, without board; plowmen, $2.75, without board; fruit pickers, by day, $2.75, without board; pruners, $3 to $4, without board; irrigators, 35c per hour, without board; potato harvesters, $3, without board; general farm work, with board, $60 per month.



Kills Prairie Dogs and Gophers of all kinds. Endorsed by State Experimental Stations. 1000 tablets prepaid for $1.25. Warranted. Raticide Tablets, 25c. Ask druggist or send direct. Booklet Free. F. D. Chemical Co., Ft. Dodge, Ia.

AMERICAN CENTRIFUGAL PUMPS

Nearly 50 years of pump-building experience back of the American line. Vertical Pump, Horizontal Pumps, Deep Well Heads, Deep Well Cylinders—good pumps of every kind for every pumping purpose.



Combination Elbow and Check Valve

Practically eliminates priming. Order with American Pump, or can be supplied for pump you now have.

GAS ENGINES, OIL ENGINES, MOTORS, Etc.

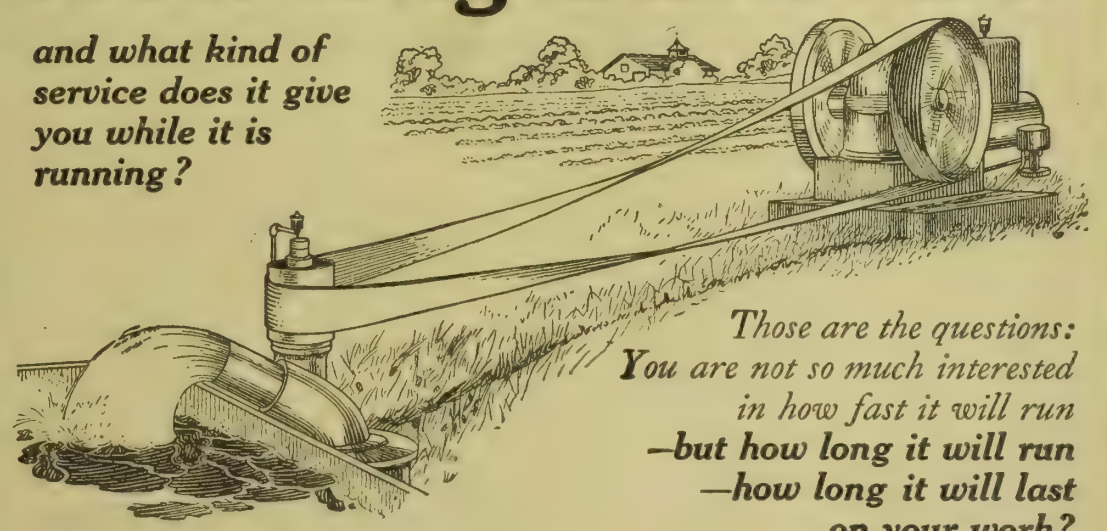
Put your irrigation problems up to irrigation experts. We'll show you how to get the MOST WATER with the LEAST TROUBLE at the SMALLEST COST. Write for our catalogs of Gas Engines, Oil Engines, Motors, Direct-connected Motor-and-pump Outfits, or any of these in which you are interested. We'll answer your inquiry fully and carefully.

CALIFORNIA HYDRAULIC ENGINEERING and SUPPLY CO.

68 Fremont St., San Francisco 424 East Third St., Los Angeles

How long will it run?

and what kind of service does it give you while it is running?



Those are the questions: You are not so much interested in how fast it will run —but how long it will run —how long it will last on your work?

—Test Special Belts

—last and *run* and do their work well for years—it depends on the kind of work. Some belt users buy cheap belts made of short fibre cotton and shoddy rubber — *consequence:* ***they last a few months—maybe not a whole season.***

You can't throw money away faster than to buy that kind of a belt—besides, when it fails to do your work the need may be greatest. Buy a **Test Special** belt in the first place—***it lasts for years. Write us.***

BELT TROUBLES: Do you have any troubles with belts? We are belt engineers. Send us a rough drawing to indicate *how your belt is operated, and tell us your troubles. We'll cheerfully help you solve them—FREE.*

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles

GREAT AUTOMOBILE NECESSITY.

There are 5,000,000 motor vehicles in the United States, one for every 20 persons. The total horsepower used to turn the wheels of America's industrial plants is only 11,000,000. The passenger automobiles of this country represent 100,000,000 horsepower. Motor cars constitute the greatest transportation force in the world, and transportation is the necessity of war most difficult to obtain adequately. Compare the motor car with the railroads and we find the automobiles of this country traveling 60,000,000,000 miles a year, as compared with the 35,000,000,000 passenger miles of the railroads. These multipliers of energy are traveling 4,000,000 miles per day, the equivalent of 1600 times around the world. Many a nation has been conquered, not for lack of bravery or men, but for lack of transportation.

An inquiry from every man who purchased an Overland car in 1917 proved that 90 per cent of automobile use is for business purposes, as reported in a special article by John N. Willys of the Willys-Overland Co. The inquiry showed that American farmers, representing 33.2 per cent of the population of our country, bought 53.1 per cent of the automobiles. Mr. Willys goes on to say that the Government estimates that it takes five acres on the average to support a horse. Assuming that every automobile on the farm replaces one horse, the automobiles are releasing for human food production over 10,000,000 acres of land. For the marketing of perishable products, getting repair parts for machinery, etc., the automobile has made the farm 30 miles from town as valuable as one five miles away that depends on the horse.

In time of labor scarcity the automobile enables farmers to scour the country and city for more help; and the time saved on the road for this and other errands enables them to do more work themselves in producing food. Since a farmer is generally worth two hired men in the field, automobiles are worth lives to Uncle Sam's people. Food produced and transported by motor vehicles will win the war.

PUMP BELT WORE OUT.

To the Editor: How far should a gas engine be from the pump? The engine is 9 horsepower and the pump a vertical centrifugal with 75-foot lift. The driving pulley is 32 inches and the driven pulley 6 inches. At present the engine is only 12 feet from the pump and the first belt is already in pieces after 10 days' service.—J. B., Niles.

For any work where there is a quarter-twist in the belt, the centers of the pulleys should be not a foot less than 25 feet apart, according to expert belting authority. The reasons for this are: (1) The power transmitted by a belt is in a direct proportion to its bearing surface on the pulleys. With a short belt and a quarter-twist, as you have, not over half of the belt width is bearing on the small pulley and the power is reduced greatly. (2) Your belt is probably traveling about 3000 feet per minute. About every 15 feet it makes a quarter twist and coming back it makes a quarter twist in the opposite direction, or about 200 quarter twists per minute. There is every reason for it to pull to pieces. With double the distance the twists would not be so short nor so frequent. With a horizontal centrifugal your distance would not be so bad.

NATIONAL AUTOMOTIVE SHOW.

Motor trucks, tractors, and accessories will have a national exhibition of the greatest magnitude on Chicago's $5,000,000 Municipal Pier, September 14 to 21. For trucks alone, 42,000 square feet of space are allotted, with option of increasing it. No floor unit will be sold of less than 400 square feet. There will be plenty of time for storage before and after the show for trucks driven cross-country. Equivalent individual and total space is allotted to tractors and nearly equal for accessories. Thus the transportation of essential materials, including food, the mechanical aids to the production of food, and the latest achievements to make both more effective, all will be embodied in a wonderful opportunity for inspection, comparison, and learning.

DANGEROUS "ROAD HOG."

One form of a road hog who has many narrow escapes is he who runs up behind another machine which is meeting still another. The hog insists on passing the machine in front of him immediately instead of yielding the right of way to the car meeting them. There is sure to be a collision on most roads unless the driver of the last named car has the good sense and ability to turn off the road at that moment. He would be justified in wrecking the "hog," who is less respectable than live pork.

Specially strong demand for pea and bean threshers is reported by Arnott & Co. of Los Angeles. The two types of threshers introduced by these people last summer, known as the Farquhar and American Double Cylinder Threshers, are in big demand. They are built for Western conditions and are claimed to require fewer hands to operate them.

Motorize your Farm

Make up your labor shortage with power farming machinery. Put every acre under cultivation. Get away from the drudgery. Select a Tractor—a **LAUSON 15-25**—and get year 'round service in the field and at the belt.

The John Lauson Manufacturing Company of New Holstein, Wisconsin, is one of the old, responsible manufacturers of farm engines noted for their salability and serviceability. The same experience is responsible for the success of the **LAUSON 15-25** Kerosene Burning Tractor. It is built with the same care and precision which has characterized the **LAUSON** Frost King Engine for twenty-three years.

The LAUSON 15-25

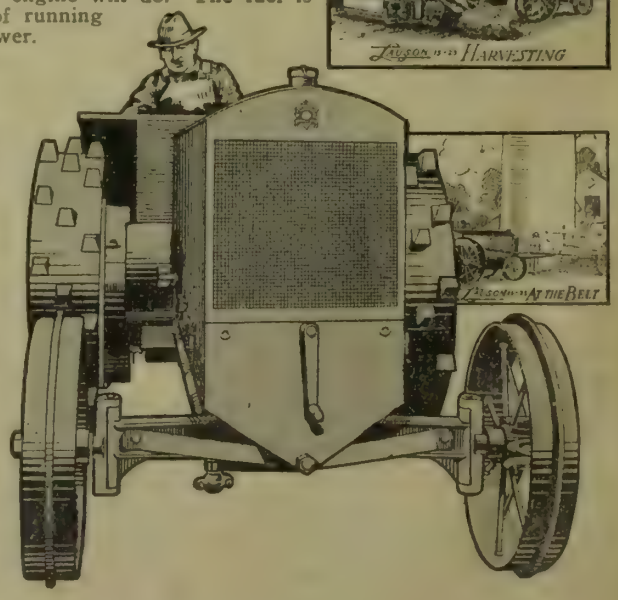
DUST PROOF-ALL GEARS ENCLOSED

The **LAUSON 15-25** insures better farm work and more of it. It will do all your plowing and do it better. It will do the discing and harrowing; heavy hauling or grading; pull stumps or manure spreader. Has a 30 per cent surplus capacity engine especially suited to belt work.

With the **LAUSON 15-25** you can afford to own your own ensilage cutter and fill the biggest silos in the shortest time when your corn is ready. You can grind feed, bale hay, do neighborhood threshing—everything and anything a small farm engine will do. The fuel is kerosene or distillate—half the cost of running gasoline engines of the same horsepower.

Check the Specifications.

RATING—Drawbar H. P. 15; Belt H. P. 25.
ENGINE—4½-inch bore by 6-inch stroke—Valve in head.
NUMBER CYLINDERS AND CYCLE—Four.
NORMAL SPEED—R. P. M. 950.
LUBRICATION SYSTEM—Splash and force feed.
IGNITION—Dixie Magneto.
CARBURETOR AND FUEL SYSTEM—Kingston Gravity Feed.
COOLING SYSTEM—Perfex Radiator.
BELT PULLEY—18-inch by 8-inch; 475 R. P. M.
TRANSMISSION—LAUSON Selective Type—sliding gear.
NUMBER SPEEDS FORWARD—Two.
SPEED, M. P. H.—Low, 1¾; plowing, 2½; high, 2½.
NUMBER WHEELS—Four.
DRIVE WHEELS—54-inch diameter; 12-inch face.
GUIDE WHEELS—32-inch diameter; 6-inch face.
WHEELBASE—86-inch.
TREAD—52-inch.
Total Weight, less fuel, water, oil and lugs—5,750 pounds.
Shipping Weight with Standard Equipment—6,000 pounds.



The **LAUSON** 15-25 will earn its way on any farm of 100 acres or more. It is a guaranteed three-plow tractor with four-plow capacity under favorable conditions.

Write for catalog and name of nearest **LAUSON** Sales and Service Station.

SEPARATES VARIOUS GRAINS AT ONE OPERATION.

[Written for Pacific Rural Press.]

A wheat field was sown to barley by John Kilkenny of Solano county and the 400 sacks of grain that resulted was half and half, but able to be sold for neither. He was offered 80c for the mixture. He took it to a mill to get it separated and afterward counted 84 grains of barley in a gallon of wheat. That was not satisfactory. But John Lucas of Yolo county, just then had a machine of his own invention on wheels on the street at Dixon and Mr. Kilkenny found only four grains of barley after running it through this. He sold the wheat for $1.40 per sack and the barley for over $1. Mr. Lucas does not have any machines to sell, but he is proud of the work done after ten years of trials. He showed his latest machine at the Davis tractor demonstration. He said it would separate wheat, oats, and barley, going only once through. He separated red gyp corn from black for W. H. Gregory of Yolo county. He cleaned 1000 sacks of rice last year for J. H. Harlan, for whom he had done similar work for ten years.

The grain is elevated to a hopper, whence it drops from a force feed onto shaking screens. It is fanned and elevated onto a gravity cleaner, which takes wheat and weed seeds from oats and barley. A second gravity cleaner takes the weeds from the wheat. The single operation separates all the various grains remarkably clean and costs only six or seven cents per sack. The machine is operated by a small gas engine mounted on the same wagon truck.

CHEAP DAIRY REFRIGERATOR.

Ten cents a day for power keeps a cooler regulated wherever desired between 25 and 40 degrees F. in the dairy house of the Hidden Valley Farm, near Redwood City. The cooler is large enough to hold eight cans of cream with several cubic feet of space besides. The refrigerating apparatus is run by a ½-horsepower motor, which is automatically stopped at the desired temperature by a thermostat, which starts it again when the temperature goes higher. It is running about one-third of every hour, as told by Dairy Superintendent R. S. Adams.

CORN BINDER AND ELEVATOR.

Everywhere we go people are curtailing farm activities for lack of help. What shall we say, then, of the man who cuts corn for fodder or silage by hand when he could get a machine to cut it faster and bind it into bundles much more conveniently handled? And why should he dump the bundles on the ground when elevator attachments are available to load them direct from the harvester onto a wagon with no man lifting them?

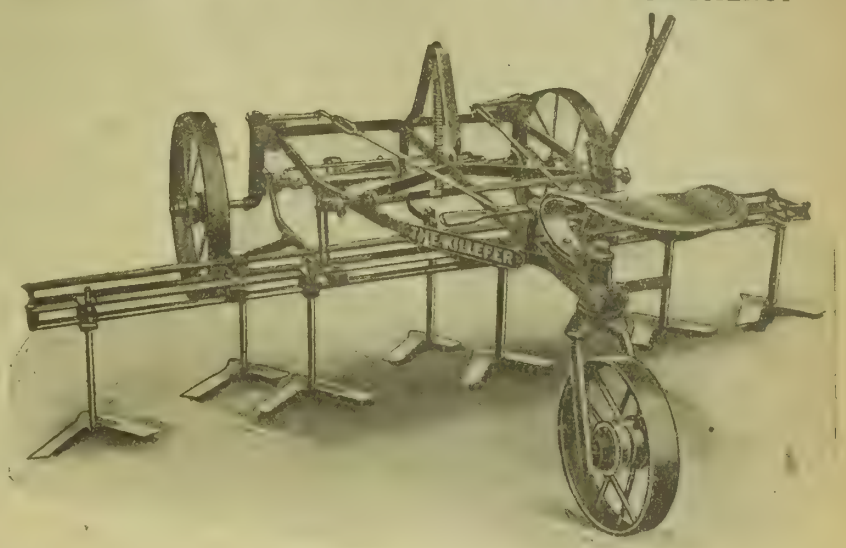
MOTOR TRUCKS HAUL FRUIT.

Motor trucks are hauling apricots and peaches to the Selma cannery from as far as Lindsay. They are loaded in the orchards and not handled again until they reach the factory, avoiding the usual handling onto and off the freight cars and relieving the railroads for more urgent war work.

KILLEFER QUALITY

4 Row Bean Cultivator

KILLEFER EFFICIENCY



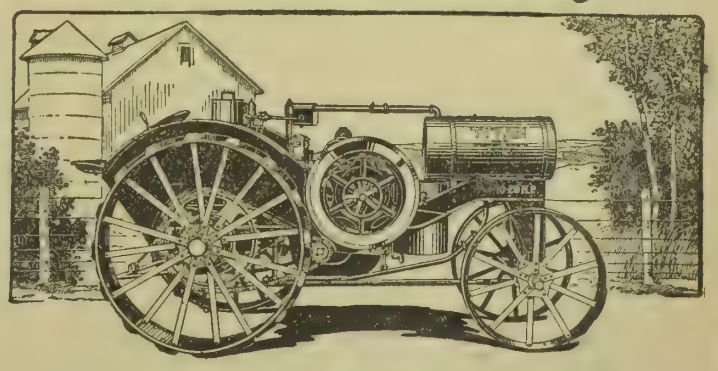
CONSERVE MAN POWER

One man will cultivate **four rows** of beans, perfectly, with this cultivator, which, like most of **our** implements, has been developed at the request of Dealers and Ranchers for a **strong, simply controlled** cultivator, capable of doing their work **better** than would be possible with a lighter tool. The frame is **one piece** of **high carbon steel**—no joints to work loose or sag—holds the wheels **always** true, and in line with the rest of the machine. The **double** frame bar gives ample **clearance** between the standards and **eliminates** the tendency to clog in trashy ground. This frame bar has a **double** lifting device which holds it **rigidly** on **both** sides. The steering device is **easily** operated and **very** accurate. Equipped with **KQ Sweeps** of **our own** design, and made to do the **best** work and **wear** the longest. Furnished with either **Tractor** or **Team Hitch**, and to cultivate rows of **any width**, from 20-inch to 36-inch.

ALSO BUILT TO CULTIVATE 2 ROWS

The Killefer Manufacturing Co.
2209-21 Santa Fe Ave. Box 156 Arcade P. O. Los Angeles, Cal.

Tractor Safety



FOR twelve years and more, shrewd and careful American farmers have kept us busy filling their orders for **International, Mogul,** and **Titan Kerosene Tractors.** In those twelve years our tractors have had to meet every possible combination of field and climate conditions. The types and sizes we sell today are the ones that have successfully met every test. Any one of them is a safe tractor to buy.

One great advantage to farmers who buy our tractors is the fact that we can also supply all the implements and machines that go with the tractor. We know farm needs. Buying from us, you get a complete, well balanced outfit for field or belt work.

Another advantage is our extensive dealer and branch house organization. A telephone call to a nearby dealer brings you promptly a repair, replacement, or adjustment for any machine we sell.

Look at it any way you will, you cannot make a safer tractor investment than to buy an **International, Mogul** or **Titan** kerosene tractor. See our dealer in your town, or write us for full information about a safe tractor for your farm.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

Milk wholesales in Los Angeles at 12c a quart and 6c a pint. The retail prices are 13c and 7c, respectively.

Mrs. H. I. Marsh of Modesto reports the sale of two Holstein cows and two calves to Fred Hartsook of Lankershin.

J. A. Goodall of Keyes reports the sale of one bull calf to E. E. Greenough of Merced, also one to Mr. Cook of Turlock.

Guy Miller will show a herd of Jerseys at the State Fair. He recently sold two Duroc gilts to the Sanger Lumber Co. of Sanger.

Mrs. Jennie Strader of Ceres intends to show a fine herd of Dutch Belted cattle at the fair this fall unless the labor situation prevents.

A glass of milk from the $10,000 cow Oxford's Briar Flower, was sold recently for $5 and the money put in the Red Cross pail hanging before her stall.

D. F. Conant of Rancho Santa Marguerita of Modesto is doing some official testing and some interesting records are being made. The Jersey people will do well to watch this herd.

E. E. Freeman of Modesto has lots of quality in his herd of 22 Holsteins. His herd sire is Segis Pontiac De Kol Dutch, who is sired by Segis Pontiac De Kol Burk, and his dam is Miss Dutch.

Raphaella Johanna Aaggie 3d of Napa State Hospital dairy has produced 929.4 pounds of milk in seven consecutive days and 3795 pounds in 30 days. That is more than six times the record of the average cow.

The Oakdale creamery established a new record for butter making during June, the total output for the month being 134,000 pounds, or two and a quarter tons of butter per day.

The patriotic farmers of Bodega, members of the Bodega Co-operative Creamery, decided to give one per cent of their cream checks for the month of May to the Red Cross. The result was $300 to that cause.

J. M. Campbell of Escalon, a new breeder of Holsteins, has just finished his first experience in record making with Potoki Johanna 2nd, who is sired by Oak Fobes De Kol Burk, and whose dam is Potoki Johanna. Potoki Johanna 2nd had never been tested. Mr. Campbell reports the sale of two bulls to Leo Pencina of Soledad.

H. A. De Wolf of Ripon is fitting for show a young bull, Sir Skylark Ormsby Korndyke, who is by Sir Skylark Ormsby Hengerveld, who has had the misfortune of being kept in a grade herd for dairy purposes, but by chance 25 of his daughters have been tested and four out of 25, or 16 per cent, have made better than 31 pounds in seven days; 14 others made better than 20, which is considered by Mr. De Wolf as being very good.

Swine and Swinemen.

At the Farm Bureau auction sale of fat hogs, held last week at Hanford, one carload of hogs was consigned and was purchased by the Cudahy Packing Co. for $15.45 per hundred.

The Merced County Farm Adviser says that hog production in that county increased by 1049 head as a result of the recent "raise another pig" campaign conducted by the County Farm Bureau.

G. M. York of Modesto, breeder of Berkshires, sold two fine gilts to J. W. Lewis of Turlock. He has 50 pigs sired by Ring Leader 20th 239090. He expects to show Ring Leader 20th at the State Fair.

P. E. Mitchel of Atwater reports the sale of two Poland-China boars to J. F. Furtado of Merced and A. Hendricks of Merced. Mr. Mitchel donated a gilt to the Junior Red Cross, which was sold for $40.

The Castleview Ranch, Santa Rosa, recently sold two young sows and a boar to E. La Franchi of Sebastopol, also a bred sow to F. R. Bogner of Santa Rosa and a young sow to Leslie Hillis of Sebastopol. All of these animals were purebred Berkshires.

Fred M. Johnson of Napa had the misfortune recently to lose his fine Duroc-Jersey boar, junior and reserve grand champion at the State Fair in 1917. Mr. Johnson will go East immediately after the coming State Fair to get a new herd header and also pick up a few good sows.

H. I. Marsh of Modesto, breeder of B. T. P. C., reports the sale of 16 gilts last week, five going to Gatewood & Sons of Fresno, seven to Fred Hartsook of Lankershin, four to Elmer McCracken of Ripon. Mr. Marsh expects to show a nice herd and there is every evidence we will hear from him in several blue-ribbon classes.

The Highland Stock Farm of Fair Oaks, Sacramento county, recently purchased in the East a yearling Chester White boar, which promises to be the record boar of the breed on the Coast, as his sire and dam were both grand champions at Omaha, and at the recent auction of the Barr herd of Chester Whites the dam, Our Maid 3d, sold for $1,005.

Beef Cattle.

George Murphy & Sons of Perkins will have a nice show herd of Shorthorns at the State Fair.

A cattleman who feeds thousands of head had planned to ship a lot to Imperial Valley, but feed conditions there have restrained him.

Cattlemen from all over the State are donating stock to the California rodeo and Salinas big week committee to be auctioned for the benefit of the Red Cross during the rodeo, July 17 to 21.

White & Tarry of the Glenwood Ranch, Sacramento, pastured 60 head of Shorthorns for six months on 22½ acres of Bermuda grass. Looks almost impossible, but you can see for yourself.

W. H. Paulk of Lassen county insists that there are 10,000 beef cattle in Lassen and Modoc counties more than there will be hay for next winter and that these must be shipped out before snow flies.

A San Joaquin county stockman says his district has about the best feed conditions for beef cattle in the State, but none of his acquaintances are in the market for feeders. They are wondering what they will do with what they have.

Unrestricted use of the national forests for grazing purposes was urged by the cattlemen at their meeting at the State University Farm at Davis, who claimed that 700,000 acres could be added to the State's grazing lands in that manner.

A plan of organization of the California Cattlemen's Association has been decided upon which contemplates the division of the State into five districts, each of more or less allied conditions. Roughly the zones will be: No. 1, Southern California; District No. 2, San Joaquin Valley; District No. 3, coast counties south of San Francisco; District No. 4, Central California and Sacramento Valley; District No. 5, extreme northern counties of California.

Sheep.

L. V. Richardson of Byron recently sold his spring clip of wool for 52c per pound f. o. b. Stockton.

The next three months' supply of mutton for all State institutions will be furnished by the State Farm at Yountville, State Purchasing Agent McMillin has announced.

More wool was used by manufacturers in May than in any other

REGISTERED AND GRADE HOLSTEINS

AT AUCTION

On the W. A. GARVEY RANCH, 3 miles east of MODESTO, 1 mile west of EMPIRE, ½ mile north of Garner school house, on THURSDAY, JULY 18, 1918, I will sell Mr. Garvey's complete herd of dairy cattle, consisting of: 6 Registered Holstein Cows. 1 Registered Bull. 5 Calves eligible to register. One bull calf 11 mo. old. One bull calf 8 mo. old. 2 little fellows, and one little lady. 17 Grade Cows. 5 Heifers from one year to 18 months old. 6 Grade Calves. 13 of this herd are fresh cows, balance are heavy springers, several will be fresh before date of sale. This sale contains the following registered stock: Viola Pietertje Hengerveld De Kol, No. 257274, H. F. H. B. El Valle Imperial Duchess, No. 257274, H. F. H. B. Maid of Sleepy Hollow, No. 110831, H. F. H. B. Roxana Pieterthe De Kol. Vina De Kol Mechthilde, No. 211487, H. F. H. B. The bull: Toyon King Pontiac Boskadel, No. 190401. H. F. H. B. Gentlemen, look this herd up and examine them carefully. You will find some good cattle here. Both registered and grades are nicely marked, heavy producers and mostly young—as fine a bunch of calves as you would care to look at. It is worth the time and travel to see these calves out of this noted sire, for they are beauties. The cattle sell without limit or reserve, as Mr. Garvey's boys are drafted. We will also offer for sale with a reserve 100 tons of good, clean alfalfa hay and forty tons of ensilage. Parties purchasing this hay and ensilage will be furnished free corral and barn room. Don't fail to attend this sale, as it contains some of the best cattle listed this year. Free Lunch. Terms Cash. Sale begins at 11 a. m.

Col. CY. N. CLARK, Auctioneer MODESTO, CAL.

Money in Wool **Money in Lambs**

MERINO SHEEP · SHROPSHIRE SHEEP

Purebred Merino and purebred Shropshire sheep have been bred on our ranch since my father established the flocks in the early days with the best foundation stock. There is money for you in raising sheep of right breeding in your orchard, on your grain ranch, in your vineyard, in your potato and bean fields. On the range my stock will improve your flocks for whichever purpose you want them. Drop me a card, telling what you are interested in.

I have young service Shorthorn bulls also for sale.

REDWOOD TANKS.

35 years in this business. I sell direct to the consumer. You act as your own agent and save 20 per cent. Tanks from 300 gallons to 10,000 gallons in stock. A stock tank 6x2 ft., $10. For hot climates get my patent tank. Reference: Farmers & Merchants Bank of Stockton. Phone 2957.

R. F. WILSON, Stockton, Cal.

month of this year, according to the monthly wool consumption report, just issued by the Bureau of Markets.

The number of sheep in the Imperial Valley has increased from 30,000 to 50,000 in 1916 to at least 160,000 this year. Imperial Valley lambs are bringing top prices in Kansas City.

The Clemens Horst Company announced the sale of 3437 acres of its famous Bear River Ranch, near here, to Price Blackford, an extensive wool grower of Yuba county. Blackford will use the tract as winter range for his flocks.

CALIFORNIA INTERNATIONAL LIVESTOCK SHOW.

The classification committee of the California International Livestock Show has completed the premium list for the coming stock show. Besides the generous premiums offered in breeding classes of cattle, horses, sheep and swine, classes for fat cattle have been provided for in single animals, also pens and carloads.

One of the interesting features of the exhibition will be a slaughter test, this being an entirely new departure in connection with livestock exhibitions on the Pacific Coast. Animals entered in the carcass contest will first be judged on hoof and afterwards slaughtered, then judged in carcass and on the block. This is essentially an educational feature and demonstrates the quality of edible meat produced under certain conditions and feeds, the character and type of animals furnishing the ripest and best carcass in the shortest time, and feed consumed.

LIVESTOCK DIRECTORY.

SWINE.

Poland-Chinas.

HAVING RECEIVED SHIPMENT of several fine gilts from the East, will offer three fine gilts and one sow bred for late farrow. Good ones at fair prices. Booking orders now for spring farrow from the finest bunch of sows we ever owned, and the Great Big Bone Bob. Young & Clark, Lodi, Cal.

WANTED—Wolf Hounds. State price. Box 1180, Pacific Rural Press.

Locke Auction Sale Draws Good Crowd

[Written for Pacific Rural Press.]

The auction sale of Locke Jerseys held July 6, at Lockeford, was marked by low prices. There was a fairly good crowd and one would have thought there would have been some good prices paid, but only twice was there any spirited bidding and that was when G. A. Moore of Ripon and J. E. Thorpe of Lockeford became engaged in a bidders' battle over two cows, which resulted in Moore taking Emperis Lass 218446 for $510, the highest price of the sale, and Thorpe getting Valet's Golden Biddy of L. 259973 at $500, which was next highest.

The sale had been well advertised by the California Breeders Sale and Pedigree Co. and there were buyers from almost every part of the State. The auctioneers, Col. Perry of Columbus, Ohio, and Col. Rhoades of Los Angeles, did everything possible to make a better average, but the bidders were there to buy just as cheaply as possible and did so, with the cows averaging $150.50.

Mr. Locke was a game loser and took his loss with a smile. Only once did he raise a protest, and that was when he withdrew the unsold bulls from the sale. He said the bulls are not bringing beef prices and that he was willing to distribute them at beef prices, but would not stand to see the butcher buy them at one-half price.

Following is a list of the animals sold (as per catalogue number), together with the buyers and prices obtained. Unless otherwise designated, the animals sold were cows:

Rare Dairy Breed in California

[Written for Pacific Rural Press.]

Californians have an opportunity to see a remarkably uniform pure-bred herd of a rare breed of dairy cows. There are only about 1500 registered Brown Swiss cattle in the United States, most of them being in Wisconsin. There is only one herd in California, that of M. Pedrotti of San Rafael, whose ranch is near Ignacio.

A few years ago Mr. Pedrotti had a common dairy herd. His cousin's Brown Swiss bull broke the fence and bred some of the Pedrotti cows. The calves that came and developed as a result of this made Mr. Pedrotti see a light. He went back to Wisconsin and bought 14 head of registered Brown Swiss for $5,200. He learned that a Brown Swiss cow had beaten all other breeds for economy of production in the University of Wisconsin herd in a year's test ending May 15, 1909. "Mernie" was one of two Brown Swiss cows in the herd of 35, including Holsteins, Jerseys, Guernseys, and Ayrshires. Mernie's record for 12 months at five years old was 13,653.7 pounds milk containing 554.49 pounds fat. Her cost of feed was $114.18. The net profit was $114.18. The record was a great one at that time, and though the breed has not been developed as other breeds have been, better records have since been made by Brown Swiss. The cow College Bravura has the highest Brown Swiss butterfat record in the United States—798.16 pounds from 19,460.6 pounds milk. A three-year bull owned by Mr. Pedrotti is by a son of this cow.

Brown Swiss cattle are not valueless when they are discarded from the milking herd. Mr. Pedrotti sold a half-breed weighing 810 pounds dressed this spring. He got $145 for it. The two bulls he is using on the herd would be broad and flat crosswise of their backs if they were not creased by the flesh built up high along each side of the backbone. They are not fat, being fed nothing but grain hay, but their hind quarters are built low and full like a beef animal. They are of a very dark fawn color. The cows and heifers, as we watched them parade down a path through the brown grass of the hills, gave first the impression of remarkable uniformity. Their back lines and rumps were well-nigh perfect, their frames smoothly covered with flesh, their skins moderately loose and fine, of a solid medium fawn color, not varying much in shade, their udders not meaty nor particularly large but all with four well-balanced quarters. Their heads seemed a trifle oversize to one accustomed to the other dairy breeds, but strictly feminine. The foreheads are wide and the muzzles notable for capacity. The ears are large and filled with long hair. The barrels are typey and capacious, though the animals are not generally as large as Holsteins. The shoulders are fine, the legs straight and short, with strong pasterns.

Mr. Petrotti's thirty-four registered females and calves are all but one descended from the original fourteen, many of which were from stock that have since made records. One of these, Rhoda, is one of the ten daughters of Swiss Wylie Girl 7th. The latter cow was grand champion at the 1917 National Dairy Show and has a record of 539 pounds fat. Rhoda has had three heifer calves for Mr. Pedrotti. She was 20 months old when he bought her in 1914. Two of her daughters have had heifer calves. If these latter have heifer calves, Mr. Pedrotti will feel that he has a family of heifer producers. The herd includes two daughters of Madame B. and the dam herself, whose two-year-old record is 363 pounds butterfat; a daughter of Madame Lachlan, 522 pounds fat; a daughter of Molly P., 512 pounds butterfat last year as a 15-year-old; a daughter of Lorelei, 491 pounds fat; two daughters of Nava 3rd, 425 pounds fat; a daughter of Myrtle, 412 pounds fat; and a three-year-old son of Lorelei, now used as one of the herd sires.

The DRY BUTTERMILK DOES IT

PRINCE ALCARTRA KORNDYKE
Is a 40-lb. Bull

But that doesn't begin to tell the story. His sire is Korndyke De Kol's Prince, whose offspring rank with the offspring of any bull that ever lived in combined production and individuality. His dam is the one and only Tilly Alcartra, the cow that made a 40-pound record as an incident, not as a real objective, for she did it after five straight years of yearly test, during which she produced a volume of milk and butter unapproached by any other cow of any age or breed. And today at past nine years of age she is making the greatest record for milk and butter of her whole career.

We have only a few sons of Prince Alcartra on hand. We know if you could see them and find how moderately we price them that you would want one to head your herd. Come and see us, or write your wants.

The J. S. Gibson Co.
Box 97 WILLIAMS, CAL.

The only Bull in California

In service whose dam as a heifer made above 36 pounds butter in 7 days and above 1,100 pounds in one year. She is a daughter of Prince Gelsche Walker and of De Kol of Valley Mead 2nd, who formerly held the world's record for 2 years' product won by a heifer.

King Korndyke Pontiac 20th

His sire, King Korndyke Pontiac, is conceded to be the best individual son of King of the Pontiacs in the west, and he is out of a half sister to Prince Gelsche Walker.

Keep your eye on this breeding in our herd as well as others, and make up your mind early to have a son of this great young sire.

At present we have only a few young bulls on hand, sired by Prince Riverside Walker, our senior herd sire. Visit us or write your needs.

Don't Let Tuberculosis Get Your Hogs

(Continued from page 28.)

not allowed to stand until putrefactive changes have taken place. If proper precautions are taken, it can be fed with safety and is of great economic value.

5. Tuberculous human beings. It has been proved that hogs can contract tuberculosis through eating the sputum of consumptives, and no caretaker affected with this disease should be allowed around them.

6. Tuberculous poultry. The frequent association of hogs and fowls make it important to see that tuberculosis does not exist among the fowls.

7. Tuberculous sows. The disease may be transmitted from a tuberculous sow to her pigs, but this manner of infection is quite infrequent as compared with the number of cases that can be traced to tuberculous cattle.

UNPASTEURIZED SKIM MILK MOST DANGEROUS.

All of the last five sources are of minor importance, and the vast majority of cases of tuberculosis will be found to result from feeding unpasteurized skim milk from untested cows, and allowing the hogs to run with them. When these methods of infection are controlled the disease will be greatly reduced.

Unfortunately there are no external symptoms of the disease, except in very advanced cases. Often hogs that prove tuberculous when slaughtered are the finest appearing animals in the herd. The intradermal test may be used to pick out the affected animals, but it is not infallible, and Dr. Hayes does not recommend it in the average case. However, he made the encouraging statement that even where tuberculosis is known to exist in a herd of hogs, if they are not fed raw milk from an untested herd, and if the other precautions mentioned are observed, the disease can be eradicated after a few generations of breeding.

HOW TO PASTEURIZE THE MILK.

So if we are feeding skim milk it it up to us to do one of two things for our own safety: either have the cows tested and feed only the skim milk from those that are found healthy, or pasteurize all skim milk before feeding it. To pasteurize the milk means to heat it to 145 degrees and hold it at that temperature for thirty minutes, or heat it to 175 degrees and hold it for one minute. The former method is generally used. If the pasteurized milk is not used at once it must be cooled quickly; otherwise chemical actions take place which cause digestive troubles.

How can the milk be pasteurized? Well, if you have only a few cows you can have a small tank made to place on top of your oil stove or whatever you use to warm water for washing the dairy utensils. If you have a large dairy it will pay you to put in a regular pasteurizing outfit, but don't let anybody talk you into buying one of the expensive outfits such as are used by creameries.

A PASTEURIZING OUTFIT.

At my ranch we have had a comparatively cheap outfit in operation for over a year, and it gives perfect satisfaction. For $225 I bought a second-hand 4-horsepower boiler and a new 200-gallon vat with a cover. Through this cover goes a ¾-inch pipe to about a foot from the bottom of the vat. Here it ends in a tee, with two long perforated pipe arms. The steam from the boiler, passing through these perforations, heats the milk in the vat very quickly.

Also we use the boiler for sterilizing the dairy utensils, and for furnishing hot water to the public bathroom located in one corner of the separator house, thus cutting down on the overhead expense.

More than you can afford to pay? Don't decide this too hastily. Some great man has said that 90 per cent of wisdom consists of being wise in time. The successful man studies carefully the conditions that will affect the future, and lays his plans accordingly. And if you study carefully the conditions affecting the future of hog raising you will decide that an investment of about $200 now will save you thousands of dollars later on.

DO IT, AND DO IT RIGHT AWAY.

True economy does not always mean saving money. Often it implies an expenditure instead, for it means the use of money in such a way that you will get the greatest ultimate benefit. And if you have an untested herd of cows you can hardly use money to better advantage than in installing a pasteurizing plant. It will prove a sound business investment—one that will pay big dividends.

Better put one in right away. Don't wait until after the horse is stolen before you lock the barn door.

SHEEP ON ALFALFA.

E. D. Dudley's sheep get nothing but green alfalfa or green grass while it is growing. He has 500 ewes, has bred Shropshires 22 years on one place. He also has Rambouillets and crossbred Shropshire-Merinos, as told us by Goodwin Horigan, who takes care of them. Ewes pregnant or with lambs are put on bush alfalfa, but are moved when they get it cleaned so it looks stemmy. Dry ewes are then put onto it or lambs which are to be kept thin for breeding. If none of these are ready for it, the stems are mowed off and nothing more is put on until it has grown high again. The alfalfa starts much sooner if not pastured too closely. After weaning time, the alfalfa is cut for hay; for Mr. Horigan says that the sheep get too fat if they have good alfalfa all the time. Mr. Dudley's sheep seem to have no trouble with bloat, possibly because they have been kept on alfalfa so many generations. But most people lose sheep by bloat, and it is well to follow the practice of Bullard Bros. of Woodland, who let the alfalfa for sheep get rather ripe. They have observed that young alfalfa and frosted alfalfa bloat sheep worst.

The Steinbeck Bros. of Bloomfield have 1000 head of Merino sheep on their place, which they bought last fall at $12 per head. They say they have just shipped 5200 pounds of wool, their first clip, to Boston and are well pleased with their purchase. The sheep are not much more trouble than twelve calves that they are feeding, they say.

We are selling a hog that a farmer will want to buy at a price a farmer can afford to pay.

Marketing Small Wool Clips

To the Editor: I have about 800 pounds of Shropshire and 300 pounds of Merino wool. A number of my neighbors have 300 to 1500 pounds. How is the best way for us to sell? We have not enough to consign and wait for our money. If we send to a dealer, who is to grade and inspect the wool so we get full Government price less legal deductions? —R. H. F., Modesto.

If you cannot wait for your money a little while, you will have to sell to a licensed local buyer, whose gross profits on the entire season's business must be not over two cents per pound, or the excess will be taken by the Government. He will ship to an approved dealer in one of the approved distributing centers. You could do the same if you could collect a minimum carload of 16,000 pounds. In that approved dealer's warehouses a "Government valuation committee" would as soon as possible inspect and certify the grade of each lot and would direct the dealer where to send it. The Government or the mills to whom the wool goes must pay this last dealer a percentage on the selling price. The dealers may advance to the growers up to 75 per cent of the value of the wool, but the growers must pay 6 per cent interest on such advance until the wool arrives at the distributing center. The growers are entitled to their money on the day the wool arrives; but as the work is so extensive there may be some delay in grading. For all such delay the grower gets 6 per cent interest on the money due him. The price as set by the Wool Division of the War Industries Board gives the amount that will be paid by the Government or the mills after scouring and on the Atlantic seaboard. For Western wool the price varies from $1.80 per pound to $1.03, there being "choice," "average," and "inferior" classifications of each of 16 grades and "twelve months" and "eight months" classes for California wool. From these prices will be deducted the amount of freight from point of origin to the Atlantic seaboard, regardless of which distributing center the wool is first sent to, and the cost of scouring will also be deducted. The distributing centers for Western wool are Portland, Ore.; Chicago, Ill., St. Louis, Philadelphia, New York, and Boston. Since we have no adequate scouring station in California, we pay high freight East on at least 50 per cent waste, and the Wool Growers' Association of California is working on this problem We can supply names of reputable wool dealers in these markets to whom car lots may be shipped under the above conditions, or we can supply names of San Francisco buyers who will handle the wool as noted above for not more than two cents per pound.

MOVING LIVESTOCK TO OTHER COUNTIES.

To the Editor: I want to move some cattle to the coast counties north. Is there any restriction or must permits be secured?—M. L., Mountain View.

[Answered by Dr. J. P. Iverson, State Cattle Protection Board.]

With the exception of a few counties in Southern California, there are no restrictions on the movement of livestock between the various counties unless a special quarantine has been issued by the Board of Supervisors, State Veterinarian, or others against such movements. We know of no reason why at present you could not move from Santa Clara to Mendocino without any restriction.

WESTERN STOCK FEED CONDITIONS.

Reports from delegates to a conference of Food Administration officials of the Western States recently showed, according to L. A. Nares of the California Food Administration that Washington State has feed enough for its own cattle; Oregon will be short of feed, but Idaho can take care of her surplus cattle; Utah can care for any Nevada cattle which may be shipped out for lack of feed. Arizona and California are both short of feed and the Administrators are making every effort to prevent cattle being shipped into these States, even into one from the other.

HOGS FATTENED ON WASTE RAISINS.

Thirty hogs, weighing about 110 pounds each, were bought one time by Glen Onstott of Sutter county and filled up a few days, then turned into a neighbor's 10-acre raisin dry-yard and 60 acres of vineyard. Thirty-two days later he sold them, weighing 185 pounds, having gained over 44 pounds each on the waste raisins and vine pasturage.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

SUGGESTIONS ON FALL HATCHING.

It has been suggested that I give a series of papers on the subject of fall hatching. Now, there is nothing more need be said until mating time, provided those who intend to hatch are following instructions given about the male birds and the care of the hens.

FALL HATCHING NOT A NEW IDEA.

Fall hatching on this Coast is about as old as the poultry industry itself. There have always been enterprising men and women who were a little ambitious to get ahead of the crowd. It's hard to say who originated the idea, but I know it has been done for the last 25 years. The reason is that during August, September and October we have clear, warm weather, except for a few rains in early seasons that amount to little except to cool the earth and start the little green to coming—just everything that chicks need. I have seen chicks brooded and raised in a tent at Healdsburg—1600 of them in a big canvas tent. They were put in at one day old and never taken out—that is, at night—until the pullets were laying. That was a very rainy season, too, but the mortality was less than 7 per cent. The chicks ran out during the day. The tent was put on high ground and the short sweet grass nearly fed them.

TEACHING CHICKS TO ROOST.

When the chicks were eight weeks old the brooders were taken out and in their place a load of straw was put at one side of the tent, while at the other side a row of low perches were set up. The first night or two the chicks nested in the straw, but they soon discovered the perches and the most precocious went to roost and soon they were followed by others, until before they were three months old all were perching. There was not one case of roup or colds in that whole bunch, and the man who raised them was not an old chicken man either, but he paid strict attention to keeping them clean and feeding what was necessary to keep them growing. I don't suppose those chicks ever missed a day going outdoors. At night they had the same even temperature all over the tent; fresh air in abundance, without drafts.

FALL HATCHING TWENTY YEARS AGO.

Twenty years ago fall hatching was as common as spring hatching, because the one who had broilers in the early winter had a gold mine, while the one who had broilers in April might just as well knock them on the head and cook them up for the pullets—and that was done many times because there was simply no sale for Leghorn broilers in the spring. Any other kind could get a quotation, but not the Leghorn; he was too common. Now it is safe to predict that during the coming winter Leghorn broilers will bring 75 cents a pound and at 12 weeks old they ought surely to weigh 1¼ to 1½ pounds. You may figure it up for yourselves.

EGGS WILL BE HIGH.

Egg prices will also be up, but they have been so before when broilers did not bring the price they do now. I paid 45 cents a dozen for eggs once and went to Cloverdale for them myself so that they would not get jarred. I moved my bed into the basement so I could watch the incubator—and then got about 20 cents a pound for the broilers! We thought that price was big, too. The Pacific Coast poultryman is coming nearer to getting a square deal now than ever before, and the man who can't make money now never could do so. Take my word for it this once and fix up to get out one or two good fall hatches—one in September and one in November if you can accommodate two. If not, be satisfied with one and take extra care of them. When you start the incubator have a piece of ground ready and start a lettuce bed at the same time; then watch the chicks transmute lettuce into greenbacks.

RABBITS DIE IN CONVULSIONS.

To the Editor: My young rabbits, from ten weeks to three and a half months old, are dying. I think it's bowel trouble. I am feeding barley and red oat hay, also some greens. The rabbits are apparently well the night before and I find four or five dead in the morning. They have a little fever to start with, then they get bloated, run all around their pen for a few minutes, then die in convulsions.—Subscriber.

Feeding oat hay, barley grain and green feed is not really necessary, and is most likely the cause of the disturbance. Barley and green feed go well together, especially if the barley is rolled. There may be too much hull in the red oat hay that causes irritation somewhere. Anyway, the simple feed of two articles is best. Some rabbit breeders think green and dry feeds should not be served, believing it best to feed either all dry feed or all green feed. Try a change, anyway, because you could not hit it much worse. Leave out one of the articles and feed a little rock salt. Give plenty of fresh water.

TURKEYS AND FRUIT.

[Written for Pacific Rural Press by W. P. Brown.]

Otto Muller in the past two years has spent considerable money, time, and thought in the development of his ranch, a few miles south of Madera. He has 160 acres of young olives two years old, which show fine growth and represent good care. Every tree has had a dose of fertilizer from his poultry houses. Mr. Muller has set out 120 acres to figs, 30 to Kadota for early shipment, the balance to Calimyrnas. In addition to this, he has extensive brooders to take care of as many as he may get from 10,000 incubated turkey eggs. He obtained a large lot of his eggs from John Mee of St. Helena. He feeds clabbered milk and eggs first, then lettuce (two acres of which he now has growing), from that to alfalfa, then to a 3000-acre stubble range he has leased for them. There he will keep them in units of 400 to 500 with a herder to each unit. He plans to provide portable corrals with roosts and some kind of awning or covering for shade during the hours of intense heat. Mr. Muller says, so far as the poultry enterprise is concerned, there may be some losses and failures but no discouragement or quitting the game. In one way he will reap a large result from his poultry enterprise—that is the by-product in the way of fertilizer for his extensive orchards.

POULTRY NOTES.

H. F. Marsh, Santa Rosa, thinks a whole crop of troubles follow in the wake of inbreeding.

Black Minorcas are not desired on the table-fowl market, according to a big dealer, because of their black pin feathers and dark meat. Rhode Island Reds make the strongest demand.

Mr. Petersen of Petaluma, who keeps about 3000 hens, said that when they began to talk of taking the wheat away from the poultryman they all thought right there was the end of profitable poultry business, but that his chickens had never done better than now.

The most fortunate thing about the Pacific Duck Ranch at Petaluma is that the 15,000 ducks that make it their stopping place for a few weeks, more or less, do not all decide to quack at the same time. Mr. Ward, the manager, said they will hatch out about 30,000 this season. They feed the young ones from nine to eleven weeks and then market them.

METHODS OF PREPARING DRIED FRUITS FOR THE TABLE

Ruth E. Cruess and William V. Cruess, University of California, Berkeley, Cal.

MOST HOUSEWIVES assume that the only way to serve dried fruits is in the stewed form. As a matter of fact, there are dozens of attractive ways in which they may be prepared. At the suggestion of Mr. F. T. Swett, we have collected from various sources a number of recipes for their preparation and have devised and tested several new recipes. The results of this work appear in the following pages. It is realized that many other recipes are possible and in use and the writers will greatly appreciate copies of such recipes that readers of this article would care to send us.

In most of the following recipes, peaches, prunes, pears and apricots may be used interchangeably. The fruit will be much more like fresh fruit if it is soaked for from 24 to 36 hours before cooking.

PEAR RECIPES.

Soak 24 hours, cook slowly 15 minutes in water to cover. Add sugar to taste.

PEAR SALAD.

Use these cooked pears with lemon juice over them and mayonnaise for salad.

BAKED PEARS.

Use the soaked pears. Put lemon juice and chopped nuts over them; sprinkle sugar on top; put a little water in pan and bake slowly ¾ of an hour.

PEAR TAPIOCA.

Four cups of scalded milk, 1/3 cup minute tapioca, 3 eggs, ½ cup sugar, 1 teaspoon salt, 1 tablespoon butter, 8 pears.

Soak tapioca 1 minute in milk. Cook in double boiler 30 minutes. Beat eggs slightly; add sugar and salt; pour on eggs gradually the hot mixture. Turn into buttered baking dish in which the soaked pears have been placed; add butter and bake 30 minutes in a slow oven.

BREAD PUDDING.

One small loaf stale bread, butter, 3 eggs, 6 pears, ½ cup sugar, ¼ teaspoon salt, 1 quart milk.

Grind bread to crumbs, soak in milk until soft. Beat eggs slightly; add sugar, salt, and combine with milk and crumbs. Cut pears in rather large pieces and mix with the first mixture. Place in buttered baking dish and bake slowly 1 hour.

PEAR PIE.

One and a half cups flour, ¼ cup fat, ¼ cup butter, ½ teaspoon salt, cold water, pears.

Line pie tin with rich pie crust and fill with pears. Sprinkle with sugar, dot with butter, and put on top crush. Bake in quick oven.

DRIED PEAR PUDDINGS.

Sweeten and season with nutmeg enough cold-cooked cereal to line the required number of custard cups. Three cupfuls will be needed for six servings. Fill the centers with chipped, cooked, dried pears, stewed with a little ginger root, heaping the mixture. Cover the edges of cereal with crumbled dried cake crumbs, dot with butterine or butter, and bake for 30 minutes.

If convenient, top each serving with half a nut meat, a raisin, a stewed cranberry or a bit of bright jelly, for there is no better way to make an every-day dessert uncommon than to dress it up.

PEACH RECIPES.

Soak peaches 24 hours. Add a little lemon juice. Cook till tender.

PEACH CUP.

Eight cooked dried peaches or apricots (16 halves), 2 eggs, ½ cup milk, 1½ cups flour, 3 tablespoons baking powder, ½ teaspoon salt, 1 tablespoon butter.

Slip the skins of the peaches, mash two of them and add the well-beaten egg yolks. Add the milk, then the dry ingredients (through the sifter). Melt the butter, add it to the flour mixture. Beat well, then cut and fold in the well-beaten whites. Put a layer of the mixture in the bottom of a custard cup; add half a peach or apricot, and cover with batter. Sprinkle granulated sugar over the top and bake in a moderate oven 20 minutes. Turn from the cups and serve hot with hard sauce or with plain or whipped cream.

DRIED PEACH PUDDING.

Boil 1 pint of milk and while hot turn it over a pint of bread crumbs. Stir in 1 tablespoon of butter and 1 pint of dried peaches, stewed until tender and put through a sieve. When cool, add 2 well-beaten eggs, half a cup of sugar and a pinch of salt. Put in a well-buttered baking dish and bake ½ hour.

CREAM PEACH PIE.

Wash the peaches, after soaking 24 hours. Put the peaches through a sieve.

One cup peach pulp, 1 cup thin cream, 2 egg yolks, 1 tablespoon corn starch, 2 tablespoons lemon juice, 1 teaspoon vanilla, ½ cup sugar.

Cook the cream and corn starch in a double boiler until thick. Add the rest of the ingredients, fill the pie crust with the above, bake in an oven of moderate temperature. When done, add the meringue made from the 2 whites of eggs to which has been added 3 tablespoons of sugar, brown a delicate brown in the oven. You may substitute either dried prunes or apricots instead of the peaches.

PEACH BAVARIAN.

One-half box gelatine, ½ dozen cooked peaches, ½ cup cold water, ½ cup sugar, whip from 3 cups of cream, 1 tablespoon lemon juice.

Soak gelatine in water. Heat peaches; add sugar, lemon juice and soaked gelatine. Chill in cold water, stirring constantly. When it begins to thicken, fold in the whip from cream. Mold and chill.

PEACH MOUSSE.

One quart thin cream, 10 cooked peaches, 1 cup sugar, 3 tablespoons hot water, 1¼ tablespoons granulated gelatine, 2 tablespoons cold water.

Soak the gelatine in cold water and then dissolve in hot. Add peaches, which have been put through sieve. Set in cold water and stir. When beginning to set, fold in the whip from the cream. Put in mold, cover, pack in salt and ice, and let stand 4 hours.

DRIED PEACH PIE.

Stew dried peaches that have been soaked over night in cold water. Sweeten to taste; add 1 teaspoon lemon juice for 1 cup dried fruit mashed fine. Dust with flour, add a bit of butter, and bake with an upper crust.

DRIED PEACH AND RICE CROQUETTES.

One-half cup rice, ½ cup boiling water, ½ cup sweetened dried peach pulp and ¾ cup liquid in which it was cooked, ½ teaspoon salt, grating of lemon rind.

Wash the rice; add it to the water, with the salt; cover and steam until the rice has absorbed the water, then add the fruit, fruit juice and lemon rind; steam until the rice is done. Cool; shape into balls, brush over with milk, roll in fine, dry bread crumbs; fry in deep fat till golden brown, and garnish the top of each with a marshmallow. Serve with a sauce made of extra stewed peaches thickened with a little corn starch.

As fish needs the combination of an acid dessert, it was found that the two could often be prepared and used at the same time.

APRICOT RECIPES.

APRICOT CONSERVE.

One pound dried apricots, 1 quart cold water, 1 cup raisins, 2 pounds walnuts, juice 1 orange, juice 1 lemon, 1 whole orange, 1 pound sugar.

Add water to carefully washed apricots; cover and let stand over night. In the morning add seeded raisins and nut meats, cut into pieces and the fruit juice and orange cut into slices. Add sugar, bring to boiling point, and let simmer for 1¼ hours, stirring occasionally to prevent burning.

APRICOT CONSERVE.

One pound dried apricots, 1½ quarts water, 2 cans shredded pineapple, sugar.

Wash the dried apricots and soak them in the water. Cook the apricots until tender in the water in which they were soaked. Press through a strainer. Combine the cooked fruits and measure. Add one-half as much sugar. Cook until thick. Pour into sterilized glasses. When cool, seal and cover as directed for jams.

APRICOT SOUFFLE.

Drain and reserve syrup from 1 quart cooked apricots and cut fruit into quarters and then put closely together on bottom of a buttered baking dish. Pour over custard souffle mixture. Bake from 35 to 40 minutes in a slow oven. Serve with apricot syrup and whipped cream sweetened and flavored with vanilla or vanilla ice cream. Canned peaches may be used instead of apricots.

STEAMED FRUIT PUDDING.

Two-thirds cup bread or cracker crumbs, 2/3 cup flour, 2 teaspoons baking powder, 1/3 cup fine suet, 2/3 cup sugar, 2 eggs beaten till light, 2/3 cup prune or apricot juice from cooked dried fruit, ½ teaspoon salt, 2/3 cup milk.

Mix first five ingredients; mix rest; blend the two. Steam 2 hours in a tightly closed mold. Give plenty of room to swell. Serve with liquid or hard sauce.

APRICOT OR PEACH SPONGE.

Make a pint of jelly with gelatine from cooked dried fruit strained. When cool, beat in the whites of 2 eggs or 1 cup thick whipped cream, or the white of 1 egg and ½ cup whipped cream.

APRICOT ICE CREAM.

One cup dried apricots cooked and run through a coarse strainer, 1½ cups cold water, 1 cup sugar, 4 tablespoons lemon juice, 1¼ cups heavy cream, 1½ teaspoons salt.

Mix and freeze.

APRICOT SHERBERT.

Two-thirds cup orange juice, 1¼ tablespoons lemon juice, 1 cup apricot pulp, 1 teaspoon gelatine, 1 cup water, 1¼ cups sugar, 1 teaspoon vanilla.

Put cooked apricots through sieve. Boil the sugar and water together five minutes, making a thin syrup. Soak the gelatine in a tablespoonful of cold water until swollen and dissolve in hot syrup. Then put all the ingredients together and freeze. This will make ten servings. Dried peaches may be substituted in this recipe for apricots.

APRICOT MERINGUE.

One pound apricots or other dried fruits, ½ cup sugar, 1 tablespoon lemon juice, yolks of 2 eggs, whites of 2 eggs, 2 tablespoons sugar.

Stew fruit; rub through a coarse sieve; add sugar, lemon juice, and yolks of eggs. Pour into buttered baking dish. Beat the whites very stiff; fold in the sugar; put on top. Bake in a very moderate oven 15 or 20 minutes. Should be just brown on top and hot throughout.

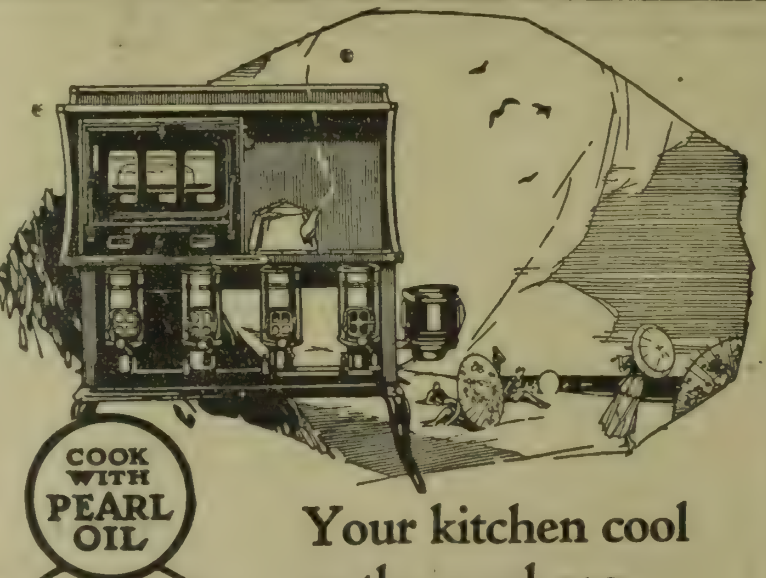
PRUNE RECIPES.

Pick over, wash and soak several hours in cold water. Cook slowly until soft.

NORWEGIAN PRUNE PUDDING.

One-half pound prunes (22 prunes), 2 cups cold water, 1 inch piece stick cinnamon, 1 1/3 cups boiling water, 1/3 cup corn starch, 1 tablespoon lemon juice.

Obtain meat from stones and add



COOK WITH PEARL OIL

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

Your kitchen cool as the seashore

Even on the hot summer days you can keep your kitchen comfortably cool by using a New Perfection Oil Cook Stove. No dirt or dust; no smoke or odor. Economical.

Lights at the touch of a match and heats in a jiffy. Easy to operate and more convenient than coal or wood. Bakes, broils, roasts, toasts,—all the year round.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer.

STANDARD OIL COMPANY (California)

NEW PERFECTION OIL COOK STOVE

to prunes and water, then add sugar, cinnamon, boiling water, and simmer 10 minutes. Dilute corn starch with enough cold water to pour easily, add prune mixture, and cook 5 minutes. Remove cinnamon, add lemon juice, mould, then chill. Serve with cream.

PRUNE PIE.

One-half pound prunes, ½ cup sugar (scant), 1 tablespoon lemon juice, 1½ teaspoons butter.

Remove stones, cut cooked prunes in quarters and mix with sugar and lemon juice. Reduce liquor to 1½ tablespoons. Line plate with paste, cover with prunes, pour over liquor, dot over with butter, and dredge with flour. Put on an upper crust and bake in a moderate oven.

PRUNE WHIP.

One-third pound prunes, whites of 5 eggs, ½ cup sugar, ½ tablespoon lemon juice.

Remove stones and rub prunes through strainer; add sugar and cook 5 minutes. The mixture should be of the consistency of marmalade. Beat whites of eggs until stiff, add prune mixture gradually when cold; and add lemon juice. Pile lightly on buttered pudding dish; bake 20 minutes in a slow oven. Serve cold with boiled custard.

STEWED PRUNES.

One pound prunes, ½ cup sugar, 1 quart cold water, 4 thin slices of lemon.

Wash the prunes thoroughly, put them into a saucepan, and cover them with cold water. Soak them over night and cook them next morning in the same water until they are soft. When they are nearly cooked add slices of lemon and sugar and cook them 5 minutes longer. Let the lemon remain in the juice until the prunes are ready for serving.

PRUNES STUFFED WITH DRIED APRICOTS.

Two cups large soft prunes, 2 cups dried apricots, 1 cup powdered sugar, ¼ cup fresh grated cocoanut.

Soak the prunes for one hour and dry. With a sharp knife, remove the stones. Fill with apricots which have been thoroughly washed, dried, and put through a food chopper. Form into natural shape of fresh prune, mix sugar and cocoanut and roll the prunes in it. Spread on a platter to dry.

JELLIED PRUNES.

One-third pound prunes, soaked and cooked, boiling water, ½ cup cold water, ½ box gelatine or 2½ tablespoons granulated gelatine, 1 cup sugar, ¼ cup lemon juice.

Remove prunes; stone, and cut in quarters. To prune water add enough boiling water to make two cups. Soak gelatine in ½ cup cold water, dissolve in hot liquid, add sugar, lemon juice, then strain and add prunes. Mold and chill. Stir twice while cooling to prevent the prunes from settling. Serve with cream and sugar.

PRUNE AND FIG SANDWICHES.

One-half cup minced cooked prunes, ¼ cup chopped figs, ¼ tablepoon lemon juice.

Remove the stones from the prunes; chop the figs. Mash and mix the prunes, figs and lemon juice, using a silver fork. Spread the mixture on thin slices of graham or whole wheat bread and press two slices together.

PRUNES FILLED WITH MARSHMALLOW.

Cook prunes that are good size until tender; sweeten slightly, then cool; remove pits and insert half a marshmallow. Place filled prunes on a buttered baking sheet, put in oven until marshmallows become soft. Remove and serve either hot or cold with whipped cream or melted marshmallows.

PRUNE LOAF.

Cut cooked prunes into quarters and add ½ cup sugar to prunes not using the juice. For the dough use:

Two cups flour, 1 tablespoon sugar, 1 tablespoon butter, ½ teaspoon salt, 2 teaspoons baking powder, 1 egg, 1 cup milk.

Beat the egg and add the milk; baking powder, flour and other ingredients being combined with them as for biscuits. Roll out thin so that the length is twice its width; spread prunes over this, keeping within an inch of the edge. Roll like jelly cake, pressing the ends firmly so that the prunes will not escape. Place roll in one side of the baking pan, pour over and around it ½ cup sugar, 2 cups of hot water (the water in which prunes were cooked may be used), 1 tablespoon butter. Bake, basting frequently. Add more water as needed. Serve with its own sauce or additional cream. Any dried fruit may be substituted in this loaf.

PRUNE ICE CREAM.

One quart cream, 1 cup prunes, 1 1/3 tablespoons lemon juice, 1 cup sugar.

Soak prunes 24 hours; cook until tender in water in which they were soaked. Force through sieve, combine all the ingredients. Freeze.

JELLIED PRUNES.

One envelope gelatine, 1/3 pound prunes, 2½ cups water, ½ cup lemon juice, 1 cup sugar.

Quarter prunes, add water to make two cups. Soak gelatine in ½ cup cold water, dissolve in hot water; add sugar and lemon, strain, add prunes and chill.

FROZEN PRUNE FLUFF.

Two cups prunes, 1 cup sugar, 3 pints water, 2 egg whites, ½ cup finely chopped walnuts, rind of ½ orange.

Cook prunes, add the sugar and orange rind and simmer until tender. Strain off the juice and remove orange peel. Stone the prunes, rub through a sieve into the juice; chill; add walnuts and egg whites unbeaten.

Freeze in three parts ice to one of salt. Other dried fruits may be substituted.

FIG RECIPES.

SWEET PICKLED FIGS.

Soak in water and boil till soft. Then add spiced vinegar prepared as directed below.

One quart vinegar, 2 pounds sugar, ½ ounce cinnamon, ½ ounce mace.

Grind and tie in a muslin bag. Boil spices, sugar and vinegar and pour hot over the fruit. Add whole cloves to taste.

Other fruits can be prepared similarly.

FIG PUDDING.

Three ounces suet, ½ pound chopped figs, 2 1/3 cups stale bread crumbs, ½ cup milk, 2 eggs, 1 cup sugar, ¾ teaspoon salt.

Chop suet, then cream. Add figs. Soak bread crumbs in milk, add eggs, well beaten, sugar and salt. Combine mixtures; turn into a buttered mold and steam 3 hours. Serve hot with a sauce.

OPEN WARFARE AGAINST THE PESTS

Agricultural Summary

The Barley Riddle.

The barley crop throughout the State is turning out well, notwithstanding fears were felt that the high temperatures prevailing about June 10 and 11 might catch some of the grain in the soft dough and materially diminish the yield. Reports so far as received have been quite favorable as to volume and quality, the crop averaging perhaps 75 per cent of normal. Following the formal announcement of the refusal of the Government to fix a price on barley or take over the crop, growers are somewhat at sea as to the market for this grain. The price is to be left evidently to the law of supply and demand, and inasmuch as conditions are such that there will be little call for our barley from foreign or Eastern buyers the demand must be largely local. This being the case, some of our conservative farmers have apprehended a slump in price. The trend of the barley market, however, since harvesting began does not bear out this fear. From a price as low as $2, at which some few sales were early reported, the price has shown a tendency to advance steadily. In the Byron and Brentwood district $2.10 has been offered, in the Imperial Valley $2.15 and $2.25, and at this writing we hear of a sale at $2.52. This developing strength of the barley situation is both a surprise and a puzzle to those interested. We are harvesting a good crop, the grain in many sections running as high as 20 sacks to the acre. The California Development Board estimates the total production of the State at about 800,000 tons. Other estimates from well-informed sources fall somewhat below this. But in any event a large output is now assured. Now with a fairly heavy crop and a much restricted market in sight, barley is seemingly more than holding its own. Explain the situation as you may, it seems pretty well settled that the barley grower is in for another prosperous year.

As we go to press, the United States Department of Agriculture has just issued its July forecast of crop production, in which it predicts a crop of barley to exceed all previous yearly production.

Wheat Price Unchanged.

The deadlock in Congress over the effort to raise the price of wheat to $2.50 or over was broken by a compromise on $2.40, the measure fixing this price having been passed up to the President for his signature. The President vetoed the measure, however, which is essentially an important appropriation bill, on the ground that the price-fixing provision is a "rider" and therefore not proper legislation, and that he is opposed to going over the heads of the Food Administration. Unfavorable weather conditions in the country have cut down the previously estimated harvest of wheat by about 40,000,000 bushels, according to the July forecast of the United States Department of Agriculture. The June estimate was 931,000,000; the July estimate is 891,000,000 bushels.

Apricot Prices Announced.

The Prune and Apricot Growers' Association met in San Jose last Wednesday and fixed the prices on apricots as follows:

Grade—	1918	1917
Standards	9½	13¾
Choice	13	14½
Extra choice	14½	15
Fancy	16	16
Extra fancy	17½	17
Extra Fancy Moorparks	19	18
Slabs	11	12

Prices set on small sizes are lower than last year, while on the bigger sizes they are higher. Standards are 3¼c lower this year. Choice cots are 1½c lower. Except for standards and slabs, a half cent comes off grades on cots not of the "Sunsweet" brand. The association will pay $6 a ton on delivery for standards and slabs and $8 a ton on all other grades.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, July 10, 1918.

WHEAT.

Congress has not changed the price to be paid for wheat from that set by the Food Administration.

Hard White—
No. 1 .... $2.20
No. 2 .... 2.17
No. 3 .... 2.13

Soft White—
No. 1 .... 2.18
No. 2 .... 2.15
No. 3 .... 2.11

Club and Sonora—
No. 1 .... 2.16
No. 2 .... 2.13
No. 3 .... 2.09

BARLEY.

Much of the barley offered for sale here is not "choice," and dealers are hard put to it to say what it is worth. Anywhere from $1.75 to $2.40 was suggested as the figure that this barley should bring. Dealers say they will willingly pay $2.45 to $2.50 for "choice feed."

Choice feed, per ctl .... $2.45@2.50

OATS.

New oats are just beginning to come into the market. A lot of red feed is reported to have sold for $2.52½; and $2.50 to $2.55 will be freely offered for large shipments.

White feed, per ctl .... Nominal
Red feed, per ctl .... $2.50@2.55
Red seed, per ctl .... None

CORN.

There has been more inquiry for corn during the week than for some time past, and Egyptian was stronger in consequence.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked .... $3.85@3.90
Milo maize .... 3.85@3.90
Egyptian .... 3.95@4.10

HAY.

Hay receipts in San Francisco for the past week were 1483 tons, as against 1457 tons the previous week. The arrivals continue much below the normal for this time of the season and consequently the market is firmer. Reports from the interior, however, intimate that while baling is still backward next week will show more activity in these operations in many sections, and the next few weeks should show increased arrivals. While arrivals are light, they are sufficient to care for present demands. Hay accessible to the river and bay landings is now beginning to arrive and several cargoes of Red Oat hay have been received during the week, the quality being good.

Wheat No. 1 .... $22.00@24.00
do, No. 2 .... 19.00@21.00
Choice tame oat .... 24.00@26.00
Wild oat, new .... 17.00@20.00
Barley, new .... 18.00@21.00
Alfalfa, first cutting .... 16.00@20.00
do, second cutting .... 22.00@24.00
Stock .... 15.00@17.00
Barley straw .... 50@80c

FEEDSTUFFS.

The market for feedstuffs was firm, with upward tendencies. Alfalfa meal was advanced with the stiffening up in the price of alfalfa hay. Rolled barley and coconut cake were advanced a dollar, while rolled oats showed a tendency to weakness.

Beet pulp, per ton .... None offering
New alfalfa meal, per ton .... $30.00@31.00
Coconut cake or meal 44.50
Cracked corn .... 86.00@88.00
Middlings .... Nominal
Oilcake .... $75.00@76.00
Rolled barley .... 55.00@57.00
Rolled oats .... 56.00@58.00

POTATOES, ONIONS, ETC.

Both potatoes and onions were stronger this week. It is now believed that the stagnancy in these markets is a thing of the past. Tomatoes are no longer coming in from Los Angeles, but a good supply is reaching market from Merced. The supply of asparagus is about exhausted. Peas and beans are weaker.

Peas .... 6@7c
String beans, per lb .... 7@8c
Wax beans, per lb .... 7@8c
do, garden .... 9@16c
Asparagus, per lb .... None
Carrots, per sack .... 50c@$1.00
Rhubarb, San Jose, per box .... $1.00@1.25
do, Strawberry, per box .... None
Summer squash .... 75c@$1.00
Cucumbers (hothouse), per box $1.00
do, Los Angeles, lugs .... $1.00@1.25
Eggplant .... 5@6c
Lettuce, Sacramento, crate .... $1.00@1.25
Tomatoes, per crate—
Merced .... 90c@$1.25
Potatoes—
Garnet Chile .... 1.75@2.00
Whites .... 1.75@2.00
Onions, Australian browns .... Nominal
River Reds .... $1.00@1.25
do, Yellows .... 1.35@1.60
Garlic .... 3@4c
Green corn, Alameda, per sack .... $2.50@2.75

BEANS.

A demand for limas increased the price of that description by 35c to 40c. Bayos and blackeyes were weaker, but otherwise the market was unchanged. A recent statement that the Army and Navy may be in the market for more of last year's crop is regarded as erroneous by the best informed bean men, who say the new crop will begin to be available in October and there is little likelihood that the Government will be in the market again before that date.

Bayos, per ctl .... $8.00@8.25
Blackeyes .... 7.00@7.25
Cranberry beans .... 11.50@12.00
Limas (south, recleaned) .... 11.40@11.60
Pinks .... 6.90@7.00
Red kidneys .... 11.50@12.00
Mexican reds .... 7.75@8.00
Tepary beans .... 8.50@9.00
Garbanzos .... 7.50@7.75

POULTRY.

The market for broilers is strong, which are quoted somewhat higher. The depressed Belgian hare prices last week caused a stoppage of shipments and a strengthening of prices.

Turkeys, live, per lb., young .... 28@30c
do, dressed .... 32@34c
Broilers, 1½ to 2 lbs 37c
do, 1¼ lbs 38c
do, ¾ to 1¼ lbs 38c
Fryers .... 36@45c
Hens, extra, per lb., colored 30c
do, Leghorn .... 26@28c
Smooth young roosters, per lb. (3 lbs. and over) .... 45@48c

Geese, young, per lb .... 25@27c
do, old, per lb 22c
Squabs, per lb .... 38@40c
Ducks .... 25@27c
do, old .... 23@24c
Belgian hares (live) .... 16@18c
do, dressed .... 20@22c

BUTTER.

Butter continued strong throughout the week and closed at 49½c. The prediction is made that it will pass the 50c mark in a short time and go higher.

In making comparisons of the present prices of butter and eggs with the prices a year ago it should be borne in mind that these prices are net to the retailer, while last year something like 8 per cent was added to the exchange prices as a commission of sale. As now quoted, this commission must be deducted to arrive at the price received by the dairies and poultrymen.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	49	48½	48½	49	49½	
Prime 1st	47	47	47	47	47	
Firsts	46½	46½	46½	47	47	

EGGS.

Eggs also were very strong this week and extras closed at the same price as the close of extra butter.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	48	47½	48	48½	49½

Oregon triplets, fancy 25½c
Oregon Y. A. fancy 26c
C. S. Oregon triplets, fancy 26c
do, Oregon Y. A. fancy 25c
Monterey cheese .... 21@23c

FRESH FRUITS.

Practically all last year's apples are now off the market, and this year's crop is coming in in variety. A price of from $2 to $3 is given to cover all descriptions. The cantaloupe market is strong. Some arrivals from the Turlock district are on the market and these will dominate in another week. Shipments from Imperial Valley have about stopped. Strawberries, blackberries and raspberries are arriving in good quantity and quality.

Apples .... $2.00@3.00
Apricots, per crate .... 1.00@1.25
Peaches, 4-box crate .... .75@1.00
Figs, black, per box .... .60@.75
do, white, per box .... .75

Standard .... 3.50@4.00

Lemonettes .... 6.50@8.00
Grapefruit, fancy, new .... 2.00@3.00

DRIED FRUITS.

The United States Food Administration for California sent out notices on July 10 which authorized the packers to begin to buy fruit for drying. The packers had expected to commence buying on July 8, but the Administration delayed them until the 10th. The selling date remains unchanged at July 15. With this permission buyers were put in the field at once and they will buy on the basis of prices quoted below. No decision has been reached on what will be offered for apples or pears.

Peaches 11c
Prunes, base 8½c
Apricots .... 9½@19c
Figs .... 12@16c
Raisins—
Muscats 5½c
Thompsons 6½c
Sultanas 6½c

HONEY.

There is little change in the honey situation. Local dealers are now buying extracted honey on the basis of prices quoted.

White, extracted 21c
Light amber .... 18@20c
Amber .... 16@18c

RICE.

The matter of price for rice for this year's crop has not yet been settled.

LOS ANGELES

BUTTER.

Los Angeles, July 9, 1918.

There was a further firming up of this market the past week due to a falling off in the milk production owing to a shortage and high price of feed, and the reduction of many dairy herds through the sale of cows to the butcher. The receipts for the past week were 302,350 pounds against 343,190 pounds the same week last year. There was withdrawn from cold storage during the week 23,693 pounds, while there was taken into cold storage the same week last year 51,424 pounds. The cold storage holdings now are 393,306 pounds against 267,985 pounds this time last year.

We quote:

EGGS.

There was a further falling off in the receipts the past week and a higher market. The arrivals by rail were 1337 cases against 2543 cases the same week last year, a falling off of 1206 cases. The receipts by truck continue to run about double as large as the arrivals by rail, making the supply for the week about 4000 cases against 7600 cases the same week last year. There was withdrawn from cold storage during the week 1617 cases, while there was taken into cold storage 3419 cases the same week last year. The cold storage holdings now are 95,157 cases against 83,608 cases this time last year. Demand good both from the home trade and the outside.

POULTRY.

There was a further slight improvement in this market the past week. Heavy broilers, hens, and fryers were all in very good demand and broilers and hens are higher. Ducks and turkeys slow sale as usual this time last year.

We quote from growers:

Broilers, 1¼ to 2 lbs 30c
Broilers, under 1¼ lbs 26c
Fryers, 2½ to 3 lbs 29c
Hens, over 4 lbs 25c
Hens, under 4 lbs 19c
Ducks .... 24@25c
Geese 18c
Roosters, 3 lbs. up (soft bone) 29c
Old roosters, per lb 15c
Turkeys, heavy, 12 lbs. and up 30c
Turkeys, light .... 27@28c
Squabs, live, per lb 30c
do, dressed, per lb 35c

FRUITS.

Receipts were hardly so good the past week and the tone of the market was firmer. Cherries coming in less freely. Only Royal Anne and Bings are now arriving. Apricots a little higher and selling more freely. Peaches steady and in fair demand. Plums hardly so firm, but demand good. Black figs steady and in fair demand. A few Malaga grapes in from the Imperial Valley and selling very well.

We quote from growers:

Cherries, Royal Anne, per lb .... 15@18c
Apricots, per lb .... 3@4c
Figs, Black Spanish, per lb .... 10@12c
Peaches, per lb .... 5@6c
Gooseberries, per lb .... 10@12c

Prunes, Sonoma, per lb .... 4@5c
Climax, per lb .... 5@6c
Tragedy, per lb .... 7@8c
Grapes—Imperial Valley Malagas, per lb .... 8@10c
Apples—Red Astrachans, per lb .... 2@3c

Special Citrus Market Report

Los Angeles, July 9, 1918.

The citrus market in the principal selling centers of the East is extremely strong. The New York market was higher on Valencias the early part of this week, though the lemon situation eased off owing to the arrival of several good consignments from Europe. The Boston market is holding up well with a slight advance in prices obtained for oranges. In Pittsburgh and Cleveland the market is better on both oranges and lemons. Only in St. Louis is any dullness in the citrus trade noted, and this is believed to be only temporary.

The citrus market is still strong locally, and tiptop prices are obtained for both oranges and lemons. The stiff prices, however, seem to be curtailing demand. Supplies are not plentiful. The arrivals of lemonettes do not meet the demand.

BERRIES.

Receipts were again good the past week and demand fair. Strawberries show no change, but blackberries were a little higher, while raspberries were lower. Loganberries steady.

We quote from growers:

Strawberries—
- Fancy, per 30-basket crate....$1.65@1.75
- Poor to choice, per 30-basket crate ..... 1.40@1.50

Blackberries, per 30-basket crate 2.00@2.20
Raspberries, per 30-basket crate 1.75@1.90
Loganberries, per 30-basket crate 1.80@2.00

MELONS.

A steady and rather firm market was had the past week. Offerings were fairly good and sales slow. Some local Tip Top were also in, which detracted from shipped-in stock. Honey Dew melons steady and firm. Not many watermelons.

We quote from growers:

Cantaloupes—
- Standard crates $2.25
- Pony crates .....$1.75@2.00
- Tip Top, jumbo crate $3.50

Watermelons, per 100 lbs. .....$1.50@1.75
Honey Dew melons—special 2.00
do, do, flats..... 1.25

VEGETABLES.

While there was no real snap to the market the past week all good fresh stuff sold fairly well. New potatoes were in lighter supply and good demand. Old potatoes all gone. Onions were rather scarce. Summer squash dull and lower. Cucumbers sold off under freer offerings. String beans steady, but slow sale. Asparagus out of the market. Cabbage higher but little offering. Bell peppers steady and in fair demand and chiles moving better. Corn in good supply and lower, but demand fair. Tomatoes coming in more freely and less active. Peas scarce and firm.

Potatoes, new, per lug.....50@55c
New potatoes, per cwt. .....$1.40@1.60
Garlic, per lb. .....5@6c
Cabbage, per 100 lbs. .....$1.25@1.50
Bell peppers, per lb. .....8@12c
Chile peppers, per lb. .....7@9c
Peas, Northern, per lb. .....10@12c
Summer squash, local, per lug.....30@40c
String beans, per lb. .....4@4½c
Tomatoes, home-grown, per lug..50c@$1.25
Eggplant, Imperial Valley, per lb....5@6c
Cucumbers, home-grown, per lug..60@75c
Corn, per lug of 3 doz. .....60@80c

BEANS.

There was some little doing in limas the past week and prices were a little higher. All others dull.

Limas, per cwt. $10.50
Large white, per cwt. 12.50
Small white, per cwt. 12.50
Pink, per cwt. 7.50
Blackeyes, per cwt. 7.00
Tepary, per cwt. 8.50

HAY.

The past week was another quiet one in this market. Receipts were fairly good but buyers held back and only took such lots as they had to have.

We quote f. o. b. Los Angeles—

Barley hay, per ton .....$24.00@26.00
Oat hay, per ton ..... 25.00@27.00
Alfalfa, northern, per ton .... 21.00@22.00
Alfalfa, local, per ton ..... 22.00@24.00
Straw, per ton ..... 9.00@10.00

COTTON.

The market braced up a little the past week under better buying on Liverpool account and continued dry weather in Texas. There was more speculation in New York than for some time and last Saturday July sold up to 28c and October 25.27c. With the opening of the current week the market eased off a little. In New Orleans Spot remains the same as a week ago. Spot middling 30c.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, Cal., July 8, 1918.

Owing to transportation delays and the inability of the auction companies in most of the larger auction markets to secure sufficient experienced labor to unload cars, the offerings during the past week have been much lighter. This condition, coupled with the pre-holiday demand, developed a higher market. Even stock not up to standard sold to better advantage than fruit in sound condition the week previous.

The cherry season is about finished, and the last of the shipments arriving in the markets are showing up weak. This applies also to Royal apricots, though Moorpark and Blenheims are still arriving sound. The market on these latter varieties can be considered good.

There is very little improvement on the week previous on peaches, as Eastern stock seems to have the preference with the trade. Western markets show a decided improvement on peaches. California peaches have during the past week moved east of Chicago.

There is still a very brisk demand for plums from all sections of the country. Shipments will be light for the next three weeks from all sections except Placer county.

Bartlett pears are moving in car lots, but shipments will not be heavy before the 12th. Growers are asking $70.00 a ton for canning stock, but there does not seem to be any tendency on the part of the canners, at this time, to pay the price. Some contracts, however, have been made at $60.00. What proportion of the crop will be sold to the canners is problematical, and this naturally will affect Eastern shipments. There is a feeling, however, among Bartlett pear growers that indicates a large proportion of the crop will be moved East on account of the indications for high prices. Eastern speculators have indicated this by purchases already made on futures.

Valley Elbertas will move about the 15th or 17th of this month and though the crop is not in excess of 60 per cent of normal, fruit will be of good quality. Placer County Elbertas will be ready to move in car lots between the 20th and 25th. The fruit will be of good quality.

Average for the week:

New York—Royal apricots, $1.33; Formosa plums, $2.78; Beauty, $2.21; Shiro, $2.37; Clyman, $1.87; Climax, $2.54; Burbank, $2.39; Santa Rosa, $2.18; Tragedy, $3.02; Comet pears H/B, $2.65; Lawson H/B, $2.77; Wilder H/B, $2.28; Royal Anne cherries, $1.41; Oregon, $1.22; Bing, $1.76; Lambert, $1.56.

Boston—Republican, $1.61; Bing, $2.17; Oregon, $1.07; Tartarian, $1.40; Royal Anne, $1.52; Royal apricots, $1.18; Formosa, $2.24; Beauty, $2.31; Climax, $2.15; Burbank, $2.16; Maynard, $2.35; Tragedy, $3.40; Santa Rosa, $2.67.

Chicago—Clyman plums, $1.56; Burbank, $1.78; Climax, $1.77; Maynard, $2.26; Shiro, $2.00; Tragedy plums, $2.68; Santa Rosa, $2.02; Formosa, $2.20; Red June, $1.89; Beauty, $1.99; Lawson pears H/B, $2.32; Comet H/B, $2.66; Oregon cherries, $1.15; Republican, $1.65; Bing, $1.54; Royal Anne, $1.40.

Shipments, by cars, from June 29th to July 4th, inclusive, as follows: 4 cherries, 40 cots, 25 peaches, 390 plums, 4 pears.

Total shipments to date, 1918—1347 cars.
Total shipments to date, 1917—1415 cars.

Special Livestock Market Report

San Francisco, July 10, 1918.

CATTLE—Quite a large number of cattle are still being offered, but principally in small lots of one to six carloads. Most of the slaughterers are still oversupplied, and are not anxious to take on more until the present supply is materially reduced. Good-weight, fat steers, however, are holding up well in price, but light-weight steers and cow stuff are very weak. There is a slight drop in quotations.

Grass Steers—
- No. 1, weighing 1000 to 1200 lbs.....11½c
- No. 1, weighing 1200 to 1400 lbs..11½@12c
- Second quality .....10@11c
- Thin .....8@9c

Cows and heifers—
- No. 1 .....8@8¼c
- Second quality .....7@7½c
- Common to thin .....4@5½c

Bulls and stags—
- Good .....6@6½c
- Fair .....5@5½c
- Thin .....4@4½c

Calves—
- Lightweight .....10@10¼c
- Medium .....9@9¼c
- Heavy .....7@8c

Sheep and lambs are steady, with sufficient supplies being marketed to meet the somewhat limited demand.

Lambs—
- Yearlings .....11½@12c
- Milk .....14@14½c

Sheep—
- Wethers .....11@11½c
- Ewes .....9½@10c

Hogs are rather scarce this week and of mixed quality. However, prices are steady and demand good.

Hogs—
- Hard, grain-fed, 100@140.....15½c
- do, do, 140@300 .....16c
- do, do, 300@400 .....15½c

Los Angeles, July 9, 1918.

CATTLE—The past week brought no improvement. Few choice fed steers were in and they met with a fair demand at steady prices. Poor and medium again made up most of the offerings. Calves are coming in less freely and sell well. California furnished most of the supply.

Per cwt. f. o. b. Los Angeles:

Beef steers, 1000 to 1100 lbs..$10.00@12.00
Prime cows and heifers..... 8.50@ 9.50
Good cows and heifers..... 8.00@ 8.50
Canners, per cwt..... 5.50@ 6.00
Calves, per cwt..... 8.50@ 9.50

SHEEP—There was a little better tone to this market the past week. With the coming of hot weather the demand has improved a little, both for sheep and lambs, though prices are not quotably higher.

Per cwt. f. o. b. Los Angeles:

Prime wethers .....$9.00@10.00
Prime ewes ..... 8.50@ 9.50
Yearlings ..... 9.50@10.50
Lambs .....12.50@13.50

HOGS—Not many in the past week and what arrive from California are in rather poor condition. The light offerings, however, caused killers to pay steady prices, the fresh meat trade taking what few arriving.

Per cwt. f. o. b. Los Angeles:

Heavy, averaging 275@300 lbs..$14.00@14.50
Mixed, 225@275 lbs..... 14.50@15.50
Light, 175@220 lbs..... 14.50@15.50

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

Portland, July 8, 1918.

Cattle—Strong; receipts, 1779. Steers, prime, $12.00@13.00; good to choice, $11.00@12.00; medium to good, $9.00@10.00; fair to medium, $8.00@9.00; common to fair, $5.00@8.00; cows and heifers, choice $8.50@9.00; medium to good cows and heifers, $6.00@7.50; fair to medium, $4.50@5.50; canners, $3.00@3.50; bulls, $5.00@6.00; calves, $8.50@11.50; stockers and feeders, $7.00@9.00.

Hogs—Receipts, 1068; 50c higher. Prime mixed, $17.00@17.50; medium mixed, $16.75@17.25; rough heavies, $16.25@16.50; pigs, $15.75@16.25; bulk of sales, $16.85@17.00.

Sheep—Dragging; receipts, 3107. East of mountain lambs, $13.00@13.50; valley lambs, $12.00@12.75; yearlings, $8.00@9.50; wethers, $7.50@8.50; ewes, $5.00@7.50.

FOR SALE.—2 canvas irrigating hose, 3c per ft.—700 feet, 100-ft. lengths, slightly used; first-class condition. Ogden Balton, Jr., Rt. 4, B. 447, Santa Rosa, Cal.

COUNTRY LANDS.

400-ACRE STOCK AND GRAIN RANCH—3 miles Pleasant Valley R. R. station, Mariposa county, Cal. 100 acres cleared and tillable. Nearly all of the ranch could be farmed if cleared of the large oak and other trees. Wood sells for $12 per cord, R. R. station. 3 and 6 room house, large barn and outbuildings; blacksmith shop and tools; ranch fenced and cross fenced, part hog tight. No alkali or hard pan. Family orchard and garden, irrigated from springs. Average rainfall, 29.88 inches. Grapes, olives, almonds, etc., grow without irrigation. Feed in pasture and free range adjoining, knee high. Elevation, 1500 feet; ½ mile school and church. Hogs and other stock fatten on acorns. Hogs never have cholera here. $30 per acre, including 300 goats, 3 horses, 3 head cattle, turkeys and chickens and all farm implements. $3000 cash, balance long time, 7 per cent. Fred B. Palmer, owner, Coulterville, Calif.

A FINE OPPORTUNITY.—I own an alfalfa and dairy property near Modesto, also some very fine Holstein cows that have been selected with great care. Owing to pressure of my large law practice I am unable to give the matter attention. In order to make a quick sale of the property and dispose of the land and cattle I will offer the land in full stand of alfalfa at $250 an acre in parcels to suit purchasers; 10 per cent cash, balance 3, 4, or 5 years; low rate of interest to bona fide purchasers who will go on the land. I will sell them the cows on the same basis and loan purchasers the necessary farming implements. Under these conditions a man can go right on the place and make a good living at once, be independent and make money and pay for the land out of the land. Address box 1170, Pacific Rural Press.

ALFALFA RANCH—320-acre alfalfa ranch, all under irrigation, together with good substantial improvements, work stock and farm machinery. 250 acres in alfalfa, balance in grain. Price, $80,000. $45,000 cash, balance in 3 years at 6 per cent. No exchanges considered. Box 239 Pacific Rural Press, Los Angeles, Cal.

BE PATRIOTIC—Raise stock on productive Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento.

Gossip that Costs Human Lives!

YOU HEARD the story about the Red Cross official who sold a sweater knitted for the soldiers?

Did you believe it? Did you repeat it?

Do you know that stories like that are lies started by German spies? Do you know that you are helping the Kaiser and *hurting our soldiers* every time you repeat such rumors?

Oh, they are clever stories—interesting stories—they make splendid gossip whenever women gather. Of course they are! The Kaiser pays his spies to make them clever so that people will repeat them.

That's how they spread and spread and grow and grow until a lot of people hear them. Discontent is sowed. The very national unity of this country is attacked.

That's how German agents are trying to slow up our preparations. That's how, unless these lies are nailed, they will prolong the war, impede the transport of our food, supplies and soldiers—yes, that is how these lies will kill our boys in France!

Of course you do not realize these consequences when you pass along a story you have heard. But you owe it to yourself to get "THE KAISERITE IN AMERICA"—101 German Lies—the newest publication of the Committee on Public Information in Washington. See how the German agents have invented lies—even to giving names and dates and places.

HAVE YOU HEARD LIES LIKE THESE?

THAT President Wilson's Secretary, Mr. Tumulty, was shot for treason at Fort Leavenworth.

THAT a sweater knit in St. Louis for the soldiers in France was sold by Red Cross workers.

THAT no soldier or sailor, after leaving American soil, can write home.

THAT Red Cross officials receive exorbitant salaries.

THAT homes displaying Food Pledge cards will be searched by Government agents.

THAT this is a "business man's war."

THAT there are 10,000 Englishmen in Utah waiting to seize America for Great Britain.

Read the 101 German lies that one newspaper ran down and proved to be utterly false. How many of them have you heard?

Your boys can fight the enemy abroad. You can fight the enemy at home. However harmless all these stories seem, don't repeat them! Don't listen to them! Get this book and see how you can help to beat the Kaiser at his game at home! It's free!

Are You Getting Ready for the Fall Shows?

Written for Pacific Rural Press by R. H. Whitten, Los Angeles

Going to show at the Fairs this fall? You should decide this question right now, for competition will be keen and the best fitted animals will stand the best chance of winning the coveted prizes.

EVERY YEAR animals are shown that are good enough individuals to win, but they do not get in the money because they were not properly conditioned. Explaining to the judge that the animals have not been fitted—that they were taken right out of the field and brought to the show—is a worthless excuse. In most cases the judge knows this, for it is very apparent. But it is not for him to prophesy that the animals would be as good as those that appear better had they been given better care. It is his duty to judge the animals as they stand before him.

The true showman has his stock in the pink of condition. The judge is instinctively pleased with its appearance and he cannot but be favorably influenced by such conditioning. The breeder has done his part and he finds the judge ready to do his. So now is the time for you to recognize the fact that if you wish to win at the shows next fall you should pick out your animals at once and begin to condition them.

Perhaps you haven't taken much interest in the shows this year, feeling that the proper wartime spirit should cause you to withhold your support. If so, you are wrong, for the Government officials, including Mr. Hoover of the Food Administration, have set their seal of approval on agricultural fairs and livestock shows and have publicly announced that they should be encouraged and supported. In this connection an article on "Fairs in Wartime," appearing in the catalog of the Missouri State Fair, is of special interest. It is written by F. B. Mumford, dean of agriculture at the University of Missouri, State Food Administrator, and a member of the National Defense Board. Dean Mumford says:

"The most serious problem faced by a modern nation in wartime is the food supply of its armies and civil population, and any activity which tends to increase the supply of food or conserve the available supply is a war measure of the highest importance. Consequently, agricultural fairs must be regarded as important activities during the war."

Gala day when the best stock shown at the State Fair is paraded before thousands of visitors.

Main entrance to State Fair Grounds two years ago. A $300,000 agricultural building now replacing the one shown in center.

Show Up California's Livestock Possibilities.

This applies even more to California than to the States east of the Rockies, for, although our State is one of tremendous livestock possibilities, and although we swept the deck at the Chicago International on steers and sheep, still the quality of our livestock, the benefits of breeding purebred stock and our vast resources in connection with stock-raising have never been properly brought to the attention of our people. No development will add more to the prosperity of the State than an increased output of purebred milk- and meat-making animals, and no other method will do as much to develop the industry as livestock shows. Every effort should be made to this end.

So to remedy this situation we are to have this fall the greatest series of shows that this State has ever witnessed. The ball will be started a-rolling with the State Fair, which will be held at Sacramento from August 31 to September 8. New buildings have been erected, new features have been planned, and the wideawake secretary, Chas. W. Paine, promises us a bigger and better fair than ever. He always makes good, so you can expect some big doings. Then the California Liberty Fair will be staged at Los Angeles October 20 to 26. Livestock is to be the chief feature of this show. Approximately $35,000 will be offered in cash prizes. Nearly all of the different breed associations have offered special prizes. Those in the cattle class will reach $3,600, and prizes for carload lots of cattle will be the largest ever offered in the United States—first premium, $500; second, $400; third, $300; fourth, $200.

Few places in the United States are so well equipped to hold a show as Los Angeles, which has a beautiful Exposition Park, with its handsome brick buildings, its concrete grandstand, one-mile race track, large barns, walks and drives. The entire park is a flower garden, and in the buildings all kinds of California products are displayed throughout the year. The park is almost in the heart of the city and is easy of access.

California International Livestock Show.

The California International Livestock Show Corporation has been incorporated for the purpose of holding an annual show at San Francisco, and the first show will be held November 2 to 10, thus giving the exhibitors at Los Angeles just the right amount of time to ship to San

MIDSUMMER MUSINGS.

AS WE take up our pen on Tuesday morning news comes that the Germans had started toward Paris with a drive fifty miles wide but came quickly upon a conglomerate rock of defense—including a few American boulders which rolled over and crushed the impetus out of them; which is a polite way of saying that they hit one of Dante's most famous creations. And the reports also say that the Americans flopped over upon an entire brigade staff and might possibly have legged the kaiser himself if the influenza had not previously gripped and sent him back to Potsdam. However, this particular spasm of autocracy may work out, all the war critics outside of Germany seem to agree that the allies are over the divide and no matter what pitfalls there may be on the down grade toward complete victory over inhumanity, there can be no doubt of the attainment thereof. More than a million Americans are already on or very near the allied fronts, another million will be there in time to shoot tyrants out of the next German Christmas tree, and other millions ready for the campaigns of 1919. Meantime Uncle Sam has rallied many thousands of his near-sighted and short-breathed nephews to dodge falling spruces and chase I. W. W.s out of the forests of the Northwest, to the end that an aerial army, such as the world has never dreamed of before, may float on its own wings across the Atlantic to drop the retribution of heaven upon the last lair of the dragon of human oppression and to approve the belief that when mankind gets right with God there will be hell enough on earth for evil-doers!

And while war-like things, upon which we hold no license to preach, seem to be going thus well for the relief of the invaded countries and for the building up of free nations from peoples who have undergone centuries of oppression and outrage, we may muse upon smaller affairs which underlie our own development and build up the strength of our own country for the duties of world-leadership which come to it unsought and unforeseen and yet almost universally conceded.

PACIFIC SELF-CONSCIOUSNESS.

IT IS our conviction that this generation of dwellers in the Pacific States should awaken more fully to self-consciousness of their national duty and opportunity. We should all take courage and incentive from most recent events. The most significant facts and suggestions which came to public notice during the observances of Independence Day in this State had relation to that most pressing of national needs—the immediate building of ships. California, the land of romantic ancestry, of the lure of gold, of the beauty of fruits and of the perfume of flowers: the land of the dolce far niente—arose to world recognition and to her own self-consciousness: yes, even

> —in flowering June
> When brooks send up a cheerful tune
> And groves a joyous sound,

California assailed the sky with the continuous roar of riveting machines and the shrill cries of caulking irons, and built more ships both of iron and wood and built them faster than all the shipyards of the country—receiving all the six pennants which Uncle Sam offered for best service to meet his requirements! There is a fly in this ointment, it is true, for this supreme patriotic achievement of our workmen was almost immediately followed by a strike of the boilermakers, which does not look well in a patriotic score—but pass that now as a human infirmity—merely illustrative of the truth of Hudibras:

> Ay me! what perils do environ
> The man that meddles with cold iron.

The general lesson of the shipbuilding achievement is that California has the spirit and the natural endowment and situation for wonderful marine development. Nowhere on the shores of the greatest industrial nations is there a spot on great marine highways where a year's work includes so many comfortable working days in the open air—in which great ships can be most quickly and cheaply built. We are building ships now for activity on the Atlantic, but that is an accident of war. When that has passed we shall be building ships to traverse all oceans and to properly correlate our young giant the Pacific with its older and more decrepit brother oceans, and of course its traffic will come nigh to equalling the sum of theirs—for it will be the sphere of the Pacific to interlock the Occident and the Orient; ministering to the maturity of one and renewing the youth of the other for the greater, newer life of the world. And it is for California not only to build carriers but to load them with the best we can produce for the souls, minds and material advancement of mankind.

OUR END OF THE RAILS.

OF COURSE, California's achievements cannot be realized by endowments of climate and geography—though these are great, as indicated. Nor can we live by oceanography alone. We need, most of all, people to plan, direct and capitalize and people also to obey—within the limits of human rights and democratic ideals. Just at the moment there is reason to believe that our needs in this line may need to be emphasized. Although no patriot can object to the present assumption of railroad direction and operation by the Government, and though most persons perhaps will never desire to see these great arteries of national life and trade returned to private ownership, it is very important to remember that these avenues of transportation were built for the development of the Far West as a national asset and their management should never lose this creative purpose and point of view. Unavoidably perhaps, but nonetheless unfortunately, as the Western point of view disappears from their operation their main industrial purpose is obscured. We must always have, of course, the long end of the rail, and it has been desirable and well used for leverage, as it was designed to be, but when the long end is apportioned for carriage it becomes crushingly heavy. It is an interesting fact that for alleged economy in operation the Government is now doing with the roads almost everything which the private builders and operators were commanded not to do, and the economists will need to write several books before we shall know whether we are helped or hurt by the operation. So far as we can now see, we are hurt by increased cost of freights and fares and by reduced train service—all of which are burdens chiefly of producers—and the presumably increased income is applied as an anti-strike salve to the jaws of operatives. Is this a necessity of war or of politics, or is it economic justice? We doubt if anyone can at this moment exactly demonstrate that: it is a coming question. But however that may be, the operation is against the present prosperity and the outlook of Far Western industry and development. Different groups of producers and business men are almost daily bringing forward claims of hardship to their activities and many of these are being recognized as just and provided for, as in the case of the recent increase of wheat prices. People are willing to suffer if it is a patriotic need: if otherwise, they reasonably object. One can get a broad view of the problem from statements made at the great assembly of advertising men who held a world convention in this city recently. Here are a few catches from this stream as poured out by Herbert Cuthbert, an expert on touring, in his address before this convention:

The tourist industry represents an expenditure of $700,000,000 a year in the United States in normal times, and of this amount California gets $1,000,000 a day.

These figures should make the average person stop and think before suggesting that anything should be done to seriously interfere with this business. They indicate to some extent the vast amount of capital that must be invested in the hotels, resorts, sightseeing cars, local transportation companies, ranchers and producers who serve almost exclusively the large hotels and resorts and all the other adjuncts to the development of vacation travel. These people have just as much right to have interest on their investments as the owners of stock in railway companies, express companies and in manufacturing enterprises during these abnormal times.

The Government has eliminated pleasure travel as a non-essential; before they are done they will realize the necessity of it. War travel will keep up the spirits of the people, will keep despondency from eating the hearts out of thousands upon whom fortunes of war have laid hands of sorrow and bereavement. They should be encouraged to seek amusement and relaxation in the free open air, in the great places of nature, in our national parks and forests, and on our inland seas and lakes, from which they will derive permanent benefit and be reinvigorated with a vitality that will carry them through all the arduous tasks of the future.

This strikes us as a forceful sermon upon a very unique theme and when we add to Mr. Cuthbert's propositions the more common and fundamental ones that tourist travel is really a picture show from which people get suggestion and inspiration for contribution to the development and production forces of the country, one is really led to wonder whether dividend payments and pay-roll extensions are really a function of government at all. When Uncle Sam wants a soldier he takes him, and that is right. When he wants a capitalist or a workman he buys him, and we are not sure that that is either right or democratic.

STRAIGHT ORDERS FOR CANNING.

WE ARE not convinced that we fully enjoy the short cuts to efficiency which are characteristic of the current era in domestic economy. We rather enjoy the old style recipes, which ambled along toward results, cluttering up the pathway thereto with nodules of humanistic philosophy and painting the sky with flashes of decorative art. This was the way that ladies of the olden time exchanged their most charming domestic secrets—appealing constantly to the reciprocating intelligence of the recipient by significant smiles, frowns and arm-length gestures and never descending to debasing details nearer than to prescribe a "pinch" of this or a "cupful or two" of that and finally "flavor to suit the taste" as the proper finale to all their impressionistic formularies. But it does not matter how much we enjoyed the grace and freedom of the old method of suggestive communication of domestic confidences: nothing now remains but to bemoan the passing of it, for it can never come back. Modern efficiency has erected over its grave an entanglement of thermometers, scales and other gravimetric and quantometric devices through which not even the spirit of the sweet old thing can ever return to float again in boudoir or kitchen atmosphere.

For this reason we mourn over the demise of the old "rule of thumb" as one without hope and make ready our worship for the new goddess of domestic efficiency who strikes out from the shoulder, looks straight into the center of things and gives orders like a drill sergeant. Our first genuflection at the altar of this goddess appears on another page of this issue and consists of unequivocal commands to our lady readers as to the way in which they must do their home canning, which is now a seasonable operation. Professor W. V. Cruess of the College of Agriculture, who has written enough pages about home canning during the last few years to fill a two-volume cook book, finds now that the military spirit of the time requires straight orders to be obeyed and not general suggestions to be dreamed over. In a note to the editor he writes:

We have published the methods of sterilization for the various fruits and vegetables in our sta-

tion publications, but these data are scattered through a number of pages and in some instances require considerable effort on the part of the canner to get the information. I have thought that it would be a good plan to have published in the columns of the Pacific Rural Press a brief table containing all of the needed information. I have therefore arranged a table in several columns giving the time of sterilization, blanching, etc., for the various fruits and vegetables where the three or four standard types of sterilizing apparatus are employed.

Now, therefore, we, the official journal of the dominant military spirit in California farm and home life, do publish the above as General Order No. 1 (new series) and do warn any recalcitrant female of our division that disobedience will incur the penalty of being drummed out of her war kitchen and compelled to spend the balance of the season with white-blooded slackers at a summer resort—unless orders on page 68 are obeyed.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Tomato and Eggplant Pests.

To the Editor: Kindly tell me what to do for large green worms that eat tomato vines and also tomatoes. Would ants kill eggplants or is there some worm that works on them? The roots are strong and I can find no worms, but they continue to die.—B. B., Parlier.

Those large green worms can be killed by spraying with arsenate of lead, but as they are so easily seen and it is dangerous to consumers to cover tomatoes with poison, it is better to pick off and smash the worms.

Eggplants are subject to several small pests which can knock out the top without being noticed unless one is well informed about them. Preventive treatment consists in spraying with lead arsenate or with tobacco or kerosene washes. Of course, we cannot tell which to use without seeing which pest you have. The ants do not injure the plants, but they do indicate that the remedy for aphis given on page 723 of our issue of June 8 is probably what you need. But it must be used before the plant collapses. You must always watch for the first signs of trouble and not expect to snatch back the victim from the doors of the crematory.

Killing Borers.

To the Editor: Will you kindly tell me what strength of concentrated lye will kill twig borers? I have been told that they could be eradicated from an orchard by washing the trunk of the trees and also pouring the wash around the roots of the trees.—Reader, Mendocino.

We would as soon tell a man to soak his feet to remove a wart from his ear. There are several twig borers, but none of them can be reached by medicating the trunk and roots. If you catch a borer in his hole in a twig, send him along and we will tell you what we can about his weak points. Soft soap and lye solution (one pound to six gallons of water) have been prescribed for borers which work near the root crown, but they never tackle a twig. They work in the rough bark at the base of the tree or wherever on the stem and larger branches the bark is sunburned. Whitewash is a good preventive and after they get in the best treatment is to cut open the black spot which their work generally causes on the bark, find the opening of the burrow in the wood underneath and punch into the end of that burrow with a small wire. Wire hairpins opened flat are good tools for it. The sooner you get at it now the less the trees will be hurt.

Prune Parting from Almond?

To the Editor: I have some two- to three-year-old French prune trees grafted on almond root. These trees are planted in heavy, rich soil and seem to do well except on some the bark on the graft keeps cracking apart until there is a distinct groove around the trunk between the root and top. The bark ridges up on each side of this groove and I am afraid if nothing is done the trees will fall over. One already fell over this spring. What causes this and is there any treatment for it?—E. J. A., St. Helena.

There is often some upsetting of the bark at the union, but it is unusual for the French prune to fall off the almond. It generally likes it too well. It is more apt to fall off the apricot root that way and for that reason the apricot is seldom used. Are you sure you have the almond root? It has been claimed that a disposition of the barks to stand off each other can be overcome by making a few cuts up and down, or lengthwise, through the union which causes the two growths to inter-knit better. We have nothing else to suggest.

Killing Devil Grass.

To the Editor: What is good to kill devil grass which is something like morning glory. I have it all over the place and mostly in the beans. I hoe it regularly, but it still comes just the same.—W. G., Arroyo Grande.

You will never get it out of the beans. If you can get the beans off early so you can plow up dry and let the stuff bake in the sun for a couple of months and then harrow and rake out roots, you may reduce it somewhat—enough perhaps so that you can grow beans with the devil in them profitably. To make a cleaner job you will have to give up one year's crop and clean the land by a persistent summer-fallow through which you run a flat-toothed weed cutter every Monday, so as to cut shoots under the surface and never give them a chance to see the light or yourself a chance to see them. All other hoeing or cultivating simply spreads the pest. There are also two prescriptions for killing by chemicals, one of which is described in the publications by Wheeler, Reynolds & Stauffer, 624 California street, San Francisco, and the other in Circular 168 of the College of Agriculture at Berkeley.

Follies of the Fellenberg.

To the Editor: We have some Fellenberg prunes six years old. Last year we noticed that the foliage dropped quite early. The fruit was not up to size. This year most of it is now dropping off. It gets a little red, the stem dries up, and that is the end of it. We irrigate once during the season. Three weeks ago we gave a good irrigation and, even so, the fruit drops. What is the cause? Is it too hot in the San Joaquin Valley for the Fellenbergs? Would you advise us to graft them over or give them some treatment? Our Robes, Silvers, Green Gages and Washingtons do well under the same conditions.—M., Stockton.

We should cut out the Fellenbergs, just as other growers have been doing for the last thirty years. There seems little occasion to consider it at all unless you have a shipping demand which makes it profitable. It has always acted contrarily in this State and has been generally disregarded in planting. It hardly seems worth while to speculate upon the reasons for its perversity. We would graft over.

Painting Pear Blight Cuts.

To the Editor: Is it possible, in painting over a cut on a blighted limb of a pear tree, that the blight can be transmitted from one blighted cut to another tree by the paint brush?—W. H., Rialto.

It may be considered practically impossible (1) if the cuts are properly made, that is usually about a foot below visible appearances of blight on the bark; (2) tools are disinfected before making the cut; (3) the wound immediately after the cutting is sponged with a disinfectant—of which the best and most available is one part of corrosive sublimate to 1000 parts of water by weight; which is one ordinary tablet of corrosive to one pint of water. If these things are done subsequent painting of the wound can be safely done because there should be no living germs to transfer by the paint brush—without relying upon the other fact that probably the paint itself would render innocuous any germ which might be taken on the brush.

Too Many Toads?

To the Editor: Will you kindly give information about toads. The place is alive with them and the flower beds around the house all undermined. I should like very much to be rid of them unless they have some virtue of which I am ignorant.—L. B., Lakeport.

Toads have an enviable reputation as friends of the plant grower. They are ravenous eaters of slugs, snails, and various creeping and low-flying insects. In Europe children are taught in the schools to have high regard for toads and not to molest them. We cannot exhort you to love toads, for we find it impossible to do it ourselves, but we do respect and protect them. Still there may be too many toads in one place. We should lift them up tenderly on the blade of a hoe and put them out in the fields.

HAS YOUR SUBSCRIPTION EXPIRED?

(7-20-18)

For answer see the yellow label.

PRACTICE PREPAREDNESS.

Have you secured a copy of "1000 Questions in California Agriculture Answered"?

The edition is being rapidly exhausted. Do not fail to own a copy.

The book is made up from a selected list of questions asked by farmers and answered in the columns of the Pacific Rural Press. One of the problems dealt with may confront you any time. By having a copy of this book you have the solution right at hand.

Marion Davis of Sebastopol writes: "I like your 'Thousand Questions.' The answers are fine."

The price is $1.50 postpaid, but when renewing your subscription just send 50c additional and we will mail you a copy. You will find it the best four bits' worth you ever owned.

$1.50 will renew your subscription for one year and supply you with this useful book of reference. Checks, money orders or postage stamps are equally useful to us.

REMEMBER—ONLY 50c TO PAID-IN-ADVANCE SUBSCRIBERS.

Elizabeth McHugh, Subscription Clerk

Killing Moles.

To the Editor: I would like to know how to get rid of moles. I have tried poisoned raisins and other poisons, but it doesn't seem to kill them at all.—W. G., Arroyo Grande.

You cannot poison moles as you can gophers because the mole does not eat vegetable substances but subsists on earth worms, ground insects, etc. If he would learn to do this without upsetting plants in his drive to get bugs, the mole would be an ally in your gardening; but he never will learn to work your way, so you have to kill him—if you can. This can be done by buying mole traps and learning to set them properly. They are different from gopher traps. The only other way known to us is to watch for his disturbance of the surface and jab him with a spading fork or throw him out with a quick plunge of the shovel and kill him on the surface.

Removing Root Knots.

To the Editor: My four- and five-year-old prune trees are affected with black knot (I think you call it)—big lumps at foot of trunk and on the roots. Kindly tell me if you know of any cure.—G. A., Calistoga.

Remove the knots with a chisel or gouge without injury to adjacent bark. Paint the wound with Bordeaux mixture and allow it to dry before replacing the earth. If a young tree is seriously dwarfed by root knot, we would dig it out now and allow the hole to remain open and bake in the sun until time to plant a new tree—filling in around the new tree with good soil from a distance. If a tree is found to have knots and is still growing well, we would take off the knots as first suggested.

Non-Podding Bean Plants.

To the Editor: What shall I do for my beans? They have been blooming now for about six weeks, but no beans. The ground has been well manured and well watered. If anything can be done, let me know, and if not I will take them out and plant something else.—G. A. R., Glenn.

We do not find anything on your specimen which accounts for non-setting of pods. The plants seem healthy. If the stand is good, we would keep them along on the chance of setting later. Possibly you have pushed too vigorous growth by irrigation and manuring. Let them get a little drier.

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., July 16, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm
Eureka	.12	.14	.11	68	48
Red Bluff	...	....	....	96	58

San Francisco	...	....	.01	72	51
San Jose	...	....	....	84	46
Fresno	...	....	....	98	60
San Luis Obispo	...	....	.01	84	48
Los Angeles	...	.68	....	84	60
San Diego	...	....	....	74	60

Lupines as Orchard Cover Crops

To the Editor: Please tell me what the name of the plant I send is. Is it of benefit to orchards as a help for growing trees if plowed under in the spring? Can the seed be bought?—M. D., Forestville.

[Answer by Prof. P. B. Kennedy.]

The plant is one of the native lupines (Lupinus nanus). It is an annual and a very beautiful flower, frequent in patches on the coast. No seed of it can be secured on the market and I doubt very much the wisdom of gathering it.

To be sure, it will greatly improve the soil both by the nitrogen containing nodules on its roots and by the humus formed by the plowing under of the leafy growth. It is most likely, however, that some other legume would produce a greater growth to plow under. Direct experimental evidence on a practical scale, however, is not at hand to prove this, although many small trials with similar lupines have been conducted, with the result that they are not promising. Possibly on light, poor, sandy soils the lupines may find a place. Your correspondent will be able to secure the following kinds on the market: White lupine (Lupinus albus), blue (hirsutus), yellow (luteus), Egyptian (termis). In addition a number are grown for ornamental purposes and seed offered under the flower list. These, however, are likely to be just as valuable from a cover crop standpoint.

The seed may be sown broadcast or drilled at the rate of about two bushels per acre. As much as 20 tons of green matter per acre are known in Europe, or 25 bushels of seed.

The ripe seeds of many of our species are very harmful to stock, but the seed of some of the European species are ground into meal and found excellent for young calves.

The seed are sometimes boiled and then washed in water, which takes out the dangerous substances, but it also takes with it much of the valuable protein substances. Much investigation is needed with both our native species and those of Europe before definite recommendations regarding them for range, cover crop, hay, concentrates from the seed, or any other purpose can be given.

There are probably 80 or more species in California, from small, delicate annuals to large, shrubby, long-lived perennials.

San Joaquin Grape Growers Prosperous

[Written for Pacific Rural Press by J. C. Johnson, Fresno.]

Prosperity will smile on the table grape producer of San Joaquin Valley, according to all indications. Judging from the prices paid for Imperial Valley grapes in Eastern markets, the growers of San Joaquin Valley will make a good profit on a tremendous crop that is expected to be harvested this season. A reliable fruit shipper predicts that 4000 cars will be shipped from this valley. The profit the growers will receive, he said, will be equivalent to what they paid for their acreage one year ago. The average of prices growers are receiving are as follows: Thompsons, $40; Malaga, $45; Cornichons, $50; and Emperors, $60. One shipper predicts that the great grape industry of the valley would yield a total profit between $2,000,000 and $3,000,000.

FRUIT MARKETS NEED REGULATION.

A plea is made in fruit circles for a more regulated market. It is the consensus of opinion among the fruit interests that the shipping of green fruits should be regulated in this locality, as it is in Imperial Valley. Strongly illustrative of the harm done by irregular marketing, the failure on the markets of the final apricot production is cited. The transportation was too slow, markets became glutted and other causes that grew out of the excitement of the grower to ship by consignment and unload his crop on the market too hurriedly served to make an absolute failure of the marketing of the last apricots of the season. Apricots, for instance, sold as high as $3,000 per car three weeks ago. Latest reports from Eastern markets show that apricots are selling for freight charges. They are bringing as low as $400 per car and even at that rate growers are experiencing some difficulty in making sales. Packers and shippers are warning growers that the same condition may develop in the table grape shipping unless better judgment is exercised.

Women in Vacaville Orchards

[Written for Pacific Rural Press.]

Can our women do field work? The Women's Land Army says that they can. But the question still hangs, and Vacaville is trying for the answer. For Vacaville is a forward-looking community, and a number of its men—seven they were—had a vision. They looked five years ahead and saw what the labor shortage was likely to be. Who could fill it? They consulted, built a camp and called on the Women's Land Army. The camp is a model, and the women are on trial. The girls have been in camp about three weeks and to date the answer to the "can they do it?" query runs something like this:

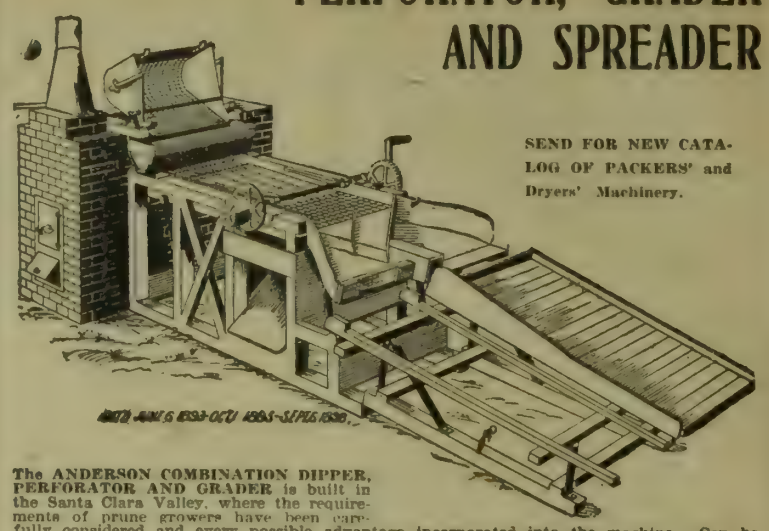
Charles McQuaid, Federal Labor Agent, says the girls have more than fulfilled his expectations — which were high. They have worked steadily and their courage seems of the matter-of-fact sort that comes to stay. They have satisfied their employers. Yes, Mr. McQuaid, who watches this experiment as a chemist his crucible, nods his head and says the girls have made good.

Henry Bassford, with three hundred acres of ripening fruit on his hands, gives his verdict over his signature: "The girls are all right seven days in the week." He has used them in picking, packing, etc.

Mr. Rogers, another large grower, says: "Use them next year? Why, of course." And he has tried out some of the girls in irrigating as well as in the fruit, and decides that women can not only call a spade a spade, but use it as one.

These are samples. Other growers tell much the same story. Practically all of the employers and girls are already talking of "next year."

ANDERSON COMBINATION DIPPER, PERFORATOR, GRADER AND SPREADER



SEND FOR NEW CATALOG OF PACKERS' and Dryers' Machinery.

The ANDERSON COMBINATION DIPPER, PERFORATOR AND GRADER is built in the Santa Clara Valley, where the requirements of prune growers have been carefully considered and every possible advantage incorporated into the machine. Can be furnished with or without rinse tank. Made in various sizes for hand or power.

SEND FOR 1918 CATALOG

It illustrates and describes the entire Anderson-Barngrover line of Fruit Packers and Dryers' Machinery. A copy will be sent free to all who are interested. A postcard will bring it.

Anderson-Barngrover Manufacturing Co.,
20 WEST JULIAN STREET · SAN JOSE, CAL.

GIANT

Thousands of Western Farmers Look for the Giant Trade Mark

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

The Giant trade-mark on each case of Giant Farm Powder is put there for your protection. When you see it you know you are getting the real Giant Farm Powder—the kind that has been cutting blasting costs for more than half a century.

Giant Farm Powders—Eureka Stumping and Giant Stumping—have become so popular that many other high explosives are often in error called "giant powders." Don't be misled. There is only one brand of Giant Powder. Demand the genuine.

"I have tried all stumping powders on the market under every practical working condition," writes James Foran, Big Lake, Wash., "hereafter I will use nothing but Giant." Joseph Labunski, Cedar Camp, Ore., says, "Whenever I use powder, it will be Giant."

Send Coupon or Postal mentioning this Paper

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Whole-Dried Apricots.

To the Editor: Are whole-dried apricots salable? Is it advisable to check by dipping in lye before sulphuring?—E. G. M., Cupertino.

[Answered by H. C. Dunlap, California Prune and Apricot Growers, Inc.]

With regard to whole-dried apricots: Our Association is assuring all growers that we will accept delivery of same. We are not giving them absolute advice in the matter of handling this product, but suggesting to all that they experiment with the first few apricots they can secure. A number of growers who have had experience state that the fruit should be dipped before sulphuring. They differ as to the proper solution to be used; some use a weak lye solution, as with silver prunes; others a salt solution. Even plain water should assist the sulphur in the bleaching process. The apricots will not stand anywhere near the dipping that prunes will. Since we are liable to have a considerable quantity of this product delivered to us, we are going to require good standards of color and sugar. There was a lack of good color with some last year.

Grape Mealybug Spreading.

Mealybug is invading vineyards in four of the most important grape counties of the State and is spreading rapidly, according to R. L. Nougaret of the U. S. Department of Agriculture. Bunches of grapes showing honeydew or other marks of infestation should not be moved from the vineyard. Boxes which have carried infected grapes should be fumigated with hydrocyanic acid gas or carbon bisulphide or should be steamed or dipped in scalding water before removal to another vineyard. It was agreed at the grape standardization meeting that all infested grapes offered for shipment should be condemned.

Myrobalan for Moist Soil.

Prune trees ten years old on bottom soil, where the water table is six or eight feet down but moisture appears on the surface every morning through summer, have borne only one good crop for E. C. Spear of Napa county and have not made sufficient growth. They bloomed regularly, but what little fruit set would drop. They are on peach root. A few trees on myrobalan in the wettest corner are much bigger and thriftier. Mr. Spear is horticultural inspector. All but two or three of the prune tree orders received in his district last season were on myrobalan root.

County Fruit Exhibits at State Fair.

No other State in the Union can show the variety of products found in California; and people look to our State Fair for exhibits of the best in fruits and other products. The fine new $300,000 building will be ready for them, and State Horticultural Commissioner G. H. Hecke is urging County Commissioners and fruit growers to boost for the best county exhibits ever put out. Prizes are so numerous that there will be keen competition.

Home-Made Orange Vinegar.

Orange vinegar is fully as good as cider or grain vinegar and can be made by citrus growers themselves at slight cost from cull oranges, per an announcement from the Citrus By-Products Laboratory of the United States Department of Agriculture at Los Angeles, who will furnish detailed directions to all applicants.

For Split and Sour Figs.

Where figs are likely to split and sour, the best and quickest remedy, as recommended by Henry Markarian of Fresno, is to apply hydrated lime, as much as three tons per acre, and withhold irrigation after July 15.

POLLINATION OF CHERRIES.

To the Editor: Referring to sterility of cherries, which you discuss in your issue of June 29, may I make a suggestion or two?

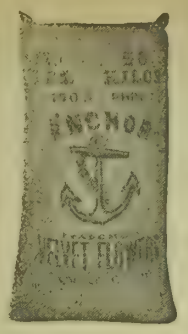
We have found that the Royal Ann, Bing and Lambert cherries in this locality are practically sterile. They do not pollenize themselves or each other and without a good pollenizer we get practically no crops. However, occasionally good, healthy Lambert trees will throw about 50 per cent of a crop. We are using the Black Tartarian, Black Republican, Waterhouse and Governor Wood as pollenizers, and find that it unquestionably pays. Occasionally we find a seedling that is a good pollenizer. We have also found that it pays to pollenize artificially; that is, to cut the blossoms from the fertile trees and put them in pails of water and hang them in the sterile trees. This more than pays us for our trouble while we are getting the sterile trees pollenized.

In planting out an orchard we arrange to plant the pollenizers so that the pollen will not have to be carried by the insects more than four trees away and in many cases we reduce it to two trees. Where the orchard has been planted and has reached the bearing age before we realized that we had to have pollenizers, we use two methods of putting in the pollenizers. One is to saw off as many trees as necessary, in order that the pollen may not be carried over four trees in any direction, from four to six feet from the ground, and put on grafts from good pollenizers. I have seen two-year-old wood from this work producing blossoms. Another method is to cut back sufficiently during the winter, that vigorous shoots will grow the following summer, and then go in in July or August and put buds from the pollenizers in these shoots. At the end of two years I have seen these buds bloom nicely and produce a heavy crop of fruit in the vicinity of the trees in which they are located.

Prosser, Wash. LUKE POWELL.

[Thank you: the observations are very interesting.—Editor.]

SULPHUR



Fleur de Soufre, Anchor Brand; Velvet Flowers of Sulphur and Eagle Brand.

Packed in barrels and double sacks; are the fluffiest and purest Sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, leaving no ash.

Try our new brand of sublimed 100 per cent pure Ventilated Sulphur for making Paste — Atomic Sulphur.

For Lime Sulphur Solution, use our "S" Brand Refined Flour Sulphur, which we will furnish at a price so cheap that you cannot afford to purchase ready-made solutions.

Wetproof Steel Lined Shot Shells

A WET day is indeed a good day for ducks to the hunter who has the *right* shotshells in his pockets. Remington UMC Smokeless "Arrow" and "Nitro Club" Wetproof Shotshells do not require fair weather to keep in good condition and work *right* through the gun. They may be exposed to wet for hours but will not soak through—the water can not get in, can not swell them, soften the turned-over end or bulge the top wad. Mauling them around in the wettest coat pocket can not scuff them. Remington UMC makes them *right*.

This is something every farmer who loves duck hunting will learn with profit — it will make those idle wet days in the Fall welcome ones.

Remington UMC for Shooting Right

The result is virtually a new type of shell, embodying the most important improvement in shotshell manufacture in over a decade.

These are the first *completely* wetproof shotshells—an exclusive feature of the Remington UMC "Arrow" and "Nitro Club" brands for shooting *right*.

You just buy the same old favorite Remington UMC "Arrow" or "Nitro Club" Steel Lined Speed Shells, at the regular price, and you get the new Wetproof feature thrown in besides. A shell that is sure fire, gives top speed, best pattern and most penetration, and has in addition the wonderful quality of staying dry as dust inside and hard and smooth as glass outside even when subjected to the wettest weather conditions.

It took three years to perfect this waterproofing process. Special paper had to be produced for the shell bodies, a special formula discovered for compounding the *right* combinations of waxes and oils, new machinery developed for applying the waterproofing so as to work it *into* the shell as a part of it, positively sealing it against hours of wet, and new methods devised for giving the shell the same *right* finish as before.

In *black powder*, buy the old reliable "New Club," now Wetproof sealed at turnover and top wad.

California's Place in the Seed Trade

[Written for Pacific Rural Press.]

In view of the meeting soon to be held in San Luis Obispo to start a drive for a pure seed law at the next session of the Legislature, and in view of the importance of commercial seed growing in California, as outlined on page 804 of our issue of June 29, it seems timely and interesting to present the latest phases of the subject.

During last week many of the seed farms in the leading producing districts of California were personally visited by W. A. Wheeler, who is in charge of the "seed reporting service" of the Bureau of Markets of the United States Department of Agriculture at Washington. Mr. Wheeler came to California to get into personal touch with those engaged in seed production and trade in this State, to assure them of the patriotic and promotive desires of his branch of Government service toward development of American seed production and to inform himself more definitely of the capacity of California to contribute to the national seed supply, not only to help win the war but to figure in the world's trade after the war is won.

Mr. Wheeler is surely wide awake and masterful in his important line of effort. He came to California from Chicago, where he delivered an address at the convention of the American Seed Trade Association upon "Seed Reporting as a Public Service," in the course of which he said:

The object of a seed reporting service is to obtain useful information relative to seed in a manner that will be of service to the public. Broadly speaking, the object is to make all kinds of general seed information available to every activity connected with production, distribution and consumption of seed.

Under normal conditions the benefits of seed reporting are quite apparent, but it is obvious that a decided advantage to the country under war conditions accrues through a thorough and complete knowledge of seed stocks, movements and prices. War conditions have suddenly thrown the American seedsman on his own resources in the supply of many seeds formerly obtained in foreign countries. This, coupled with an unusually heavy demand from farmers and home gardeners, has brought about unusual conditions in many lines of seed business. Normal agencies are all upset; imports are cut off, and shortage of labor has created conditions conducive to low production in certain regions. If we are to produce the large crops which the war demands, we must have seed. Seed growers must be informed as to the probable demands of planters so that their acreage may be planted intelligently. Exports must be regulated to prevent seed being shipped abroad that is needed at home. These things all make necessary the most careful study of all factors affecting seed production and distribution.

WHAT IS TO BE SEEN IN CALIFORNIA.

With such purposes in view, Mr. Wheeler came to California, which is the chief State in the production of vegetable seeds, to visualize the local aspects of the industry, and he has surely caught some notable things in his eye. He has seen in one locality 500 acres of onion seed balls approaching maturity and calculated that it would yield perhaps one-fifth of all the onion seed usually required in the United States. At another place he saw enough spinach going to seed to furnish one-half of the annual national demand. And he saw other things perhaps even more notable and made the personal acquaintance of the growers and infused them with his own spirit and with fuller realization that they are contributing finely to the achievement of an honorable "big business" for world welfare—the production of good seed from which good things must grow for the service of humanity.

A popular idea of the relative importance of California and other States in the production of "vegetable seeds" can be had from the fact that the official publication of Mr. Wheeler's branch of the public service, the Seed Reporter, a monthly publication of the Department of Agriculture, contains in its issue for July a full page of reports on the growing crops of the vegetable class. These reports are State summaries from individual reports of growers and they cover fifteen different vegetables and in ten of these California prospects are named first, indicating leadership in their production in this State. These vegetables are beans, beets, carrots, celery, lettuce, onion, pea, radish, spinach, and tomato. Mention is made of Oregon and Washington as leading producers of cabbage and turnip seeds. Thus three Pacific Coast States dominate the production of four-fifths of the classes of vegetable seeds commercially produced in this country.

SAN FRANCISCO OFFICE OF SEED REPORTING.

As predicted in our issue of June 29, an office of the seed reporting service of the United States Department has been opened in San Francisco at room 1131 of the Merchants Exchange, on California street, and S. S. Lawrence, who is experienced in California seed growing and trade, is in charge. Mr. Lawrence is at the service of all who are interested in the seed industry in ways which are for the public benefit.

The apple trees around Watsonville are loaded to the limit, a correspondent writes.

WHAT DO YOU GET IN YOUR MILL FEEDS?

Do you want to know how much of chaff and hulls and straw, etc., that are valueless are in the mill feeds you buy? Do you want to know its protein, carbohydrate, and fat content? Do you want the State to inspect mill feeds and do you want their composition stamped on the outside of sacks so you can know what you are buying? California and not more than seven other States are at the tail end of the procession. Some forty-odd States in the Union have such inspection laws, and those that do not have them of necessity become the dumping ground for poor, low grade stuff that cannot be sold elsewhere. While this is not true to the same extent in California as in the Middle Western tail-enders, the danger is ever present and the many proprietary mixed feeds that have sprung up of late render it doubly important that manufacturers be required by law to guarantee the quality of their feeds by minimum protein and fat contents and maximum fiber. Such a law was defeated at the last Legislature for want of interest in it by farmers. Pledge your candidates to boost it the coming session and let us hear from you.

Voters Attention!

In November another "Single Tax" bill comes up.

It has been defeated three times in our State.

It removes all taxes from buildings, bonds, stocks, franchises, corporations and all other personal property, placing the entire burden on LAND.

Farmers beware. Vote NO.

Write for free booklet "Single Tax and the Farmer."

Anti Single Tax Ass'n of California

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

FRUIT CROP BY COUNTIES.

Following is the estimated per cent of the normal fruit crop grown in each of the main producing counties. The table was compiled in cooperation with the United States Bureau of Crop Estimates, San Francisco, from reports of county horticultural commissioners and Government crop reporters, and was prepared by George P. Weldon, chief deputy, and O. W. Newman, field deputy. Blank spaces indicate that the crop is not grown at all or is grown to so small an extent as not to be of commercial importance.

NATIONAL POWER SHOW.

More exhibitors are already signed up for the national exposition of motor trucks, tractors, and accessories in Chicago, September 14 to 21, than the total number at the 1917 show which was held in the Coliseum. Manager Buelow believes that before that time there will be twice as many exhibitors. The space already contracted for is so much greater than the total floor space of the famous Coliseum that the Coliseum would seem small if set down in the area reserved for the Automotive and Accessories Exposition, Inc., which is the official name of this national exhibition. On Thursday and Friday will be held a threshermen's convention on the floor of the show auditorium.

CALIFORNIA CROP ESTIMATES.

According to preliminary figures prepared by the Bureau of Crop Reports, based on conditions July 1, the principal California crops are estimated as follows, compared with 1917 (all crops are stated in bushels, except hay, in tons):

	1918	1917
Corn	2,429,000	2,400,000
Wheat	6,378,000	7,425,000
Oats	5,695,000	6,860,000
Barley	32,914,000	39,150,000
Potatoes (Irish)	8,314,000	15,225,000
Potatoes (sweet)	938,000	1,002,000
Rice	6,318,000	5,600,000
Hay, tons	4,074,000	4,819,000

The hay crop in Shasta county this season is only one-third the average. This is due to the light fall of snow last winter and the consequent extremely dry summer.

What Will Prunes and Apricots Bring?

[Written for Pacific Rural Press.]

Last week we published the prices for dried apricots set by the California Prune and Apricot Growers' Association, and on June 18th the prices for prunes. The books of the Association for last year show the following record of sizes for various localities. Readers will notice the sum of the percentages in each case do not total a 100 per cent, for the reason that in the record slabs and No. 2 fruit are included. This is probably the first publication of such comparisons. Only the chief localities where the fruit is grown commercially are considered.

PRUNE SIZES IN PERCENTAGES OF CROP IN EACH LOCALITY.

Districts—	20–30	30–40	40–50	50–60	60–70	70–80	80–90	90–100	100–120	120 up
Santa Clara Valley	.013	.027	.125	.211	.197	.153	.098	.076	.06	.031
Hollister	.001	.009	.07	.13	.20	.16	.13	.12	.10	.08
Napa Valley	.01	.03	.09	.18	.21	.16	.12	.09	.07	.033
Sonoma	.027	.033	.14	.20	.16	.14	.10	.09	.07	.04
Sacramento Valley	.004	.015	.033	.084	.16	.205	.16	.12	.129	.08
San Joaquin Valley	.001	.014	.066	.09	.175	.195	.17	.137	.07	.074

APRICOT SIZES IN PERCENTAGES OF CROP IN EACH LOCALITY.

Districts—	Standards	Choice	Ex. Choice	Fancy	Ex. Fancy	Jumbo
Santa Clara Valley	.075	.176	.293	.199	.123	.056
Hollister	.13	.22	.256	.12	.10	.003
Ventura County	.35	.36	.16	.054	....	....
Riverside County	.07	.50	.17	.18	.002	....
Orange County	.363	.30	.231	.06	.004	....
Alameda County	.07	.24	.32	.20	.09	.007

This year's prices figured on last year's sizes would give the following averages for the various localities and for the State.

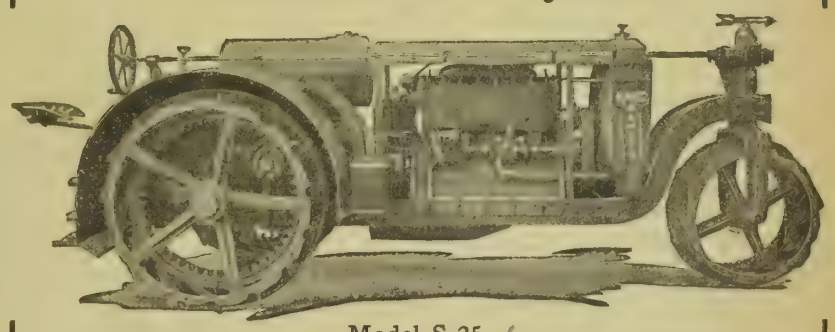
Prunes—Santa Clara Valley, 8c; Hollister, 7.7c; Napa, 8.2c; Sonoma, 8.3c; Sacramento Valley, 7.5c; San Joaquin, 7.8c; State, 8c.

Apricots—Santa Clara Valley, 14c; Hollister, 14c; Ventura, 12c; Riverside, 13c; Orange, 12c; Alameda, 14c; State, 13.5c.

Immediately upon the announcement of apricot prices by the Association, independent packers offered to sell at prices one-half cent or more lower. The purpose is evidently to demoralize the market. The only way to maintain prices and stabilize the market is for the growers to stick together.

Your Problem is Solved

When You Buy a



Model S-25.

SAMSON GMC TRACTORS SIEVE-GRIP GMC TRACTORS TRACTOR

10 HP ON THE DRAW BAR—25 HP ON THE PULLEY

The Samson Sieve-Grip Tractor embodies all the features which years of painstaking effort and experience have approved. It is not an experiment. It is a demonstrated success of years' standing. Its enthusiastic owners are numbered among nearly all civilized nations on the globe.

In construction, it is very simple. In strength, all that its name implies. Built to meet the most exacting demands, day in and day out.

Its Sieve-Grip Steel Wheels, skeleton-like in construction, give greatest traction with least weight. They do not slip. They do not pack the soil. They assist cultivation.

Its Nodust-Moisto-Rizer cleanses all air entering carbureter and crank case vent. All working parts of the motor are protected from dust and grit.

Its lubricated roller pinions reduce friction to a minimum. They deliver maximum power to the draw bar.

Its ball and disc type Governor assures simplicity of operation and prevents racing of the motor. Adjustment, made from the driver's seat, secures any desired set speed, regardless of load, to the tractor's maximum capacity.

We court the most rigid investigation.

It will be our pleasure to give you a demonstration at any time, without obligation on your part.

Ask any customer or write for information.

Samson Sieve-Grip Tractor Co.

GENERAL MOTORS CORPORATION

STOCKTON, CAL.

Are You Getting Ready for the Fall Shows

(Continued from first page.)

Francisco and get their stock in shape. For that matter, these dates have been set with a much larger circuit in view, and with the idea of attracting Eastern exhibitors. Those showing at the American Royal Show at Kansas City can ship to Los Angeles, thence to San Francisco, thence to the Pacific International at Portland, and thence to the International at Chicago, a week intervening between each of these shows.

LIBERAL PREMIUMS OFFERED AT ALL COAST SHOWS.

The San Francisco officials have secured a site of ample size, well adapted to the purpose, with railroad tracks and loading platforms. They offer a premium list of approximately $30,000, and with the premiums offered at the other Coast shows the livestock men throughout the Middle West can well afford to send high-class exhibits here. Many have already agreed to do this, and it is expected that competition will be much more keen than at the Panama-Pacific Exposition, where so many Middle West herds were prevented from showing on account of the foot-and-mouth disease. If you want a premium list or further information about any of these California fairs write to Chas. W. Paine, secretary of the State Agricultural Society, Sacramento; C. R. Thomas, manager Livestock Department, California Liberty Fair, Central Park, Los Angeles; Joseph E. Painter, manager California International Livestock Show Corporation, 818 Merchants Exchange Building, San Francisco.

SHOW UP YOUR SAMPLES AND GET PUBLICITY.

Of course there will be the usual number of county and district fairs, and you ought to plan to exhibit at those near your home, as well as at the larger shows. The more the better—not only for the good of the shows but for you personally. For the best advertising your herd can have is the winnings it makes and the publicity it receives at these shows.

The modern fair or show is a direct descendant of the old-time sales or market day. It dates back of the Grecian democracy and the Roman republic and has been handed down from generation to generation. The progress of civilization has wrought changes in form, but underlying all is the same basic idea—publicity for our wares.

"THE SHOW RING IS THE SHOW WINDOW OF THE PUREBRED BUSINESS."

A store that is successful places in its show windows fair representations of the goods it has to offer, and customers entering the store find the same grade of stock, although perhaps not quite so attractively displayed. In the same way, at the show the breeder exhibits samples of the stock he has at home and acquaints people with his strain. The practical element of the present show ring has taken from it the character of a sporting game and made it over into a definite phase of the breeding business that promotes confidence and acts as a true barometer of the development of the purebred industry.

You may say that you are only a small breeder and cannot afford to show your stock yet, but the chances are that you never will become a big breeder until after you establish a reputation for your stock through the show ring. The farmer's standard and the show ring standard are now practically the same, and farmers are now clamoring for stock of championship blood, believing in the old adage that "like produces like." In every line of the purebred industry you will find that the stock which commands the highest prices is from the herds that have made good in the show ring.

BEGIN EARLY AND LEARN THE "ROPES."

Perhaps you won't win enough prizes or make enough direct sales the first season to warrant the expenditure, but there is a cumulating advertising value that you must take into consideration. To illustrate, one of the most successful hog breeders in the United States recently said of his early experiences: "The first year in business I sold only one hog. But I was busy getting a show herd ready, and I made my debut at the state fair. I did not expect to win, but went with the intention of learning the "ins" and "outs" of the game. I brought one blue and one red ribbon home and much wisdom in the art of showing hogs. Since then I have been more or less successful in the show ring, but learning new things every year—things that count and things that make me money.

"In 1916 I brought home about $5,000 in cash prizes. I had made many valuable sales while on the circuit, and had received advertising value 500 per cent in excess of the expense of showing my herd. In 1917 I repeated the 1916 winnings and went a little further. My mail orders came in rapidly, my business increased, my public sales were well attended, and my stock sold at record prices. My sales for 1918 promise to reach $100,000.

"I attribute this success to the free advertising I secured from the fair circuit. I figure that on the 1917 circuit, at the eight fairs I attended, over 100,000 people viewed my hogs. A list of the prizes I won was published in practically every farm paper in the territory which the fair represented. In this way my name, the farm name and my winnings received free publicity."

SHOW RING PUTS YOU ON THE MAP.

The show ring will do as much for you, Mr. Reader, in building up a profitable business. It will give the public an opportunity to see the kind of stock you are raising, and if your animals are of the right type and quality, and make good in the ring, it will bring you orders and build up a business that cannot be established in any other way. It will "put you on the map," give you a standing as a breeder, and a recognition that the fellows who stay at home will find hard to overcome when it comes to getting the business. For that matter, even if you do not win, you cannot make a creditable showing without being greatly benefited by it.

INSTRUCTIVE TO THE BREEDER WITH GRADE STOCK.

But perhaps you are only an intending breeder, or a young breeder with grade stock, and consequently have nothing to exhibit. If so, you certainly should plan to attend as many of these shows and fairs as possible, for you will be given an

(Continued on page 57.)

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

Garden Vegetable Planting

[Written for Pacific Rural Press.]

Summer Planting in Gardens.

"Late" vegetables should be planted early. Late vegetables are late principally because they require a long growing season. Late in the season, early sorts must be planted because there is only a short growing season left. In California there is a complication in the form of the hot dryness of our summer, which precludes the planting of certain vegetables at that time. All vegetables require adequate moisture, but some of them thrive at higher temperatures than others. Among the vegetables recommended for July planting by A. J. Nevraumont of the California Seed Co. are those mentioned in following paragraphs.

Sweet Corn.

Sweet corn of early varieties thrives in summer heat if it has reasonable moisture around its roots. Golden Bantam is a standard sort and much relished as used from the writer's garden, though the ears are small.

Peas.

Garden peas, being a cool weather crop may not make good growth in our interior valleys, but will do well in foggy coast valleys if planted this month. It is not necessary to use early varieties, as they stand the light frosts of early California winters. Early varieties will help in keeping a continual supply, however.

Lettuce.

Lettuce in hot, sunny climates needs some shade and the quality is much better when plants are protected from direct rays of the sun.

Beets.

Garden beets will mature before killing frosts and will help keep the dietary fresh through the winter months if stored in a place ventilated with the naturally moist air of winter or if left in the ground.

Radishes.

Rich, moist ground is needed by radishes, which must make rapid growth or they become tough, fibrous, pithy, and strong. They are good if sown until September.

Plant Fall Potatoes Now.

For a late crop of commercial potatoes, Arthur Swall of Tulare county has for three years planted Burbanks grown in the spring on his own place from Oregon seed. They mature when planted between July 10 and August 5. The fall crop produces more than the spring crop.

Kohl Rabi.

Kohl rabi is a "turnip-rooted cabbage," the roots of which are eaten like turnips. Sow the seed from July to October, ½ inch deep in rows 18 inches apart. When large enough to insure a stand, thin the plants to eight or ten inches apart.

Table Pumpkins.

In a garden space which has persistently refused to grow several kinds of vegetables, the writer now has a magnificent patch of table pumpkins. The hills were prepared by mixing liquified hen manure well with the dirt and soaking the ground well before planting.

Turnips and Rutabagas.

These root crops are similar, though rutabagas require a longer season. They are hardy against frost, however, and both will mature well for winter use if planted in July.

Carrots.

Carrots are delicious when properly cooked, and the writer's boyhood appetite for them, uncooked, has come back with compelling force due to the early sorts grown in his own garden this spring. All varieties will yet mature before frost, in most California locations.

Cabbage, Kale, Etc.

For winter growing greens, including cabbage, kale, cauliflower, brussels sprouts, endive, chard, broccoli, collards, etc., the seeds should be sown in a shady, moist place this month. The plants can later be put in the garden, where earlier crops have been taken out.

ARE YOU GETTING READY FOR THE FALL SHOWS?

(Continued from page 56.)

opportunity to get facts and make observations that will be worth thousands of dollars to you in building up your herds and flocks.

You will find each show like a short course in animal husbandry—a concentrated, brief, but convincing presentation of the vital points of livestock breeding. The teaching is done in these cases by observation and comparison, not by lecture and lesson. You will have before you the best of the different breeds—the best specimens from great herds. It would be impossible for you to travel to all the different points to see these animals, but in the show ring they are brought before you, just as much as they are brought before the judge, and you have a grand opportunity for studying size, type, conformation, finish and breed characteristics.

TAKE THE STEP TOWARD PUREBRED BREEDING.

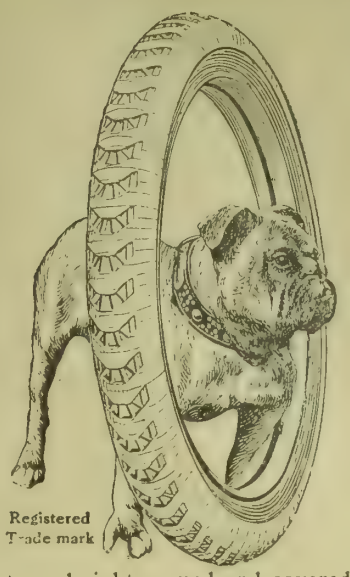
The sight of a purebred herd at a fair has been the turning point in the career of many a man. He begins to see stock raising in a new light. He becomes proud of the fact that he is a farmer and livestock breeder, for he learns that no business on earth is more important or honorable, or offers him greater opportunities.

This change of spirit comes not only from seeing the exhibits of high-class stock but also from talking about livestock matters and swapping ideas with others. Sticking right to his own work day after day a farmer is apt to get into a rut, and nothing will put new life into him or increase his ability more than hearing the experiences of others—of the leaders in different lines.

GIVES INSPIRATION FOR THE YEAR AHEAD.

The successful business man is constantly studying the products and methods of others, and he knows that new ideas are worth going a long way to get, for without them his business would soon be going backward. It's the same with farming and stock raising, so economize elsewhere if necessary but put by enough money to take you to one or more of the fall shows.

From Coast to Coast on BRAENDER



Registered Trade mark

Bull Dog Grip, Non-skid

TIRES

without a change!

BRAENDER Tires made an astonishing record for tire endurance in the first Official Smith Trophy Coast-to-Coast Run over the Lincoln Highway. Mr. Raoul F. LeMat and Mr. Stanley James left New York in a Stutz and a National equipped with BRAENDER Tires. They finished the 5,286-mile run at Los Angeles without a tire change.

No harder test of tire quality, no stronger proof of sound construction could be conceived, and yet the Stutz turned right around and covered the return journey on the same set of BRAENDERS—without a tire change.

It is not only in racing and road events of national importance that BRAENDER Tires have proven their ability to give extra mileage. They are just as dependable for satisfactory service to the average car owner.

Here is what one user writes:

Whittier, California, Aug. 18, 1917

"Some time ago I bought a Ford runabout and it had two Braender casings on it. I drove them 15,000 miles and never had a blow-out and one of them looks like it would run two or three thousand miles more without any trouble * * * I can sell several of them, so please send me prices, etc."

(Signed) G. F. ARNETT, 343 S. Newlin

We have received similar satisfactory testimony from all parts of the United States.

FAIR DATES.

Monterey county—Salinas, July 30 to August 3.
Mendocino county—Ukiah, August 5 to 10.
Humboldt county—Ferndale, August 19 to 24.
Napa county—Napa, August 22 to 24.
State Fair—Sacramento, August 31 to September 8.
Exposition—Oakland, September 9 to October 6.
Glenn county—Orland, September 15 to 21.
Kings county—Hanford, September 23 to 28.
Fresno county—Fresno, October 1 to 5.
Southern California Fair—Riverside, October 8 to 13.
Liberty Fair—Los Angeles, October 12 to 26.
Livestock Show—San Francisco, November 2 to 10.
Indio—Indio Fair, auspices Board of Trade, November 15-16.

Field Crops.

Bean fields in Monterey county never looked better.

Alfalfa is selling at Hopland for $30 per ton in the field baled.

The hay and grain crops in the Sierra Valley are the shortest for several years.

Bean growers have started a movement to organize branches of the State association.

The recent rain meant an average increase of the bean crop in Ventura county of from two to three sacks to the acre.

The rice growing industry in Glenn county has within six years risen from an experiment of a half dozen acres to a crop which this year is estimated at $5,000,000.

The cantaloupe market at Turlock opened last week. The top price for standards was $3.75 a crate and for ponies $3. The average price paid was around $3 and $2.50.

California will have to pay $9.62½ per 100 pounds for rice for the State institutions for the next three months, according to bids recently submitted. The former price was $8.10.

Averaging more than 225 sacks of potatoes to the acre. George H. Peters, potato king of Kern county, turned out approximately 32,000 sacks on 149 acres of his place near Arvin.

Cotton consumed during June amounted to 527,464 running bales, and for the eleven months ending June 30 it was 6,049,544 bales, the Census Bureau has just announced—slightly in excess of last year.

The farmers in the Two Rock Valley and about Bloomfield do not find the sudan grass a successful crop with them, except where protected by a high fence or a windbreak of some sort against the cool winds.

Farmers of the Clarksburg district, Yolo county, are making plans to combat the red spider pest that destroyed a large volume of the bean crop last season. The Farm Adviser is urging the use of dry sulphur.

The ruling price for which tomatoes in the Porterville district have been contracted is $15 per ton. Packers say that practically their entire output has been contracted for delivery to buyers for the United States Army.

N. T. Cory and F. W. Herbert, who have 300 acres five miles west of Lincoln planted to beans, will arrange for the irrigation of the beans with the waste water of the P. G. and E. Co.'s electric power plants near Auburn.

J. Rose, who has a large dairy in Byron-Bethany Irrigation District, has a large acreage of alfalfa, but before he could irrigate he bought 700 tons of hay for his cows. This year, with irrigation and without increasing his alfalfa acreage, he will not have to buy any.

Melon growers and truck gardeners have asked the State Fish and Game Commission for relief against Chinese pheasants, which are doing serious damage to melons and garden truck generally. Under the terms of the State laws the pheasants are protected at all seasons and shooting is prohibited.

The waters of Lake Almanor are to be used, by order of the State Railroad Commission, to save 25,000 acres of growing crops in Butte and Sutter counties from perishing. The lake is of artificial construction and is intended for power purposes exclusively, but a part of the water has now been requisitioned for irrigating.

The farmers about Bloomville, Mendocino county, and down the Anderson Valley have usually cut nearly the entire acreage for hay, but this year they are cutting only enough for their own use keeping the balance for grain. Ernest L. Whipple of Philo, Mendocino county, says he has never had a better hay crop, though at one time he would gladly have sold it for a ton and a half per acre.

Deciduous Fruits.

Plum picking began in the Porterville district this week.

The organization of the Sonoma apple growers has been completed.

It is thought that apricot growers will dry much of their small fruit this year.

The Government of Tasmania is sending its pomologist, J. W. Ward, to study fruit culture in California and other Pacific Coast States.

Commercial driers in the vicinity of San Jose have this season fixed a charge of $6.50 a ton for drying prunes and $14 for drying apricots.

This year's crop of Gravenstein apples in Sonoma county will be large, it is thought. The apples will be packed and shipped green for the most part.

The plum crop of the Sacramento river district is one of the lightest of recent years. The yield will not be above 50 per cent of normal, owing to the cold spring.

Two dry years following each other have been hard on the almond orchards of the Oakley and Antioch districts. Many trees will not mature their crop this year.

The community packing house of the Mount Vernon district fruit growers near San Bernardino has proved a success and given satisfaction to the fourteen members of the association.

Although the crop of Tuscan peaches throughout the Yuba section is late this year, it is believed the local plant of the California Packing Corporation will commence operation about July 20.

Three orchard crops—prunes, almonds and peaches—will bring between $700,000 and $750,000 into the Chico-Durham district in 1918, despite the fact that this has been a poor year for the production of fruit and nuts, an exchange reports.

A vigorous effort is being made by the fruit growers and farmers to reach an agreement with the farm workers in the Watsonville district with regard to a labor wage to be paid during the present season in order to assure the handling of the apricot and apple crops. A scale of 35c an hour has been tentatively set by a number of farm centers.

The San Francisco Sealer of Weights and Measures seized a large quantity of berries in the wholesale market last week because of short weight. Shippers should remember that it is not the weight of the crate's contents when it leaves the country that counts. It is the number of pounds in the box when the inspector sees it in the wholesale market.

Citrus and Semi-Tropical.

Fumigating season in the Lindsay district opened this week. There is comparative freedom of the local groves from scale and other insect pests as compared with previous years.

Hawaii will have a record-breaking pineapple crop this year, with a total of 3,500,000 cases of the fruit. The best previous pineapple record was in 1915, when 2,669,616 cases were packed.

Dr. Kelly of the University of California is to be sent to the Porterville district to make a study of proper cultural methods in orange groves. A portion of the expense is borne by the University and the remainder by the orange growers.

In an announcement made last week by Manager L. D. Palmer of the Orange County Fruit Exchange he says that the exchange shipments

PALO ALTO :: CALIFORNIA

will total nearly 1500 cars, which represents in the neighborhood of 75 per cent of the 2000-car crop of the district. It is estimated that this crop will bring in excess of $4,000,000.

Grapes.

Plans are being made at Lodi for the building of a community camp to accommodate women and girls working in the orchards and table-grape packing sheds.

Wine grape growers are protesting vigorously against the bone-dry measure now before Congress. They claim that this year's crop is worth $14,000,000, and that to pass the bill would bankrupt them.

Miscellaneous.

Sacramento and San Joaquin river boats have petitioned for authorization to increase their freight rates.

The Nevada County Farm Bureau will open its free school of fruit packing here the first week in August.

The San Joaquin Valley has appealed to the Women's Land Army of California for a volunteer unit of 200 workers to assist in saving the crops.

Volunteer fire-fighting parties successfully ended an all-day struggle to extinguish a forest fire which burned approximately 1300 acres of timber north of Nevada City on Sunday last.

Wheat cutting is now in progress in the Western wheat belt, and reports received by the employment service indicate that there has been no shortage at any point where the harvest had actually begun.

An unusual storm broke in the Vallecitos recently. Out of a cloudless sky a heavy deluge of water fell. The storm did no damage, as practically no grain has been cut in that vicinity as yet.

The California Packing Corporation cannery at Yuba City begins about July 20 to 25, and from the large crop in that section they will have a long run. New additions have been made to the plant.

California Nursery Company, having its plant at Niles, Alameda county, has secured a permit from the State Corporation Commissioner to issue to George C. Roeding all of its capital stock ($400,000, par value $100) in exchange for a certain nursery business at Niles.

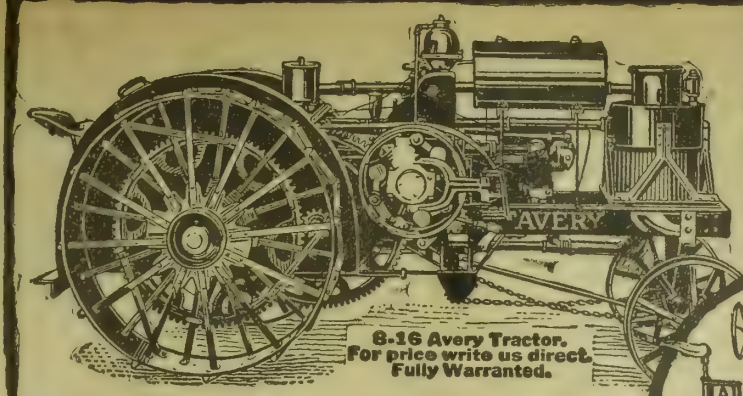
Secretary of the Interior Franklin K. Lane has approved of the reconstruction of a weir in the Colorado river, which was removed by the Government during the last floods. At the time of the high water, the weir was thought to be adding to the flood damage. The light rainfall this season, however, has been a menace to crops and the Imperial Valley sought to have the weir reinstalled to impound what water there is.

The intimation that the Government might establish parcel post service via motor trucks throughout the San Joaquin Valley, on the same lines as the service is carried out successfully in portions of the East, has aroused interest among farmers and fruit growers of the district. A Fresno motor truck firm has received word from its Washington headquarters to investigate the possibilities of a parcel post service in the San Joaquin Valley.

The Food Products Inspection Service is now available to shippers in the markets named below. Applications for inspection in any market should be addressed to the inspector in charge of that market or to the Bureau of Markets, Washington, D. C. Inspectors in charge of California markets are: S. H. Boddinghouse, inspector, 315 Consular Building, 510 Battery street, San Francisco, Cal.; O. W. Schleussner, supervising inspector, and H. H. Warner, inspector, 204 Wholesale Terminal Office Building, Los Angeles, Cal.

DO NOT BURN STRAW.—FOOD ADMINISTRATION.

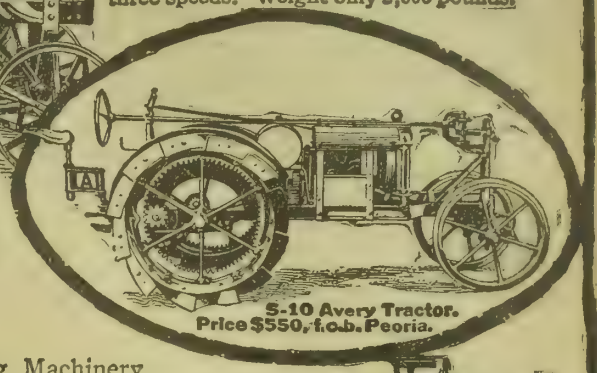
Burning grain straw or other straw or feedstuff is a crime under the President's proclamation unless a permit is first obtained from the Food Administration. A great feed shortage exists. Grain or rice straw will prevent starvation of cattle and should be saved even where it cannot be handled at a profit; for cattle can be brought to it. Bean straw is still more valuable for feed, as proved by wide experience in California. Orchardists must not use bean straw or alfalfa for mulch or fertilizer this year. Cattle men are urged to reciprocate by buying these products and, wherever feasible, by furnishing manure to take their place.



8-16 Avery Tractor. For price write us direct. Fully Warranted.

The wonderful Avery 8-16 Tractor (to the left) pulls 2 or 3 plows and drives 19-inch threshers, etc. Fully warranted. Price includes a reasonable profit to dealers **who are obligated to supply Avery Service.**

The 5-10 Model B Avery Tractor (below) is **just the tractor for small farming, fifty acres or less.** Just the thing for truck gardening, fruit growing, etc. Gear driven selective type, three speeds. Weight only 2,000 pounds.



5-10 Avery Tractor. Price $550, f.o.b. Peoria.

Avery Gives the World Power for Every Farm Need

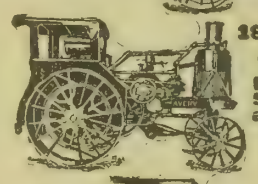
—For Every Size Farm and Every Kind of Work

THE complete line of Avery Motor Farming Machinery fills all power farming requirements for every size farm in the world. The Avery is the **one standardized, thoroughly proved complete line of motor farming machinery.**

With one of the sizes of Avery Tractors, you can plow, prepare your seed bed, and plant **and harvest your grain crop.** With an Avery Motor Cultivator you can cultivate your corn, cotton, beans or any crop planted in rows. With one of the eight sizes of Avery "Grain-Saving" Separators, you can thresh all kinds of grain, kaffir corn, clover and other seeds. Every size Avery is a one-man outfit. For any kind of field work, belt work, or road work there is an Avery motor power machine that can be used safely, successfully and profitably.

Avery Tractors are entirely built in our own big factories and every part of an Avery Tractor (motor, radiator, transmission, etc.) is built **especially** for tractor work and **only** for the Avery Tractor. The Avery Company are builders—not assemblers. They specialize in motor farming machinery. Don't confuse the Avery Tractor and other Avery machinery with the ordinary assembled machine.

12-25 H.P. Avery Tractor For 3 or 4 plows and 22 in. Threshers



18-36 H.P. Avery Tractor For 4 or 5 plows and 26 or 28 in. Threshers

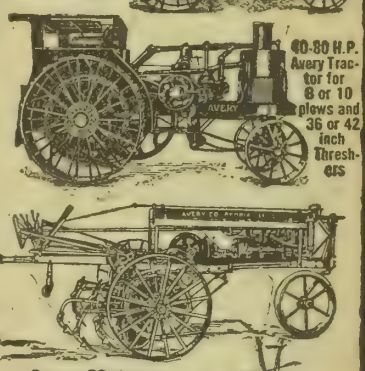
25-50 H.P. Avery Tractor For 5 or 6 plows and 32 inch Threshers

Some Special Avery Features

With the Avery Tractor you can unhitch from one machine and instantaneously hitch to another at the drawbar, or apply belt power. And you don't have to use a wrench to do either—the coupler is automatic and the belt pulley is always in place.

Avery Tractors are the only make with a Duplex Gasifier. It does the trick—turns kerosene or distillate into gas.

The Avery motor is low speed. Main bearings are adjustable from the outside. Patented inner cylinder walls are removable. All parts are accessible and every part renewable. With the three or four-plow Avery Tractor and an Avery Motor Cultivator, one man can prepare and cultivate two and one-half times the acreage of corn that can be raised with horses.



40-80 H.P. Avery Tractor for 8 or 10 plows and 36 or 42 inch Threshers

See the Nearest Avery Dealer

Go to the Avery dealer and select and buy the size tractor and equipment to meet your requirements (no matter how small or how large the acreage you cultivate) or write direct for complete Motor Farming Catalog.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles

HOW TO KNOW A GOOD BELT.

[Written for Pacific Rural Press.]

There is a remarkable difference in wearing quality of various brands of rubber belts on the market. The value of a rubber belt depends on the grade of cotton fabric used, the grade of rubber cement used, the way the rubber is impregnated into the fabric, and the flexibility, which depends on these factors. Cotton fabric used in belting varies from a tensile strength of 2000 pounds down to 1400 pounds or less per inch width of a six-ply belt, according to A. H. Gregory of the New York Belting Co.; and the best fabric for this purpose weighs 32 ounces per 40-inch square. Its greatest strength is lengthwise of the belt. In belt talk the rubber in and between the plies is called the "rubber friction." How strong and elastic it is and how persistently it binds the plies together determines the number of times the belt can be bent or twisted before it pulls to pieces, provided the duck is full weight and full tensile strength. No belt is properly flexible with a poor grade of "friction." Only the best belts can long stand the twisting they get on vertical centrifugal pumps and similar installations.

TESTING BELTS EASILY.

Mr. Gregory tells an easy way to test the grade of rubber belting as to its "rubber friction." This should be the same whether a section is cut crosswise or lengthwise of the belt. Cut a section an inch wide across the end of each belt to be compared. Cut off the selvedge so one ply can be peeled off a half inch. Punch a hole through the remaining plies and hang it on the hook of a reliable spring scale. Then pull the loosened ply just so that it peels off at the rate of one inch per minute. The scales will read about six pounds for very poor belting and 25 pounds for the best grade of belting. It will require a pair of pliers and two hands to strip the ply from a good belt.

Another point, and a very important one, is that rubber friction usually withstands the effect of age in proportion to the strength it possesses as determined by the test above noted. A rubber belt of poor rubber friction usually ages and goes to pieces in a very short while, while a rubber belt of high grade rubber friction may last for years, dependent, of course, upon its usage.

TRACTORS INCREASE MAN POWER.

The advantage of the tractor, like that of most other improved farm machinery, lies not only in the reduction of the cost of performing a unit of work but also in that it permits one man to do considerably more work in a given time.

This has been true of practically all improved farm machines, says the U. S. Dept. of Agriculture. Even the grain binder, generally considered as one of the greatest agricultural inventions of the century, which has increased about eight-fold the acreage one man could handle, has not resulted in decreasing materially the cost of producing grain.

Judging by the experience of tractor users, it is not only safe to expect a material reduction in the cost of farm operations per acre through the use of the tractor, but it is safe to expect to be able to increase the crop acreage to a very considerable extent, and, at the same time, the amount of crops which one man can raise.

Furthermore, it should be remembered that the cost of doing the work with a tractor in most cases can not be directly compared with the cost of doing it with horses, since on farms where tractors are used a number of horses generally are retained, and any comparison, therefore, must be made between the cost of operating the farm with horses alone and the cost of operating with the tractor and a certain number of horses. Not infrequently horses stand idle while the tractor is being used for field work, because there is not sufficient help available to use them at the same time, and in such cases part of the cost of their maintenance must be considered when figuring the cost of farm operations, since they are still a part of the farm plant.

Not only should the relative expense of operation with the two methods be considered, but also the relative results. The increased crop acreage and consequent increase in incomes which the purchase of the tractor will usually make possible may in war times make the difference between idle acres and food producing acres.

BIG STATE FAIR FARM POWER EXHIBIT.

To the Editor: We decided at our last meeting to exhibit at the State Fair, all members of the California Tractor and Implement Association who will exhibit doing so under the auspices of the Association and making a big collective exhibit, much like last year's, but bigger and better. We will have one or two large tents filled with exhibits in the same location as last year and there will be other tents in the same field containing exhibits of pumps, stationary gas engines and other sorts of power farming machinery and farming equipments.

As our annual demonstration provides the means of seeing tractors and plows at work and as the space available on the State Fair grounds does not permit doing anything further than stirring up the dust, we have decided to have an exhibit in which none of the machines will be in motion.

J. M. Perry of Stockton, who was last year president of the State Agricultural Society, is now chairman of the machinery department at the Fair. He and the other directors fully appreciate the immense importance of tractors and other power farming machinery, particularly at the present time, when maximum production and saving of man labor and horse labor are essential. This department, therefore, will be given special prominence at the 1918 State Fair.—The California Tractor and Implement Association, G. M. Walker, Secretary-Treasurer.

ADVANTAGE OF TRACTOR HARROWS.

An advantage of a 50-foot harrow over several of less width totaling the same is that each of several harrows must lap the last one slightly in order to cover all the ground. This loss is not encountered with the 18-35 tractor and 50-foot harrow used by W. T. Roberts of Sonoma county.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler

of the "Giant" Type

WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL.

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

Send today for full information and our latest catalog of earth-moving machines.

Three Operations Finished In Once Over the Field

JOHN DEERE

VAN BRUNT

Single Disc Grain Drill

It is war time thrift to use a Van Brunt Grain Drill. In one trip over the field it pulverizes the soil, makes the seed furrows, drops and covers the seed. The Van Brunt Grain Drill makes horse power and man power available for other purposes—it helps solve the labor problem. Besides saving labor, a Van Brunt Drill will increase your crop yield because it does better seeding.

Patented Adjustable Gate Force Feed—Insures Even Seeding

All the seed is planted at the same depth—evenly, uniformly from every feed. All the seed reaches the bottom of the furrow. It matures evenly. No seed is wasted. Thorough seeding, you know, means much towards increasing your crop production. Van Brunt Drills do first class work in any soil capable of being seeded and do not choke up in mud, gumbo, sticky or trashy ground. Save labor, save seed and increase your crop yield by using a "Van Brunt" Grain Drill.

These Books Free for the Asking

"Better Grain Yields From the Same Fields"—32 pages beautifully illustrated, telling how to select, test and plant seed. Also *"Better Farm Implements and How to Use Them"*—a 156 page text book on farm implements. Worth dollars.

To get these books just state the implements in which you are interested and ask for package B P 4 24.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

WHY FARMERS NEED ORGANIZATION.

To the Editor: Without going into the ethics (or lack of them) of class organization, I will state what I believe to be a fact. Farmers do not function best as capitalists, but the great majority, the ordinary mill-run farmer, is first a laborer and secondly a capitalist. This is proved by the long hours farmers work and the small interest, if any, which their capital earns them. This I have learned by observation, experience and from some United States Bulletins on the subject.

Whether we like it or not, the tendency of the times is toward more Government control and ownership and more political organization by the labor unions, and if the farmers do not organize they will find themselves ground between the upper and nether millstones of organized capital, seeking cheap raw products, and organized labor, demanding cheap food.

And if war patriotism is not sufficient to prevent profiteering and discrimination in Government control, a little organization would go a long way toward preventing profiteering on farmers.

I am not connected with the Nonpartisan League.—K. S. Harlow, Imperial.

COMPOSITE CONDITION OF CALIFORNIA CROP, JULY 1, 1918.

The composite condition of all crops of California on July 1 as compiled by the Bureau of Crop Estimates, and transmitted through the office of the California Field Agents was about 6 per cent below their 10-year average condition on that date. Last year the condition of all crops in California on July 1 was .3 per cent above their 10-year average and 4.8 per cent below their 10-year average in 1916. The condition of the various crops on July 1, expressed in percentage of their seven and ten-year averages (not the normal) was as follows:

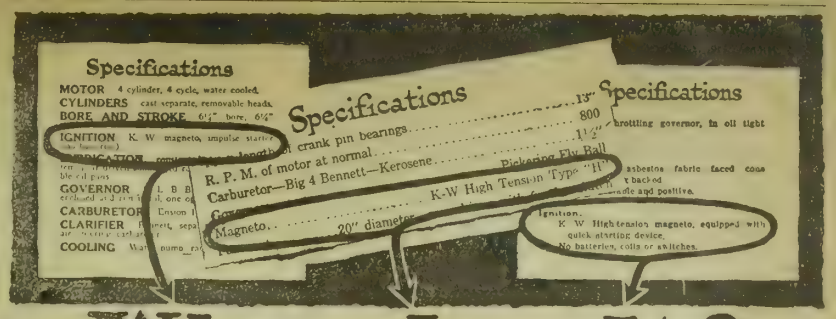
Apricots	114.7	Cotton	96.9
Lemons	107.1	Alfalfa	96.8
Hops	105.6	Potatoes	96.6
Pears	105.1	Prunes	96.1
Gr. sorghum	104.4	Field peas	95.5
Corn	103.4	Walnuts	95.2
Watermelons	102.3	Sugar beets	94.6
Grapes	101.1	Oats	94.0
Cantaloupes	101.1	Oranges	92.9
Blackberries & raspberries	101.1	Wheat	91.3
		Hay	90.6
Tomatoes	100.0	Peaches	90.1
Onions	100.0	Barley	88.2
Cabbages	98.9	Olives	87.3
Almonds	98.6	Apples	86.4
Beans	97.8	Pasture	82.4
Rice	97.8		
Sweet potatoes	97.8	Average of all	94.0

THE WOMAN'S L. A. POLICY.

They have a catch word in the office of the "Women's Land Army." They call it "Our Policy," and it bumps up in every sentence. It hasn't been brought to a cold formula, but it runs something like this: The Women's Land Army was formed to supply a need; not to create one. It will not supplant nor undercut men; it will not supply a traveling unit if local women can be used. If it should be proved that there is no need of women in the fields, the Army must drop its work at once.

OLIVES WILL BE STICKY.

Black scale have been busy laying their eggs during the past two months. The eggs will hatch soon and this fall the new generation will make fruit trees, leaves and fruits sticky with their exudations. Olives are especially affected. The remedy is thorough spraying while the insects are young with distillate emulsions or miscible oils, which may be had from spray manufacturers more cheaply than they can be made satisfactorily at home in most cases.



Why Is It?

That practically every tractor manufacturer (and there are 40) using K-W magnetos as standard equipment, include them in their specifications or catalogue?

They do so because the record which the K-W magneto has made for itself—by actual field operation—during the last ten years—has given it a reputation that *tractors built for quality* demand.

These 40 manufacturers pay more for K-W Magnetos but it is their assurance to the tractor buyer that he is being provided with the most reliable ignition system, guaranteeing to him a "No Trouble" service day in and day out.

Write for a list of K-W Equipped Tractors

High Tension MAGNETOS

are *true* High Tension types. No Batteries and *no* Starting Coils are needed. The K-W Magneto starts any size motor *easily* and *quickly*. It gives the hottest known spark—fires any kind of fuel equally well—is timed accurately; and last but not least, its construction protects it against **dirt, water and oil.**

If you are not using K-W Ignition now, write us. Let us show you how a K-W Magneto will be a time, money and fuel saver for you.

Insist that your new tractor be K-W equipped. Look for the K-W Trade Mark.

Double-stitched seams; hold-fast, patent buttons

Giant Bar Pocket Stay—prevents pocket ripping

High cut from crotch to waist insures perfect fit.

Wide cut legs—so you can wear 'em comfortably over woolen pants.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

E. E. Greenough of Merced is fitting up a small show herd for the State Fair.

A third cow-testing association for Stanislaus county is now in course of organization.

William Campbell of Escalon recently sold seven Holstein heifers to W. I. Clapp of Manteca.

C. D. Hayworth of Modesto is milking 20 registered Jerseys, of which 15 have register of merit records.

A. B. Humphrey of Escalon is preparing a Guernsey herd for the fair, also a good number of Berkshires.

J. D. High of Modesto is having exceptionally good luck in his Holstein herd. Of the last 13 calves dropped 11 were heifers.

W. T. Elleby of Modesto sold a Jersey bull to Harry S. Coey, also of Modesto. Most of Mr. Elleby's herd is of the famous Bleakhouse strain.

Livestock growers and dairymen of Fresno district are raising the largest crop of sweet sorghum in the history of the district. The movement is the result of a campaign waged by Leroy B. Smith, Fresno County Farm Adviser.

J. J. Boyer says he has had several offers of $24 per ton for his wheat hay, baled f. o. b. Lafayette, Contra Costa county, but is holding for $28. He has a grandson of the $50,000 Holstein bull, King Segis Pontiac Alcartra, which he expects to show at Sacramento.

The Shoreacres Dairy of San Leandro is furnishing milk to the bay cities from 230 cows, including 14 registered Guernseys and 26 registered Holsteins. They have two fine Guernsey herd bulls and several Holsteins, one a grand individual from Miss Holdridge's herd.

W. J. Hackett of Ceres reports the sale of a 16-months-old Jersey bull to Gen. McKittrick of Bakersfield. He also sold a bull to L. H. Willet of Ceres. Mr. Hackett has a few good Durocs along with his fine herd of Jerseys. He recently purchased a Duroc boar from Guy Miller and reports the sale of two Duroc gilts to Judge Kilpatrick of Redwood City.

F. Stenzel of San Leandro has secured as his dairy superintendent H. S. Logan, formerly of the A. E. Smith Holstein ranch in Washington. Mr. Logan reports that of the ten best milk producers in the cow-testing association last month Mr. Stenzel had eight. Of the 10 best butterfat producers he had seven. A three-year-old has just had triplets. She may be tested.

After 21 years of using registered Holstein bulls and saving the heifer calves from the best cows, J. M. Christen of Pacheco last fall bought six registered females and the son of Prince Gelsche Walker, Prince Hartog Alcartra Walker, a fine individual born in February, 1917. An exceptional number of heifer calves have given Mr. Christen a fast start in purebreds.

Bock Bros. of Pacheco now have 10 registered Holstein females and some calves from the six females bought four years ago from the Copa d'Oro Ranch at Los Banos shortly before their sale. Some of the calves are by the young herd bull, a grandson of Prince Gelsche Walker. One of the heifers, with rough farm handling, gave 64 lbs. milk in one day at a year and ten months old. Her dam gave 85 lbs. when fresh last winter.

C. A. Le Barron of the Le Barron Estate at Valley Ford has one of the best equipped dairies to be found in the State. He uses the James system for feeding. They use the Empire milkers, and Mr. Owens, the manager, says milking machine troubles are a result more often from the operator than defects in the machine. His herd is headed by Willow Moor Peter Pan. The Ayrshires prove themselves good hustlers in this hill country and the young calves look fine.

Beef Cattle.

The cattlemen about Hopland report the feed conditions in the hills good.

J. W. McClealand of Budgeville, Humboldt county, reports plenty of feed in his section for all cattle on range.

T. S. Smith of Onyx has plenty of feed for his 500 head of beef cattle. He is a strong advocate of registered bulls to go on range.

Claude Williams of Chico reports plenty of feed for the 300 head of Durhams. The Williams herd is headed by registered bulls.

T. D. Carneal of Livermore is going out of beef Devons in favor of Dairy Shorthorns. Both breeds are believed the best in their classes for ranging hilly land.

Chas. Andres of Weldon, Kern county, has 210 head of Herefords and Shorthorns and reports feed a little short, but has plenty for his own stock. He uses registered bulls and has his range fenced.

McKenzie & Stover of Red Bluff have 3500 head of beef cattle and have always used purebred bulls. The feed problem is causing them to think hard and hustle. They will get along; they always have.

R. M. Dunlap recently landed at Redding five head of Shorthorn cows and heifers for Holt & Gregg. These will be bred to Sultan Mayflower at the State Farm. Two $1,000 Hereford bulls were brought for H. H. Gable of Esparto and a great Shorthorn show heifer, Lady Roberta, for W. M. Carruthers. This yearling heifer was shown at the International, the Royal and Iowa State Fairs last year and won a bunch of ribbons. Mr. Carruthers will show her in California this fall and expects to carry off championship honors. The heifer was sired by a son of Choice Goods and came from Howell Reese of Pilger, Neb. Mr. Dunlap will leave about July 25 for the East to get more stock.

Swine and Swinemen.

J. P. Mallory of Fresno has a very fine herd of Durocs he expects to show at the fair this fall.

A son of Star Leader is now being used in the herd at Anchorage Farm and he is showing the same prepotency as his daddy.

Arthur Thompson of Hopland has started to raise purebred hogs and has bought his boar from F. A. Brush of Santa Rosa and his sows from Foster of Hopland.

A. Buckland & Son of Fresno are always willing to show their fine herd of big type Poland-Chinas. They have some very choice stock and are especially fond of their new herd boar, California Jumbo Buster, who is by Buster, the best son of Grant Buster, owned by E. E. Marlow of Wellsville, Mo. The dam of this fine boar is Lady Jumbo, by Long Jumbo.

Sheep.

More than 200 sheep have been killed by bears in one county in Virginia recently.

Bishop Bros. of San Ramon are fitting 15 Shropshire ewes, a dozen rams and 18 lambs of both sexes for showing at the fairs this fall. They have about 1400 Shropshires on their San Ramon ranch.

Farm Adviser A. A. Jungerman of Stanislaus county hopes to interest sheep farmers with small amounts of wool in pooling it, in order that shipments of sufficient size may be made to Portland, Ore., where top prices will be received.

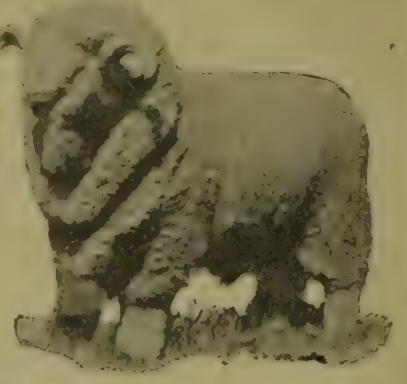
Live Oak Stock Farm

F. A. MECHAM ESTATE

P. O. Address:
Petaluma, Sonoma County, Cal.
Take Electric Cars at Petaluma or Santa Rosa for Live Oak Station

Importers and Breeders of

Red Polled Cattle, Shropshire Sheep, American Merino and Rambouillet Sheep



SHROPSHIRES, RAMBOUILLETS and AMERICAN MERINOS

We have for sale this season 350 HEAD OF PUREBRED SHROPSHIRE RAMS, yearlings and two-year-olds. They are sired by sons of the famous Senator Bibby, one of the best Shropshires ever imported into the United States. He is now nine years of age and is still hale and hearty.

WE HAVE 500 AMERICAN MERINOS AND RAMBOUILLETS. Our Rambouillets are all from prize winning rams at the P. P. I. E. Strong, hardy, range raised stock. We have a fine lot of yearling American Merinos of our own breed.

ALL STOCK SOLD SINGLY OR IN CARLOAD LOTS.

Also a fine lot of young Red Polled bulls and heifers sired by Teddy's Best of Jean Duluth Farms.

GRAND CHAMPION
Shorthorn Blood

More grand champion bulls have been used on my range herds than any other breeder on the Coast has used on his foundation herds. Several champion and grand champion cows have been produced and shown by my father and myself. All of my stock is from registered bulls of highest merit and from the original registered herd of cows established on this ranch in 1872.

Bulls of this breeding for sale in car lots or less.

Also purebred Shropshire and Merino sheep for sale.

Write for particulars or come and see the stock.

Hillcrest Stock Farm

T. S. GLIDE, Prop. DAVIS, CAL.

SANTA ROSA
Shropshire Farm

We are establishing, on the old Taylor Ranch near Santa Rosa, a breeding herd of 2000 purebred Shropshires, all descended from the original importation of 200 by Gov. Sparks of Nevada and from registered rams. These are the pick of thirty years' breeding in connection with our father, G. C. Wheeler at Reno, Nev. Yearling and two-year rams for sale. Before the breeding season, we will sell a number of ewes.

WHEELER BROTHERS, Santa Rosa, Cal.

FOR SALE 1000 one and two-year old
Shropshire Rams

By Imported Canadian Sires and Purebred Ewes. For further particulars call or address:
Phone No. 251-F-2 C. E. BARNHART Suisun, Cal.

Persian Sheep Rams

Large, rapid growers; hardy, disease-resistant—especially valuable for crossing onto fine wooled breeds. Bred from direct imported stock.

C. P. BAILEY & SONS CO.
SAN JOSE, CALIFORNIA.

Owing to the scarcity of water in the mountains the stockmen are bringing their cattle and sheep back to the valleys. Already several bands of sheep have passed through Red Bluff and the owners are trying to find pastures for them.

We are informed that the Oakland Exposition to be held in September and October has decided not to give premiums and hold a livestock show in connection with the other features. Efforts to make it the greatest of land shows held on the Coast seem likely to be sustained.

SAN FRANCISCO LIVESTOCK SHOW NOTES.

Stockmen, breeders and others interested will be glad to know that the premium list and preliminary classification of the California International Livestock Show is now in the hands of the printer and will be ready for distribution the latter part of this month, when everyone interested will be furnished a copy. About $30,000 in premiums is to be awarded at the first annual exhibition to be held November 2 to 10 next in San Francisco. Cattle, swine, sheep, goats, horses, poultry and rabbits are all listed and very generous amounts have been apportioned to the various classes.

One of the events of the exhibition will be the night horse show, to be held every evening, with ring events and exhibition of fancy horses. This is something new for California and should be a big attraction. A big military feature will also be added, consisting of artillery horses, and officers' remounts, and it is expected that some splendid exhibitions will be given by many of Uncle Sam's boys during this event. Special music will be provided in the shape of some well-known and popular band.

The poultry department will be conducted by the San Francisco Poultry Association, T. E. Woodhull, secretary, and the rabbit exhibit will be made through the Pacific Coast Rabbitry Association, of which Walter Hickling is secretary. No entrance fee will be charged, except for poultry and rabbits.

Jos. E. Painter, manager of the show, expects to secure free transportation for stock coming and going.

BLACK HAWK STOCK NOT TO BE SHOWN.

The Black Hawk Stock Farm of Diablo have just decided not to show the 30 registered Shire horses they have been trying to fit for all of the big fall fairs. As Manager E. Lovell, says, last year at the fair they had ten men to help show the horses. Right now, in spite of all efforts to get men in the East or West, they have just one man, Wm. Clayton, and he has been called. Seven of their men have been drafted. Every class would have been filled. A lot of specially fine colts were being fitted. A four-horse team, each animal weighing over a ton, was about ready. A new set of decorations for their barn have been procured. They had built two old-country Scotch carts to show the horses tandem, but they can't get help. Even the dairy stock was last week turned onto the range and cream is being bought from neighboring Portuguese.

LIVESTOCK DIRECTORY.

Rates in this directory, 3c per word each issue.

SWINE.

Poland-Chinas.

HAVING RECEIVED SHIPMENT of several fine gilts from the East, will offer three fine gilts and one sow bred for late farrow. Good ones at fair prices. Booking orders now for spring farrow from the finest bunch of sows we ever owned, and the Great Big Bone Bob. Young & Clark, Lodi, Cal.

Feeding Cattle Cheaply for Quality

[Written for Pacific Rural Press.]

Cattle, hay, and concentrate feeds have been so high and pasturage so scarce that people have sold much of their cattle and hay and will not generally feed their stock in California this season. Most cattle go to market from the grass beginning in May. They often get into good condition, but not this year. Even in the best of years, grass or hay-fed cattle do not kill out so high a percentage of meat nor so good quality as those fed at the Alisal yards of the Oakland Meat Co. in Monterey county, according to Floyd Vettel, ranch foreman here. About 4500 cattle go through this feed yard every winter, 3250 having been on hand at one time last winter.

The ranch consists of 520 acres in a sheltered canyon, with lots of shade, and including some farm land, some grassy hill pasture, and 13 feed corrals averaging about three acres each. The ranch was long used by the Spreckels people as a feed yard in connection with beet tops and beet pulp. Then Miller & Lux used it for awhile before the Oakland Meat Co. took it over.

Stock is generally shipped in from Nevada, Oregon, and Northern California in the fall, as it is considered that the best feeders come from these districts. Dairy stock is not wanted if the other kind is available, and poorly bred beef stock is about as undesirable.

THE BEST FEEDERS.

Cattle coming three years old and in thin condition make the best gains. One lot of three- and four-year cattle obtained early last February from a Merced man who had no feed were thin almost to weakness. The tops of this bunch were taken out 80 days later, having fattened rapidly and economically. Younger stock grows too much to fatten enough in the 120 days which is the limit on this feed before they begin to get blind and "go to pieces." After 120 days, stock on siloed beet pulp are unable to avoid fences after dark, according to Mr. Vettel. Two years and coming three are the best ages for fattening under these conditions.

Cattle are weighed when shipped in and weighed when shipped out. The scales are along the driveway and may be opened at both ends, so a bunch just weighed are driven on without mixing again with unweighed cattle. They are graded according to age, since a mixture of younger with more mature stock would result in the younger ones being "bossed" and driven away from the feed. Whenever some fat cattle are wanted at the Oakland slaughter house, the "tops" or best and fattest cattle of each bunch are sorted out and shipped. The shrinkage is 80 to 100 pounds per head en route. When some are shipped out, others are shipped in during the winter feeding season. Very few cattle were there last April, as it was time for the extra-early run of grass cattle to slaughterers on account of range feed and hay shortage in 1917 and certainty of a still greater shortage in 1918.

The corrals are on gravelly soil, which has packed hard long since, and drains into a creek bed. They are surrounded by heavy plank fences with feed troughs and mangers around them and feed racks and trees for shade in each enclosure. Fresh water is also supplied, being regulated by automatic valves. A narrow-gauge railway runs through the yards from the forage stacks and feed shed. Small or large cars are hauled by horses down this track and unloaded directly into the racks or handily into the feed troughs on the fences. As the railroad runs across the ranch, feed is brought in by the carload and manure will be hauled out in the same way. The feed varies with what may be available. The sugar factory a few miles away often is unable to dry its beet pulp fast enough, so the surplus is run into silos. This keeps nice and white and sweet and soft, but after a day or two of exposure to air it turns black and looks like well-rotted manure. Cattle eat it, however, though they prefer the unspoiled pulp silage. It makes a washy feed. To correct the washiness, grain and bean straw are chopped in a 36-inch Smalley feed chopper and fed dry separately in the troughs. Cattle eat about six pounds of this mixed chop per head per day, as estimated by Mr. Vettel. He says that without chopping 60 per cent of the grain and bean straw would be wasted. After chopping, not over 10 per cent is lost.

Dried beet pulp is preferred for feeding, although considered more expensive. It is easier and cheaper to handle and gives better results. Cattle are given all they want, which averages about 15 pounds per day along with two to five pounds of cottonseed meal to balance the ration. The maximum labor for feeding was eight men when the 3250 cattle were in the corrals at one time.

AVOID TUBERCULOSIS.

"Visitors are requested not to walk in front of the cows," is the legend seen in the milk barn of the Palo Alto Stock Farm. "The reason," said Manager M. H. Tichenor, "is that the cows are free from tuberculosis, but there is no way of immunizing them. No one knows where visitors may have picked up the germs of tuberculosis or may have carried them in on the dust on their clothes. We are safer if they keep away from the cows' heads." A further rule might well be enforced on all dairy farms whose cattle are tested and free from the disease. It would read about like this: "No spitting or waving of handkerchiefs is allowed on these premises, and people who cough frequently are requested to stay away."

COW-TESTING ASSOCIATION HAS LIMITATIONS.

It can not compel a dairyman to dispose of his poor cows if he is determined to keep them. It can not make him feed according to production nor practice economy in the management of his dairy herd. It can not require him to dispose of his scrub bull and buy a better one. It has never yet demanded the planting of legumes and the building of silos. It never will compel, but it always will encourage, economical improvement of the herd, of the farm, and of the business.—United States Department of Agriculture.

Popularity of Mutton and Wool Sheep

[Written for Pacific Rural Press.]

While many farmers are induced to establish a band of sheep on their place or to increase flocks already established by the prevailing high prices paid for wool, it is nevertheless true that sheep-raising is carried on primarily for mutton production. According to information furnished by the Department of Agriculture, at the present time 45 per cent of the sheep belong to those of mutton blood, 35 per cent to those of fine wool, and 20 per cent to the crossbreeds. Ten years ago, the mutton sheep were 35 per cent of all sheep, fine-wool sheep 41 per cent, and crossbreeds 24 per cent, and consequently, during this period, one-tenth of the national flock has changed from wool to mutton as the chief purpose. While mutton sheep have thus increased their percentage of all sheep by 10 during as many years fine-wool sheep have lost 6½ from this percentage and the crossbreeds 3½. The tendency of the sheep business in this direction is largely economic, though it has been favored by the advice and propaganda of the Government.

WESTERN STATES LEAD IN CHANGE.

This change in the sheep industry is largely characterized in the national average by the Western and Pacific States, in which more than one-half of the sheep are found on ranges. The fine-wool sheep are 46 per cent of all sheep in that group of States, a loss of 7 in the percentage in 10 years; the crossbred sheep are 22 per cent, a loss of 2½; and these losses have gone to the mutton sheep, which are 32 per cent of all sheep, a gain of nearly 10 in the same number of years.

The greatest advance in this movement has been made in the North Atlantic States, in which farmers' markets are near and the people have an active taste for mutton and lamb. In these States 62 per cent of the sheep are of the mutton bloods, a gain of 20 in the percentage in 10 years; only 17 per cent are fine-wool sheep, a loss of 17; and 21 per cent are crossbreeds.

At the present time the South Atlantic States have the lowest fraction of fine-wool sheep, 7 per cent, and the North Atlantic States are next with 17 per cent; the highest fraction, 46 per cent, is in the Western and Pacific group, and next below are the South Central States with 30 per cent.

Mutton sheep are as high as 68 per cent of the sheep in the South Atlantic and West North Central States, and as low as 32 per cent in the Western and Pacific States, and 44 per cent in the South Central.

ISOLATE THE SICK ANIMALS.

To the Editor: We lost four yearly calves, and they never seem to be sick. We found their bladders full of blood and their bowels inflamed and full of little reddish, pill-like substances. Two of our cows died at the same time. One was bleeding from the nose and the other one started a couple of months ago to get very poor in flesh and finally died. What is the cause and what is the remedy?—P. B., Holtville.

The above symptoms stand for a number of diseases, all of which may cause very extensive loss to the farmer. Isolate your animals at once when they begin to show symtoms of dullness and loss of appetite. We suggest that you advise your county veterinarian of the loss of animals. In the absence of such an office, phone or wire to the State Veterinarian, State Capitol, Sacramento. Either one will thoroughly investigate the disease and give you all directions as to how to combat the outbreak.

DE LAVAL
CREAM SEPARATORS
Save Cream, Time and Labor

Save Cream: If you are trying to get along without a cream separator, or are using an inferior or half-worn-out machine, with butter at 40 to 50 cents a pound, a De Laval would soon save enough cream to pay for itself.

Save Labor: A good cream separator is a big time and labor saver. And this year, more than ever before, time saving and labor saving on the farm mean money saving.

There is no other cream separator that can compare with the De Laval in clean skimming, capacity, ease of operation, freedom from repairs, and durability.

Order your De Laval now when you need it most and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

Clean and Clear as Water

Awarded Gold Medal Pan.-Pac. Expo.

For Calf Scours

B-K treatment is saving many calves. Scouring calves indicate a germ infection that is likely to run through your entire herd with serious losses.

The loss of one calf is bad enough, but nothing compared to your loss when the infection spreads—as it will unless checked. Then your year's work in building up your herd is wasted—your profits lost.

Leading breeders testify that B-K stops scours. It is powerful in killing germs. When used internally B-K kills the germs in the mouth, throat and digestive tract, heals inflamed membranes, relieves irritation. B-K may be given freely in drinking water.

If your dealer does not have B-K, send us his name.

FREE BULLETINS: Send for complete information—"Special trial offer" and our calf bulletin No. 136.

WESTERN MEAT COMPANY

Animal Food Dept. 704 Townsend St., San Francisco

Kings County Poland-Chinas

[Written for Pacific Rural Press by Ord L. Leachman.]

Where does the best pork come from? That is the question asked Mr. Sullivan, the foreman of the Western Meat Company stock yards. He does the grading of all hogs bought by the Western Meat Company. In answer to our question he said: "We receive a better grade of hogs from Kings county than from any other section of the State." We determined to find out the reason, so we visited Kings county. We found almost every farmer using purebred boars on their ranches, purchased from some of the purebred herds.

On M. Bassett's place, at Hanford, we found about 500 head of purebred Poland-Chinas, all registered except the fattening hogs, and they were eligible and better than 75 per cent of the boars used on the average ranch. Among the many boars on the Bassett farm we found Model Fellow as the herd sire.

We next visited Fred Ross, secretary of the Poland-China Association of Kings county, who has some of the finest of the breed. He has sold his surplus stock, but has a goodly number left for breeders. He is breeding a number of excellent sows to his fine boar, Rossmead Big Bob, who is by Caldwell's Big Bob, grand champion at the National Swine Show last year, and weighed 1122 pounds in the show ring.

We interviewed W. L. Haag & Son, who own Young Jumbo, for whom they paid $400 at the Bernstein sale last spring. They are using this boar on some fine sows, whose pigs look like blue-ribbon winners as well as good pork.

C. L. Newport, who is using Royal King on purebred sows to produce pigs for slaughter only, has the kind that makes packers smile.

John M. Bernstein was next seen. Here we found the noted boar, President, and a younger boar, California Smooth Jumbo, who is a coming winner and the kind that produces the kind everyone should have.

Of the Dimmick Bros. of Lemoore one brother had gone to France to fight for Uncle Sam. The other is too young to fight, but not to young to raise hogs and help win the war. They have Model Wonder, reserve grand champion of 1917 State Fair, who is the sire of a very promising bunch of pigs.

C. G. De Raad of Lemoore has a fine bunch of hogs.

At the W. D. Trewhitt place were 150 head of big type Polands. My Choice, a boar of extra good breeding and quality, may be seen in one of the boar pens.

Other breeders who deserve notice from the Poland-China breeders all over the country are Dr. J. A. Crawshaw, W. M. Bernstein, C. A. Vaughn, all of Hanford, and H. G. Shinn and H. D. McCune of Stratford. These breeders are not only growing good pork, but they are supplying breeding stock to almost every part of the Western States.

YOU can save from $6.00 to $12.00 in fattening each hog by feeding Globe A-1 Hog Feed (10% dry buttermilk) and you can save from four to six weeks' time. This is not laboratory theory, but actual, results of feeding tests.

Successful Feeder's Opinion

Mr. Green, of Willits, Patterson & Green, whose drove numbers nearly 2000 animals, says:

"We shall continue to use your A-1 Hog Feed as the results obtained are extraordinary.

"A feed that will put nearly two pounds average daily weight on a hog weighing about one hundred pounds is a product that no hog feeder can afford to overlook.

"WILLITS, PATTERSON & GREEN.
"Per R. S. Green."

Fact Book, packed with valuable feeding information, sent free.

Veterinary Queries

[Answered by Dr. Edward J. Creely.]

Sore on Mare's Neck.

To the Editor: I have a mare with a discharging sore about three inches in diameter on top of her neck, caused, I think by collar bruise. There is considerable swelling and the cavity is apparently about two inches deep and filled with thick pus. There is no odor. I have been washing the pus away with the hose and sprinkling the sore and adjacent parts with dilute sheep dip, Little's. If this is fistula, how will I know it and what can be done about it?—W. E., Colfax.

This is fistula of the withers, and the cavity is much deeper than you suspect. Surgery offers the only hope. An incision should be made below the swelling to drain out the pus pocket deep in the tissues. The whole track should then be irrigated and the dead tissue removed by means of the knife. The wound should then be packed with gauze saturated with tincture of iodine or a 1 to 1000 solution of bichloride of mercury for three days, the packing being removed each day and the wound thoroughly cleansed. Later the wound should be treated with antiseptic washes such as a 2 per cent solution of carbolic acid, and dried, and a liberal amount of powdered boracic acid dusted over the wound.

Mare Has Bad Fistula.

To the Editor: I have a mare that developed fistula of the withers last September. The veterinarian opened it, but it has never healed. The discharge isn't very profuse, still it runs some every day. I would like to know if you or any of the readers could suggest a remedy that will cure her at this late day. —W. R., Fallon, Nev.

Too much faith should not be placed in the so-called fistula remedies. In a chronic case such as you describe a graduate veterinarian should be called and all the dead and fibrous tissue which has formed should be removed. After removal a mild caustic may be applied, but this should be left to the judgment of the surgeon.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

THE MOLTING PERIOD.

Since my last letter I have been making inquiries among handlers of poultry who are in a position to know conditions—not from a one-day standpoint, but from many. The consensus of opinion among these men is that there is absolutely no danger of poultry products slumping in price for a long time. The shortage is so real that it cannot be brought up to normal under three years at least. Of course there will be some fluctuations, caused by supply and demand; but if poultrymen will learn how to regulate the supply good prices are assured for a long time ahead, for both eggs and table poultry.

Feed prices, too, are going to be better because the Government is stopping speculation by regulating the supply. Undoubtedly the change will work a little hardship at first, mostly on the farmers, but after things get straightened out it will be better for all.

HATCHING SEASON ABOUT OVER.

Hatching season is about closed, though you never can tell, for only this morning a man told me he just took off a hatch that went 50 per cent, which is not bad for this late in the season. Speaking generally, however, the hatching season is over until September. What the poultryman should do now is commence selecting the hens that will pay to keep over for next year's breeders, and preparing for winter layers. This month will see thousands of hens dropping feathers, and by the first of August the molt will be pretty general all over the State. How to feed the hens to make the molting period as short as possible is what concerns us most.

FEED MOLTING HENS LIBERALLY.

A great many people commit the folly of allowing the hens to live on what they can pick up on range during the molt. Cheap? No; it's the dearest kind of feeding, because the hens draw on their own system for what is needed to grow feathers and then take a long rest to restore themselves.

During the first part of the molt hens will lay enough eggs to pay for their feed, if they are fed right, and it's a poor hen that can't run a bill for the latter part of the molt, when her feeder can collect on delivery.

WHAT TO FEED.

While the feathers are dropping a little greasy food helps the process. Instead of all beef scrap, give half beef scrap and half the amount in tallow melted and mixed in the mash water. Oats make a very good feed for molting hens if the fibre contents are softened by soaking or processing so that they can be digested easily. Plenty of good, sharp grit is a great help to hens in helping digestion, as also is plenty of exercise. Cotton seed has high protein content and high fibre content, so unless hens are very active and have good grit they do not digest more than one-third of the protein content. Sunflower seed is an oily food that can be used in moderation during the molt, but it has enormous fibre content, so must not be fed in quantity. Peanuts are a very concentrated food, are also very digestible, and where they can be had at a low price can be fed during the molt to advantage. The soy bean has about the same protein contents, is very digestible, and as it contains scarcely any carbohydrates it is the most desirable of all the concentrated foods, but it should be fed with plenty of good green feed to get best results.

BARLEY AS A POULTRY FEED.

Barley needs no comment, because in California it has almost become the standard poultry food, not because it is best but because necessity places it to our hand and we make the best of it.

One thing I have always noticed in feeding barley is that a horse that is fed on barley is constantly shedding, and if you sit in a buggy behind a barley-fed horse the lap robe will need shaking when you get out; and a hen that is fed barley is almost always in the molt, dropping feathers when you least expect them. So that during the molt barley can be relied on to be helpful in the first stage; but as its digestibility is not very high, it needs soaking or sprouting to help digestion.

Next week the discussion of feeding for quick molt will be resumed. It is not possible for everybody to feed just what is mentioned, but it is well to know what is considered best.

KEEP YARDS COOL AND SHADY.

Don't neglect to provide for plenty of shade during the hot days of July and August; look well to the comfort of growing chicks and laying hens and they will repay you later. Sprinkle the yards evening and noon so as to be sure no sudden heat harms them. Feed early, then leave hens to enjoy the shade and cool during the heated part of the day, then feed last thing at night all they will eat, and you will get more eggs than by disturbing the hens during the heat of the day. If there is food within reach of them, they will help themselves if they feel the need, just as they do to water; but it is folly to go out and feed at a time when the heat of the hen's body is about at the highest for the twenty-four hours. Rest and shade are more than food at that time and count for more either in the egg basket or in growth of chicks.

WORMS IN CRAW.

To the Editor: Enclosed find four worms I found in a chicken craw. They were alive. What are they and what damage will they do? Is there a remedy?—J. C., Fairfield.

The specimens enclosed were tape worms that come from eating mice, and many chicks are given to eating mice. The harm they do is not noticeable until the worms get well established. If the particular chicken that has worms is known, it will be easy to treat her individually; but if the whole flock has them they will all need treatment. Individual treatment may be given by beating an egg up with one tablespoonful of oil of turpentine until they mix. Give a teaspoonful to the fowl night and morning for a few days and keep it on short rations, then give a dose of castor oil, not less than a tablespoonful, to finish the cure.

TICKS ON CHICKS.

To the Editor: What can I do to get rid of ticks in a chicken house, and do they hatch on the chicken or in the wood? If I would close the door tight and burn sulphur, would it do any good?—J. A. W., Nicolaus.

Ticks are not particular as to where they hatch, but wherever they lay their eggs there they will hatch, and if it is on the chickens it is almost sure death to them. Yes, a good sulphuring would get them, but every crack and crevice must be closed up with clay or something similar. Use good, strong sulphur and lots of it. Leave the house open a day and night after doing the job or the chickens will take cold by breathing the fumes. Rake up and burn any loose brush and rubbish around, because there will be stray ticks in it. If the chickens are strong enough, dip them in warm water and creolin, a teaspoonful to a quart of water, and dry quickly in the sun.

J. H. Stubbe has moved his poultry plant from Campbell to Palo Alto and announces this week that he will have fall hatched chicks.

A LIBERTY BOND.

A Liberty Bond! What a queer contradiction,
Although truth, as you've heard, may be stranger than fiction,
For Liberty should from all fetters release us.
While bonds hold us fast, whether pauper or Croesus.
Yet a Liberty Bond, I'd advise you to buy it—
Will insure you your freedom—you'll see when you try it.
'Twill aid you to conquer foes cruel, despotic,
'Twill help save your country; come, be patriotic!
A Liberty Bond—I'd advise you to buy one—
Will insure you your freedom—rejoice when you try one.

—Helen Leah Reed.

PRESERVES.

Soft fruits as ripe apricots, plums, raspberries or very ripe peaches may be made into preserves satisfactorily by adding an equal weight of sugar, a little water to prevent scorching and by boiling down to the desired appearance and consistency. The preserves should be packed boiling hot and sealed at once to prevent fermentation or molding.

Firm fruits, such as pears, firm peaches, quinces or water melon rind, should first be cooked in a little water until tender. Sugar equal in weight to the fruit used is then added, and the whole boiled down to a preserve. Firm fruits become tough and shriveled if the sugar is added before they have been well cooked in water or a dilute syrup.

Fruit preserves without sugar may be made by adding to each quart of the cooked pulp, three quarts of apple or grape juice and to each four quarts of the mixture two teaspoons of ground cinnamon and one of ground cloves. Boil down to a thick consistency. Seal boiling hot in jars or cans. This preserve will be very tart and will be suitable for a relish.

RHUBARB BUTTER.

Six pounds of rhubarb, 6 lbs of syrup, (3 lbs corn syrup to 3 lbs of sugar), 2 oz of root ginger.

Peel the rhubarb and weigh after peeling. Cut into pieces about 2 inches long, and put in kettle with the syrup and ginger which must be bruised and tied in a muslin bag. Leave this for 3 days, stirring gently each day to help the sugar dissolve. Strain the liquor from the fruit the third day, boil and pour the syrup over the fruit while hot. Let stand again for 3 days, then take out the ginger, and boil from a half to three quarters of an hour. Pour into clean, dry jars and cover. Root ginger, bruised and tied in muslin, or ground ginger, is generally used for jams.

BARLEY TASTE.

Many people object to the so-called barley taste in bread and by experimenting with substitutes it has been found that soda added to barley bread dough in the proportion of 1 teaspoon soda to 6 cups of barley flour will destroy the bitter, acid taste usually called the barley taste.

The taste varies with the different brands of flour and brands put out by different firms vary slightly and behave differently. The housekeeper should learn how to use a given brand and continue to purchase that brand.

THE HOME CIRCLE

TIME TABLE FOR CANNING IN THE HOME.

[By W. V. Cruess, University of California.]

During the rush of the canning season, it is often troublesome and wasteful of time to have to read through several pages of printed matter to ascertain the proper length of time for the treatment and sterilization of home canned products. The writer has therefore thought it desirable to assemble in a single table the most important data bearing upon the sterilization of foods in the home. This material has been assembled in the tables given below. It is assumed that the user of the tables understands the principles of canning. For detailed information concerning types of sterilizers and methods of canning, the reader is referred to Circular 158 of the Agricultural Experiment Station and to Bulletin 839 of the U. S. Dept. of Agriculture. The former publication can be obtained free of charge upon application to the College of Agriculture, Berkeley.

TIME TABLE FOR CANNING FRUITS IN JARS (TIME IN MINUTES).

Product—	Time of Sterilization: Time of parboiling or blanching.	Hot water sterilizer at 212 deg. F.	Water seal at 214 deg. F.	Steam pressure 5-10 pounds.	Steam pressure 10-15 pounds.
Apricots	0	16	12	10	5
Apples	1½	20	12	8	6
Blackberries	0	16	12	10	5
Cherries	0	16	12	10	5
Currants	0	15	12	10	5
Figs	½	30	15	10	5
Gooseberries	½	15	12	10	5
Grapes		15	12	10	5
Peaches, free	½	20	15	10	5
Peaches, cling	1	25	20	12	6
Plums	0	16	12	10	5
Raspberries and Loganberries	0	15	12	10	5
Strawberries	0	15	12	10	5
Quinces	1½	20	12	8	5
Pears	0	30	20	15	10

TIME TABLE FOR CANNING VEGETABLES IN JARS (TIME IN MINUTES).

Product—	Time of Sterilization: Time of parboiling or blanching.	One period lemon juice method at 212 deg. F.	One period at 212 deg. F.	Water seal at 214 deg. F.	Steam pressure 5-10 pounds	Steam pressure 10-15 pounds.
String beans	5-10	90	120	90	60	40
Peas	5-10	90	180	120	60	40
Tomatoes	1½	60	60	30	20	15
Corn (sweet)	5	120	180	120	90	60
Lima beans (green)	5-10	120	180	120	60	40
Pumpkin and squash	3	90	120	90	60	40
Peppers	5-10	60	120	90	60	40
Cabbage and sprouts	5-10	90	120	90	60	40
Cauliflower	3	45	60	40	30	20
Carrots and parsnips	5	60	90	80	60	40
Turnips	5	60	90	80	60	40
Beets	10	60	90	80	60	40
Salsify	5	60	90	80	60	40
Sweet potatoes	10	90	90	80	60	40
Greens, such as spinach, chard, beet leaves, etc.	15	60	120	90	60	40
Asparagus	5	90	180	90	60	40
Artichokes	10	60	120	90	60	40

Three-day method Sterilize one hour on each of three successive days at 212 deg. F., counting time from the time the water reaches the boiling point.

TIME TABLE FOR CANNING MEATS (TIME IN MINUTES).

Product—	Time of Sterilization: Time of parboiling or blanching.	Hot water sterilizer at 212 deg. F.	Water seal at 214 deg. F.	Steam pressure 5-10 pounds.	Steam pressure 10-15 pounds.
Uncooked beef, pork and mutton	0	240	180	120	60
Game and poultry	0	240	180	120	60
Corn beef	0	180	180	120	60
Salmon and other large fish	0	240	180	120	60
Shell fish, such as clams, mussels, etc.	5	240	180	120	60
Fried, stewed, baked, and other cooked meats	0	180	180	120	60
Smoked meats, such as kippered fish, lightly smoked beef, etc.	0	180	180	120	60

Precautions and Suggestions:

ALTITUDE.

The table is designed for altitudes from sea level to 1,000 feet altitude. For altitudes above 1,000 feet, increase the time of sterilization 10 per cent for each 500 feet increase in altitude. Example: If time of sterilization at sea level is 90 minutes, it would at 3,000 feet altitude be 40 per cent more than 90 minutes or $90 + (40\% \times 90) = 90 + 36 = 126$ minutes. At 3,000 feet, 40 per cent more time is required because this altitude is 2,000 feet above the 1,000 foot level and 10 per cent is added for each 500 feet above the 1,000 foot level.

SIZE OF CONTAINERS.

The table is based upon the quart jar as the container. Smaller jars require slightly less time and larger jars slightly more. Gallon cans require the same time as quart jars; quart and smaller cans, about 10 per cent less time than quart jars.

HOW TO COUNT TIME OF STERILIZATION.

Do not count time of sterilization until the water reaches the boiling point, if a hot water sterilizer is used or until the desired pressure is reached in a pressure sterilizer. All other time is not counted. This point is of utmost importance.

BRINES AND SYRUPS.

Fruits are usually home canned in syrups containing one pound of sugar in 2 pints of water for medium fruits, 1 pound of sugar to 1 pint of water for sour fruits, and 1 pound of sugar to 3 pints of water for sweet fruits. The syrup is added to the fruit in the jar.

By the lemon juice method 5 fluid ounces of lemon juice or strong vinegar and 2 tablespoonfuls of salt are added to each gallon of water. For corn and peas use 6 ounces. Measure in a glass measuring cup. This brine is added to the jars in canning vegetables. Where other methods are used, omit the lemon juice or vinegar. A longer time of sterilization is needed when the vinegar or lemon juice are omitted.

COOKING BEFORE SERVING.

All canned vegetables and meats should be heated to boiling after the jar is opened for use. This removes all danger of "botulinus" ("ptomain") poisoning.

HOME-MADE STERILIZER.

For sterilizing at 212° F. a sterilizer can be easily made by placing a frame made of several slats in the bottom of a washboiler. The jars are placed on this false bottom and water is added to half the height of the jars. The cover is placed on the boiler and the water is heated to boiling. Count time of sterilization from the time the water boils.

Go easy with your spoon—more than 5,000,000 soldier boys are dipping from that sugar bowl.

RED CROSS WORK.

Interminable folds of gauze
For those whom we shall never see.
Remember, when your fingers pause,
That every drop of blood to stain
This whiteness falls for you and me,
Part of the price that keeps us free
To serve our own, that keeps us clean
From shame that other women know.
O saviors we have never seen,
Forgive us that we are so slow!
God—if that blood should cry in vain,
And we have let our moment go!

THE SUGAR SITUATION.

The shortage of sugar presents quite a serious problem to the housewife who is desirous of canning all the fruit possible this season. This situation may be met by drying as much fruit as possible and by canning fruit and fruit juices without sugar. This can be done successfully and they may later be made into sauces or jelly as needed.

Limiting the amount of jelly and preserves will also be a help and in making these, using the least possible amount of sugar or syrup.

Sugar substitutes for cooking fruit include corn sugar, corn syrup, fruit syrups, glucose, honey, maple sugar, sorghum and New Orleans molasses. Equal weight of corn syrup and sugar makes a good combination for butters or jams.

STRAWBERRY PRESERVES.

Weigh the berries and add one pound of sugar to each pound of berries. Heat quickly to boiling, and boil two minutes, no longer. Pour into a shallow tray or baking pan and set in the sun until the liquid evaporates to a thick syrup and the berries have become plump. Cover the pan with cheesecloth during the exposure to the sun to exclude flies. About a week's time will usually be necessary for the syrup to concentrate. Pack in jars or glasses and cover with paraffine.

Strawberries preserved in this way are much more attractive in texture, color and flavor than those prepared in the usual way.

MACARONI AND SALMON.

Boil two cups macaroni broken in pieces until tender. Mix a tablespoon of oil from the salmon with two tablespoons fat, blend with three tablespoons flour, add gradually two cups of milk. Season with salt and pepper and cook thoroughly. Arrange in a greased baking dish the macaroni and canned salmon in alternate layers pouring some of the sauce over each layer of salmon. Cover the top layer with bread crumbs (saved from the crumb jar), brown and serve hot.

Italians who purchase foodstuffs or goods of common consumption and lay in supplies greater than the ordinary family needs are punishable by fine and imprisonment.

MISS HEAD'S Berkeley, California
SCHOOL FOR GIRLS

A cheerful, home-like school that stands for earnest, honest work, and all that tends toward cultured, upright womanhood.

Accredited to the University of California, Stanford, and other leading colleges. East and West.

Primary, Grammar, and High School. Excellent courses in music, art, domestic science, domestic art.

Commercial Course to train girls for war service.

Special attention paid to outdoor life. Five buildings. Attractive grounds. Outdoor study and schoolrooms. Separate house for younger girls. Gymnasium, tennis, basketball, indoor swimming pool, horseback riding, etc.

Good Health

Children and Hot Weather.

Through the long, hot summer days it is a great task to keep children happy. Children should be kept as cool as possible in the hot interior valleys of California, especially. This may be accomplished in some measure by clothing them suitably. Children need only enough to cover their bodies. As far as possible, children should sleep out of doors at night, if screened porches are available, or, if not, with all the windows and doors wide open. A bath in cool or tepid water will do much to make sleep comfortable. Children must be provided too with occupations suited to their age. A play pen on a cool porch, or even under the trees in the yard, will give much pleasure. Sand piles, swings and many other simple pieces of play apparatus, which are easily made at home, without any great expense, will keep older children happy and out of mischief.

In the country and on the farm young children are often required to work in the field and gardens too long at a time, or to carry water and other weights too heavy for their strength, and often to work under a blazing sun. Such early work interferes with growth and development, which is the one great business of childhood.

Children's food must be chosen with special care in summer to suit the ages, and proper food habits should be established.

Older children should be taught to observe regular habits also and mothers should guard against the dangers of over- or under-feeding, and especially against poor food materials, such as over-ripe fruit. Young children need to be taught to chew their food thoroughly and to eat slowly. Cleanliness of the body is desirable for health and comfort at all times, but is imperative in the summer time.

A Corrective for Fetid Feet.

It is said that a piece of blotting paper cut to the size of an insole, saturated with a few drops of solution of formaldehyde and placed in the shoe outside the stocking, will lessen sweating and counteract the disagreeable odors with which some people are peculiarly troubled. It is powerfully disinfectant and germicidal.

California Army Camps Healthful.

The health conditions of our army training camps are said to be excellent, the death rate per thousand for the nation being but 3.31. The California camps, however, hold the record. At the present time the only contagious disease among our soldiers is measles, while pneumonia leads the list in causes of death.

No, we know of no drug that will cure addiction to the use of tobacco. A determined, manly effort of the will to slough off a vicious habit is the only remedy.

"Just as it looks in the Big, New Barker Bros.' Catalog"

That's your first thought after you have unpacked the new piece of furniture or the home furnishings upon their arrival at your home from "The House of Complete and Competent Home Furnishing Service." Nearly all illustrations in Barker Bros.' 1918-1919 Catalog are actual photographic reproductions. Descriptions are accurate and concise. When we send you a copy of this book we literally "send our store," for practically all departments are represented. You need this book to help you buy wisely and economically. Agricultural Summary

Cheese Under Regulation.

Regulations governing the transactions of cheese manufacturers, dealers and commission merchants have been issued by the Food Administration. The rules are designed to prevent the sale of cheese at an unreasonable advance over cost, to limit commissions, and to reduce the number of resales to the minimum. The price paid to the producer for cheese is not affected. The general purpose of the regulations is to put the industry on a more stable basis by removing possibilities for excessive profits. This result, together with the control exerted on the retailer through the fair-price committees, is expected to lead to an increased demand for cheese and encouragement to producers.

Bean Acreage Equal to Last Year's.

Reports received from various districts in the State would indicate a change of mind on the part of many intending bean growers who contemplated following their early grain harvest with a planting of beans. The extremely dry condition of the ground and the scarcity of water for irrigation have deterred many from following out their plans. As a result the bean acreage of the State will be cut down materially below early estimates. The preliminary estimate, according to the July bulletin of the local Bureau of Crop Estimates, is for an acreage of 597,000 acres compared with the harvested acreage of 558,000 in 1917.

Apples Share General Prosperity.

It is reported that the last box of 1917-18 apples was taken out of storage this week, so that the new crop is brought prominently to the fore. Astrachans have been on the market for some time and Alexanders are maturing in the earlier districts. These new-crop apples are selling around $2 a box for choice fruit. It was thought a price on Gravensteins would be named by the Sebastopol Apple Growers this week and that from $2 to $2.25 for four-tier stock might be the figure. Last year the association's opening price was $1.60. The condition of apples this year is 70 as compared with 85 this time a year ago.

Prices Predicated on the War Spirit.

Numerous news notes float into the office of the Rural Press mentioning sensational prices brought by animals or articles of agricultural production recently put up at auction for the benefit of the Red Cross. Of course, these spectacular stunts are to be expected when our boys are fighting for the life of our nation on the blood-soaked battlefields of France. Such prices are more a measure of the spontaneous and unbounded generosity of the wrought-up bidders rather than of the animal's or commodity's real worth. But they make an interesting record all the same.

Rice Price Agreement.

A voluntary agreement has been arrived at between the directors of the Pacific Rice Growers' Association and the California Food Administration under which California rice growers are to receive $4.32 per hundred. The price of $4.16 2-3 fixed at the recent conference at Washington, D. C., has been repudiated. This price of $4.32 is based on No. 1 grade, which includes fancy and choice Japan rice. This agreement is similar to that in effect in the Southern States and will make the retail price to the consumer of next October's crop approximately 11 cents.

Wheat Conservation Still Necessary.

Denial of reports that because of the estimated billion bushel wheat crop this year wheat conservation is no longer necessary is made by Frederick O'Brien, acting Federal Food Commissioner for California, following receipt of information from Washington.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, July 17, 1918.

WHEAT.

BARLEY.

Barley is somewhat stronger and the holders of choice barley are demanding $2.60, although there is no record of any sale above $2.57½.

Choice feed, per ctl	$2.50@2.60

OATS.

Red feed oats are unchanged. There has been some inquiry for red seed, which should bring from $3 to $3.25. A Texas grower has offered Texas red seed, regarded as the best for this market, at $3.35 for July delivery, $3.40 for August delivery and $3.50 for September delivery. No sales are reported at these prices.

White feed, per ctl	Nominal
Red feed, per ctl	$2.50@2.55
Red seed, per ctl	None

CORN.

Corn is steady with an upward trend for milo maize and California Egyptian is in fair quantity and has sold within a restricted range of $4 to $4.05.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked	$4.15@4.20
Milo maize	3.90@4.00
Egyptian	4.00@4.05

HAY.

Hay receipts for the past week were 2139 tons—about 50 per cent more than was received in either of the two previous weeks, and prices are easier. Consumers continue to buy from hand to mouth. Under these conditions only a limited amount of hay can be placed each week, and the surplus will soon fill up all storage capacity available. The present prices were never before so high at this season of the year.

Wheat No. 1	$22.00@24.00
do, No. 2	19.00@21.00
Choice tame oat	24.00@26.00
Wild oat, new	17.00@20.00
Barley, new	18.00@21.00
Alfalfa, first cutting	16.00@20.00
do, second cutting	22.00@24.00
Stock	15.00@17.00
Barley straw	50@80c

FEEDSTUFFS.

With the exception of the price of alfalfa meal there was no material change in prices this week. The increase in the price of this meal was due to the increase last week in the price of the second cutting of alfalfa.

Beet pulp, per ton	None offering
New alfalfa meal, per ton	$33.00@34.00
Coconut cake or meal	44.50
Cracked corn	86.00@88.00
Middlings	Nominal
Oilcake	$75.00@76.00
Rolled barley	55.00@56.00
Rolled oats	56.00@58.00

POTATOES, ONIONS, ETC.

Potatoes were higher this week on a good demand for local consumption. An increasing market is looked for in potatoes and they may reach about $3 as the season advances. Onions showed a decided advance and were lively throughout the week on demand for shipment to the East. Tomatoes are now coming in freely and prices were marked down. Lettuce and cucumbers were both plentiful and sold lower. Garden beans are now plentiful and sell at prices of other descriptions.

Peas	8@9c
String beans, per lb	7@8c
Wax beans, per lb	7@8c
do, garden	7@8c
Asparagus, per lb	None
Carrots, per sack	50c@$1.00
Rhubarb, San Jose, per box	$1.00@1.25
do, Strawberry, per box	None
Summer squash	75c@$1.00
Cucumbers (hothouse), per box	85c@$1.00
do, Los Angeles, lugs	75c
Eggplant	5@6c
Lettuce, Sacramento, crate	75c@$1.00
Tomatoes, per crate—	
Merced	50@75c
Potatoes—	
Garnet Chile	1.75@2.00
Whites	1.85@2.15
Onions, Australian browns	Nominal
River Reds	$1.35@1.60
do, Yellows	1.75@2.00
Garlic	3@4c
Green corn, Alameda, per sack	$3.00@3.50

BEANS.

Beans were dull this week. Owing to a slight increase in the demand for limas they sold at a slightly higher price.

Bayos, per ctl	$ 8.00@ 8.25
Blackeyes	7.00@ 7.25
Cranberry beans	11.50@12.00
Limas (south, recleaned)	11.60@11.75
Pinks	6.90@ 7.00
Red kidneys	11.50@12.00
Mexican reds	7.75@ 8.00
Tepary beans	8.50@ 9.00
Garbanzos	7.50@ 7.75

POULTRY.

The poultry market is firm. Owing to increased receipts in fryers and young roosters the prices of these descriptions became more settled.

Turkeys, live, per lb., young	28@30c
do, dressed	32@34c
Broilers, 1½ to 2 lbs	37c
do, 1¼ lbs	38c
do, ¾ to 1¼ lbs	38c
Fryers	37@42c
Hens, extra, per lb., colored	30c
do, Leghorn	26@28c
Smooth young roosters, per lb. (3 lbs. and over)	42@45c
Old roosters, colored, per lb	20@21c
Geese, young, per lb.	23@25c
do, old, per lb	22c
Squabs, per lb	38@40c
Ducks	25@27c
do, old	23@24c
Belgian hares (live)	16@18c
do, dressed	20@22c

BUTTER.

Butter continues remarkably strong and closed at the top, showing an advance of 2½ cents for the week. The advance on the 17th was due to short receipts, only 60,500 pounds coming against 77,600 a week ago. So much milk is going to the condensaries that the butter factories are getting less than a normal amount.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed
Extras	50	50	50¼	51	51	52¼
Prime 1st	47	47	47	49	49	49
Firsts	47	47	47	47	47	47

EGGS.

After the decline from the high point of last week eggs were steady throughout the week. Some eggs were taken from cold storage during the week, but they were mostly eggs on short-term storage and sold as fresh to the public, although such eggs cannot be traded in on the exchange. The production of eggs at this season is keeping up wonderfully well.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	48	47	47	47½	47½	48
Extra 1sts			Nominal			
Firsts			Nominal			
Extra pullets	44	43½	44½	44	44½	45½
do, Firsts		Nominal				44

CHEESE.

Very little new cheese was offered on the floor of the exchange this morning. The cheese makers are affected by the shortage of cream, as are the butter makers, and the cause is the same. The holders of California flats demanded 27c today, but the buyers refused to pay more than 26½c. Young America's have not been dealt in for several days.

Y. A.'s	Nominal
do, Firsts	Nominal
Fancy, California Flats, per lb	26½c
First, California Flats	24½c
Oregon Triplets, fancy	26c
Oregon Y. A. Fancy	25½c
C. S. Oregon triplets, fancy	26c
do, Oregon Y. A. fancy	25c
Monterey cheese	21@23c

FRESH FRUITS.

The currant season is practically at an end, and cherries are getting scarce. Cantaloupes from Turlock are arriving in greater quantity and much better quality and are going well at the quoted prices. Plums are also of better quality and in greater quantity. The berry market shows little change.

Apples	$2.00@2.50
Apricots, per crate	1.00@1.25
Peaches, 4-box crate	.75@1.00
Figs, black, per box	.60@ .75

Grapes, Seedless	$2.00@2.50
do, Malaga	2.00@2.25
do, Fountainbleu	1.00@1.25

CITRUS FRUITS.

Fancy lemons declined slightly this week, while the choice and standard varieties are firmer, due to a growing scarcity. Grapefruit is higher with a narrower range of prices.

Oranges:	
Valencias, fancy	$6.50@7.00
Valencias, choice	5.50@6.25
Lemons:	
Fancy, per box	7.50@8.00
Choice	6.00@7.00
Standard	4.00@4.50
Lemonettes	6.00@7.00
Grapefruit, fancy, new	3.00@3.50

DRIED FRUITS.

The packers are beginning to get returns from the opening of business in dried fruits. Heavy orders are coming in. It is estimated that the orders for peaches from the trade will be five times as great as it will be possible to fill. There is also a heavy business in raisins and the movement in prunes promises to be brisk.

HONEY.

The Honey Exchange has placed a minimum price of 20c to the producer of honey, but the local dealers say that they know of no sales—amber and very little light amber being sold at that price. Some comb honey has been sold on this market and as high as 23c has been paid for the white. Nearly all the honey produced in this State is now being exported, local consumers refusing to pay the price.

White, extracted	21c
Light amber	18@20c
Amber	15@18c

RICE.

The voluntary agreement reached between the Food Administration and the rice growers and millers should establish the price for the coming crop. Millers are to pay growers a base price of $4.32 per hundred for the No. 1 grade of paddy and rice will retail at approximately 11c a pound. The price to be paid for the cleaned rice at the mills will be between these two prices, but is not fixed yet.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, July 16, 1918.

There has been an easier tone to all auctions the past week owing to increased offerings. There is always a depression after the Fourth of July trade, which is no particular reflection upon the general market and trade conditions as a whole.

Owing to the shortage of labor, railroads are continuing to experience difficulty in securing help for unloading fruit and imperative action was necessary to reduce the amount of labor involved in unloading cars and segregating lots. It has been agreed by all shippers and receivers co-operating with the railroads that packages will hereafter be grouped in lots of sixty and wherever it is possible to assemble one shipper's lot it will be done, otherwise more than one shipper's fruit may be sold as one lot. This will apply throughout the season, except in the selling of pears, which will be sold in lots of not less than forty.

There is still little demand for peaches east of the Mississippi river, but owing to the fact that Southern Georgia has finished her season and with but ten days or two weeks yet open for Northern Georgia to continue, we look for a decided improvement in the peach market.

Midsummer plums, especially the Blue varieties, are now moving and meeting with a ready demand.

Bartlett pears are beginning to move in heavy supply, and though tonnage from Sacramento river will be short from 7000 to 10,000 tons over last year, Placer county will produce the heaviest pear crop in its history. We look for a firm market on Bartletts throughout the season.

Thompson Seedless and Malaga grapes are moving from Imperial and Coachella valleys and meeting with ready demand at attractive prices. Quality is fair and the berries are medium size.

Thompson Seedless from Fresno district will begin to move within a week. It is estimated that the shipments of this variety will be light from Fresno owing to prices established for dried stock by the Government.

As yet no damage has been done to the Tokay crop in the San Joaquin Valley. Indications are that it will be heavy. Berries will be small, but bunches will be well set.

Averages for the week:

New York: Lawson pears H/B $2.27, Comet H/B $2.49, Wilder H/B $1.94, Bartlett (boxes) $4.60; Republican cherries $1.62, Bing $1.91, Royal Anne $1.97; Triumph peaches 62c; Thompson Seedless grapes $3.65; Santa Rosa plums $1.67, Formosa $1.67, Tragedy $2.35, Burbank $1.67, Climax $1.70, Red June $1.50, Clyman $1.30; Royal apricots $1.15.

Boston: Tragedy plums $2.61, Santa Rosa $1.95, Burbank $1.84, Climax $2.13, Formosa $2.25, Clyman $1.84, Beauty $2.04; Royal apricots $1.32, Blenheim $1.05; Royal Anne cherries $1.79, Republican $1.84; Wilder pears H/B $1.60, Comet H/B $1.53, Gifford H/B $1.45, Bartlett (boxes) $3.75; Thompson Seedless grapes $3.90.

Chicago: Royal apricots $1.30, Blenheim $1.22, Tilton $1.32, Moorpark $1.41; Comet pears H/B $2.19, Wilder H/B $1.62; Bartlett (boxes) $2.87; Triumph peaches 81c; Thompson Seedless grapes $3.22; Climax plums $1.62, Burbank $1.51, Tragedy $2.17, Santa Rosa $1.92, Shiro $1.41, Botan $1.35, Abundance $1.28, Simoni $1.33, Red June $1.68, Beauty $1.38.

Total shipments by cars from July 6 to 12, inclusive: 7 apricots, 8 peaches, 397 plums, 96 pears. Total shipments to date, 1918, 1899 cars; total shipments date, 1917, 1922 cars.

LOS ANGELES

Los Angeles, July 16, 1918.

BUTTER.

There was a marked improvement in the receipts the past week, yet the market not only held up but advanced 1c the last part of our review week. Receipts for the week were 380,100 pounds, against 347,550 pounds the same week last year. This increase in the market supply failed to check the bullish feeling in the face of a good home demand and some outside movement. There was withdrawn from cold storage during the week 16,939 pounds, against 6960 pounds the same week last year.

We quote:
California extra creamery............49c
do, prime first........................48c
do, first 47c

Daily quotations—

1918	Tues.	Wed.	Thu.	Fri.	Sat.	Mon.
Extra	48	48	49	49	49	49
1917						
Extra	37	38	37	39	39	39

EGGS.

The arrivals by rail were 1715 cases, against 2339 cases the same week last year. Truck receipts were thought to have been three times as large as the receipts by rail, making the supply for the week 6860 cases, against 9356 cases the same week last year. The high prices of fresh eggs caused quite a demand for cold storage eggs, there being withdrawn from cold storage during the week 3196 cases, while there was taken into cold storage during the same week last year 57 cases. This showing caused the market to break 1c on extras, 2c on case count, and 1c on pullets during the week. Still the market is 10½c higher on extras and pullets and 8½c higher on case count than this time last year.

Daily quotations:

1918	Tues.	Wed.	Thu.	Fri.	Sat.	Mon.
Extra	46	46	46	45	45	45
Case count	45	45	45	45	45	43

Case count	36	36	36	35	34½	34½
Pullets	33½	33½	33	32	31	31½

POULTRY.

Receipts the past week were not heavy and there was a fair demand for hens, fryers and broilers, all higher 1@2c. Young roosters are bringing a little more money. Turkeys and ducks quiet but steady.

We quote from growers:
Broilers, 1¼ to 2 lbs..................31c
Broilers, under 1¼ lbs..................28c
Fryers, 2½ to 3 lbs....................21c
Hens, over 4 lbs.......................25c
Hens, under 4 lbs......................20c
Ducks ....24@25c
Geese 18c
Roosters, 3 lbs. up (soft bone).........31c
Old roosters, per lb...................15c
Turkeys, heavy, 12 lbs, and up..........30c
Turkeys, light ....27@28c
Squabs, live, per lb...................30c
do, dressed, per lb....................35c

FRUITS.

Market well supplied. Peaches and apricots lower under increased offerings. Plums steady and in fair demand. Black Spanish figs coming in more freely, lower and demand fair. Astrachan apples meeting with fair demand. The week closed the cherry season. A few Bartlett pears were in. There was also some crabapples on the market, but they were dull. Grapes in fair demand, market weaker.

We quote from growers:
Apricots, per lb. ....3@4c
Figs, Black Spanish, 7-lb box......50@75c
Peaches, freestone, per lug......$1.00@1.50
do, clings, per lug............ 1.50@2.00
Pears, per lb..........................7@8c
Crabapples, per lug............$1.00@1.10
Beauty plums, per lb. ....7@8c
Prunes, Sonoma, per lb. ....4@5c
Climax, per lb. ....5@6c
Tragedy, per lb. ....7@8c
Grapes—Imperial Valley Malagas,
per lb. ....7@8c
Apples, Red Astrachan, per lb.......4@5c
do, White Astrachan, per lb.......4@5c

BERRIES.

There was quite a dropping off in the receipts the past week. Blackberries, raspberries and loganberries higher; strawberries no higher, but firm and demand fair.

We quote from growers:
Strawberries—
Fancy, per 30-basket crate....$1.65@1.75
Poor to choice, per 30-basket
crate .... 1.40@1.50
Blackberries, 30-basket crate....$2.25@2.50
Raspberries, 30-basket crate.... 1.80@2.40
Loganberries, 30-basket crate... 2.50@2.75

MELONS.

Imperial Valley cantaloupes out of the market and home-grown beginning to come in. A good demand for home grown, but prices lower under better offerings. Watermelons in better supply; prices steady and firm. Honeydew melons steady.

Cantaloupes—
Tip Top, jumbo crate........$2.50@3.00
Watermelons, per 100 lbs ......$1.50@1.75
Honeydew melons, special........... 2.00
do, do, flats......................... 1.25

VEGETABLES.

Potatoes and onions were in fair demand and prices much the same as at close of our last review. Cabbage scarce, in fair demand and higher. String beans steady and in fair demand. Eggplant slow sale and weaker. Cucumbers dull and lower. Tomatoes coming in more freely and sharply lower; demand fair. Corn slow sale but steady. Peppers in good demand and prices rather firm.

Potatoes, new, per lug.............50@60c
New potatoes, per cwt. ....$1.40@1.60
Garlic, per lb. ....5@6c
Cabbage, per 100 lbs...........$1.50@1.75
Bell peppers, per lb. ....8@12c
Chile peppers, per lb................9@10c
Peas, Northern, per lb. ....10@12c
Summer squash, local, per lug....30@40c
String beans, per lb. ....4@4½c
Tomatoes, home-grown, per lug....30@75c
Eggplant, Imperial Valley, per lb....4@5c
Cucumbers, home-grown, per lug..25@40c
Corn, per lug of 3 doz. ....60@80c
Lima beans, per lb.....................6@7c

BEANS.

The market continues dull as a whole; there was some little demand for limas the past week. Even the local trade taking a few. Prices, however, show no change.

We quote from growers:
Limas, per cwt. $10.50
Large white, per cwt. 12.50
Small white, per cwt. 12.50
Pink, per cwt. 7.50
Blackeyes, per cwt. 7.00
Tepary, per cwt. 8.50

HAY

The receipts for past week were very good and buyers holding back, only taking such lots as needed from day to day. Prices not quotably lower, though tone of the market was weak.

We quote f. o. b. Los Angeles—
Barley hay, per ton ....$24.00@26.00
Oat hay, per ton .... 25.00@27.00
Alfalfa, northern, per ton .... 21.00@22.00
Alfalfa, local, per ton .... 22.00@24.00
Straw, per ton .... 9.00@10.00

COTTON.

Conflicting weather reports caused more cautious trading the past week and a narrow range of fluctuation in futures. There was a very good demand for spot cotton, both from the mills and for export. Prices closed Monday but little different from a week ago. July closed in New York at 27.93c and October 24.80c. Spot middling in New Orleans 30.25c.

Special Livestock Market Report

San Francisco, July 17, 1918.

CATTLE—Beef cattle are firm, though slaughterers are still unable to absorb the offerings. This condition may continue for a week or two longer. Good weight steers, however, are in good demand, while half-fat cattle and cow stuff of all grades are a drug on the market. The Eastern market on most grades is unsteady.

Grass Steers—
No. 1, weighing 1000 to 1200 lbs.....11½c
No. 1, weighing 1200 to 1400 lbs..11½@12c
Second quality ....10@11c
Thin ....8@9c
Cows and heifers—
No. 1 ....8@8¼c
Second quality ....7@7½c
Common to thin ....4@5½c
Bulls and stags—
Good ....6@6½c
Fair ....5@5½c
Thin ....4@4½c
Calves—
Lightweight ....10@10¼c
Medium ....9@9¼c
Heavy ....7@8c

SHEEP—Sheep are not very plentiful on the market. Lambs are not coming in quite so freely as desired. Northern California lambs are expected in large numbers, commencing next week. The consuming demand is better.

In the East lambs are in active demand and are having a splendid market. Choice lambs are bringing from $18.40 to $18.60, while even culls are bringing from $12 to $15. Local quotations are:

Lambs—
Yearlings ....11½@12c
Milk ....14@14½c
Sheep—
Wethers ....11@11½c
Ewes ....9½@10c

HOGS—Hogs are rather scarce again and have advanced to 16½c for good weights and 16c for light weights. There was also a slight advance on good hog stuff in the East this week of 20c per cwt. San Francisco prices are:

Hogs—
Hard, grain-fed, 100@140...........16½c
do, do, 140@300......................16c
do, do, 300@400......................16c

HIDES.

CATTLE—Wet salted hides, per lb.: Steers and cows, over 48 lbs., 14@15½c; light hides, 25 to 48 lbs., 14@15½c; bulls and stags, 10@12c; kip, 15 to 30 lbs., 18@20c; calf, under 15 lbs., 28@29c.

HORSE—Wet salted, each: No. 1 large, $5.00@5.75; do medium, $4.50@4.75; do small, $1.50@2.50; do colts, 40@50c; dry horse hides, 50c@$3.00, according to size and quality.

Los Angeles, July 16, 1918.

CATTLE—But few choice fed steers in the past week and met with fair demand. The scarcity and high price of feed is forcing many thin and half fat cattle to market. Calves steady and in good demand.

Per cwt. f. o. b. Los Angeles:
Beef steers, 1000 to 1100 lbs..$10.00@12.00
Prime cows and heifers........ 8.50@ 9.50
Good cows and heifers........ 8.00@ 8.50
Canners, per cwt............... 5.50@ 6.00
Calves, per cwt................ 8.50@ 9.50

HOGS—A steady market and fair demand was had the past week. Receipts continue light and generally light weights, mostly half fat. Killers paid full quotations.

Per cwt. f. o. b. Los Angeles:
Heavy, averaging 275@300 lbs..$14.00@14.50
Mixed, 225@275 lbs............ 14.50@15.50
Light, 175@220 lbs............ 14.50@15.50

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—Receipts continue light. Choice sheep and fat lambs met with a fair demand. The hot weather is encouraging the consumption of mutton and lamb. Lambs are higher.

Per cwt. f. o. b. Los Angeles:
Prime wethers ....$9.00@10.00
Prime ewes .... 8.50@ 9.50
Yearlings .... 9.50@10.50
Lambs ....13.00@14.00

No. Portland, Ore., July 15, 1918.

Cattle—With a heavy run of cattle in the yards at North Portland today the market opened slow. The receipts are 2300 head, which run heavy to the butcher class of stuff. Quotations are: Prime steers, $12.00@13.00; good to choice steers, $11.00@12.00; medium to good steers, $9.00@10.00; fair to medium steers, $8.00@9.00; common to fair steers, $5.00@8.00; choice cows and heifers, $8.50@9.00;; fair to medium cows and heifers, $4.50@5.50; canners, $3.00@4.50; bulls, $6.00@8.00; calves, $8.50@11.50; stockers and feeders, $7.00@9.00.

Hogs—The run of hogs today is not very heavy, 1200 head coming forward over Sunday. While trading is somewhat slow, prices are holding steady at quotations: Prime mixed, $17.25@17.50; medium mixed, $16.75@17.25; rough heavies, $16.25@16.50; pigs, $15.75@16.25; bulk, $17.25.

Sheep—Quite a liberal run of sheep came forward over Sunday, however, prices are not inclined to be affected. Receipts today are 2800 head. Quotations: East of Mt. lambs, $13.50@14.00; Valley lambs, $13.00@13.50; yearlings, $9.00@10.00; wethers, $8.00@9.00; ewes, $6.00@8.00.

Special Citrus Market Report

Los Angeles, July 16, 1918.

Despite occasional slight recessions in the Valencia markets East and West, the orange situation remains strong, and all signs point to its becoming stronger. In face of the fact that in the interval between now and the ripening of the new navel crop—a period of about four months—there are in sight not more than 4000 or 4500 carloads of oranges, to be spread over a wide area of demand, it looks as though new price levels will be reached. And while the patronage of people of small means may be out of the reckoning, money is rather plentiful in urban centers and easy in rural districts and the seductive orange will doubtless continue to have a demand that the meager reserves in sight cannot supply, hence an unprecedented price level should surprise no one. Fancy Valencias have recently sold on a basis of $6 to $6.25 f. o. b. California and have sold in the auction marts of the East from $7 to $8.25. Lower grades have sold from $4 to $6.25.

The cool weather in the East and the abundance of fresh deciduous fruits on the market have had a slightly depressing effect on lemons. Moreover, large shipments of foreign lemons are in sight. A New York dispatch dated July 15 says there are 200,000 boxes afloat. Nevertheless, while these conditions have disturbed somewhat the speculative element and lowered prices a little, the lemon interests have strong faith in the future and look forward to another spurt in prices when the next hot wave arrives. New York has shown the strongest market, where good fruit brought this past week $4.25@6.50. Philadelphia offered the lowest market—$3.50@6.05.

In California markets prices on citrus fruits are high in sympathy with the strong situation at Eastern points.

REMANUFACTURED PIPE.
All sizes standard pipe and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. **Weissbaum Pipe Works**, 160 Eleventh street, San Francisco.

CO-OPERATION (not operated for profit) reduces living expenses. Particulars and catalogue from Co-operative League, Commercial street, San Francisco.

TO REDUCE THE HIGH COST OF LIVING, send for our Wholesaler to Consumer Catalog. Smiths Cash Store, 106 Clay street, San Francisco.

PATENTS THAT PROTECT are procured through Pacific Coast Patent Agency. Savings and Loan Building, Stockton, California. Established fifty years.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

COUNTRY LANDS.

A FINE OPPORTUNITY—I own an alfalfa and dairy property near Modesto, also some very fine Holstein cows that have been selected with great care. Owing to pressure of my large law practice I am unable to give the matter attention. In order to make a quick sale of the property and dispose of the land and cattle, I will offer the land in full stand of alfalfa at $250 an acre in parcels to suit purchasers; 10 per cent cash, balance 3, 4 or 5 years; low rate of interest to bona fide purchasers who will go on the land. I will sell them the cows on the same basis and loan purchasers the necessary farming implements. Under these conditions a man can go right on the place and make a good living at once, be independent and make money and pay for the land out of the land. Address Box 1170, Pacific Rural Press.

FOR SALE.—Improved ranch, big fruit crop, pipe system. Cheap if taken at once. Geo. W. Cheves, Paradise, Butte Co., Cal.

ALFALFA RANCH—320-acre alfalfa ranch, all under irrigation, together with good substantial improvements, work stock and farm machinery. 250 acres in alfalfa, balance in grain. Price, $80,000; $45,000 cash, balance in 3 years at 6 per cent. No exchanges considered. Box 239, Pacific Rural Press, Los Angeles, Cal.

BE PATRIOTIC—Raise stock on productive Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento.

MARIPOSA CO. RANCH FOR SALE—480 fenced hog-tight, house, 2 barns, 12 horses, 25 hogs on grain, 15 tons hay, farming implements, harness, wagons, etc. Price, $9,600. Frank Solari, Hornitos, Cal.

53-ACRE RANCH in South San Joaquin irrigation district, modern improvements, horses, implements, tools, sheep, poultry—$20,000. D. M. Berry, R. R. 1, Manteca, Cal.

WANTED.

WANTED: TEACHERS AND CIVIL SERVANTS—The Western Normal prepares you efficiently, saving two years' time and money proportionately. Over 1,000 graduates now employed in California. Also prepares for Government positions. Initial salary, $1,100 up. All our students passed the Spring Departmental examinations. Many now in Washington, D. C., at $1,200 per annum. Address: Western Normal, Stockton. Fall term opens August 26.

WANTED by two experienced partners, lease for term of years on improved farm on coast or central part of state. Can give good references. Address, C. C. Mattson, R. 2, Merced

WANTED—To rent, a ranch suitable for hogs, about 60 acres farm land, part in alfalfa. Hans Duveneck, Ukiah, Cal.

SEEDS, PLANTS AND TREES.

FOR SALE.—Baled alfalfa and grain hay, all grades and prices accordingly. Can furnish up to two thousand tons. Write at once, or better, come to see the hay for yourself. Can make immediate delivery. Bomberger & Co., Modesto, Calif.

ALFALFA LAND for DAIRYING

Already checked, leveled, and planted to alfalfa.

ALSO FIRST-CLASS ORCHARD, BEAN AND SUGAR BEET LAND. TWENTY ACRES AND UP WITH EASY TERMS OF PAYMENT

BRENTWOOD IRRIGATED FARMS

IN CONTRA COSTA COUNTY, SIXTY-THREE MILES FROM SAN FRANCISCO.

For prices and descriptive matter

Address BALFOUR, GUTHRIE & CO., Land Dept., 350 California Street, San Francisco

CALIFORNIA AGRICULTURAL BOOKS

WRITTEN FOR CALIFORNIA CONDITIONS BY CALIFORNIA WRITERS

THE PACIFIC RURAL PRESS is the publisher of six books written by recognized authorities for the betterment of agriculture on the West Coast, to meet conditions that are different from the East. At this time these books are especially valuable to the producer because he must make up in planning what he is losing in man power. Four of these books are now of especial value.

The large crop of grain raised in California, as well as the nation, this year means that stockmen and poultry raisers will enlarge their operations, having the certainty of good prices ahead.

The year in field crops and vegetables really begins in July in California, and at no time in the past has the prospect been so good for successful farming as now.

There never was a more opportune time to engage in the breeding of hogs in the west.

Poultrymen who are alert to the possibilities of the situation know that every well-directed effort will be sure of greater recognition and profit this fall than ever before.

To meet the questions that constantly arise on the farm you should have at hand the information you need, that time would be saved and perhaps the crop also. Get these books and you will make up for loss of man power and higher wage cost.

CALIFORNIA POULTRY PRACTICE

By MRS. SUSAN SWAYSGOOD

MORE THAN 150 PAGES OF TEXT, CLOTH BOUND, WELL ILLUSTRATED.

"CALIFORNIA POULTRY PRACTICE," by Mrs. Susan Swaysgood of Pomona, a woman who has followed poultry culture for something like forty years, first in Sonoma county and of later years in Southern California. It is a book of some 150 pages, giving in simple and lucid English the methods and practices that have been garnered over a period of nearly fifty years in the breeding, management and caretaking of poultry under a California sun. What the author has to tell rings true, and while advancing no new theories nor any 'secret' systems, it yet tells in a matter-of-fact way the essentials that stand for success in both the handling of large and small flocks. To the beginner it is a safe and sane guide, and to the experienced it has some things to tell that even the veterans may ponder over to advantage."—H. W. Kruckeberg in Los Angeles Times. **Price $1 postpaid.**

SECOND THOUSAND ANSWERED QUESTIONS IN CALIFORNIA AGRICULTURE

By E. J. WICKSON

CONTAINS 256 PAGES OF TEXT, CLOTH BOUND.

Price $1.50 Postpaid.

THIS BOOK is a handy reference volume. It answers questions when you want the information. There are occasions when you want to know almost instantly what to do, and being able to refer to the answers here given may save you many times the cost of the book.

This book is made up from a selected list of questions asked by farmers and answered in the columns of the Pacific Rural Press. Divided into nine parts, covering Fruit Growing; Vegetable Growing; Grain and Forage Crops; Soils, Fertilizers and Irrigation; Livestock and Dairy; Feeding Animals; Diseases of Animals; Poultry Keeping; Pests and Diseases of Plants.

CALIFORNIA HOG BOOK

BY W. S. GUILFORD

Cloth Bound, Handsomely Illustrated, 224 Pages of Text
Price, $2 Postpaid

"ONE OF THE MOST COMPREHENSIVE books that has been published on the breeding and management of hogs comes to the Rural Spirit. The author is W. S. Guilford, who possesses, first of all, a practical knowledge of the things which he writes in this volume through being associated for a great many years with his father in Illinois in the breeding of hogs, and from his study of the scientific end of the business at the University of Wisconsin. Mr. Guilford, as director of the Sacramento Valley Irrigation Company, found hogs rightly managed to be one of the greatest aids to farmers under the irrigation system which he represents, and there being no text book that fitted the conditions wrote one. His volume leaves very little for the reader to guess. There is something in it for the men just starting in hog breeding and who know absolutely nothing about it, and there is a great deal of value within its pages for the man who has been in the business for years. While the book was written primarily for California conditions, it is easily adapted to the Pacific Northwest."—Pacific Rural Spirit.

"I have had occasion to go through a copy of your recently published 'California Hog Book,' received a short time ago. I wish to congratulate you upon being able to produce a text and guide on this subject for the California farmer. The book covers an important need, and I wish there were more publications of this character which so well fills California requirements. I am recommending this book to the membership of the Glenn County Farm Bureau, and, in fact, am urging hog raisers to use the 'California Hog Book' in connection with their industry."—W. H. Heileman, Willows.

CALIFORNIA VEGETABLES
IN FIELD AND GARDEN

BY E. J. WICKSON

FOURTH EDITION, BOUND IN CLOTH, WELL ILLUSTRATED, 320 PAGES OF TEXT.

"THE ARRANGEMENT of the volume is logical and handy. Professor Wickson devotes the first portion to climatic, seedage, cultural and irrigation questions, and has so arranged several of the chapters in this section as to make them applicable to every limited geographical division of the State. The latter half of the book is given to a detailed consideration of various vegetable crops from artichokes to turnips, as well as to vegetables for canning and drying, seed growing, garden protection and weeds."—Oakland Tribune.

"Professor Wickson's special field is 'Agricultural Practice,' which, being interpreted, means actual plowing, hoeing, irrigating, harvesting, pruning, fertilizing and other actual farm operations involving manual labor and the use of tools, as distinguished from that form of agricultural activity in which the tongue is the principal implement. He was for many years professor of agricultural practice in the University before becoming dean of the college, and is now professor emeritus, which means that for meritorious service he may hereafter do what he likes. He is, of course, an enthusiastic personal gardener. It is thought that this summary of the experience which qualifies Professor Wickson to write about vegetable growing will be more enticing than any summary of the contents of the book, which consists of cultural directions for growing all vegetables, either commercially or for family use, under the varying California conditions."—San Francisco Chronicle. **Price $2 postpaid.**

What California Must Do for the Apricot

Twenty-eighth of the Editor's Series of Historical and Analytical Sketches of California Farming

CALIFORNIANS might set up a claim that the apricot is an American fruit and perhaps might make such a claim stick now that the world is so widely disposed to credit all good things to America—because the elder Disraeli, in his "Curiosities of Literature," written more than a century ago, credits some older writer with the statement that "the apricot, drawn from America, was first known in Europe in the sixteenth century"—which was probably a misprint for Armenia, whose patronymic the fruit bears because De Candolle first called it Armenica vulgaris and later botanists Prunus armeniaca. However that may be, California did make a claim for herself as the home of the apricot, for in August, 1858, the California Culturist printed a letter from a pioneer named Wilder stating that in the mountains of Lassen county he had found "an abundance of wild apricots of a fine free growth," etc. He must have mistaken wild plums for apricots, for our leading dendrologist, Dr. W. L. Jepson, informs us: "there is certainly no apricot wild in California," and then he counter attacks: "It is my experience that local observers are often very wild-eyed." This shows that man was sometimes wilder than untamed nature—even before the modern Hun was dreamed of!

IT IS California's pressing present task and duty to place one of the world's most ancient fruits on its proper pathway of progress down the ages. *(Page 78.)*

How Did the Apricot Get into California?

This question cannot be definitely answered from such resources as this writer now has. Although there were at the Spanish missions in territory which is now New Mexico apricot trees which had the aspect of very old trees, as reported by those who saw them before 1840, there are no apricot trees mentioned in the records of early visitors to the California missions. This is, however, not conclusive evidence of their absence, because these records add "other fruits" to the lists of those recognized, and neither a British skipper nor an American trapper would be likely to know an apricot tree if he saw it.

However, apricots appeared among the first fruits planted by American settlers and they came from at least two sources: Mexico and the glass-houses of the Eastern States—whence it was common to send all things which needed protection against Eastern winters for trial in California. Very early also apricots came direct from European sources and the varieties originated on the shores of the Mediterranean, in the gardens of France and in the "stove-houses" and walled fruiteries of England were spreading their beautiful foliage and displaying their golden fruits in the open air of California, all the way from the valley of San Gabriel to the lower foothill fringes and tributary small valleys of the Sacramento, and throughout the coast valleys south of San Francisco.

And the apricot scored in the coin-sacks of the pioneers as other fruits did. The Wolfskills of Putah Creek did well with the trees they brought very early from Mexico, for it is recorded that in 1857 John Wolfskill sold a ton of apricots from six trees at 75c per pound—evidently trees of some size and some price also! The Wolfskills were of the first westward run of Missourians; men who could see things for themselves, and nobody had to show them the money in apricots!

Sun-curing of apricots. Partial view of drying floor, with orchard in rear and fruit-cutters in middle ground.

Passion for Apricots Limited.

But though they were ready enough to exchange gold-pulp for gold-dust, the pioneers were very conservative in planting apricots. Like other Americans even to this day, the pioneers did not know apricots nor what to do with them in a very large way. In 1856 there were fifty times as many peach trees, nearly twenty-five times as many apple trees and two and a half times as many pears as there were apricot trees—and yet the apricots were then more numerous than plums and prunes combined and twice as many as of oranges. And though apricots have made some good runs, the present score, some sixty years later, stands: peaches, prunes and oranges each about three times as many as of apricots, and pears, apples and lemons about on a par with them—that is, about three millions each of the last four. Thus apricots have gone beyond the pioneers' conception of their outlook, though they do now stand no higher than fourth in our list of tree fruits.

How Did the Apricot Do It?

It must of course be remembered that the pioneers could not have any conception of the current commercial uses of the apricot. There was no canning industry, except of the kitchen variety. There was no way to get fresh fruit overland. There was no alliance of sulphur and sunshine in fruit drying. The apricot grower's problem was to get the fruit to San Francisco before it pasted down the clods of his orchard with a yellow slum gullion. No wonder, then, in the '60s the disposition was to plant apricots very sparingly, if at all, so as not to pass beyond the small fresh fruit demand for eating and canning and the smaller profit for drying into what looked much like the waste from a steam punch in a boiler shop. But changes came beyond anticipation. In the '70s fresh shipping and some machine evaporating began and canning found increased opportunity. Soon after 1880 sulphuring before drying was taken up, canners and Eastern shippers made new records, and confidence in the apricot began to rise. Thenceforward apricot production advanced as these figures indicate:

	Eastward cars	Canned cases	Dried tons
1887	...	.....	1,250
1897	177	317,408	15,000
1907	71	397,350	1,500
1908	232	1,161,250	19,000
1917	403	823,829	16,000

EDITORIALS

ICONOCLASM.

THE SECULAR newspapers are currently containing allegements that a man from Milpitas is trying to play predatory pranks with the State's outfit for agricultural education and to deface the furniture thereof—particular effort being made to knock the knobs off Dean Hunt's farm bureau and otherwise befit it for a rummage sale. The affair becomes less interesting because these same newspapers declare that Dean Hunt refuses to defend his educational achievements against the allegations from Milpitas—taking the high and proper ground that if they are worth anything they ought to erect their own monument in public esteem. This attitude against controversy is rather disappointing to the secular press whose delight is to get people to hammer each other back and forth in print, but it exactly pleases us because if there is any fighting in these columns we like to do it ourselves, and, as in this particular issue of Milpitas vs. Berkeley, we receive neither orders nor munitions directly from either side, we ought to be able to set up the fight in our own way and run it through to our heart's content.

WHAT COMES FROM MILPITAS?

AS WE have received from Milpitas no more intimation of purposes and methods than the Germans gave about their last drive along the Marne, we shall proceed on the basis of expositions thereof in the every-day journals. From these we have learned that there is an organization called the "United Farmers of Santa Clara County" and that J. J. McDonald of Milpitas is president thereof. Just why this thing was done in a corner and why an organization with such a good name should be running around the pavilion of public opinion looking for a loose board to pry off for access thereto, we cannot imagine—unless the incumbents of the name are either not of the farming standing and quality to command respect or are too modest to claim it: either of these possible defects is practically as bad as the other. Both unrepresentativeness and undue reticence not only disqualify any organization from trying to do what needs to be done for agricultural organization in this State, but also forecast failure in doing it. The organization we need must be representative of all phases of our great farming interests, must proclaim support of sound sociological, economic and industrial truth and must enter the arena of public affairs with good music and banners flying and not tumble into the ring like a disguised clown hired to ride a trick mule. We confess we do not like the genesis of the "United Farmers of Santa Clara." We are not quite ready to accept the suggestion of some journals that this group of men, whom we do not personally know, has organized to inflict upon this State the abominations of the I. W. W. creed—even though they do invite such conclusion by their method of attacking the problem of farm organization, which is the State's greatest present need. It is said that they expect soon to hold an assembly in Sacramento and until such event demonstrates their degree of representativeness and the quality of their doctrines it is only fair to defer definite classification of them.

WHAT ARE THE MILPITAS MUNITIONS?

AS WE have said, we know only by current rumor. But there are those who claim to have seen President McDonald and to have secured his views. He is alleged to have said:

The farmers must realize more than any other class of men that in the great readjustment of business which is going on now and which will be even more grave when peace is declared, all classes of business and labor will be represented, and that it is up to them to see that their real interests are consulted, and not misrepresented by persons who appear to speak for them.

Dean Hunt has strenuously opposed organization, as was to be expected. He does not represent the farmers or their interests, but the State University, whose affairs are handled by a board of regents made up, not of farmers, but of business men from the cities. Their interests and ours are opposed.

Of these two paragraphs we do not hesitate to say that in our judgment the first is true and the second false. The propositions in the first paragraph we have been urging for years, and of the attainment of which we now have more faith than ever because it seems to us that it is now possible to organize farming on a business basis, and this will cover all economic and commercial requirements of fairness and prosperity to producers and will automatically include all the political and other drives on public opinion which are necessary to secure and protect such fairness and prosperity.

MILPITAS SHOOTS A DUB.

THERE are several phases of falsity in the second paragraph quoted above. We do not believe that Dean Hunt "strenuously opposes organization." Practically all that he has achieved in California during the last six years has been by organization of farmers and those who serve their interests in research and educational lines. The reporters say that he "declines to enter into any controversy over it" and we do not need to. But perhaps Mr. McDonald means that Dean Hunt strenuously opposes his kind of organization. Perhaps so: we do not know nor care. If he does, it is perhaps because he is too conservative to approve an organization which has not demonstrated either that it is right or representative.

But more important than this are the falsehoods that the State University does not represent the farming interests to which the chief portion of its present efforts are devoted and that the regents are concerned with interests opposed to farmers' interests. To sustain his misconception Mr. McDonald will have to prove that the Governor and four other leading State officers are opposed to farmers' interests; that the president of the State Agricultural Society is also thus; that about half the other regents who own and operate farms are opposed to their own interests and that the other half, who are well-known professional men whose life and effort has been for the upbuilding of the State, are opposed to what they know very well to be the leading industry of the State and its greatest future line of development. It is not upon such falsehood and nonsense as this that enduring and effective organization of farmers can be built.

But more fatal to effective service for agricultural organization is the "class" appeal which is implied in the words attributed to Mr. McDonald. No serviceable agricultural organization can be built upon class prejudice, as we argued at some length in our issue of July 13. What we need is organization of all farmers from all "classes" of our population as "farmers," not as a "farming class"—which does not exist except in the minds of mistaken people, wise and otherwise. There may be other "classes," rather well defined, perhaps, and both high and low, against the unjust claims of which all farmers must be organized, but if you simply get together in such organization what you can of those who glory in class feeling and class martyrdom you repel from effective organization ten times as many farmers as you include. We have been looking straight at that sort of a thing for nearly fifty years and have seen something.

ORGANIZATION AND PATRIOTISM.

IT IS at about this stage in the reeling of the films through the columns of the common newspapers that the furniture is alleged to be attacked by Mr. McDonald and his associates, who imagine that the farm bureau shows missing drawer-knobs and castors and a cracked mirror. The accounts indicate that a meeting of the directors of farm bureaus was held in which nine counties were represented and we are led to understand that a drive was made on this assembly by Mr. McDonald's bunch and the outcome of the melee is thus described:

The proposal to organize a "farmers' political party" was repudiated, the only dissenting vote being that of the San Joaquin farmer who had proposed the plan.

Those who opposed the organization along the lines suggested declared that a political party representing the farmers at this time would inevitably take on the appearance of a "party of discontent," and that it would by this very fact be subjected, no matter how patriotic its members might be in their motives, to accusations of disloyalty.

"The farmers of California are loyal and patriotic," declared one of the leaders who opposed the motion to organize. "They are going to work with the constituted authorities, and they are not going to do anything that will give any man the excuse to question their loyalty."

On the basis of the occurrence thus described it is claimed that the farm bureau is opposed to organization of farmers for this reason:

The officers of the university dominate the farm bureaus by appointing and controlling the farm advisers, and that their influence was not for the best interest of the agriculturist, but was exercised in behalf of the business interests "centered in the regents of the university."

We have already seen what business interests are chiefly centered in the regents of the university, viz.: agricultural more largely than any other single interest. But more important than that are the questions: Are the farm bureaus opposed to agricultural organization or only to the kind of organization proposed by Mr. McDonald, and does the danger of suspicion of disloyalty inhere in that? We apprehend that the colored gentleman is in that length of fence and therefore the attitude of the representatives of nine counties toward the proposition thrown in by the man from San Joaquin is sensible and reasonable and will be approved by nearly all farmers, because they have no assurance of what Mr. McDonald is aiming at and do not desire to have any such affiliations as are attributed to the politically organized farmers of the Northwest. And though we do strongly sympathize with their attitude in this matter, we are still of the opinion that farm bureaus may be dominated too much by the idea that farmers must be good dogs and too docile under the conditions in which they find themselves, politically and otherwise. It is strange that farmers should be thus dominated and exhorted for fear of cracking their patriotism while other people can profiteer or strike or do all kinds of shady and greedy politics right under the nose of Uncle Samuel, in Washington and in the several States, and still be cited as exemplars of patriotism. Of course, the evil which other people are able to get away with does not justify evil in farmers, nor do they generally desire any chance for evil. They want the square deal, and so far as Mr. McDonald is impelled to seek that, we sympathize with his effort; but he can never get near such a goal if he should be trying to raise an oligarchy of those he considers "farmers" from the ruins of a civilization broken down by anarchy. It is probably the fear of such an undertaking as that on his part which queered his proposition with the farm bureaus. Mr. McDonald thinks our agriculture is menaced by a depth-bomb to be dropped through the attic: he had better look for mines planted in the cellar!

LIMITATIONS OF THE FARM BUREAU.

MR. McDONALD is unreasonable in his effort to impeach the farm bureaus because they refused to consider his proposition to organize a "farmers' political party", for at least two reasons:

First, the farm bureau is a part of the agricultural-education system of the State. It is a voluntary distribution-agency for the truth secured by research: it is an actuating-force to put in practice principles and methods approved by

investigation; it is the connecting link between men who see things and men who do things. As a part of government system of practical education it has no business to do politics as an organization. Mr. McDonald condemns it for not doing his kind of class politics: he would get black in the face in condemnation of it if it should resolve that it would rather have Wilson three times than McAdoo once or if he should see it creeping into the trunk of the G. O. P.! With Mr. McDonald it is simply a question of whose ox is gored!

Second, the farm bureau is unfitted for political action by the fact that as part of a system it is morally bound to embody the esprit du corps and to promote the policy of that system. It is not bound to follow any instructions: it is even independent of direct suggestions but in opposition to the policy of the system of which it is a part it could not function at all and would fly off the shaft like a cracked pulley.

The farm bureau is doing a great and indispensable work in rural organization and is practically helpful to the farming interest in many ways which have been previously pointed out in these columns, but as an organization it is not available for the doing of politics for, because of its auspices and environment, it could become a bureaucracy of an extent painful to contemplate or it could explode while endeavoring to take on such dimensions.

LET'S MAKE IT A DRAW ?

AND NOW, having had a good go at Mr. McDonald for the edification of the agricultural ring-side, and with no desire for a knock-out for either side, we offer to shake hands with him on this proposition:

Let us both let the farm bureau alone. It is doing a good work for those who like it and it is making no faces at those who do not like it. If the members enjoy the guidance they receive, why not: they pay for it. If outsiders do not desire to trade at that shop, why should they throw rocks at the sign? And if outsiders do not like the members of the farm bureau why should they try to inject their politics into them?

We believe all thinking farmers should go into politics for the promotion and protection of their livelihoods and their grand, fundamental industry, but we have no idea of asking the farm bureaus to lead in that movement. And if we keep hands off in our propaganda for a grander political lay out why should Mr. McDonald assault the Bureaus for refusing wind to the tin-horn variety of farming politics which he is trying to promote ?

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

A Seedling Apricot.

To the Editor: I send you apricots grown on a seedling tree which came up in our yard and which I transplanted to the orchard eight years ago. It is a mighty fine looking tree and has borne for four years. A nurseryman came to see it and took some buds. He said he would try them and sell them under the name "Richman seedling." Can you tell me what they are?—J. W. Richman, Gilroy.

If you are sure that the tree came from a seed, and the circumstances you relate seem clearly to indicate that, you need not worry about what it is, for it is a new variety and you have the right to name it. It may have resemblance to older varieties, but we do not recognize it from these specimens. Even if it does, it is still a new variety and has to be tried out for several years more before one is safe in propagating and planting it. These things need to be demonstrated before that standing can be given to it: (1) It must be in some important respect different from any other variety which it may resemble, or ripen at a different date; (2) it must ripen as evenly as possible all around; (3) it must be a reasonably regular bearer for a term of years; (4) it may have some other claim to original behavior as a new variety. It was to determine such points that your nurseryman visitor took buds for trial. Perhaps the most important point in such a large apricot as yours is to make sure of its regular bearing as the tree becomes older. Most promising seedlings in the past have been abandoned for failure in this particular.

Transplanting Toads.

To the Editor: I agree with you that surplus toads should be transplanted to places where they will do most good. I usually carry toads on a shovel. Don't you think that would be better than a hoe?—Gardener, Sonoma.

We make no claim to expertness in the transportation of toads. We catch them up gently with whatever tool we happen to be using—hoe, rake or spade. Our observation is that a toad is a born aviator and enjoys a trip through the air without having to jump for it. Therefore, when we get the hoe under the place where his tail ought to be and lift him up he sits tight on the hoe-blade and does not try to jump off, and so long as the hoe keeps to a gentle undulating motion, such as one naturally gives it in walking, he likes the ride. But our toads may be different; we do not answer for the behavior of others. Our objection to the shovel is when one gets a toad on a shovel there comes the temptation to throw him as far as you can, and that is not good for the toad. You can pick him up in your fingers if you like, but we have never reached that degree of familiarity. Still it has been demonstrated that the claim that one may get warts or other trouble from handling is all superstition.

Summer Gardens on San Francisco Sand.

To the Editor: What can I do for my garden? My lettuce has turned a sort of whitish color; also the spinach, etc. I give the garden plenty of water and I can not account for this drying up of the vegetables. Sometimes the lettuce turns a sort of silver color and as I can not find any insects I am at a loss to know what to do.—N. V., Verona Place.

Your plants are suffering from sunburn. There are no insects nor disease present. It is very hard to grow vegetables successfully in San Francisco during the dry season on the sand which comprises the soil in many parts of the city. Success can be had by bringing in loam soil to cover the sand as they do in Golden Gate Park or by using a great deal of animal manure, which makes the sand more retentive of moisture. If this is not done the sand quickly dries below and the plants sunburn and fail, although they may be often surface-sprinkled. In the late fall and winter it is much easier to grow vegetables in the city because the sun has less power, the air is moister and rains keep the sand deeply moistened. If you start after the rains begin you can get as fine a vegetable garden as you desire with all but a few plants which cannot stand a light frost.

Overflow and High Water Table.

To the Editor: I am living on light sandy river sediment, which dries out quickly in summer, so I would like to put my crops in in the fall. But this land overflows most every winter and water will remain on from two to four days at a time. Will it harm or drown out such crops as oats, barley, vetches, clover or alfalfa put in this ground in the fall? How far from water surface should alfalfa be planted? My land is from two to six feet above water level and a neighbor told me that it would kill alfalfa if planted less than six feet from water level. The land is sandy, underlaid with gravel.—Subscriber, Requa.

If you are sure you have no longer overflow and your soil and subsoil are such that water will draw quickly down to two feet or more below the surface, you need not fear injury to any of the crops you mention from a fall start—except alfalfa. And the injury to alfalfa will not come from winter overflow but from the high water table. On such land as you last describe you should get a stand of red clover, which will grow with water above and below but does not like drying out.

Is a Dairyman a Producer?

To the Editor: I am a dairyman and stock raiser. A friend of mine came along a few days ago and we talked about the war. He said I was not a producer and I said I was. Will you kindly give your opinion?—Subscriber, Redwood.

The dictionary says: "a producer is one who produces: particularly one who cultivates or makes things for sale and use, in distinction from the user or consumer." A secondary meaning of the word is "that which produces, such as a furnace producing gas for fuel." Obviously all our current discussion of economic relations proceeds upon the primary significance of the word, and an essential part of that is the human agency involved and no other agency is admitted to that significance. If your friend is trying to substitute the secondary meaning of the word for the first and is claiming that the cow is the real producer, he is playing on words and forfeits his right to be listened to in economic discussion. Tell him to talk to the cow!

HAS YOUR SUBSCRIPTION EXPIRED?

(7-27-18)

The yellow label supplies the answer.

CONCERNING CO-OPERATION.

With the first issue in July, there went into effect an increased rate of postage on newspapers and magazines—not exactly as a war measure, as the increase is intended to be permanent—which, when it reaches the maximum, will amount to between 500 and 600 per cent more than was charged previously.

We ask your co-operation to meet this situation. Keep your subscription paid up.

There never was a time when the interests of the California farmer demanded a good, clean, safe and sane journal to represent them than at present, and to do this effectually, we have to request your co-operation, as stated above.

A check, a money order, a dollar bill or postage stamps will co-operate.

CO-OPERATION SURMOUNTS EVERY OBSTACLE.

Elizabeth McHugh, Subscription Clerk.

What Is a "Brush Tick Bug"?

To the Editor: I planted four or five acres of pumpkins in the month of May and they are full of greenish brush tick bugs on the root of the pumpkins just above the ground, which cause the plant to die. Some plants have hundreds of these bugs. It is a strange bug to us. I tried sulphur and lime, but that would not get rid of them, and then I tried coal oil and water mixed and that injured the plant. Can you tell me what will kill the bugs without injuring the plant?—M. M. G., Livermore.

It is surely a strange bug to us also. Why did you not send a few so we could see what you have? We should use the "squash-bug prescription" on another page of this issue or make a strong tea of tobacco stems or buy blackleaf tobacco extract. Of the latter, use a teacupful to a barrel of water in which you have dissolved one pound of laundry soap and dose the bunches well with that.

French Prune on Peach.

To the Editor: Owing to the scarceness of French prune on myrobalan root this year, I find that I will have to use peach root. I know nothing about the peach root and will appreciate some information regarding same. Has it any advantages over the myrobalan root in growth, longevity and freeness from disease?—Reader, Lower Lake.

The peach root makes a good, long-lived prune tree if the soil is a good, well-drained loam such as the peach delights in. It is rather freer in growth than the myrobalan and makes a large tree sooner, but it will not stand heavy soil and exposure to standing water as well. It is rather more liable to root-knot. We should not hesitate to use the peach on proper soils.

Berries in San Francisco.

To the Editor: I have a lot 12x40 feet and another 10x40 feet—divided by a brick wall. What would be best to plant that would bring in some return. I was thinking of planting loganberries and raspberries. The soil is sandy and fairly well manured.—I. H., San Francisco.

You probably cannot do better than to plant one row of loganberries on the narrower strip, to be strongly trellised, and two rows of raspberries on the wider strip, to be grown to stakes, which are easier to work around. These fruits do well in San Francisco unless too much shaded by buildings.

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., July 23, 1918.

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm

Fitting and Showing Cattle

Written for Pacific Rural Press by R. H. Whitten, Los Angeles

I ONCE visited a man who is considered one of the most successful exhibitors of dairy cattle in the United States. He seemed to have almost magic power over his cattle. He could lead with a light rope a bull that otherwise would require two men with staffs. He would call a few names and the cows would run up to him, playfully, gleefully, each endeavoring to get closest to him so as to have his arm around her neck.

THERE is no use in your taking up the fundamentals until you are absolutely sure that you have a deep-seated, unquenchable love for the work. Better by far that you stay out of the game entirely than go into it with any pretended love, or with love of such a weak brand that it will melt under the hot opposition of difficulties and obstacles that you will find arrayed against you. It isn't the easiest job in the world to successfully condition and show stock, but if you have a sufficient supply of the right kind of love, and will take up the work in a win-or-die spirit, you'll win all right. You'll soon have the world agape at your achievements.

MUST LOVE STOCK AND THE GAME.

"Tell me," I inquired, "how you establish this bond of sympathy between yourself and these animals, for evidently it is the secret of your success."

"Yes," he replied, "you have struck it right. Every day people ask me the secret of my success, and I give them a practical answer about breeding, feeding, housing and care, but I do not add 'and love, and love, and love.' I do not tell them that if they cannot win it is because they do not love their stock and the game, for they could not understand. They would think that I was dippy."

Yet the success of this man proves that the love we invest in our work is the investment upon which the biggest dividends are paid.

IN DECIDING UPON AN EXHIBITION HERD,

animals coming nearest the scale of perfection as compiled by the association of that particular breed should be selected. Be particular to pick animals of a uniform type. Often a bull is beaten in the get-of-sire class because, while the exhibitor picked good progeny, he did it without due regard to the need of uniformity that they must present when lined up side by side before the judge.

This word of caution is especially timely this year, as a new classification has been added in the dairy cattle division at the State Fair—for five cows in milk, to be decided entirely on conformation. It is obvious that, other things being equal, the herd possessing the greatest uniformity is going to stand the best chance of winning.

Of course, it requires high-class animals to win, but type and individuality are not enough. The sleek, shiny animals that you see in the show ring have not come direct from the pasture or corral. They have undergone a long preparation for the show, and everything possible has been done to make them show off to the best advantage.

The animals should be selected, and conditioning should start about six or eight weeks before the first fair at which they are to be shown. Then any visible imperfections will be noticed and can be remedied to a great extent before the animals start out.

CONDITIONING THE ANIMALS SELECTED.

If possible, they should be kept in a cool, well-ventilated barn during the daytime, so as to be away from the hot sun and flies, and should be let out morning and night for exercise. The importance of plenty of exercise cannot be emphasized too strongly. It creates an appetite, keeps the blood circulating, and the system in good condition generally.

Care should be exercised in feeding at this time, as the change from their regular food often has a marked effect on their condition later on. As a rule, the food should be light, so as to promote healthy digestion, for without good digestion animals soon go to pieces and lose the much-desired "bloom."

The cows should be fed three times a day. If oil cake meal or coconut oil meal is added to the grain ration, it will help to give a sleek, shiny coat. Beware of condiments; they generally do more harm than good.

DIVERSE PRACTICES AS TO CONDITIONING.

There is a difference of opinion about blanketing. Some exhibitors never blanket show stock, claiming that when this is done the animals are more liable to catch cold. But most exhibitors blanket heavily for the first two weeks of housing, gradually reducing the covering until nothing but a light sheet is needed at the finish. This, with frequent and regular groomings, causes the hide to soften, making it more pliable and pleasing to the touch.

There is also a difference of opinion about the use of the currycomb. Some use it followed by a stiff brush for the first two weeks of conditioning, and then change to softer brushes, flannel rub-rags and plenty of elbow grease. Others claim that a currycomb has a tendency to irritate the skin and that only soft brushes and rub-rags are necessary.

But the main thing is the amount of elbow grease used. To get the skin and hair in the best of condition, wash the animal once a week, and brush it for at least a half hour daily. The washing keeps the skin clean and the brushing gives that gloss and luster to the coat without which no animal can be in the pink of condition.

TACTFUL USE OF CLIPPERS AND SHEARS.

Someone has well said that the clippers and shears are to the showman what the hammer and chisel are to the sculptor, for in hardly any other way does a good showman exercise his skill more than in judicious clipping. He can fill out or cause depressions where they are needed, and emphasize the cleancutness and quality of the animal.

All long hair should be clipped from the udder, from the inside and the edge of the ears, and from the belly to give a clear view of the milk veins. Clip all of the tail except the switch. In some cases it is advisable to clip the head, and with animals of the polled (hornless) breeds it should be clipped to a point just back of the ears. When this is done the ears should be clipped on the outside as well as inside.

Have the hoofs in proper shape. Crooked, over-long or misshaped toes will detract very much from the appearance of the animal, as it cannot move or stand with natural ease or grace and will not show to good advantage. The soles should be pared down with a blacksmith's knife or pruning knife, and finished off with a rasp.

TRAIN ANIMALS TO LEAD AND TO POSE PROPERLY.

Begin early to teach all animals to lead nicely and to stand in a good showy position and hold that position without harsh treatment. In other words, as the home is the training ground, you should have a cattle show at home before starting on the circuit, and familiarize the animals with the conditions that will confront them in the show ring.

USE GREAT CARE IN SHIPPING.

Time to ship, and all of the animals in fine condition? Good! But remember that all the care given in the fitting of the herd will count for nothing if extreme care is not taken in shipping. Allow each animal plenty of room, and bed heavily. If shavings can be had, it is best to use them, for six inches of shavings will last longer than a foot of straw, and will keep the animals much cleaner. If shavings cannot be obtained, bed the car with straw about two feet deep, so that when it is trampled down there will be a nice thick bed for the animals to lie on.

Figure on plenty of help—one man to every eight head—and in loading the cattle do not become excited. Handle them carefully and quietly. Place mature animals beside the ones with which they will be the most quiet, and calves, of course, so that they can nurse their mothers. Tie each one with its halter rope, giving it sufficient freedom of head for comfort, but not enough so that there will be any danger of entanglement.

Everything that will be needed for the herd should be taken along, and, besides feed, water and bedding, there should be the blankets, brushes, combs, rub-rags, soap, pails, lanterns, etc.

WHILE EN ROUTE.

While en route feed and water the herd with the same regularity as if at home, but give only about half the usual amount of grain. More than this is liable to put the cattle off feed, and they will not take on a good fill after reaching the fair grounds.

After the car is set for unloading, get the herd to the barn as quickly as possible, but always have one man stay in the car while the others are leading to the barn, for when the first animals are taken out the others become restless and may get

(Continued on page 88.)

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

When Test Grape Maturity?

How and when and where should grapes for shipment be tested as to their maturity? This question was threshed at the recent grape standardization meeting in Merced. Chas. Collins, Horticultural Commissioner of Tulare county, tests only the greenest grapes, as that is what the law is after. Several of the Fresno and Tulare packers agreed that this was right. One of them said the testing should be done at the door of the packing house to avoid packing those too green. Horticultural Commissioner F. P. Roullard tests only after packing, except on special request. Deputy Horticultural Commissioner F. C. Brosius of Sacramento county, where most of the grapes are packed in the vineyards, tests them in the vineyards and only from the lower halves of the bunches. He has 11,000 acres to test for maturity, so he starts generally about mid-August, ten days before shipping is expected to begin, with three or four inspectors. This gives a line on the early-ripening districts. As the ripening dates of various districts vary, four or five inspectors can handle the work this way all through the season.

Orange Trees Clean Inside.

Most all of orange pruning is done inside the tree by a successful grower of Butte county. Three objections to a brushy inside are noted: It is a great breeding place for red and yellow scale; it scratches hands of pickers so they don't pick all of the fruit that matures there; and not very much matures there on account of lack of light and air. A complete curtain of fruit wood all around the tree is desired, with the centers cleaned out so there will be a crop of fruit inside as well as outside. Limbs are not left nearer than 18 inches from the ground because fruit will bend them down aplenty anyway. The work is done after fruit is off and before blossoming. Suckers are taken out in the summer.

Irrigation Made Apricots.

People said R. E. Liguori of Livermore Valley could not irrigate his 24-year Blenheim apricot trees in summer without splitting the fruit, but he did it. His overflow sediment 18 inches deep on black soil underlaid at 11 feet by clay holds moisture pretty well, but he irrigated last May and again in mid-June. He has a good crop, while his neighbor across the creek, who does not irrigate, has practically none that are marketable, though his trees bloomed and set a good crop. The apricots there are too small even to dry. The difference, believes Mr. Liguori, is due to the irrigations.

Avocado Booklet.

To grow the avocado intelligently, the grower should know something about its culture and conditions in its native home. Exploration of Guatemala for desirable new avocados by Wilson Popenoe of the United States Department of Agriculture furnished material for an excellent paper read before the California Avocado Association and reprinted for general distribution by F. O. Popenoe of Altadena. The explorer says that many of the best California varieties are better than the average fruits sold in Guatemala City.

Transplanted Raspberries Set Back.

We thought that our raspberries, transplanted last summer in a cool San Mateo climate, would continue to grow and bear late fall berries, as they had previously. They "died hard," but are making shoots for next season's fruit. We are getting practically no fruit from the canes we transplanted.

Little Manure Helps Cover Crops.

A light dressing of hen manure in the orchard, not enough to fertilize, gives cover crops a start that permits them to fertilize the soil equivalent to a heavy dressing of manure, observes Sonoma Horticultural Commissioner O. E. Bremner. Too much manure interferes with cover crops starting.

Ripen Young Fig Wood Early.

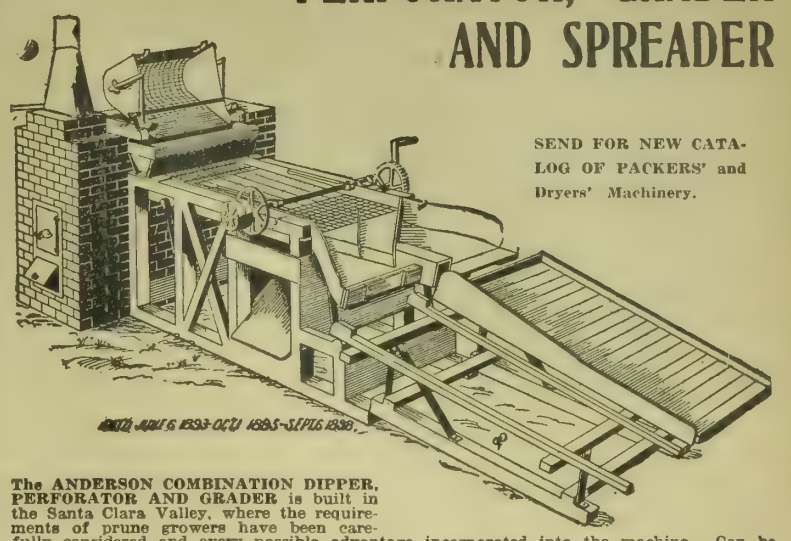
Young fig trees must not be kept growing too late in the season, writes Tulare Horticultural Commissioner Chas. F. Collins, but moisture should be withheld and the wood allowed to mature. Otherwise early winter frosts will injure them severely.

Fixing Bad Hearts in Good Trees

[Written for Pacific Rural Press by W. P. Brown.]

The most interesting work I have seen being done in any orchard was tree surgery in the fine apple orchard of C. H. King of Sebastopol by H. H. Newsom of Berkeley and two men. Some of these trees Mr. King told me were 40 years old and some perhaps older. On the 20 acres in the home ranch he will probably have 400 trees to treat. The very remarkable feature about it is that many of these old trees—in fact, all that I saw—have fine, vigorous tops full of fruit, and yet many of these have their hearts entirely rotted out. The trees are 10 inches to 18 inches in diameter. Mr. Newsom found many trees badly decayed inside which Mr. King thought absolutely sound. Mr. Newsom has the trees entirely cleaned out, then puts in iron rods to strengthen the trees and fills in with cement. This is expensive work, but Mr. King says this is a paying orchard and the trees justify the expenditure. Mr. King believes in regular fertilizing and good care and says he always has good crops. He and his partner have 20 acres on which the crop is estimated at 10,000 boxes. He believes in pruning every year, but avoids making any heavy cuts. Thinks most of the decay comes from cutting big limbs, giving the stub a coat of paint or wax and then forgetting to ever look after them any more. Of course, that cracks and water gets in and it begins to decay. If a tree dies, he digs a hole four feet square, gets out every root in reach, puts in fresh soil and has no trouble in getting a young tree to grow, after he has given it a good dose of fertilizer.

ANDERSON COMBINATION DIPPER, PERFORATOR, GRADER AND SPREADER



SEND FOR NEW CATALOG OF PACKERS' and Dryers' Machinery.

The ANDERSON COMBINATION DIPPER, PERFORATOR AND GRADER is built in the Santa Clara Valley, where the requirements of prune growers have been carefully considered and every possible advantage incorporated into the machine. Can be furnished with or without rinse tank. Made in various sizes for hand or power.

SEND FOR 1918 CATALOG

It illustrates and describes the entire Anderson-Barngrover line of Fruit Packers and Dryers' Machinery. A copy will be sent free to all who are interested. A postcard will bring it.

Electric blasting easier and cheaper

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

The use of an electric blasting machine results in economy. It reduces the amount of powder required often by 10% to 20%. With it you can shoot several stumps or other blasts at one time. You can fire several lighter shots under a difficult stump or rock with better effect and less trouble than with a single large charge. It is the only reliable means of exploding charges under water.
Safety favors electrical blasting. There are fewer misfires and no hang-fires. Should a misfire occur, all danger of explosion is over when you disconnect the wires from the machine. As you can time blasts to the second, traffic along roads is not held up unnecessarily.

The smallest Electric Blasting machine fires five charges or fewer at a time, weighs but six pounds and cost is saved on a job in a very few days. Anyone can work all sizes of this simple, handy machine.

Send coupon (or postal mentioning this paper) for big free book "Better Farming." Tells you scores of money-saving ways of doing farm work.

What California Must Do for the Apricot

(Continued from first page.)

These figures show a large general increase in thirty years. They also show great fluctuation from year to year in the size of the crop and the use made of it. The very low dried product of 1907 is a partial crop failure, which left only 1500 tons dried and 71 cars shipped after the growing demand of the canners had been supplied. The figures of 1908 are inserted to show that the accident of 1907 did not interfere with the general progress of the fruit.

Averages for decades are safest to rely upon. The annual average of dried apricots from 1900 to 1907 was 10,442 tons and from 1911 to 1917 it was about 6000 tons—which shows the progressive development of apricot canning and Eastward shipment of fresh fruit.

The increase of apricot production is due to the heavier cropping of rather old trees, for the present acreage is only about 20 per cent larger than in 1910.

HOW THE PROPHETS HIT IT UP.

One who remembers the dawn of promise for the apricot nearly forty years ago, when the gorgeous fruit in clear, heavy syrup began to issue abundantly in bright tins from the commercial canneries, like "apples of gold in pictures of silver," and when well-ripened fruit began to be gathered by the ton from the sun-drying trays still holding its natural beauty of color—remembers also how enthusiastically the prophets of that day described the coming commercial glories of the California apricot. George W. Meade, who was the leading Mercator and Nestor of our unfolding preserved fruit industry of forty years ago, wrote this of the cured apricot in 1887 and 1888:

From a small trade and a trifling demand there is today no city of any consequence in America which does not use the California apricot either in a canned or dried state, and they can be found in most of the great European cities. There is not the slightest chance of overdoing the apricot business. If we can once get the California apricot into Europe at a reasonable price, there will be no limit to the consumption.

And this prophecy has been practically realized. No fruit we grow has come so near selling itself profitably for the last forty years and with so little trouble to growers and handlers as has the apricot, though growers have seldom had their fair share of the returns perhaps—except when canners fought among themselves, which is now a "lost art" in their industry.

PROPHECY WHICH CAME TRUE TOO EASILY!

In one way it may be claimed that prophecy cited was too easily realized. Europe has been willing to take our preserved apricots to whatever amount canners and driers could produce them, and we have been too content with taking such easy money. H. C. Dunlap of the California Prune and Apricot Growers has gathered these significant figures with reference to dried apricot production:

The production of six seasons previous to 1917 amounted to 195,000,000 pounds, and of this 124,000,000 pounds were exported: therefore the American consumption of dried apricots amounted to only 71,000,000 pounds, or an average of less than 12,000,000 pounds per year.

In other words, we have been selling almost two-thirds of the product abroad and letting our own consuming population of a hundred millions take it or leave it. As the great bulk of the American people do not know apricots, they largely left it—while the masses of middle class Europeans, who knew fresh apricots as a luxury of the rich, were electrified at a chance to get the fruit in forms of such close approach to the luxury of their "higher ups," as California canned and natural-color dried apricots really are. Then came the war, which sealed up Germany, our greatest single customer, but no disaster followed because other European nations also knew apricots and took more of them for military and civil consumption. But next came the submarine and embargoes due to lack of ships, and cured apricots were thrown into bad company as "luxuries" in the civil category and, having no standing as army supplies, the war finally "got" the apricot. It is of course all a mistake: the cured apricot is as good a staple food as other cured fruits and ought to be bought for shipments from this State at least up to their price ratio and their handicap in greater sugar requirement. They are worth all they cost as a menu variant and tonic anti-scorbutic, even if added sugar be scanted. They should also figure proportionally in army rations for the same reasons, but that is a hard proposition, for it must be remembered that the bulwark of our liberties, the constitution of the United States, is lattice-work when compared with the conservatism of the quartermaster's division. It took several decades to get an army mule on this coast a chance to bite barley instead of oats, and this war will not last long enough to get a doughboy a taste of an apricot pie—even though assurance were given that it would send him from the Marne to Potsdam in one yump!

WHAT NEEDS TO BE DONE FOR THE APRICOT?

Simply to make the American people know what an apricot is and what it is good for. If we can punch that button they will do the rest.

Fortunately the first drive toward this objective has been successfully launched—we have an organization, alert, competent and capable. Every man with an acre of apricots should

"Over the top"

WHEN this celebrated roofing goes "over the top" of a building, the owner's roofing troubles cease.

Pioneer Roofing

—protects thousands and thousands of buildings of every shape and character from the ravages of weather.

For 30 years western farmers have depended upon "Pioneer Roofing" and that their confidence has not been misplaced is shown by the ever increasing sales.

There is a grade or weight made to meet the individual requirements of every type of building.

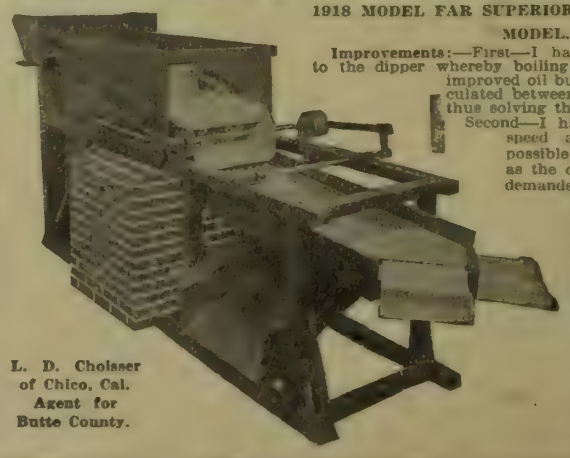
ASK YOUR DEALER

for the original and genuine "Pioneer." If he can't supply you write us for samples and booklet.

Pioneer Paper Co.
Manufacturers
247-251 S. Los Angeles St.
LOS ANGELES, CAL.

PERFECTION PRUNE DIPPER AND GRADER

1918 MODEL FAR SUPERIOR TO ANY PREVIOUS MODEL.



Improvements:—First—I have added a circulator to the dipper whereby boiling water (heated by an improved oil burner) is constantly circulated between circulator and dipper thus solving the hot water problem.

Second—I have installed an extra speed attachment making it possible to speed up or down as the condition of the prunes demands. Hard prunes require more scalding and must remain in the hot water longer than soft ones.

A call and inspection will convince you that this dipper and grader is second to none on the market.

L. D. Cholsser of Chico, Cal. Agent for Butte County.

F.J. YANDLE,
Inventor and Manufacturer
303 THIRD STREET, SANTA ROSA, CAL.

be in it. It is one function of this organization to undertake what they technically call "consumer advertising" and that means to pursue a campaign of education directly against those who now neglect to add apricots and apricot creations to their daily bread simply because they do not know how delicious, nutritive and wholesome they are. This association does not now cover the fresh and canned forms of the fruit, but it can probably stimulate the canners to fill the public eye with natural-color pictures of the fruit as it rolls from silvery tin to cut glass with the orchard quality and beauty still in it. This is a fundamental phase of apricot promotion which has been occasionally entered upon but never fully pursued. On its own part, the association of dried apricot producers should fill the Eastern sky with truthful color pictures showing how the properly ripened and cured apricot also carries the charm and similitude of the fresh fruit into the simplest culinary preparations and into the most elaborate creations of the pastry cook. Besides these flat forms of publicity, all opportunities should be sought to actually demonstrate apricot-cooking methods and achievements in all places where consumers congregate. These are not new things and therefore we emphasize them confidently. Other producers' organizations pushing California fruits and fruit products have done them with excellent efficiency and surprisingly profitable results. The American people, as does none other on earth, chooses its foods in accordance with the suggestions of the eye and the judgment rather than by the limitations of the purse. Therefore, the field is free for conquest by the very best and most delicious things. One of these best things is the California grown and sun-cured apricot, and we as producers of it are not giving our product half a chance. We have made millions every year from this fruit and have seldom had a thankful thought, much less done a helpful deed for its achievement. It is our clear duty now to widen and smoothen its pathway to the future—for though the California apricot will have perhaps even a better foreign field than ever to traverse after the war, even greater things abroad will be easier to achieve from a wider basis of popularity at home. The outlook for the apricot is as good as ever, but just at the moment it needs a push!

More Help, Higher Prices Needed

Fifty per cent of next fall's crops will spoil if rains come early, says G. W. Whitman, one of the largest fruit growers of Contra Costa county. The season is two weeks later than normal anyway. "I have only one message for the farmers," says Mr. Whitman. "We must have more help. I have been using high school boys with previous farm experience and paying them men's wages, but they are at the shipyards now, making $4 per day and double pay for overtime. Few farmers can compete with the shipyards for labor. I don't believe in exempting farmers as a class from military duty; but we must have help from the outside during the war or food will waste and will cost everybody more. Last year we had twice the normal length of harvest season, but we can't count on that this year. If pears had risen in proportion to 250 articles listed in Bradstreets, we would get $93 per ton for them instead of the $70 we are fighting for."

Cantaloupe Production in Western States

[By R. C. Risser, Assistant Truck Crop Specialist.]

With a single exception, the most important truck crop grown in the Far Western States for Eastern shipment in the fresh state is cantaloupes. If we exclude the main crop of potatoes from consideration, there is no other perishable vegetable product, and but few other fruit products, which are moved to Eastern markets from Western fields in the volume which is made by shipments of cantaloupes. In round numbers there were shipped from the five States — California, Colorado, Arizona, New Mexico and Nevada — about 11,000 cars of this product in 1917. The best information at hand indicates that about half of the commercial production of the United States is from these five States and that considerably over half of that volume is from the one State, California.

SHIPPING SEASON.

During the summer season cantaloupes are of particular interest, as they form an important part of the straight car shipments handled under refrigeration from the West to the East. From June to October they are conspicuous on the principal markets of the United States. Beginning with the Imperial Valley of Southern California, which is the earliest extensive district in the country and also the largest one known to be in existence, the first straight cars start East between the middle of May and the 5th of June. The average date in the past five years, 1913 to 1918, inclusive, for the first car to roll has been May 25th, and May 25th was the date for this year also. The average date for the peak of shipments from this district in the same period of years was June 21st. The peak load this year was reached on the 18th. The average date for the last car to be shipped in the past five years is July 23d.

As the shipments from the Imperial Valley are on the decline, but before the entire crop has been moved, the Salt River Valley of Arizona begins moving its crop. The Imperial Valley does not have a long season, but in comparison with the Salt River Valley there is a striking difference, for the former has averaged 59 days for the past five years.

Following closely upon Arizona, the Moapa district of Nevada, the smallest of the districts, begins shipping some time in July. Almost coincidently with the Moapa Valley of Arizona the San Joaquin Valley of California, which now ranks second only to the Imperial Valley in acreage and shipments, begins to move its crop and the shipping period is well advanced by the time Arizona and Nevada finish. This valley's acreage is centered in the Turlock Irrigation District of Stanislaus county, but San Joaquin, Merced and Madera counties must be included in this general district as growers of cantaloupes. The season of the San Joaquin Valley is longer than any of the other districts. The height of the season is usually in advance of heavy shipments from New Mexico, which starts its first car early in August, and Colorado, which begins about the middle of the month. It starts normally about a month earlier than Colorado and continues well up into the fall.

YIELD.

The Turlock district is the highest yielding district and some have attributed this fact to the long season alone. Six hundred standard crates per acre are often obtained here, but the large individual acreages when put in fail to produce like the main area which is grown by small farmers. An instance which illustrates this principle occurred in 1917 Three large plantings aggregating 1,250 acres produced an equivalent of 112 standard crates per acre, or about a third of what the small plantings were making. A third factor which is significant is the variety. Honey Dews and Pink Meats, where successful, are yielding much larger crops than the ordinary netted varieties grown on the same land. Aside from these factors cultural methods, rotation with alfalfa and other means of soil improvement should not be lost sight of. Control of water in irrigation and other things pertaining to the care of the fields and varying with the individual growers have a material effect on production.

Facilities for handling the crop after it is grown have also been shown to be important in their bearing on shipments. A car shortage during the height of the season limited the shipments from Imperial in 1917 and a labor shortage during a period of abnormal rush limited the shipments from the valley in 1918.

Squash-Bug Prescription

[Written for Pacific Rural Press.]

As we have frequently noted, this pest is hard to beat. The Kern Farm Bureau Monthly says the following formula has given fairly good results:

Whale oil soap, 1 pound; coal oil, 1 quart; water, 6 gallons. Boil up the soap in a few quarts of water and remove from the stove. Then mix in the quart of coal oil, stirring vigorously. Add sufficient water to make six gallons.

Howard K. Dickson, instructor in agriculture at the Kerman Union High School in Fresno county, reports as follows:

"My best success was obtained by spraying before 8 o'clock in the morning or before the bugs leave the clusters around the base of the vine and scatter under the leaves. I find that repeating the spray on the bugs after about a minute's intermission from the first spraying gets a lot of them which are only slightly wetted the first time."

CURL LEAF IN PEACHES.

To the Editor: Curl leaf in peaches can be checked and in a few days the trees will look as thrifty as ever if sprayed with one and one-half ounces of formaldehyde to one gallon of water. As soon as a tree is sprayed, and while it is still wet, dust it with sulphur. If possible choose a warm, sunny, still forenoon for the work. We have used this treatment for two seasons with the best results.—Laura A. Davis, Lockeford.

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Cottonseed Meal Prices.

An agreement on cottonseed meal prices was reached by the Food Administration with the mills in Imperial Valley last season on the cash basis of $55 a ton f. o. b. the mills in car lots. It was charged that the protein content soon became lower, but that was perhaps a mistake, as the irrigated Imperial Valley cotton does not produce as much oil or protein in the seed as unirrigated cotton in Texas. However, dissatisfaction existed and the Food Administration is now making efforts to get an agreement on price based on protein content. Meanwhile, anyone can get it by the carload at $55 per ton f. o. b. El Centro or $56 per ton plus the freight through commission men elsewhere. There is a considerable quantity left over, according to reliable advices. Buying direct from the mill saves the $1 per ton commission.

Standardization Increased Prices.

Standardization of onion shipments similar to that applied to fruit shipments by the State law was asked last season by Coachella Valley onion growers. No one had the necessary authority or money, but the State Horticultural Commissioner promised to send an inspector if the growers would organize and foot the bill. This was done, according to O. W. Newman of the commission, and a letter recently received from their secretary said that standardization had increased the price of onions 10c to 15c a sack over what it would have been this spring.

Pea Vine Silage Not Spoiled on Top.

"An experienced man told me that with pea vine silage I would have to expect a loss of nine feet on top," said Superintendent L. J. Kelley of the Shoreacres Dairy in Alameda county, recounting his first experience. "But I had a system of saving the upper layer of corn silage by covering it with a deep wet straw mulch. I tried it on the pea vines and the experienced man was surprised later to find not over an inch loss." It has been found impracticable to blow the chopped pea vines into their 46-foot silos, so a vertical bucket elevator carries them to a horizontal conveyor on top, which dumps them into whichever of the four silos may be ready for them.

Higher Prices for Secondary Products.

The producer of secondary products, such as pork, eggs, and milk, needs a higher price for his own product rather than a reduced price on his raw materials, according to Dean T. F. Hunt of the California College of Agriculture. While prices are rising, as at present, the exchange value of secondary products is less in proportion than that of primary products, such as grain, hay, etc. But it will be vice versa when prices drop if the producer of secondary products keeps at it that long.

Poisoning Gophers.

To the Editor: Gophers are the easiest animal to poison that I know of.

First get a rod of iron one half inch thick and fifteen inches long and pointed. Punch a hole in runway and drop squirrel poison in the half inch hole. You will get 90% of them the first time you go over ground and get the rest of them the next time you do the same. Do not close the punched hole. If you do the squirrel poison is no good.—Henry Hartmann, Livermore.

State Potato Law Needs Fixing.

Washington and Oregon send horticultural inspectors to California to prevent introduction of potato pests from this State to their own, but we are practically without protection of the same nature, writes W. V. Shear, who has been inspecting seed potatoes grown in California under our State law. He urges its amendment by the coming Legislature to finance greater efficiency and to include the study and protection of all important truck crops in the State.

First Crop Potatoes for Seed.

To the Editor: If the first crop potatoes are spread out on a dry, dark floor to dry for two weeks, then when they are sacked or put into open boxes a little dry sulphur is sprinkled over each layer, they can be kept for months. Have used them to plant the next spring with good results.—Laura A. Davis, Lockeford.

Sulphate of Ammonia on Grain.

A blindfolded man walking through the fields of rye, wheat, and oats on J. M. Salinger's ranch near Hopland could have told when he struck the plats where sulphate of ammonia were applied on top of the ground last February at various rates from 100 to 200 pounds per acre. The increase was remarkable.

Norwalk Tires

Note the increasing number of Norwalks on the road. Just one trial makes a motorist a Norwalk enthusiast. Give these mighty mileage makers a trial. It's the logical way to lower your mileage COST, as Norwalk users will tell you.

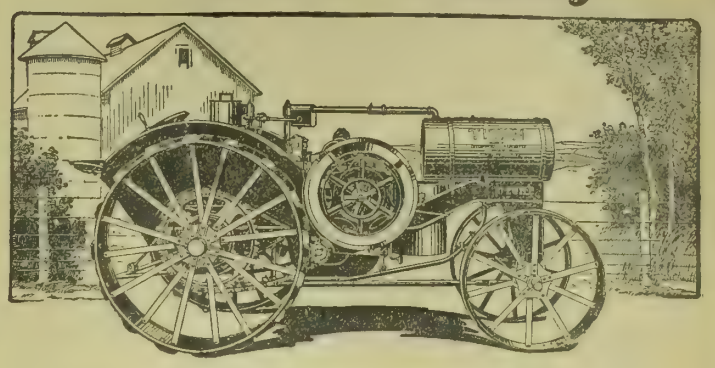
Tractor Safety



FOR twelve years and more, shrewd and careful American farmers have kept us busy filling their orders for **International, Mogul,** and **Titan Kerosene Tractors.** In those twelve years our tractors have had to meet every possible combination of field and climate conditions. The types and sizes we sell today are the ones that have successfully met every test. Any one of them is a safe tractor to buy.

One great advantage to farmers who buy our tractors is the fact that we can also supply all the implements and machines that go with the tractor. We know farm needs. Buying from us, you get a complete, well balanced outfit for field or belt work.

Another advantage is our extensive dealer and branch house organization. A telephone call to a nearby dealer brings you promptly a repair, replacement, or adjustment for any machine we sell.

Look at it any way you will, you cannot make a safer tractor investment than to buy an **International, Mogul** or **Titan** kerosene tractor. See our dealer in your town, or write us for full information about a safe tractor for your farm.

FAIR DATES.

Monterey county—Salinas, July 30 to August 3.
Mendocino county—Ukiah, August 5 to 10.
Humboldt county—Ferndale, August 19 to 24.
Napa county—Napa, August 23, 24, 25.
State Fair—Sacramento, August 31 to September 8.
Exposition—Oakland, September 9 to October 6.
Glenn county—Orland, September 15 to 21.
Kings county—Hanford, September 23 to 28.
Fresno county—Fresno, October 1 to 5.
Southern California Fair—Riverside, October 8 to 13.
Liberty Fair—Los Angeles, October 12 to 26.
Livestock Show—San Francisco, November 2 to 10.
Indio—Indio Fair, auspices Board of Trade, November 15-16.

Field Crops.

Grasshoppers have laid bare five hundred acres of wheat around Burney, Shasta county.

H. D. Pitner of Ukiah harvested 11 tons of shelled corn from eight acres which he had planted June 1.

In New Zealand the wheat crop will fall about 1,000,000 bushels short of the actual home consumption.

On account of dry weather and unfavorable growing conditions in California, the crop of garlic is short this year.

Alfalfa growers are joining the California Alfalfa Association in Fresno county. Many thousands of acres have been signed up.

The acreage of sweet potatoes planted in California this year is about equal to that of last and the growing condition is promising.

The forecast for the United States shows the oat crop will be less than a year ago, while the barley crop will be 21,000,000 bushels greater.

There was harvested in California last year an increase of 30,000 acres of potatoes over the year before. This year shows a falling off of 12,000 acres.

Sam Britton, grain broker of Marysville, has purchased the barley crop of Onstott Bros., consisting of 10,000 sacks. He paid $2.50 per hundred.

U. S. Agricultural Department cantaloupe experts advise against wrapping the melons. They also advise icing cantaloupes immediately after pulling them.

The hop acreage in this State has been cut down to about 10,500—1500 acres less than a year ago. The condition is good, giving promise of a yield of 15,500,000 pounds.

Imperial Valley farmers who held their barley because the price offered was only $2.15 and $2.18 were urged by Professor B. F. Cocheron, State leader of farm advisers, to sell.

The acreage sown to rice in this State shows an increase over last year of 28,000 acres. Taking all of the rice-producing States as a whole, there is an increase of 156,000 acres.

Some forty Kings county farmers are growing honey sorghum for silage and syrup and have planted out approximately 700 acres to it this year. There are prospects of a very good crop.

They are using a small combined harvester, drawn by eight horses, in the Ukiah Valley, manned by only two men—the driver and one to sew sacks—cutting about 20 acres per day. It seems to be just the machine for the small fields.

Potato shippers at Portland have been warned that if further shipment of potatoes affected by tuber moth are made an effort will be made to quarantine all California potatoes. A number of carloads have been destroyed at Puget Sound points.

The hot weather, which stopped the bean planting in unirrigated sections, has proven the salvation of the rice crop. This grain had been growing slowly up in the valley. With the first hot winds it began to flourish and a better than 100 per cent crop is looked for.

The cantaloupe season at Brawley closed on the 12th and for the Imperial Valley as a whole on the 15th. The quality and condition of the vines was far above the average of past seasons. The yield of shipping stock was higher per acre than last year, but lower than seasons two previous years.

Deciduous Fruits.

Northwestern pears should begin to move about the latter part of this month. It is estimated shipments will total 1200 or 1500 cars and the heavy movement will be on between the 10th and 15th of August.

More than 1000 girls in Oregon cities have been interested in light farm work by farm help specialists of the U. S. Department of Agriculture and are now being placed in the fruit districts of the State to assist in picking berries and fruit.

Canners are competing with the trade for the supply of raspberries, paying as high as $8 a crate for this fruit. The local retail trade finds it difficult to dispose of these berries at a profit, buying at the $8 figure, so the canners are getting most of the fruit.

Pitting of apricots in Orange and Ventura counties is in full force. The scale for this year is 30c per 100 pounds, or an increase of 5c over the general figure of last year. The fruit is larger this year than last and is in excellent shape. This will make it possible for the pitters to pit more pounds and with greater ease.

Dr. J. C. Whitten, professor of horticulture at the University of Missouri, has accepted the post of head of the division of pomology in the Agricultural College of the University of California. He is one of America's leading horticultural educators. Growers of deciduous fruits and nuts will be particularly interested in the University of California's latest acquisition to its faculty, for late figures given out by the United States Bureau of Markets show that these growers produced 18 per cent of all farm products grown in the State at a value of $99,000,000.

Citrus and Semi-Tropical.

The Board of Supervisors of San Bernardino county has appropriated a special fire fund of $2,900, which will be disbursed under the direction of the Forest Service of Los Angeles, to be used to keep fire out of those canyons which deliver irrigation water to the orange growers of the county.

Tulare county citrus growers have secured the services of Prof. W. P. Kelley of the faculty of the University of California, who will make a special study of San Joaquin Valley conditions and outline a scientific program for proper orchard culture. Growers have agreed to accept and give a thorough test to the methods to be recommended by Prof. Kelley.

Grapes.

General sentiment against packing any shot grapes was expressed at the recent Grape Standardization Conference.

It is estimated that San Joaquin

Pacific Redwood Tanks
are Sentinels on Modern Farms

Always standing on duty, Pacific Tanks guard the Farm's welfare. No attacks of impure water; no attacks of fire can devastate with a Pacific Tank on guard. No room for the enemy of annoyance that so often prevents the housewife from wearing smiles. No burden of farm-drudgery that keeps the help from being satisfied.

Why pay two times as much for a steel sentry, besides double the freight, when a Pacific Redwood Tank will "fill the bill" on the up-to-date farm.

We have an army of these Tanks and every one is built for a life-time service on a farm.

A "Pacific" is always equipped ready for a call to duty. Once stationed, it *never* needs to be "relieved." In storm or sunshine it stands as a vanguard. Thousands of farms throughout the world have Pacific Tanks as their sole protection.

Fill out the enclosed blank and mail to us. We will be glad to prove these claims.

GROZ-IT

Highly Concentrated Pulverized Manure

A mixture of cattle and sheep manure from animals fed on cotton seed meal and cake and alfalfa (highly nitrogenous foods) aged for several years under climate conditions that remove moisture but prevent leaching and fermenting.

No odor.

No flies or insects.

No weed seed or foreign matter.

Many times plant food values of ordinary manure.

Guaranteed contents.

Nitrogen, 1.5 to 2%.

Phos. Acid, P^2O^5, 1.25 to 2%.

Potash K^2O water soluble, 4 to 5%.

We are shipping GROZ-IT in immense quantities to Southern and Eastern states, where present freight rates make it $10 per ton more than cost to you. Place your order now to insure delivery.

Sold in bags or bulk.

Write for circular and prices.

Also ordinary Manure
in Carloads
Horse-Sheep-Cattle and Rotted Manures

Pacific Manure & Fertilizer Co.
429 Davis St., San Francisco

county will harvest this year 50,000 tons of wine grapes, 20,000 tons of table grapes to winery, and 30,000 tons of table grapes packed, and that this output should bring the growers about $2,000,000.

The first car of table grapes from the San Joaquin Valley left Fowler for the Eastern market last Sunday. The car passed the legal requirements of 17 per cent sugar by about two points. The grapes were in large and uniform bunches. A general movement to market is expected to follow this week.

Miscellaneous.

Argentina expects to have a surplus of 2,000,000 tons of maize corn of the crop of 1917-18 available for export.

William Oates of Lompoc, a honey man, says the present year is one of the most successful in the history of the bee business. His Lompoc apiaries were filled two or three times and his hives at Los Alamos did almost as well.

The third annual Napa County Fair will this year be held at Napa, August 23, 24 and 25, on the East Napa Pavilion grounds, where there are plenty of large shade trees to make the grounds attractive to visitors. The livestock exhibits promise to be exceptionally good. The display of agricultural products will be the finest that has ever been assembled in the county.

The Farmers' Lime Company of Placer county announces that it will have pulverized limestone ready for delivery on and after August 15. Bins are under construction at Rattlesnake quarry and a pulverizer will be installed shortly. The limestone at the quarry will be sold at $2.25 per ton. It will be delivered on ranches at 25c per ton per mile in truckloads. On board cars at Newcastle it will be $4 per ton.

STANISLAUS COUNTY NOTES.

There never has been a time since irrigation began in the Turlock and Modesto districts when crops looked as favorable as this year. The first crop of grain and hay that has been taken off went ahead of any crop yet grown. Forty sacks of barley to the acre was the best we heard of, and an average of five tons of barley and oat hay per 30 acres was the largest yield of hay.

The cantaloupe and watermelon crop is just coming on and will be in full blast when this is published. A large crop of both varieties is promised, with good prices. The acreage, however, is less than half what it was two years ago. A great many who had good melon ground chose to plant other crops of beans or corn, feeling that there was greater need for these staples.

The bean crop promises to be a big one. Estimates place it at 1000 acres more than last year for the two districts. Both the earlier and later plantings promise a big crop at this writing.

H. A. Stannerjohana of Turlock tried out five acres of string beans for seed last year. He did so well that this year he has 25 that look mighty good now.

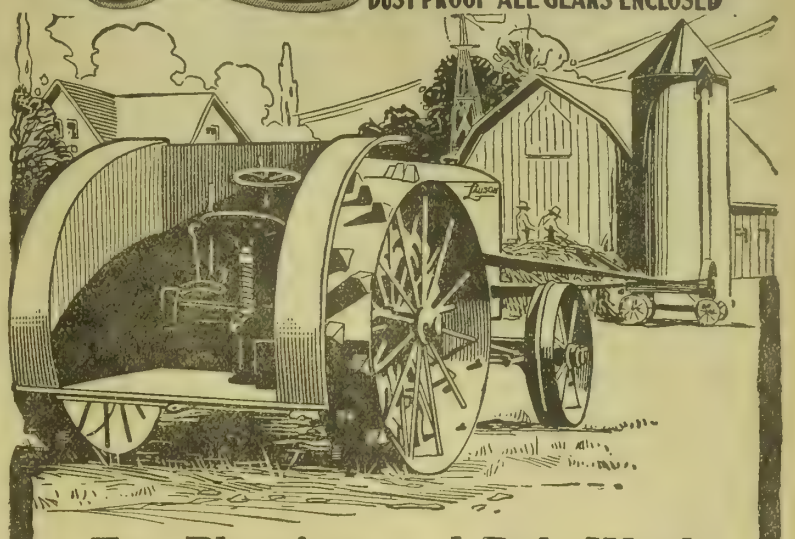
In April it was feared that the water would not hold out, but the cool weather of May kept back the snow so that there has been plenty of water. One more irrigation is expected this month.

No labor trouble has been experienced in the grain, alfalfa or other hay harvests. The greatest labor difficulty is getting milkers; $70 and $75 for a string of 25 cows is being offered. This shortage and the good prices of grain and other farm products is causing many of the dairymen to sell their cows.

There is not much fear in regard to labor for the melon crop. The city of Turlock is full of men waiting for the crop to come on. The cool nights of the last three weeks are holding the crop back some.

The best price offered for good plump barley has been $2.50 per 100 so far. Alfalfa is selling for $17 in the field.

The LAUSON 15-25
DUST PROOF-ALL GEARS ENCLOSED



For Plowing and Belt Work

Most tractors are measured by their ability to *plow*. Field work is only *half* the work. Lauson farmer owners now look upon the Lawson 15-25 as a *power unit* for doing all the heavy work on the farm.

—for plowing, discing and seeding.
—for keeping up the country roads, pulling grader and running crusher.
—for running the silo cutter, hay baler or grain separator.

Lauson tractors are bought on performance and reputation. Send for complete information and specifications. Very often the *saving* pays for the Lauson in one season.

Builders of Lauson Frost King Engines

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles

MOST CONVENIENT HAY AND STRAW CHOPPING.

Pea straw is a by-product in the districts where peas are grown for market, for canning or for seed. In this year of more cattle than feed in California the Food Administration is making every effort to have all roughage saved. But is pea straw worth anything for feed?

For three years the Shoreacres Dairy at San Leandro has used a mixture of one part chopped pea straw to four parts chopped alfalfa, feeding it dry with silage to as many as 300 cattle at once. They had 400 tons of the chop last year and will have 600 tons this year. The same thing could be done on a smaller scale.

The hay and straw are stacked endwise to the big storage and feed barn in stacks 150 feet long and 8 or 10 feet apart. The barn consists of the ground feeding floor over which is the wood floor of the storage room for chopped roughage. Six double mangers cross the feed floor. Chutes lead into these from 18-inch square holes in the floor above. Vertical chutes in sections about four feet long are set securely over these holes from above and are built up with additional sections as the storage room is filled. Always in throwing chop to the cattle below it can be pitched downward by this system. Two other holes in the floor and chutes over them are located over a driveway so wagons can be loaded below in the same way.

It is in chopping the hay that the system excels most others we have seen. A 36-inch feed chopper is mounted on a truck with a 25-horsepower electric motor, which is removable for other work as needed. This outfit is set first between the far ends of two of the 150-foot stacks, moving forward as it eats them up, and blowing the chop through a long pipe into the storage room. "It's a fine machine—has an awful appetite," says Superintendent L. J. Kelley. Twenty horsepower operated it last year, but a 25-horsepower motor has been installed for the present season. The hay and straw are pulled from the stacks onto the machine platform with a Schmeiser hay derrick, eliminating a lot of hand pitching.

POWER ADMINISTRATOR ASKS NIGHT PUMPING.

A State Power Administrator has been appointed, with authority to increase or curtail output and distribution of electric power by the various companies, including the Pacific Gas and Electric Co., the Great Western, Sierra and San Francisco, Western States, Coast Counties, California-Oregon, and Northern California Power Company. H. G. Butler, who has been appointed, says there is no prospect that a priority list will have to be made, but if electricity gets scarce non-essential industries may have to be cut off temporarily. Irrigation cannot, of course, be classed as a non-essential, but it is urgently requested that farmers do as much as possible of their irrigation pumping at night. Here is where good reservoirs will help win the war. Mr. Butler's office is with the State Railroad Commission in San Francisco.

BUYING WATER.

To the Editor: I have 15 acres of two-year prune trees to irrigate from my neighbor's well. How shall we settle on the cost of the water? He pays $6 per horsepower per year on a 15-horsepower motor and has all the water two persons can handle. I simply want an approximate cost without measuring the water.—H. R. H., E. Oakland.

If you can use the water when it will not discommode your neighbor, the following basis of figuring ought to be fair, if his plant was originally installed for his own use only: Find the cost of his installation and the number of days he uses it per year for himself. Find how much interest and power cost per day of actual use he would have to charge himself if he did not sell any water. You can afford to pay him this amount per day while you are using his outfit, and he can very well afford to charge no more, as it is practically all velvet for him.

MOTOR TRUCKS FOOD CARRIERS.

A motor truck manufacturer asked W. J. Shotwell, traffic director of the Food Administration, to use his influence to get priority of shipment for certain material needed in the trucks. "I would suggest," said Mr. Shotwell, "that you write us a letter stating that all the material for which you ask priority will be used in the manufacture of trucks for the purpose of hauling food from the farms or distributing it in the cities or in hauling needed supplies back to the farms. On that ground we can recommend priority. The truckmaker asserted that it would be easy to guarantee that, for most of their trucks were sold to farmers or for rural package delivery routes, etc.

CLEARING STUMPS WITH DYNAMITE.

The spirit of the pioneer is not dead with us yet, for we find the farmers of the Anderson Valley, Mendocino county, clearing land so heavily timbered that it requires 60 to 75 sticks of dynamite to blow out some of the stumps and costing about $100 per acre to clear it. The cost, however, is largely returned by converting the timber into cross ties, for which the railroads pay a good price.

WEATHER HURTS BELTS.

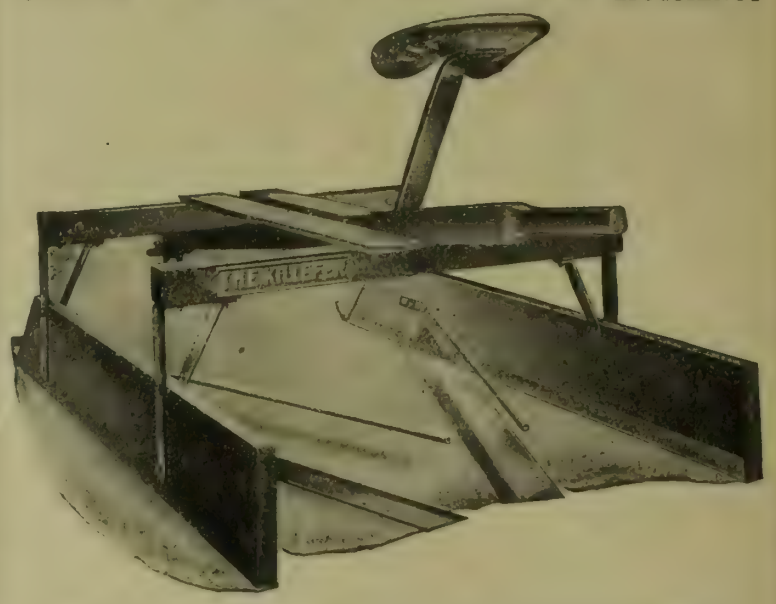
Belts cost money and are much shorter lived if left out in all kinds of weather. Pump belts ought to be rolled up and put away dry in winter. Hot summer sun does not hurt them while running, but a shade over the belt will pay for itself because the sun will soon damage any belt standing still.

The looser a belt can be run between parallel pulleys the greater will be the contact on their surfaces, more power can be delivered, less strain will be put on the bearings, and the belt will last 20 to 25 per cent longer than if run tight.

KILLEFER QUALITY

BEAN CUTTER

KILLEFER EFFICIENCY



There will be a big demand for Bean Cutters this year and when the time comes they will be needed quickly. Do not delay putting in your order now for what you need in this line, also for extra blades.

We build two weights of sled cutter, the one shown above being our regular wood frame cutter. For heavy ground where a stronger cutter is required, we make a steel arch frame at an additional cost of five dollars. Give your order to your dealer and insist upon having the Killefer Bean Cutter. Send for catalogue.

AUXILIARY HARVESTER ENGINES.

To the Editor: We are sending 2500 harvester-threshers this year into California, Washington, Oregon, Utah, Colorado, Montana, Kansas, and Nebraska. By far the greater number are going to California, Washington, Oregon, Utah, and Colorado. Of these 2500 McCormick and Deering harvester-threshers, 1600 have been equipped with 15-horsepower auxiliary engines. The auxiliary engines operate both the cutting and threshing mechanism, making it necessary to use only enough draft power to pull the dead weight of the machine over the ground, which means about half as much power as needed both to pull and operate the harvester-thresher.

So popular have these auxiliary engines become that the general office of the harvester company at Chicago has just received a wire from the Portland branch house asking if it would be possible to ship in the neighborhood of a hundred more of the auxiliary engines by express. The company is advising against this method of sending the engines, as it will cost between $65 and $70 more to send each engine by express than by freight. Whether this will have any weight with the farmers remains to be seen.

Two men with a harvester-thresher and a tractor or eight to twelve horses can harvest, thresh, and bag fifteen to twenty acres a day. If the harvester-thresher is equipped with an auxiliary engine, six horses are all that are necessary or a 10-20-horsepower tractor is sufficiently large to draw the machine. The harvester-thresher puts all the grain into bags and all the straw back on the ground. It separates weed seed and collects it in a separate compartment, so that the farmer does not sow weeds when he uses a harvester-thresher.

It is interesting in this year, when horse power and man power are so scarce, to compare the cost of the various methods of threshing. The following average estimate has been made on good authority: The average cost of harvesting grain with a binder and shocking or stacking the grain, later to have it threshed by a stationary thresher, is estimated at 13½c a bushel. Harvesting the grain with a header, stacking it and stationary threshing is estimated to cost on an average 11½c a bushel. With a 9-foot combined harvester-thresher the average cost of harvesting and threshing grain is estimated at 3c a bushel—a cost of less than one-third of any other practiced method of harvesting and threshing.—International Harvester Co., Chicago.

POWER NOTES.

T. S. Glide of Davis has used a silage cutter for six years with a hay chopping attachment and "would not now feed hay any other way."

Automobile trucks had proved profitable in moving freight before the railway rate increase went into effect. Now they should be 25 per cent more profitable.

Robert Jardine of Glenn recently drove his automobile with a trailer down to J. R. Bloom's ranch at Dixon and took a trailer load of purebred Shropshire sheep back home with him.

A 5-horsepower electric motor runs a 1½-ton ice machine for A. E. Slater of Pacheco. This pumps cold brine through a milk cooler, which often freezes a little of the milk. It also keeps a refrigerator of 30 milk cans capacity near to freezing point.

Where a belt is twisted as on a vertical centrifugal pump, the greater the speed the less bearing the belt will have on the pump belt wheel and the less power it can exert on the pump. This loss can be largely prevented by setting the engine more than 25 feet from the pump.

Speed up with Electric Power

"Production and Not Acreage is the Measure of Profit"

HERE are some of the ways in which modern industry has been speeded up by putting electric power to work in the right place.

Metal mines have boosted output to meet world-wide demands. Great central power plants in place of small local plants in coal mining areas now supply cheaper electric power per ton output for each mine. All tonnage records have been smashed in the steel industry. Greater automobile output has lowered prices and given better road transportation. More and better cloth has been produced at lower power costs.

Through the use of electric motors many farmers are also securing the high production obtained in the big manufacturing industri

Over 200,000 H.P. in G-E motors is now at work in this way on the Pacific coast.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

Stanislaus county has appointed a county dairy inspector.

A. C. Sturgeon of Tulare is building a new silo on his ranch.

The J. H. Harlan Co. is preparing a nice herd for the State Fair.

On the 15th of this month milk condensaries in Washington advanced the price of raw milk from $2.25 to $2.40.

Gyp corn is usually cut twice in the summer for green feed or hay and is then pastured to cattle by T. D. Carneal of Livermore.

A. M. Bibens of Modesto reports the sale of four young bulls, one going to M. S. Brown of Fort Bragg, one to Mr. Kirt and two to Burt L. Kace of Modesto.

R. L. Holmes of Modesto is well pleased with the nine head of Holsteins he bought at the last Sacramento sale. He will show about ten head at the State Fair.

Two months dry, putting on flesh, then a period in the test stable and the rest of ten months being milked in the regular "work herd" is the program aimed at for the Palo Alto Stock Farm Holsteins and Guernseys.

W. J. Higdon of Tulare has a junior two-year-old Holstein heifer which is making a good long-distance record. Her name is Madrigal Mookie 2nd. She has produced over 13,000 pounds of milk and 480 pounds of butter in six months.

Corn for silage is planted in July after peas for seed have been harvested on the Shoreacres Dairy along San Francisco Bay. This corn is almost mature enough by Thanksgiving and is usually frosted, but that does not hurt except by loss of some leaves.

"I can look back now from my daily milk records and see which bulls I kept too long and which ones I sold too soon," says J. M. Christen of Pacheco. "It takes practically no time to weigh the milk and record it for each cow, but I see where the records can be used in breeding."

The American cow contributed $100,000,000 worth of her products to the exports of the United States in the last year. The value of the condensed milk exported from the United States in the fiscal year 1918 actually exceeds the value of all the condensed milk produced in the entire country in 1914.

Tilly Alcartra of the A. W. Morris & Sons herd has completed the first six months of her year, making 18,750 pounds milk and 775 pounds butter, an average of over 100 pounds milk and nearly 4¼ pounds butter per day. Her production for the year will undoubtedly very materially exceed her three previous yearly records, one of which was over 1040 pounds and two over 1190 pounds. Tilly is the greatest long-distance producer in the world.

Beef Cattle.

The 1000 head of Herefords and Shorthorns belonging to L. Rankin of Onyx look well and have plenty of feed.

Chas. L. Weaver of Tulare reports the sale of two Shorthorn bulls to R. C. Hyde of Visalia and ten head to the John Heinlen Ranch Company of Lemoore.

Dr. J. P. Iverson, now in charge of the State Cattle Protection Board, was endorsed unanimously by the California Cattlemen's Convention as successor to State Veterinarian Chas. Keane, who resigned some weeks ago.

A correspondent writes that feed conditions in the northern and eastern parts of the State are not good, and that many head will have to be driven out. Hay at McArthur, he says, is worth $22 a ton in the shock.

The Tagus Ranch of Tulare is feeding 80 head of calves for baby beef and is experimenting on all of the beef breeds. It also has 1500 head of regular butcher stock to put on the market this fall and winter.

If you want corn silage for fattening purposes, let the corn get ripe and add water when cutting it for silage, says Jas. McDonald of the Ormondale Co., who feeds silage from 20 acres to his 65 registered Shorthorns.

More baby beef and steers weighing not over 1100 pounds should be marketed in these war times as urged by Jos. P. Cotton, meat buyer for the allies. Putting fancy meat on steers takes too much feed per pound of the meat.

In 1914 we were shipping 3,000,000 pounds of beef meat to Europe in a month. A year ago we shipped 23,000,000 pounds in a month. Last month we shipped 130,000,000 pounds to Europe, said Food Administrator Ralph Merritt to the California Cattlemen's Convention, June 28.

The California State Cattlemen's Association held their annual meeting July 19 at Salinas. Many live questions were taken up for discussion. The association is wide-awake to the present feed shortage emergency and is cordially co-operating with the Government in its effort at co-ordinating the activities of the cattle interests of the country with military requirements.

Swine and Swinemen.

The next sale of the Kings County Poland-China Breeders' Association will be held on October 9.

J. E. Thorp of Lockeford has 20 head of registered Jerseys and is fitting several of them for the State Fair. He also has some extra good Durocs which he intends to exhibit.

The Animal Husbandry Department of the Bureau of Animal Industry is assured that the campaign to increase pork production at least 15 per cent over last year has been successful.

Distillate and crude oil mixed in equal quantities and sprinkled over the backs of hogs at the trough will get all the lice, if done repeatedly, as practiced on the Castleview Ranch at Santa Rosa.

Better care with a smaller herd is A. L. Tubbs' philosophy with his Yorkshire herd at Calistoga. He keeps six or eight of the best breeding sows and two boars every year. These give him 100 to 150 pigs per year, as the average is ten or twelve per litter.

At a meeting of Kings County Poland-China Breeders' Association last week six new members were added to the list. It was decided to hold four consignment sales a year instead of two as in the past. The next sale is set for October 9 and all hogs offered will be passed upon for fitness by a committee appointed by the president. Kings county Poland-China men have through this organization made the fame of their square dealing and good animals spread far and wide.

A record number of entries has been made in the swine futurity events of the 1918 California State Fair's livestock show. Twenty-three herds have been nominated by leading breeders of the State for the 1918 Poland-China Futurity and nearly as many for the 1918 Duroc-Jersey Futurity. Competitions in the Poland-China event will be for senior pigs, junior pigs and litters, with cash prizes totaling $600 guaranteed by the American Poland-China Record Association. The Duroc-Jersey Futurity is for spring pigs farrowed since March 1, 1918. The prizes aggregate $400 and are guaranteed by the National Duroc-Jersey Record Association.

Serviceable Holstein Bulls

Best of Breeding at Bargain Prices

Why not head the herd with a son of **KING MEAD OF RIVERSIDE**, one of the very greatest proven sires of the Holstein breed. During the past year two of his daughters have completed strictly official year's records of 1215 and 1331 pounds butter, the latter record standing as the world's strictly official record. All of his daughters that have been tested for the year average over four per cent butter fat, which can be said of no other sire of the breed with over five tested daughters.

We can offer sons of this great sire as low as $250.00 out of well bred cows with high A. R. O. records. The dams of several of these have records above 800 pounds butter. His sons are all good individuals.

Also offer a few excellent sons of **KING MORCO ALCARTRA**, whose dam, **TILLY ALCARTRA**, is the greatest long distance producer in the world. She is now making the greatest record of her career, having produced in the first six months 18,750 pounds milk and 775 pounds butter. This is her fourth consecutive year above 1040 pounds butter, three of which will be above 1190 pounds.

Have also two or three very fine sons of **SIR AAGGIE DE KOL ACME** at serviceable age from high record dams. **SIR AAGGIE** is out of **AAGGIE ACME OF RIVERSIDE 2D**, holder of the world's strictly official yearly record and the two-year-old record of 2426 pounds.

We are offering these young sires at surprisingly low figures, and no dairyman should overlook the opportunity. Their pedigrees and prices will be mailed on request.

Dairy Shorthorns for Milk and Beef

Dairy Shorthorns lead in butterfat production in many cow-testing association reports. Their calves make fine beef more economically than other dairy breeds. Dairy Shorthorns are the best breed to range hills and stubble for roughage where help is scarce. My young bulls can increase the production of your herd when their calves come to milking age. Write for details of a few bulls I have to sell.

W. T. ROBERTS, Prop. **Willow Brook Farm** PENN GROVE, CAL.

Shorthorn Bulls

Four Head—Two to three years old.
Six Head—Ten to twelve months old.

BRIGHTON FARM HERDS.

H. L. & E. H. MURPHY PERKINS, CAL.

Sheep.

Many sheepmen in the northeastern part of the State are not breeding their ewes this season, figuring that in the present scarcity of feed they stand a better chance of carrying their unbred ewes through on the desert.

Sheep growing in Stanislaus county is to be given an impetus by the County Farm Bureau through a campaign soon to be launched to put at least one sheep on every ranch and to pool the crop of wool clipped the present season for shipment to Portland under consignment to the Government.

Chas. A. Kimble, who has built up a large business in breeding of fine sheep, reports the following shipments of Rambouillet bucks made recently: One car to Galitain Sheep Co. at Red Bluff, two cars to the Donnel Sheep Co. at Rawlins, Wyo., four cars to Pyramid Land and Stock Co. at Reno, Nev., and one car to D. L. Waltz at Stockton.

Professor Robert F. Miller, sheep and wool specialist of the University Farm, Davis, has been appointed as California's representative in the wool division of the War Industries Board by the chief of the wool division, Lewis Penwell, Washington, D. C., and for information regarding the disposal of the present wool clip growers should communicate with Professor Miller at Davis, Cal.

Livestock Miscellaneous.

Copies of the proposed rules by which livestock markets are to be operated since July 25, under the control of the Department of Agriculture, have been issued. No charge is made for licenses, which must be secured by all commission houses, order buyers and traders.

Manager Joseph E. Painter of the California International Livestock Show is leaving for Denver Saturday to meet D. Schilling of Chicago for the purpose of discussing with him matters of detail regarding the Horse Show and the possibilities of securing some Eastern stables for the exhibition. Mr. Painter will bring his family with him on his return from Denver. Exhibitors are already announcing their intention of exhibiting at San Francisco. Otto V. Battles of Congdon & Battles, Yakima, Wash., writes assuring Mr. Painter that they will exhibit their celebrated Aberdeen-Angus show herd at San Francisco, then at Portland, and then the herd will be shipped to the International Livestock Exhibition at Chicago. Congdon & Battles are not only the largest breeders of Aberdeen-Angus cattle in the United States, but maintain the best show herd, which was undefeated anywhere in the 1917 shows.

Fitting and Showing Cattle

(Continued from page 76.)

loose. Give the animals plenty of bedding and after watering and feeding lightly let them rest until the following morning.

PREPARATIONS FOR SHOW DAY.

Go to bed early yourself, too, for you will have a great deal to do before show day. First of all, each animal must be washed. Of course, no grooming was done on the road, so the cattle will be badly gummed up with sweat and stained from the shipment. The washing should be done as early as possible, for it removes the oil from the pores of the hide and from the hair, and considerable brushing and rubbing will be required to bring out more oil so that the hide will show quality and the hair have a silky appearance.

After this first washing, brushing and rubbing usually suffices until show day, except that the tails should be washed out each morning, and any stains gotten during the night should be washed off. But watch the herd carefully and try to remove all manure as soon as it is dropped. In many cases someone is on watch all night to keep the bedding under the animals and the manure away, and the time is most profitably spent. The animals should be taken out each day for a little exercise, and if possible taken into the arena to stand and pose, so that when they go in to show they will be accustomed to the surroundings.

PUTTING ON THE FINISHING TOUCHES.

One of the final touches in fitting is the polishing of the horns. This should be done the night before the judging, as the effect will be more pronounced and the animals will have no chance of disfiguring or marring themselves before appearing in the ring. First scrape off the outside scale with a sharp knife. Be careful not to cut too deeply, as the shell is quite thin. Next round off all sharp edges with a wood rasp. Then scrape with glass to remove the rasp marks. Follow this with sandpaper to make the horn smooth, and finish up with emery paper. To polish, use three strips of cotton flannel. With the first strip use pumice stone and sweet oil, and see-saw the horn for about four minutes. With the second strip repeat the operation, using oil alone. Use the third strip dry, and continue the rubbing until a "piano finish" comes.

The night before the show the tail should be washed out and braided, making about a dozen small, tight braids, starting at the top of the switch and braiding around until the switch is finished.

The grain feed should be light the morning and night before showing, adding an extra amount of salt to each feed, so that when the animals are watered just before going into the show ring they will drink an extra amount. Milk them out clean the night before showing, and not again until after showing.

SHOW DAY PROGRAM.

Show day will be a very busy one, and you should get started early. Exercise the animals earlier than usual; clean the barns more quickly; groom more rapidly. Feed carefully, and if possible by a little change in feed get the animals to eat more, so as to improve the appearance of both width and depth.

Just before the animals go into the ring, give them a final and very careful grooming over. Comb out the tails, opening the braids with your fingers, running them through the hair, taking apart any tangles, and then use a comb carefully so as not to pull out any hairs.

RING CRAFT.

It is now up to you to see that the strong points of the animal will be prominent and that the weaker ones will be covered up as much as possible. If the animal has a sway back, the defect will show less when the forefeet and hindfeet are nearer together. If the back is inclined to arch too much, a sharp touch over the raised part will cause it to be dropped.

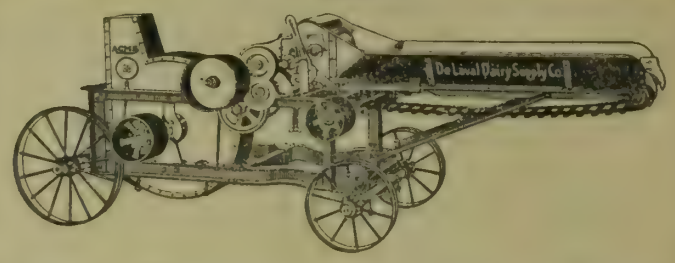
When the judge examines the hide on one side move the animal's head in that direction. This tends to loosen the skin so that it will not be tight over the ribs, and you know mellowness of hide is one of the desirable qualities sought.

Don't forget the feet, and watch the udder, too, to see that it is showing to the best possible advantage. Keep the animal up at all times, even when the judge is at the other end of the line.

Go into the show ring determined to win, and here's hoping that you do. But if you are defeated, take your medicine like a true sportsman. There is only one first prize, and the animal that gets it is the best entry in the opinion of the judge. If you can't agree with him, at least be man enough to abide by his decision without quibbling.

So, if you are defeated, take it in the right spirit. Find out in what respects your animals failed to please the judge and go home determined to overcome these faults. Say to yourself, "I'm coming back next year, and I'm surely going to win." And you will if you work with your herd in that attitude throughout the year.

ACME



Feed Cutter and Silo Filler

Steel Frame Construction
Lawn Mower Type Knives

THE knives of the Acme produce a clean cut silage of even lengths that packs well in the silo. The ALL STEEL FRAME adds strength and durability to the machine: Prevents wear and vibration by holding all bearings in perfect alignment. Can't warp or sag. Strongly riveted—no bolts to jar loose.

Put the Best Blood in Your Herd

The cow making the highest official yearly butter record for 1917-1918, as shown by the report just issued by the Holstein-Friesian Association of America (and it is the world's official record for one year) is Aaggie Acme of Riverside 2nd. She is out of the same dam as our senior herd sire.

Prince Riverside Walker

The junior three year old heifer making the highest yearly butter record for 1917-1918 as shown by the report just issued by the Holstein-Friesian Association of America, is Miss Valley Mead De Kol Walker. She is by the same sire as our senior herd sire, PRINCE RIVERSIDE WALKER.

Buy your herd sire in the blood lines that are doing things TODAY and that will increase in value in the records they are bound to make in the TOMORROW. We have just a few good bull calves by PRINCE RIVERSIDE WALKER, out of splendid dams. They move young at our prices.

OUR ENTIRE HERD IS TUBERCULIN TESTED

Fall Fair Entry Questions

To the Editor: What are the entry fees, the closing dates for entry, and the base dates from which the ages of animals are calculated for entry at the State Fair?—Subscriber.

Address Secretary State Agricultural Society, Sacramento, for premium list, which gives this information. Applications for entry must be accompanied by $5 to apply toward entry fees, or rental, and the cost of exhibitor's ticket. Entry fees are as follows: Horses and cattle per entry in each section, $1; sheep, goats, and swine per head, 50c (with minimum charge of $1 per pen used); dairy products per entry, $1; poultry and pet stock, $1 for each $5 worth of premiums or fraction thereof offered. Closing dates are August 1 for livestock, except actual names of get of sire and produce of dam; August 26 for poultry, and August 30 for dairy products. The base date for computing ages of horses, asses, and mules is January 1; for beef cattle September 1 and January 1; for dairy cattle August 1 and February 1; for sheep and goats January 1; for swine September 1 and March 1.

LIBERTY FAIR STOCK ENTRIES.

Entry fees for the livestock show to be held at the California Liberty Fair in Los Angeles, October 20 to 26, will be $1 per head for horses and cattle, including nurse cows, except in car lots. Box stalls for horses will cost $3 each. Hogs, sheep, and goats will cost 50c per head, with $1 per pen minimum. Applications for entry, accompanied by entry fees, must be sent to the secretary on or before September 25, except for car lots and for horse and mule teams, which may be entered as late as October 5. Free transportation of exhibits is accorded by the railroads from all points in California and Arizona and some other territory. Base dates for calculating ages for classification are the same as those of the State Fair. All animals in competition except get of sire and produce of dam must be owned by exhibitor at time of entry and during the fair. Animals in car lots must have been the property of exhibitor at least 30 days prior to the opening of the show. The announcement and premium list may be had on application to the Secretary, California Liberty Fair, Los Angeles.

STRONG EARLY SHEEP DEMAND.

To the Editor: The demand for Shropshire rams has been exceptionally early and very good, demonstrating the fact that the opinions of many sheep raisers has been unchanged by continuous boosting of many farm journals of breeds as yet untested and therefore very expensive for breeders and country alike at this time when the experimental stage should give way to the practical and sure results. Recent sales from the Bloom flock of Shropshire rams are as follows: To Mr. Robinson of Rio Vista, who two years ago bought from this same flock and thought so well of results as to "come again," when he bought more ewes. He weighed one yearling ram to satisfy his curiosity and found it tipped the scales at 265 pounds. One carload to the Maurer Cattle Co. of Los Angeles and another sale to Robert Jardine of Glenn, who loaded a trailer attached to his roadster.—J. R. Bloom, Dixon.

THE WORLD'S WOOL.

From a carefully prepared article by G. C. Boroughs, Sunset Ranch, Napa, published in an Eastern magazine, we extract the following statement: The number of sheep in the principal counties of the world, according to the latest statistics available, was 600,000,000, from which was obtained 2,985,000,000 pounds of raw wool, yielding 1,027,000,000 pounds of wool cloth ready to be made into clothing. Put into tabulated form, it reads as follows:

People to be clothed	1,500,000,000
Number of sheep	600,000,000
Wool (pounds)	2,985,000,000
Woolen cloth (pounds)	1,027,000,000

KIMBLE RAMBOUILLETS

These sheep are purebred, large and smooth, with heavy fleece of fine, long, staple, white wool. Yearling rams and ewes. Individuals or carload lots.
Prices reasonable. Correspondence solicited.

Importers and Breeders of
Red Polled Cattle, Shropshire Sheep, American Merino and Rambouillet Sheep

SHROPSHIRES, RAMBOUILLETS and AMERICAN MERINOS

We have for sale this season 350 HEAD OF PUREBRED SHROPSHIRE RAMS, yearlings and two-year-olds. They are sired by sons of the famous Senator Bibby, one of the best Shropshires ever imported into the United States. He is now nine years of age and is still hale and hearty.

WE HAVE 500 AMERICAN MERINOS AND RAMBOUILLETS. Our Rambouillets are all from prize winning rams at the P. P. I. E. Strong, hardy, range raised stock. We have a fine lot of yearling American Merinos of our own breed.

ALL STOCK SOLD SINGLY OR IN CARLOAD LOTS.

Also a fine lot of young Red Polled bulls and heifers sired by Teddy's Best of Jean Duluth Farms.

Money in Wool MERINO SHEEP
Money in Lambs SHROPSHIRE SHEEP

Purebred Merino and purebred Shropshire sheep have been bred on our ranch since my father established the flocks in the early days with the best foundation stock. There is money for you in raising sheep of right breeding in your orchard, on your grain ranch, in your vineyard, in your potato and bean fields. On the range my stock will improve your flocks for whichever purpose you want them. Drop me a card, telling what you are interested in.

I have young service Shorthorn bulls also for sale.

Hillcrest Stock Farm
T. S. GLIDE, Prop. DAVIS, CAL.

Shropshire Rams
IMPROVE YOUR LAMBS

The G. C. Wheeler sheep ranch of Reno, Nevada, has sold all but 2000 of their purebred Shropshires, which Wheeler Bros. have brought to the old Taylor Ranch, near Santa Rosa, Cal. These are vigorous, hardy animals, all descended from registered rams and from the original importation made from England by Governor Sparks of Nevada.

Their new location is being fitted as a breeding and show ranch. Come and see them or drop a card telling what you want.

Ewes and yearling and two-year-old rams for sale.

VETERINARY QUERIES

[Answered by Dr. Edward J. Creely.]

Subscribers wishing an immediate reply should send money order for $1. No charge for questions answered through this department. Name and address of subscriber must accompany each query

STRINGY MILK.

To the Editor: Will you kindly inform me through your valuable paper, of which I am a subscriber, what the matter could be with one of my cows? It is a Jersey, and ever since I bought her, about a year ago, she gives stringy milk from one teat. She is a rather old cow, but gives splendid milk. Can you inform me what to do for her and is the milk good to use? We are milking her every other day now. She has not been bred since we got her—that is over a year. Would it help or overcome the trouble if she were bred and then came in fresh? The dairymen here say it is a case of garget.—Mrs. W. U. B., Suisun.

Stringy milk is due to a germ infection, but need not necessarily be serious. We suggest that you breed the cow at once, because milking her every other day only certainly does not pay for the feed she eats, and to keep a cow that does not pay is a bad policy, especially in these times, when food and feed conservation are almost the main topics of the day. It is best to breed a cow two to three months after she has become fresh.

The milk from the infected quarter is not dangerous, but should not be used or mixed with the other milk. All milking utensils should be scalded and dried in the open air.

You may apply a mild ammonia liniment to the affected quarter, but the trouble usually disappears when the cow is in the dry period, and when she freshens again the milk should be watched for a few days.

PIGS COUGH BADLY.

To the Editor: What causes my pigs to cough? I have lost one already. It coughed for some time, with just a light cough which kept getting harder until it would spit up blood.—W. J. M.

Let the pigs sleep in well-ventilated sheds where overheating and piling up will be impossible. The food should be of a light and sloppy character. A milk cathartic of calomel and oil should be given for constipation, the calomel in 3 to 10 grain doses, according to age, followed by the castor oil.

COLT HAS WARTS.

To the Editor: We have a ten-months-old colt that has so many warts around her mouth and nose that no skin can be seen. What will remove them?—Mrs. M. J., Paso Robles.

Give one tablespoonful Fowler's solution in the drinking water morning and evening.

Lovejoy Farm, California

[Written for Pacific Rural Press.]

A. J. Lovejoy is likely to come to California with his world famous Berkshire herd. Mr. Lovejoy is the breeder of the world record priced Berkshire boar and the author of a treatise on fancy pork making that is accepted as final authority wherever hogs are grown. When he was in California last year to attend the Western Berkshire Congress, W. F. Sandercock of the Sandercock Land Co. took him over the fairyland of the Natomas project north of Sacramento and offered him a farm free of charge if he would live on it, call it Lovejoy Farm, and breed his hogs there only for a period of years. Mr. Lovejoy, though well along in years, was enthused with California and there is reason to believe that he and his son will one day, with their herd, belong to this State.

MAKING HOG BONE.

Weak legs or pasterns are a serious fault in hogs. Ben De Sart, herdsman for the Maplewoode Ranch, Calistoga, does not propose to let anything like that happen. He feeds ground green bone and finds that it digests well, with no signs of it in the manure. He gives the hogs lime water in their slop. To prepare this he adds quicklime to water as long as no sediment is left. Then about a pint of this lime water is used per barrel of slop or water. Chunks of air-slaked lime are about the yard for hogs to eat at their pleasure. Charcoal is kept before them to sweeten their stomachs; and a mixture of wood ashes, salt and ground tobacco stems makes a good conditioner. All of these materials are of mineral nature and ought to help make bone as well as keep the hogs in good health.

Chas. Gatewood & Son of Fresno have bought W. T. Dice's interest in King's Big Bone Leader, ten head of weanling sow pigs from Mr. Dice sired by Big Knox Boy and Lad o' Promise. From H. W. Ekholm, Escalon, Blue Valley Beauty 9th, and a mature sow, seven fall gilts, and three spring gilts sired by Blue Valley Tecumseh. From H. I. Marsh, Modesto, five spring gilts sired by Model Major.

YOU can save from $6.00 to $12.00 in fattening each hog by feeding Globe A-1 Hog feed (10% dry buttermilk) and you can save from four to six weeks time. This is not laboratory theory, but actual results of feeding tests.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

THE MOLT FURTHER CONSIDERED.

Last week we talked about the early stages of the molt and the various foods that are aids in the process of loosening up and causing to drop the old feathers which must make room for the new. Practically there are three stages of the molt, and if a person watches and feeds right for each stage there will be left but a short period of rest, similar to that taken by hens after laying out a long batch of eggs before commencing another batch.

THE DURATION OF THE MOLT.

The rest depends partly on the age of the hens and partly on feed. If the hens are more than two years old, they will take a little longer than yearlings, and for every year added to the age of the hens it is safe to add one week to the period of rest. If fed right, yearling hens soon respond to the feed and begin to lay, after completing the new dress, while poorly fed hens take a much longer rest than nature demands. So the duration of the molting and resting period depends largely on the feeder and caretaker. During the first stages some oily foods, in addition to the full ration, assist the feathers in dropping; during the latter part of the molt the feed must be narrowed down to the feeds containing the most mineral, both in vegetable and animal, according to bulk and weight.

FEEDS THAT CONTAIN MINERAL ELEMENTS NEEDED.

All grains contain mineral, as do all green feeds and animal foods, but what we want is to serve feeds that have enough mineral without so much other things that demand energy to digest. In green feeds the one green feed above all others that excels in free mineral is alfalfa, and if green alfalfa can be had and cut up in short lengths it pays to induce the hens to eat more of it during the molt than they usually do. The moist mash comes in handy for that, in addition to dry mash. Feed a mash composed of the usual ingredients and add from 15 to 20 per cent of its bulk in short-cut green alfalfa. Moisten with sour milk, if possible, and you have a feed containing free mineral. Milk of any kind, even whey, contains a fair amount of mineral and is better than water.

BONE, GOOD AND BAD.

The safest animal food containing sufficient mineral to make it easy of digestion is bone. But so much bone nowadays is steamed and robbed by chemicals of every element of good in it that it is not worth the price asked for it. Bones that have been treated with naphtha or other solvents for removing the fat have a peculiar odor and are honeycombed with small holes. Do not buy bones that have these holes just like fine pin holes because there is very little nutriment left. Dried blood meal is rich in protein and mineral, is nearly all digestible, but hens do not like it, which is perhaps just as well, because when fed in quantity it causes a relaxed condition of the bowels that is hard to stop; but if fed in small quantities in the mash it is valuable in the molt. Linseed or flax meal in small quantities is also good and 2 per cent of these rich feeds is all a hen can digest to advantage. All feeds containing too much starch, or, as they are called, non-albuminous, have very little use in a molting hen's ration, because they make her work too hard to get what little food value they contain.

FEED MUST BE EASY OF DIGESTION.

Feed those things that are easy to digest and the organism can be building up a surplus for feathers, and it's safe to say that no mineral element will go to waste while the process of growing new feathers is going on. Ordinarily any excess of one element of food over and above what nature calls for in the organism goes to waste; but during the molt mineral, and yet more mineral, is called for because the composition of feathers is chiefly mineral.

CRATE-FATTENED POULTRY.

Most large city dealers do not want fattened broilers even at the same price per pound they pay for thin ones. The fattened stock is soft. Shrinkage is great. Many fattened birds die en route. Most of them arrive in a "weather-beaten" condition, from which it is hard to re-fatten them. There is great variation between many lots of farm-fattened poultry. The large dealers prefer growthy thin stock, which they put into their own specialized fattening plants in shape to fatten quickly and give them the benefit of increased value on the original carcasses also. The dealers can tell when the birds are in condition to look best after killing, and can thus display uniform stock that sells to best advantage.

POULTRY NOTES.

A. E. Balmer of Martinez reports that he sold $138 worth of turkey eggs for hatching all over California, Oregon and Nevada, and some in Arizona, between March 1 and May 20, through his ad in Pacific Rural Press. "Advertising pays," says he.

W. H. Stump of Bloomfield was in the poultry business heavy, but greatly reduced his stock of hens. He says he made a great mistake, for chickens are now paying better than any time formerly. Mr. Stump is an intensive farmer; says he raises something for everything and everything for somebody.

Does poultry pay? This question is answered by Mrs. H. I. Marsh of Modesto. She started the season January 1 with 250 hens and 15 turkey hens and has kept track of all the feed expenses, for she bought all their feed, and up to the 1st day of July she has netted $631 and still has the old stock.

W. G. Campbell made a good brooder of four 3x1x1½ boxes, some flannel and a three-gallon demijohn. One 1 ft. and one 1½ ft. sides were removed from each box. The boxes were placed corner to corner in the form of a square, with the open 1½ ft. side towards the ground and the 1 ft. open side towards the inside. One and one-half inch strips of flannel, hung from the top, reached almost to the floor in each box. The demijohn was filled with boiling water and wrapped in flannel and placed in the center of the square between the boxes and the whole covered with a blanket and some canvas. The water remained warm all the day following filling and a suitable temperature was attained by regulating the covering of the jug.

ZEROLENE

The Standard Oil for Motor Cars

The Popular Motor Oil

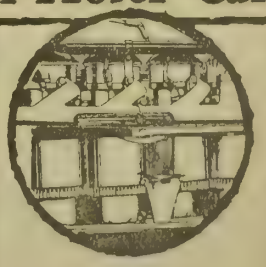
More ZEROLENE is used for automobiles on the Pacific Coast than all other oils combined.

Leading motor car distributors praise ZEROLENE, correctly refined from selected California asphalt-base crude, because it maintains its lubricating body at cylinder heat and gives perfect lubrication with less wear and less carbon deposit. Get our lubrication chart showing the correct consistency for your car.

At dealers everywhere and Standard Oil Service Stations

STANDARD OIL COMPANY

(California)



Engines are either water-cooled or air-cooled. This, the air-cooled type, like all *internal combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE fills these requirements perfectly. *because it is correctly refined from selected California asphalt-base crude.*

Mrs. Best's Letter.

COMMENTING ON THE FALL FASHIONS.

COTTON GOODS POPULAR.

My Dear Friends: It has been a good many years since cotton wash goods, ginghams especially, have been so popular as they are now. Plaids, especially, are in vogue, and when the dress is prettily and becomingly made it may be worn practically anywhere. The laundering is quite a problem, for no colors are now guaranteed, and it is only by careful washing in lukewarm water, drying in the shade and ironing with an iron not too hot, that you can hope to keep the original colors. Sleeveless jackets of solid color, harmonizing with the plaid, are seen on the streets—the cut and style being similar to the sport coats and velvet coats so popular in the spring.

FALL DRESS STYLES.

The shop windows are showing fall garments already, although not many people are purchasing this early. But it is interesting to know what the changes will be that mark a this season's dress. These early models are nearly all of them in the long, scant lines, many of them in tunic effects, or long panels, front and back, styles that were very popular in the spring also. Satin dresses are much in evidence—a great many of them in black with scant tunics, bordered with heavy silk fringe. Blue serge seems just as popular as ever and is in many cases heavily embroidered in wool—not in bright colors, though. Gray and black seem the most used, and they may be either a soft wool or soutache in elaborate designs.

SIMPLE COLLARS.

The most noticeable feature about the new dresses is the simplicity of the neck. Most of them are rounder than formerly and many of them are collarless. If there is a collar, it is a very simple affair of Georgette crepe or satin, the same color as the dress. The touch of white at the throat, to which we have all been accustomed, has disappeared for the time being.

Blouses show the same simple neck finish, and even if there is a large collar it is not worn on the outside of the suit coat as much as formerly. If one desires the white or flesh next the face, the more popular way to accomplish it is by the use of the popular filet lace collars.

TAILORED SUITS.

The tailor suits shown now are very plain in style and somber in coloring. The oxford gray bound in black braid is shown, as well as the dark blue for street wear. There seems rather a somber note in most of the new fall garments, perhaps more noticeable just now, for so many people are wearing the semi-sports clothes, and those are always gay colored.

FALL HATS.

Some of the shops are showing very attractive feather turbans in both light and dark colored feathers. These hats are very small, with no brim at all, and fit the head very snugly. Fall hats are shown, in combinations of velvet and crepe or cloth and wool braids. These hats might almost be called mid-season hats, for it is really too early to select a winter hat.

ROSABELLA BEST.

THE HOME CIRCLE

PICKLING RECIPES.

SAUERKRAUT.

Shred the cabbage into narrow strips and weigh; for each ten pounds use one-half pound of salt. Mix thoroughly, place in a stoneware crock or wooden container with wooden head or plate to cover. Weight down, being careful to not use limestone as a weight. Keep in a warm place and fermentation will soon start. After about three weeks, the kraut will have the desired flavor. If a scum appears, remove it, as it may spoil the kraut. When the fermentation ceases, the kraut may be sealed with paraffine. A better method of preserving is to heat it to boiling and pack boiling hot in jars. Sterilize for half an hour in a wash boiler sterilizer and seal. It will then keep indefinitely.

CUCUMBER DILL PICKLES.

Wash the cucumbers. Prepare a crock, keg, barrel or wooden bucket. Place a layer of dill plant in the bottom of the container and a small quantity of mixed "dill pickle spices." On these place two or three layers of small cucumbers. Add another layer of dill plant and spices, then cucumbers as before. Continue until the receptacle is nearly full. Cover with layer of beet or grape leaves at least an inch. Cover with brine made of one pound of salt, ten quarts of water and two-thirds of a quart of vinegar. Allow to stand until fermentation ceases (three to four weeks). Seal with paraffine. If large barrels are used, the barrels may be headed up after filling with the cucumbers and spices and then filled with a brine. Leave the bunghole open. When fermentation is over, fill the barrel with brine and close the bunghole. Dill pickles may be kept indefinitely by heating to boiling in the brine in which they were made and sealing boiling hot in glass jars.

CUCUMBER PICKLES IN VINEGAR.

Use small cucumbers, place in brine made with two pounds of salt to a gallon of water. Keep submerged for about four weeks. If the pickles become soft, add more salt. After four weeks, remove the cucumbers and heat in a large amount of water to the simmering point for 20 minutes. Discard this water; cover with fresh water, heat to simmering point, remove from the stove and let stand two hours to soak out excess salt. If the pickles tend to be soft or flabby, add a tablespoon of alum per gallon of water. This will harden them and is not injurious to health. Rinse in cold water. Drain. Store in strong cider vinegar until ready for use. If the pickles soften, place them in fresh vinegar. Pack in wide-mouthed corked bottles or jars with glass tops.

A REMEDY FOR FLEAS.

If you are bothered with fleas, put dry sulphur along the edge of the carpet and in the crevices of the mop boards. Fleas lay their eggs and the young hatch in the cracks of the floor and the crevices along mop boards, also under matting, rugs and carpets. Before you lay your carpet or matting, wipe up the floor with water in which a big handful of sulphur has been stirred. Until you have got rid of the fleas it is a good plan to add sulphur to all the water used on the floors.

After carpets have been swept and rugs cleaned, sprinkle a little sulphur over them, then brush it in with a stiff broom.

Fleas in barns and sheds will torment animals and are carried into the house on the clothing. Clean up the barn floors, shed floors and yards. Sprinkle the floors in the barn and hog sheds liberally with a dry mixture of sulphur and wood ashes. (Be sure the wood ashes have been away from the heat for at least a week.) Then dampen the floors. Repeat every few days for as long as your patience or the fleas hold out. The rainy season is the easiest time to get rid of fleas.—L. D., Lockeford, Cal.

PECTIN TEST.

The old rule of cup for cup of sugar and fruit juice in jelly making has meant that much more sugar is used than is necessary. Fruit jelly is made possible by a substance known as pectin and the amount of pectin in cooked fruit juice determines the amount of sugar necessary.

Add one or two tablespoons of 95 per cent grain or wood alcohol to an equal amount of the cooled fruit juice in a glass. Shake gently and let stand for 30 minutes. Pour slowly from the glass and observe whether the pectin has formed in a single lump or in smaller particles. If the pectin forms in a single lump measure for measure of sugar must be used. If it is in several smaller lumps three measures of sugar will answer for four measures of juice. If no lumps form, but small particles are apparent, one measure of sugar should be used to two measures of juice. If no pectin is observed the juice will not make jelly alone, but must be combined with some other fruit juice rich in pectin.

CANNING PIMENTOS AND SWEET PEPPERS.

Select ripe, well colored pimentos or sweet peppers. To peel, place them in a very hot oven for a short time until the skin can easily be slipped off with the fingers. They can also be peeled after dipping in hot cottonseed oil for a short time. Cool, remove the skins, and cut out stems and seed cores. Pack well in cans or jars. Fill with boiling hot water. Seal cans. Place rubbers and caps loosely on jars. Sterilize sixty minutes at 212 degrees F. in a washboiler sterilizer. Pressure sterilization and lemon juice are not necessary.

CANNING SPINACH.

Clean thoroughly as for table use. Place in wire basket or cheese cloth and immerse in boiling water ten minutes. Chill in cold water. Pack in jars or cans. Fill with boiling hot brine of two ounces of salt (two tablespoons) and six ounces (twelve tablespoons) of lemon juice or the same amount of strong vinegar per gallon of water. Seal cans. Place caps and rubbers on loosely. Sterilize in boiling water for sixty minutes.

BREAKFAST MUSH.

A healthful, tasty conservation breakfast mush may be made of ½ cornmeal, ½ cleaned bran, salt. Cook in double boiler. Serve with milk, cream or butter. The bran can be ground finer if desired.—Subscriber.

You Are the Hope of the World

Down toward the deep blue water, marching to throb of drum.
From city streets and country lane the lines of khaki come;
The rumbling guns, the sturdy tread, are full of grim appeal,
While rays of western sunshine flash back from burnished steel.
With eager eyes and cheeks aflame, the serried ranks advance.
And your dear lad and my dear lad are on their way to France.

Before them, through a mist of years, in soldier buff or blue,
Brave comrades from a thousand fields watch now in proud review,
The same old flag, the same old faith, the freedom of the world.
Spells duty in those flapping folds above long ranks unfurled.
Strong are the hearts that bear along democracys advance,
As your dear lad and my dear lad go on their way to France.

The word rings out; a million feet tramp forward on the road.
Along that path of sacrifice o'er which their fathers strode.
With eager eyes and cheeks aflame, with cheers on smiling lips,
These fighting men of '17 move onward to their ships.
Nor even love may hold them back, or halt that stern advance,
As your dear lad and my dear lad go on their way to France.

—Randall Parrish.

A Possible Sign.

"Any insanity in your family?" asked the insurance doctor of Mrs. Suffragist.

"Well, no; only my husband, who imagines he is head of the house."—Indianapolis News.

Good Health.

[By H. E. Pastor, M. D.]

Importance of Proper Breathing.

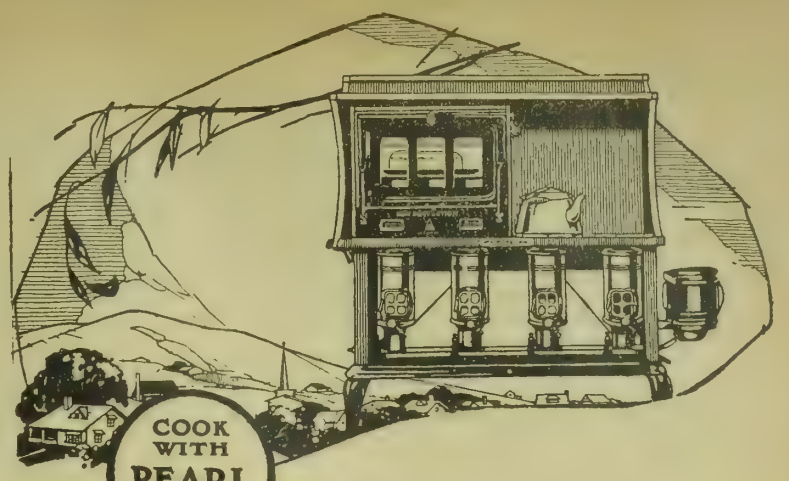
Most ill-health comes from ignorance of and indifference to hygienic laws, or to perverted tastes and perverted desires. Health is natural. Normal breathing is automatic. A plentiful supply of fresh, uncontaminated air is of more importance to the human economy than either food or drink. We can survive being deprived of the latter essentials for hours, or even days; but without air we can live a few minutes only. Few persons appreciate its value to the full. The air that most adults breathe is deficient in quantity as well as defective in quality. We constrict the abdominal walls with improper clothing so that the diaphragm—the bellows of the body that draws in the good air and expels the bad—cannot act properly; or we bend forward when in a sitting posture so that the lungs are cramped and not allowed to fully expand; or we let the air passages of the nostrils get clogged up as a result of catarrhal conditions, and become mouth-breathers. Air furnishes half the life of the body. The whole breathing apparatus should be kept in good working order and made to do its full duty. Lack of sufficient oxygen, the life-giving principle of the air, makes the blood poor and the circulation sluggish, throws extra work on the kidneys and interferes with the proper elimination of the different poisons generated in the body through the normal breaking down of its tissues, and makes conditions favorable for the invasion of tuberculosis and other insidious diseases. If your breathing is shallow, irregular, nervous or hurried, devote a few moments each day to breathing exercises. Draw in full breaths slowly, expanding the lung cavity to its full capacity, and then gradually expel the drawn-in air. Repeat this for some minutes. In time a deep and rhythmic respiration will be established and a new lease of more healthful life secured.

Eradication of Dandruff.

It is hard to find a specific for this very common annoyance, and many remedies are recommended. The drug resorcin is an excellent application for this purpose, is a good hair tonic, and tends to preserve the hair's natural color. A good combination is this:

Resorcin	2 drams
Castor oil	1 dram
Cologne	3 ounces
Alcohol	9 ounces

Mixed together, these ingredients make a solution agreeable in odor and color, and should be applied to the scalp once or twice a week and well rubbed in with the finger-tips.



COOK WITH PEARL OIL

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

Cooking Comfort

On hot summer days you want your kitchen cool and comfortable to cook in. A New Perfection Oil Cook Stove makes it so.

No smoke or odor; no dust or dirt, and all-the-year-round service.

None of the bother of coal or wood. Lights at the touch of a match and heats in a jiffy. Economical.

And you have all the convenience of gas.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

1141 Van Ness Avenue San Francisco

Agricultural Summary

A Word to Pear Growers.

The California Pear Growers' Association has disposed of all cannery pears in sight in the principal districts, Sacramento, Contra Costa, Santa Clara, at the present time at $70 per ton. Arrangements are being made for the tonnage in Sonoma and Napa counties and contracts will probably be signed in a few days. Canners are asking a small differential on Sonoma and Napa county pears. Should there come a lull in Eastern shipments or should any growers be short of packers, the association may have a small additional tonnage to dispose of, and canners stand ready to take any that are of good quality. In Alameda county many non-irrigated orchards, owing to drought, are producing undersized pears, and these, of course, will not bring full price. Driers are buying windfall pears at $15 f. o. b. wharf San Francisco. Canners are buying selected windfalls at $30, and good No. 2 pears at $35 per ton. Frank Sweet, manager of the Pear Growers' Association, has sent word to all growers that it is folly to ship trashy windfalls, full of bruises, worms and rot, to San Francisco.

Canned Fruit Prices Named.

This week the California Packing Corporation announced its schedule of prices on the canned fruit pack of 1918. The new prices denote a considerable advance over those of last year, due, it is claimed, to the higher cost of labor and materials. These prices apply to orders already booked only. The disposition of future orders will depend on what remains after filling the requirements of the Government, which is taking large quantities of the best grades. Prices follow:

	No. 2½ Extra Stand	No. 10 Extra Stand
Apples	$1.90	$5.75
Apricots	2.25	6.75
Apricots, peeled	2.50	7.25
Apricots, sliced	2.50	....
Blackberries	...	9.25
Cherries, Royal Anne	3.50	11.00
Cherries, black	3.25	10.00
Cherries, white	3.50	11.00
Grapes, Muscat	1.75	5.00
Loganberries	...	9.50
Peaches, yellow free	2.25	7.00
Peaches, yellow cling	2.50	7.75
Peaches, yellow cling sliced	2.50	7.75
Peaches, white cling	2.50	7.75
Peaches white cling sliced	2.50	7.75
Pears, Bartlett	2.75	8.50
Plums, egg	2.25	6.25
Plums, green gage	2.25	6.25
Plums, gold drop	2.25	6.25
Plums, red	2.25	6.25

Barley Keeps the Market Guessing.

The future of the barley market is still problematical. There is little trading being done at the moment and there continues to be a shortage of shipping to meet export requirements of California barley and other grains. What few sales are being made, however, indicate a firm market. Choice heavy barley is in strong demand for milling use and hovers around the $2.65 figure. Lighter feed grades sell around $2.50@2.55. The Eastern trade has picked up and it is not unreasonable to expect that barley will hold firm in sympathy with wheat.

Prices of Hides Reduced.

Hide prices to become effective August 1 and understood to represent a reduction of about 10 per cent have been agreed upon by the price-fixing committee of the War Industries Board and the industry. They provide for an average reduction of from 7c to 8c per pound from the old prices.

Packer hides range from 24c to 30c a pound, according to the weight of the steer, and country hides from 21c to 22c. All country hides are to be bought and sold on a selected basis.

Sugar Beets.

The U. S. Food Administration for California has announced that if the war continues for another year the price of sugar beets will be higher and that if it does not the price will be lower. Two forms of contract are being offered growers. One sets a definite minimum, the other provides for a higher price, if there is one next year, but fails to set a minimum.

THE MARKET REPORTS

Figures Given are Independent and Reliable. Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, July 24, 1918.

WHEAT.

The following has been issued by the cereal division of the United States Food Administration: The value of wheat of various grades and varieties depends upon three factors: First, the relative distance from the consuming markets; second, the variety of the wheat and its relative value for flour production; third, the grade of the wheat as to quality and impurities within the various varieties.

In order to avoid "red tape," the President authorized the creation of the United States Food Administration Grain Corporation to carry out the financial details of buying and selling wheat and various cereal commodities. Therefore contracts and payments are made in the name of the United States Food Administration Grain Corporation, which operates without profit, charging such differentials as will cover risks, storage, and insurance.

The following are the fair price bases and wheat classes and grades on which the Food Administration Grain Corporation will buy wheat at the points named:

1. The wheat grades are those adopted by the United States Department of Agriculture under the Grain Standards Act.

2. The Food Administration "fair prices" are named below for "basic" wheats, and the market relations fixed as follows:

New York	$2.39½
Minneapolis	2.21½
Chicago	2.26
Tacoma, Seattle, Portland	2.20
San Francisco, Los Angeles	2.20

Basic Wheats.—No. 1 Northern Spring, No. 1 Hard Winter, No. 1 Red Winter, No. 1 Durum, No. 1 Hard White.

Intermountain basis f. o. b. outgoing car $2. The "premium" wheats are as follows:

	Premium.
No. 1 dark hard winter	$0.02
No. 1 dark northern spring	.02
No. 1 amber Durum	.02

The "discount" wheats are as follows:

	Discount.
No. 1 yellow hard winter	$0.02
No. 1 red spring	.05
No. 1 red Walla	.07
No. 1 red Durum	.07
No. 1 soft white	.02
No. 1 white club	.04

Discounts for other grades than No. 1: No. 2 wheat, 3 cents under No. 1; No. 3 wheat, 7 cents under No. 1. Grade below No. 3 will be dealt in on sample on merit.

Details of Buying Plan.

The Food Administration Grain Corporation will buy on the above fair-price bases at the principal primary markets as named. It will buy warehouse receipts in approved elevators at the principal primary markets as named above. In the intermountain territory, where there are no public storage facilities available, an adjustment will be made to make effective the $2 minimum for the No. 1 grade f. o. b. outgoing car, available for transportation to a public terminal elevator. The intermountain region comprises southern Idaho, western Montana, western Wyoming, Nevada, Utah, western Colorado, New Mexico, and Arizona. Further details can be obtained at grain corporation offices.

BARLEY.

There is little business being done in barley.

Choice feed, per ctl.............$2.40@2.50

OATS.

There is little doing in oats, but the market is strong and a higher price is being demanded for the best grade of feed.

White feed, per ctl.................Nominal
Red feed, per ctl.................$2.50@2.65

CORN.

Practically no corn offered on this market at the present time.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked	$4.20@4.25
Milo maize	3.95@4.05
Egyptian	4.05@4.10

HAY.

Hay receipts last week were 3234 tons, again an increase of about 50 per cent over the week immediately preceeding. This increase was expected, as baling operations have been in progress for some time and some of the farmers have completed their work of this kind. The market has been unable to take care of the increase and the arrivals have been placed with difficulty. Consumers are still holding back for concessions in price and have only been buying in a small way as absolutely needed.

Wheat No. 1	$22.00@24.00
do. No. 2	19.00@21.00
Choice tame oat	24.00@26.00
Wild oat, new	18.00@22.00
Barley, new	18.00@22.00
Alfalfa, first cutting	16.00@20.00
do, second cutting	22.00@24.00
Stock	17.00@19.00
Barley straw	50@80c

FEEDSTUFFS.

The market for feedstuffs is steady but the demand is not large. The only change in price noted this week is in rolled barley, which is quoted at $56.00@58.00.

New alfalfa meal, per ton	$33.00@34.00
Coconut cake or meal	44.50
Cracked corn	86.00@88.00
Middlings	Nominal
Oilcake	$75.00@76.00
Rolled barley	56.00@58.00
Rolled oats	56.00@58.00

POTATOES, ONIONS, ETC.

White potatoes showed continued strength. Yellow onions also were higher on demand for shipment out of the State. At the close onions developed weakness and made a slight recession from the highest prices of the week. High prices have been placed on new garlic. Those who handle garlic say that there is a serious loss in weight in keeping garlic and that this is especially excessive in the new product. Peas and beans are coming in in such quantities that quotations were cut materially.

Peas	6@8c
String beans, per lb	3@4c
Wax beans, per lb	4@5c
Carrots, per sack	50c@$1.00
Rhubarb, San Jose, per box	$1.00@1.25
do, Strawberry, per box	None
Summer squash	50@75c
Cucumbers (hothouse), per box	50@75c
do, Alameda, lugs	75c@$1.00
Eggplant, per box	$1.00@1.25
Lettuce, Sacramento, crate	75c@$1.00
Tomatoes, per crate—	
Merced	50@75c
Potatoes—	
Garnet Chile	1.75@2.00
Whites	2.25@2.60
Onions, Australian browns	Nominal
River Reds	$1.35@1.60
do, Yellows	1.85@2.10
Garlic, new	10@11c
Green corn, Alameda, per sack	$3.00@3.25

BEANS.

Bayos lost 25c and pinks gained 10c in the ordinary fluctuations of the market. Limas were very much stronger and sold at practically a dollar higher. There are only a few limas left on the market and several recent orders calling for mixed carloads of beans with limas in quantity caused a demand which could not be met at the former price.

Bayos, per ctl	$ 7.75@ 8.00
Blackeyes	7.00@ 7.25
Cranberry beans	11.50@12.00
Limas (south, recleaned)	12.50@12.75
Pinks	7.00@ 7.10
Red kidneys	11.50@12.00
Mexican reds	7.75@ 8.00
Tepary beans	8.50@ 9.00
Garbanzos	7.50@ 7.75

POULTRY.

Poultry receipts during the past week have been somewhat lighter and prices have been well maintained. Geese were more plentiful and sold at a lower price. This was about the only weak spot in the market.

Turkeys, live, per lb., young	28@30c
do. dressed	32@34c
Broilers, 1½ to 2 lbs	36c
do, 1¼ lbs	36@37c
do, ¾ to 1¼ lbs	38@40c
Fryers	36@40c
Hens, extra, per lb., colored	30@31c
do, Leghorn	26@28c
Smooth young roosters, per lb. (3 lbs. and over)	42@45c
Old roosters, colored, per lb	20@21c
Geese, young, per lb	22@23c
do, old, per lb	21c
Squabs, per lb	38@40c
Ducks	25@27c
do. old	23@24c
Belgian hares (live)	15@18c
do, dressed	19@22c

BUTTER.

Butter closed at the same quotation as last week for extra, although it sold a cent higher during the week. Prime firsts and firsts were unchanged during the week and the call on firsts was abandoned for the present. There has been a good deal of talk of profiteering and the Food Administration, through representatives, has given warning to the members of the exchange.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	53½	53½	52	52	52½	52½
Prime 1st	49	49	49	49	49	49
Firsts	47	47	47	47	47	Nom.

EGGS.

Extra eggs and pullet extras were strong throughout the week and both closed at the top. With extras again at 49c, it looks as if eggs may pass the 50c line before the end of next week.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	47½	47	47	48	49	49
Extra 1sts	Nom.		45½	45½	45½	45½
Firsts			Nominal			
Extra pullets	44½	44½	45	46	47	47
do, Firsts	44	44	44	44	44	44

CHEESE.

Cheese is strong, in sympathy with the high prices for butter. The dealers who last week refused to pay 27c for California flats came to this price at last.

Y. A.'s	Nominal
do, Firsts	Nominal
Fancy, California Flats, per lb	27c
First, California Flats	24½c
Oregon Triplets, fancy	26c
Oregon Y. A. Fancy	26c
C. S. Oregon triplets, fancy	26c
do, Oregon Y. A. fancy	25½c
Monterey cheese	21@23c

FRESH FRUITS.

Few cherries are left on the market and most of these are of inferior quality. Turlock cantaloupes now dominate the market. Prices are still high, but reductions are expected as soon as shipments become larger. Bartlett Pears are arriving in fair quantity. The berry market was irregular throughout the week.

Apples	$2.00@3.00
Apricots, per crate	1.00@1.25
Peaches, 4-box crate	.75@1.00
Figs, black, per box	.60@ .75
do, double layer	1.25
Strawberries, per chest	7.00@10.00
Blackberries, per chest	8.00@10.00
Raspberries, per chest	7.50@9.00
Loganberries, per chest	6.00@7.00
Currants, per drawer	Nominal
Gooseberries	5@8c
Cherries, black, flats	Nominal
do, do, white	Nominal
do, white, bulk	Nominal
Royal Anne	Nominal
Plums	$1.00@1.50
Cantaloupes, flats	$1.00@1.25
do, ponies,	$2.50@2.75
do, standard,	3.00@3.50
Watermelons, per lb	1¾@2¼c
Pears, box	75c@$1.00
do, Bartlett	$2.00@2.50
Grapes, Seedless	$2.00@2.50
do, Malaga	1.75@2.00
do, Fountainbleu	1.00@1.25

CITRUS FRUITS.

All grades of lemons were cheaper this week. Oranges showed no change from the previous week, but grapefruit showed strength on decreased receipts.

Oranges:	
Valencias, fancy	$6.50@7.00
Valencias, choice	5.50@6.25
Lemons:	
Fancy, per box	7.00@7.50
Choice	5.50@6.50
Standard	4.00@4.50
Lemonettes	5.50@6.00
Grapefruit, fancy, new	3.00@4.00

DRIED FRUITS.

The buyers of dried fruit during the past week have practically cleaned up the market and there is very little fruit now left in the hands of the growers. As a consequence the buyers bid up from a cent to a cent and a half higher for some of the lower grades of apricots. No price has yet been set on apples.

Prunes, graded, price to growers:	
gain in dip	11c
Prunes, graded prices to growers:	
20-30, inclusive, per lb	15c
31-41, inclusive, basis	10c

HONEY.

The honey market is strong, with an upward tendency. Some shipments of honey are arriving in this city, but is not finding a market. The competition of the honey exchange is beginning to tell, and this is one reason for the strength of the market.

White, extracted	21c
Light amber	18@20c
Amber	15@18c

RICE.

Nothing new in the rice situation

LOS ANGELES

Los Angeles, July 22, 1918.

BUTTER.

Receipts the past week were good, so was demand, and values advanced 2c. The arrivals for the week were 334,860 pounds against 306,140 pounds the same week last year. There was taken into cold storage during the week 15,457 pounds against 14,865 pounds the same week last year, making the cold storage holdings now 391,823 pounds, against 275,830 pounds the same time last year.

We quote:

California extra creamery	51c
do, prime first	50c
do, first	49c

Daily quotations—

1918	Tues.	Wed.	Thu.	Fri.	Sat.	Mon.
Extra	49	50	50	50	50	51
1917						
Extra	39	39	39½	39½	40	40

EGGS.

There was a drop in the receipts the past week while the demand held up well both from the home and outside trade. Receipts for the week by rail, 1612 cases, against 1372 cases the same week last year. The truck receipts continue about three times as heavy as the arrivals by rail, making the supply for the week 6448 cases against 5500 cases the same week last year. Under this showing the market held steady and firm up to Monday, when extras and pullets were advanced 1c under a brisk demand. There was withdrawn from cold storage during the week 85 cases, while the same week last year there was taken into cold storage 324 cases. The cold storage holdings now are 91,856 cases against 84,049 cases the same week last year. Extras are 10c higher, case count 9c, pullets 11c higher than a year ago.

Daily quotations:

1918	Tues.	Wed.	Thu.	Fri.	Sat.	Mon.
Extras	45	45	45	45	45	46
Case count	44	44	44	44	44	44
Pullets	42	43	43	43	43	44
1917						
Extra	33½	33	33½	33½	36	36
Case count	33½	33	33	33	35	35
Pullets	31	31	31	31	33	33

VEGETABLES.

There was a firmer tone to this market. Potatoes in good demand both from the consuming trade and for shipment. Onions, too, showed more strength. Cabbage scarce and again higher. String beans steady and in fair demand. Summer squash slow sale and lower. Corn and cucumbers slow sale and weak. Peppers in better supply, slow sale and lower. Tomatoes in good demand

and steady. Lima beans steady and in fair demand, so is eggplant.

We quote from growers—

Potatoes, new, per lug	60@65c
New potatoes, per cwt	$1.75@2.00
Garlic, per lb.	5@6c
Onions—Stockton Yellow Danvers, cwt.	$2.00
Cabbage, per 100 lbs.	$2.00@2.50
Bell peppers, per lb.	8@10c
Chile peppers, per lb.	6@8c
Peas, Northern, per lb.	10@12c
Summer squash, local, per lug	25@30c
String beans, per lb.	4@4½c
Tomatoes, home-grown, per lug	30@75c
Eggplant, Imperial Valley, per lb	4@5c
Cucumbers, home-grown, per lug	25@40c
Corn, per lug of 3 doz.	60@75c
Lima beans, per lb	6@7c

FRUITS.

Receipts and demand for all seasonable fruits continue good. Prices gradually worked lower on peaches and pears. Apricots and plums held up fairly well and demand very good. Red and White Astrachan apples also sold well. Figs slow. Crabapples dull and lower. Grapes steady under light offerings and fair demand.

We quote from growers:

Apricots, per lb.	3@4c
Figs, Black Spanish, 7-lb box	50@75c
do, White, 7-lb. box	50@60c
Peaches, freestone, per lug	$1.00@1.25
do, clings, per lug	1.25@1.50
Pears, per lb.	5@7c
Crabapples, per lug	90c@$1.00
Beauty plums, per lb.	6@7c
Prunes, Sonoma, per lb.	6@7c
Climax, per lb.	5@6c
Tragedy, per lb.	7@8c
Satsuma, lb.	5@6c
Burbank, lb.	4@4½c
Santa Rosa	5½@6c
Grapes—Imperial Valley Malagas, per lb.	7@8c
Apples, Red Astrachan, per lb	4@5c
do, White Astrachan, per lb	4@5c

BERRIES.

There was quite a dropping off in the receipts the past week and under the lighter offerings and fair demand prices ruled higher.

We quote from growers:

Strawberries—	
Fancy, per 30-basket crate	$2.25@2.50
Poor to choice, per 30-basket crate	1.75@2.00
Blackberries, 30-basket crate	2.50@2.75
Raspberries, 30-basket crate	2.00@2.25
Loganberries, 30-basket crate	2.50@2.75

MELONS.

More coming in and the tone of the market weaker. Demand good for choice melons. Home-grown cantaloupes now control the market. While meeting with a good demand, they are gradually working lower. Watermelons coming in more freely, slow sale and rather weak. Honeydew melons in fair demand and steady.

Cantaloupes—	
Tip Top, home-grown, standard crate	$2.00@2.25
do, do, pony crate	1.50&1.60
Shipped-in cantaloupes, small, pony crates	$1.25@1.35
Watermelons, per 100 lbs	1.50@1.75
Honeydew melons, special	2.00
do, do, flats	1.25

BEANS.

There is no change in this market since last week.

We quote from growers:

Limas, per cwt.	$10.50
Large white, per cwt.	12.50
Small white, per cwt.	12.50
Pink, per cwt.	7.50
Blackeyes, per cwt.	7.00
Tepary, per cwt.	8.50

HAY.

The market continues dull and weak. Receipts the past week were not heavy, but the demand was light for all kinds. Only such lots were taken as had to be had.

We quote f. o. b. Los Angeles—

Barley hay, per ton	$24.00@26.00
Oat hay, per ton	25.00@27.00
Alfalfa, northern, per ton	21.00@22.00
Alfalfa, local, per ton	22.00@24.00
Straw, per ton	9.00@10.00

COTTON.

With continued hot and dry weather in much of the cotton belt, values were bid up the early days of our review week by shorts covering. Prices slowly advanced up to last Friday, when under the report of showers in some sections of the cotton belt and a desire of a number of holders to even up the end of the week caused some loss of the early advance. Prices, however, were well maintained. More favorable war news and better Liverpool advices caused holders to offer very sparingly. The current week opened in New York rather quiet and tone of the market weaker. July closed at 28.65c and October 25.72c. Spot middling in New Orleans was in good demand and closed Monday sharply higher at 32.38c.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, Cal., July 22, 1918.

This past week produced one of the most wonderful markets in the history of the fruit business. All auctions were liberally supplied and fruit met with ready sale at prices greatly in excess of the previous week. It has been conservatively estimated that the average gross per car during the past week will run a little short of $1800.

Bartletts are arriving in good condition though some stock has arrived on the turn. However, the top of the market was realized on a few boxes at $7 and at no time did the auctions sell less than $4. It is true but a few thousand boxes of Bartletts have been sold east of Chicago during the past week, and at the prices realized it would be hardly safe to gauge the market for the balance of the season.

A decided improvement was noticed in plums. Shipments have been somewhat lighter than the week previous and the market reacted 25c to 50c per crate.

A decided falling off of Eastern peaches has caused an eager demand for California stock. Unfortunately the supply at this time is not heavy, but indications are that even under the heavy offerings of Elbertas which will shortly begin to move, we do not anticipate a decline.

Inquiries for future stock of Elbertas have been so active, quotations have recently been withdrawn from the market as shippers thought it inadvisable to quote, except in a few instances, and it is likely that the bulk of the stock will be sold on a delivered basis.

Southern Georgia has completed shipments for the season and Northern Georgia will be finished this week, except a few scattering lots which will have no effect upon the market. Within two weeks practically the only peach competition that will confront California will be from West Virginia and as the shipping radius from that State is limited and as the stock in Washington can hardly be considered as competition this season, except in a few markets.

Thompson Seedless and Malagas from the Imperial and Coachella Valleys have sold at remarkably high prices. Most of the stock has been moved East in Express cars, which unquestionably accounts for the fruit arriving in such good condition and meeting with such active demand. Thompsons from the Fresno district are two weeks later than last year. Shipments are now going forward. Malagas from the Fresno district will also be ready to move East the latter part of this month. Tokays in some instances are beginning to show color and there is a noticeable activity among Eastern buyers who are speculating at unheard-of prices in the Lodi district.

Viewing the markets as a whole, we find them in a very healthy condition and indications are that supplies will be regular from now on and at no time in excess of the demand. All varieties of fruits appear to be of good quality and fair size and with Eastern weather conditions remaining favorable, a strong market should maintain throughout the season.

Following are the averages for the week.

New York: Climax plums, $1.64; Tragedy, $1.83; Santa Rosa, $1.70; Burbank, $1.58; Cal. Blue, $1.92; Cal. Red, $1.80; Red June, $1.40; Wickson, $2.22; Formosa, $1.50; Kelsey, $3.50. Bartlett pears, $5.05; Wilder, H/B, $2.04. Malaga grapes, $4.12; Thompson Seedless, $2.69. Triumph peaches, $1.00.

Boston: Tragedy plums, $2.24; Climax, $1.85; Santa Rosa, $1.87; Burbank, $1.57; Wickson, $2.20; Maynard, $2.30; Formosa, $1.86; Cal. Blue, $2.17. Bartlett pears, $5.46; Wilder H/B, $1.85; Lawson H/B, $2.20. Thompson Seedless, $3.05; Malaga grapes, $5.03. Alexander peaches, $1.12; Triumph, $1.10.

Chicago: Tragedy plums, $1.84; Wickson, $1.84; Cal. Red, $1.50; Climax, $1.45; Hinlori, $1.60; Kelsey, $1.77; Red June, $1.52; Burbank, $1.50; Santa Rosa, $1.87; Duane, $1.40; Gaviota, $1.70; Botan, $1.37; Eureka, $1.77; Formosa, $1.46; Cal. Blue, $1.75. Malaga grapes, $4.27; Thompson Seedless, $3.24. Bartlett pears, $4.24. Tilton apricots, $1.90. Hale peaches, $1.01; St. John, $1.24.

Total shipments July 13th to 19th, inclusive: 1 cherry, 1 apricot, 340 peaches, 388 pears.

Total shipments to date, 1918—2701 cars; last season, 2713.

Special Livestock Market Report

San Francisco, July 24, 1918.

CATTLE—There is little or no change in the market situation this week from last. Cattle of poor quality continue to crowd the market, while desirable steers of good weight and finish are hard to get and command top prices. There is no immediate outlook for a change from these conditions. Quotations are the same.

Grass Steers—	
No. 1, weighing 1000 to 1200 lbs.	11½c
No. 1, weighing 1200 to 1400 lbs.	11½@12c
Second quality	10@11c
Thin	8@9c
Cows and heifers—	
No. 1	8@8¼c
Second quality	7@7½c
Common to thin	4@5½c
Bulls and stags—	
Good	6@6½c
Fair	5@5½c
Thin	4@4½c
Calves—	
Lightweight	10@10¼c
Medium	9@9¼c
Heavy	7@8c

SHEEP—Sheep are scarce and supplies are drawn largely from feeders lots to meet the light demand.

Lambs—	
Yearlings	11½@12c
Milk	14@14½c
Sheep—	
Wethers	11@11½c
Ewes	9½@10c

HOGS—Not many hogs are coming in and the scarcity will continue very likely for a couple of weeks yet, when stubble hogs should begin to arrive in quantity. Prices have advanced a fraction of a cent. In Chicago last Tuesday hogs reached the record price of $19.20 per cwt.

Hogs—	
Hard, grain-fed, 100@140	16¾c
do, do, 140@300	16¼c
do, do, 300@400	16c

Los Angeles, July 22, 1918.

CATTLE—More thin cattle are coming in; market dull and lower. Choice fed steers scarce and in good demand. Calves also in good demand and steady.

Beef steers, 1000 to 1100 lbs.	$10.00@12.00
Prime cows and heifers	8.00@ 9.00
Good cows and heifers	7.50@ 8.00
Canners, per cwt	5.50@ 6.00
Calves, per cwt	8.50@ 9.50

HOGS—Receipts continue light; prices advanced 50c per cwt. all round. Killers all in the market and what offering were sold without trouble.

Heavy, averaging 275@300 lbs.	$14.50@15.00
Mixed, 225@275 lbs.	15.00@16.00
Light, 175@220 lbs.	15.00@16.00

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—Few offering, and the market is firm. Killers having to draw on California, Arizona and Nevada all, to get what few sheep and lambs needed.

Per cwt. f. o. b. Los Angeles:

Prime wethers	$9.00@10.00
Prime ewes	8.50@ 9.50
Yearlings	9.50@10.50
Lambs	13.00@14.00

North Portland, July 22, 1918.

The run of cattle in the cattle division today is not extra heavy, everything is meeting with ready acceptance at steady to strong prices. We quote as follows: Prime steers, $11.75@12.25; good to choice steers, $10.75@11.75; medium to good steers, $9.50@10.75; fair to medium steers, $8.50@9.50; common to fair steers, $5.50@8.50; choice cows and heifers, $8.00@8.50; medium to good cows and heifers, $6.00@7.50; fair to medium cows and heifers, $5.00@6.00; canners, $3.00@5.00; bulls, $5.50@7.50; calves, $8.50@11.50; stockers and feeders, $6.00@8.00.

There is steady demand in the hog division today at an advance of 10 to 15 cents over last week's prices. Quotations follow: Prime mixed, $17.85@18.00; medium mixed, $17.65@17.85; rough heavies, $16.85@17.00; pigs, $15.75@16.25; bulk, $17.75@17.85.

With 1600 head of sheep and lambs in the sheep division today the mutton market opened strong to higher for all classes. Quotations follow: East-of-the-Mountain lambs, $13.75@14.25; Valley lambs, $13.50@14.00; yearlings, $9.50@10.25; wethers, $8.50@9.50; ewes, $6.00@8.00.

Special Citrus Market Report

Los Angeles, July 23, 1918.

The limited supply of Valencias now on hand, about 2000 cars held by growers' organizations, are being distributed with a view to supplying all parts of the country fairly. Last week only 183 carloads left California as against 1482 cars the same week last year. Fancy fruit sold from $5.95 to $7.50, while lower grades sold as low as $5.25.

Owing to unfavorable weather conditions, lemons have been in light demand. However, with a diminution of the volume of deciduous fruits on the market and the advent of warmer weather, a change for the better is expected. California shippers have been sending lemons to the Eastern markets pretty steadily and getting around $5 per box for choice fruits f. o. b. California.

The local demand for all citrus fruits is good and the price level high, except on lemons, which show some weakness.

Classified Advertisements

MISCELLANEOUS.

REMANUFACTURED PIPE.
All sizes standard pipe and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. **Weissbaum Pipe Works,** 160 Eleventh street, San Francisco.

CO-OPERATION (not operated for profit) reduces living expenses. Particulars and catalogue from Co-operative League, Commercial street, San Francisco.

TO REDUCE THE HIGH COST OF LIVING, send for our Wholesaler to Consumer Catalog. Smiths Cash Store, 106 Clay street, San Francisco.

PATENTS THAT PROTECT are procured through Pacific Coast Patent Agency. Savings and Loan Building, Stockton, California. Established fifty years.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

WANTED TO BUY—Yuba, Holt or Best tractor. State condition, year made, and price. Address, Stuart Walcott, Los Olivos, Cal.

COUNTRY LANDS.

A FINE OPPORTUNITY—I own an alfalfa and dairy property near Modesto, also some very fine Holstein cows that have been selected with great care. Owing to pressure of my large law practice I am unable to give the matter attention. In order to make a quick sale of the property and dispose of the land and cattle, I will offer the land in full stand of alfalfa at $250 an acre in parcels to suit purchasers; 10 per cent cash, balance 3, 4 or 5 years; low rate of interest to bona fide purchasers who will go on the land. I will sell them the cows on the same basis and loan purchasers the necessary farming implements. Under these conditions a man can go right on the place and make a good living at once, be independent and make money and pay for the land out of the land. Address Box 1170, Pacific Rural Press.

FOR SALE—600 acres good, level, unimproved land in Klamath county, Oregon. Good alfalfa land or stock ranch. Price $10 per acre. W. H. Johnson, owner, 22 Maple Ave., Watsonville, Cal.

BE PATRIOTIC—Raise stock on productive Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento

FOR SALE.—Improved ranch, big fruit crop, pipe system. Cheap if taken at once. Geo. W. Cheves, Paradise, Butte Co., Cal.

400-ACRE IMPROVED stock and grain ranch, 3½ miles Pleasant Valley R. R. station, Mariposa county, Cal. 100 acres cleared and tillable; nearly all could be farmed if cleared of large oak and other trees; 3 and 6-room house, large barn and outbuildings; blacksmith shop and tools; fenced and cross fenced, part hog tight; nice family orchard and garden irrigated from springs. Average rainfall, 29.88 inches. Grapes, olives, almonds, etc., grow without irrigation. No alkali or hardpan. Feed in pastures and free outside range adjoining, knee high. Elevation, 1500. School and church, one-half mile. Price, $30 per acre, including 300 goats, 3 horses, 3 head cattle, turkeys and chickens, and all farm implements. $3,000 cash, balance long time, 7 per cent. Fred B. Palmer, owner, Coulterville, Calif.

MARIPOSA CO. RANCH FOR SALE—480 fenced hog-tight, house, 2 barns, 12 horses, 25 hogs on grain, 15 tons hay, farming implements, harness, wagons, etc. Price, $9,600. Frank Solari, Hornitos, Cal.

OWNER OF 360-ACRE MOUNTAIN RANCH desires responsible tenant. Cash or shares. Enclose stamp for particulars. Address, F. B. Plant, 178 Kempton Ave., Oakland.

53-ACRE RANCH in South San Joaquin irrigation district, modern improvements, horses, implements, tools, sheep, poultry—$20,000. D. M. Berry, R. R. 1, Manteca, Cal.

WANTED.

WANTED: TEACHERS AND CIVIL SERVANTS—The Western Normal prepares you efficiently, saving two years' time and money proportionately. Over 1,000 graduates now employed in California. Also prepares for Government positions. Initial salary, $1,100 up. All our students passed the Spring Departmental examinations. Many now in Washington, D. C., at $1,200 per annum. Address: Western Normal, Stockton. Fall term opens August 26.

WANTED by two experienced partners, lease for term of years on improved farm on coast or central part of state. Can give good references. Address, C. C. Mattson, R. 2, Merced.

WANTED—To rent, a ranch suitable for hogs, about 60 acres farm land, part in alfalfa. Hans Duveneck, Ukiah, Cal.

SEEDS, PLANTS AND TREES.

FOR SALE.—Baled alfalfa and grain hay, all grades and prices accordingly. Can furnish up to two thousand tons. Write at once, or better, come to see the hay for yourself. Can make immediate delivery. Bomberger & Co., Modesto, Calif.

CABBAGE AND CAULIFLOWER SEED—Also late plantings of many vegetables should be started now. Buy of C. C. Morse & Co., Dealers in good seeds, San Francisco

Brentwood Irrigated Farms
In Eastern Contra Costa County, California
Land planted to Alfalfa, also First Class Orchard Land
Tracts of twenty acres and up with easy terms of payment
For Prices and Descriptive matter Address:
BALFOUR, GUTHRIE & CO., Land Dept., 350 California St., San Francisco

CALIFORNIA AGRICULTURAL BOOKS

WRITTEN FOR CALIFORNIA CONDITIONS BY CALIFORNIA WRITERS

THE PACIFIC RURAL PRESS is the publisher of six books written by recognized authorities for the betterment of agriculture on the West Coast, to meet conditions that are different from the East. At this time these books are especially valuable to the producer because he must make up in planning what he is losing in man power. Four of these books are now of especial value. The other two, not appearing below, are "California Fruits, and How to Grow Them," and "California Garden Flowers."

The large crop of grain raised in California, as well as the nation, this year means that stockmen and poultry raisers will enlarge their operations, having the certainty of good prices ahead.

The year in field crops and vegetables really begins in July in California, and at no time in the past has the prospect been so good for successful farming as now. There never was a more opportune time to engage in the breeding of hogs in the west. Poultrymen who are alert to the possibilities of the situation know that every well-directed effort will be sure of greater recognition and profit this fall than ever before.

To meet the questions that constantly arise on the farm you should have at hand the information you need, that time would be saved and perhaps the crop also. Get these books and you will make up for loss of man power and higher wage cost.

CALIFORNIA POULTRY PRACTICE

By MRS. SUSAN SWAYSGOOD

MORE THAN 150 PAGES OF TEXT, CLOTH BOUND, WELL ILLUSTRATED.

"CALIFORNIA POULTRY PRACTICE," by Mrs. Susan Swaysgood of Pomona, a woman who has followed poultry culture for something like forty years, first in Sonoma county and of later years in Southern California. It is a book of some 150 pages, giving in simple and lucid English the methods and practices that have been garnered over a period of nearly fifty years in the breeding, management and caretaking of poultry under a California sun. What the author has to tell rings true, and while advancing no new theories nor any 'secret' systems, it yet tells in a matter-of-fact way the essentials that stand for success in both the handling of large and small flocks. To the beginner it is a safe and sane guide, and to the experienced it has some things to tell that even the veterans may ponder over to advantage."—H. W. Kruckeberg in Los Angeles Times. **Price $1 postpaid.**

SECOND THOUSAND ANSWERED QUESTIONS IN CALIFORNIA AGRICULTURE

By E. J. WICKSON

CONTAINS 256 PAGES OF TEXT, CLOTH BOUND.

Price $1.50 Postpaid.

THIS BOOK is a handy reference volume. It answers questions when you want the information. There are occasions when you want to know almost instantly what to do, and being able to refer to the answers here given may save you many times the cost of the book.

This book is made up from a selected list of questions asked by farmers and answered in the columns of the Pacific Rural Press. Divided into nine parts, covering Fruit Growing; Vegetable Growing; Grain and Forage Crops; Soils, Fertilizers and Irrigation; Livestock and Dairy; Feeding Animals; Diseases of Animals; Poultry Keeping; Pests and Diseases of Plants.

CALIFORNIA HOG BOOK

BY W. S. GUILFORD

Cloth Bound, Handsomely Illustrated, 224 Pages of Text
Price, $2 Postpaid

"ONE OF THE MOST COMPREHENSIVE books that has been published on the breeding and management of hogs comes to the Rural Spirit. The author is W. S. Guilford, who possesses, first of all, a practical knowledge of the things which he writes in this volume through being associated for a great many years with his father in Illinois in the breeding of hogs, and from his study of the scientific end of the business at the University of Wisconsin. Mr. Guilford, as director of the Sacramento Valley Irrigation Company, found hogs rightly managed to be one of the greatest aids to farmers under the irrigation system which he represents, and there being no text book that fitted the conditions wrote one. His volume leaves very little for the reader to guess. There is something in it for the men just starting in hog breeding and who know absolutely nothing about it, and there is a great deal of value within its pages for the man who has been in the business for years. While the book was written primarily for California conditions, it is easily adapted to the Pacific Northwest."—Pacific Rural Spirit.

"I have had occasion to go through a copy of your recently published 'California Hog Book,' received a short time ago. I wish to congratulate you upon being able to produce a text and guide on this subject for the California farmer. The book covers an important need, and I wish there were more publications of this character which so well fills California requirements. I am recommending this book to the membership of the Glenn County Farm Bureau, and, in fact, am urging hog raisers to use the 'California Hog Book' in connection with their industry."—W. H. Heileman, Willows.

CALIFORNIA VEGETABLES

IN FIELD AND GARDEN

BY E. J. WICKSON

FOURTH EDITION, BOUND IN CLOTH, WELL ILLUSTRATED, 320 PAGES OF TEXT.

"THE ARRANGEMENT of the volume is logical and handy. Professor Wickson devotes the first portion to climatic, seedage, cultural and irrigation questions, and has so arranged several of the chapters in this section as to make them applicable to every limited geographical division of the State. The latter half of the book is given to a detailed consideration of various vegetable crops from artichokes to turnips, as well as to vegetables for canning and drying, seed growing, garden protection and weeds."—Oakland Tribune.

"Professor Wickson's special field is 'Agricultural Practice,' which, being interpreted, means actual plowing, hoeing, irrigating, harvesting, pruning, fertilizing and other actual farm operations involving manual labor and the use of tools, as distinguished from that form of agricultural activity in which the tongue is the principal implement. He was for many years professor of agricultural practice in the University before becoming dean of the college, and is now professor emeritus, which means that for meritorious service he may hereafter do what he likes. He is, of course, an enthusiastic personal gardener. It is thought that this summary of the experience which qualifies Professor Wickson to write about vegetable growing will be more enticing than any summary of the contents of the book, which consists of cultural directions for growing all vegetables, either commercially or for family use, under the varying California conditions."—San Francisco Chronicle. **Price $2 postpaid.**

Grain-Stock Ranch Has No Labor Problem

Written for Pacific Rural Press

BIG GRAIN and grain hay crops, cream, beef, and pork are produced on this 2000-acre ranch with least labor uncertainty, but with co-operation of all concerned in getting things done with least effort, and in the best manner.

LABOR SHORTAGE does not worry T. D. Carneal, who farms 2000 acres in Alameda county. A. L. Henry of the Livermore Herald says that it may smack a little of the feudal system, but it certainly gets rid of the most vexing obstruction to food production in these days. The people concerned are happily producing and marketing food products in larger quantities and more cheaply than they could under the common system, and their labor supply is always pretty well assured. Mr. Carneal says he started twenty years ago building for his system and it would cost more now than it has, but in many cases the cost would be only a small percentage of the benefits.

The system is to put a tenant on each of three blocks of 500 acres and farm the rest himself. The tenants share the crops with Mr. Carneal, they help each other and Mr. Carneal when extra help is required. Each one keeps a hired man permanently and Mr. Carneal has two. Three neighbors co-operate in the heavy jobs, such as stacking and the threshing, which is done for all by Mr. Carneal's thresher. They all eat the mid-day meal where they are working, but go home at 5 o'clock to milk the cows, etc. The work done for each other is charged and credited by the nine-hour day and the system is carried out so that none of the tenants, ranch owner, or neighbors feel any labor shortage.

The small marketing, buying, and cream hauling are done for the tenants by Mr. Carneal, who himself is scarcely able to do much ranch work, but thus enables the rest to put in their time where it counts for production. A Ford and an auto trailer are used commonly; but when a big load is to be carried, such as recently, when all the young children on the ranch were taken to a free medical clinic in Livermore, the big automobile and trailer are used. With the auto and trailer, Mr. Carneal does more than three men with teams.

Attractive homes have been built for all of the tenants and equally comfortable bunk houses for all the hired help. Each one has a screened porch, stationary wash tubs, with hot and cold water under pressure, sanitary conveniences, and baths. The class of people that appreciates this is the class that will stay and is the class that is wanted.

Mr. Carneal has built 32 miles of hog-tight fence, so the hogs make money out of waste grain and other crops without any appreciable labor. Roads were necessary; but even with rights of way donated the county could not get them fixed up soon enough, so Mr. Carneal built them himself all over the ranch and was thereby enabled to raise the rent without reducing the renters' profits. The system attracts the best class of tenants. Two of them have been on the ranch five years; one of them three years. Each of them has an automobile.

Disking provides all the seed-bed necessary for the biggest crops in this district and is preferred because it saves labor, avoids turning up mustard seed that have fallen into the cracks, and does not leave clods and crevices under the surface to dry out the grain roots.

Grain is bound and threshed for all tenants by the stationary thresher on the Carneal ranch. But the straw is blown not into piles outside, but into some fourteen scattered barns, where it is fed directly to cattle during the winter.

The land of each renter is worked in a three-year rotation, about one-third of it being in grain or grain hay every year, one-third in pasture, and one-third fallow. The pastured land is rented for cash because there is no other satisfactory way to divide the profits from it. The crop land is rented on shares. The rotation is better for renter, landlord and land. A good crop assured on one-third of the land every year is better and far cheaper to produce than the average crops produced by common farming. Mr. Carneal figures that if it costs six sacks of wheat to raise a crop of seven sacks per acre, there is one sack profit. If the crop is increased to eight sacks, the profit is increased nearly 100 per cent. The rotation has far more than justified itself in this direction. The crop this year is a good one, while elsewhere in this district a great many very discouraging failures have been realized.

Co-operative Livestock Breeding.

It was early seen that continual cropping was robbery of the soil unless fertility were returned. Cattle were the solution, and Devons were selected because much of the ranch is hilly. The Devon is still believed most economical for beef production, but the tenants all have dairy herds now and the Devons are being reduced. Mr. Carneal recently bought a milking strain Durham bull, which is used free to the renters on the herds of all, because he believes this breed the best for milk production where they must go far and range the hills for feed. Each renter has two or three Berkshire sows, which are bred free to Mr. Carneal's registered Berkshire boar on account of the ranging qualities of this breed. To feed grain to hogs would be almost folly in Mr. Carneal's mind, but to let them pick up the waste is good patriotism. Except waste materials, the hogs are fed nothing at all until about farrowing time, when the sows are fed a little every night to get them into the habit of coming to the house. Coyotes might easily get the pigs in their first two or three weeks if born and left afield. After they are old enough to run to the sows, they are in small danger. One renter sold his pigs this season for $247, having never fed them grain at all except the stubble.

Grain Straw into Feed Barns.

Grain straw is not wasted on this ranch. The grain is bound into bundles and stacked beside some 14 barns scattered about the ranch. It is threshed by a stationary thresher and the straw blown directly into the storage space with no handling. The sides of the barns are composed of vertical slats as a part of the racks into which two or three days' feed may be thrown at once from the interior. Shed roofs protect the cattle as they eat from the racks, and dust does not fall in their eyes as it would from sloping slats. The straw not only saves more expensive feed and the labor of handling it, but it keeps the digestive tracts in good shape while cattle are eating lush grass, etc.

FUTURE STATE OF JOHN BARLEYCORN.

WILL California lose her chief cereal in the effort which is now being made for the nationalization of barley? For about twenty years barley has been our chief cereal—following wheat, which fell from leadership in the '90s, and beating the old cereal chieftain at the rate of seven to one in some years. This increase in production became profitable in three ways: (1) Our growing local feed demand for our multiplying meat and motor animals (which had not then learned to consume gasoline); (2) the development of the European malting demand for bright, plump California barley; (3) the contribution of California to the beery fame of Milwaukee and St. Louis, as the quenching of American thirst with Canadian barley juice became more expensive to the maltsters. It really looked as though California barley might have a free field for expansion ahead, although the interior Northwest States had learned our John Barleycorn game and were disposed to play it to their limits. Our cereal sky is not now so clear and it is quite a question how long we shall be able to get away with twenty or thirty million dollars a year for our barley product.

NEAR BEER AND CLOSE MONEY.

TWO conditions affecting such an income from barley will occur to all who give the matter any consideration. First, how will the prohibition movement hit beer? Will it knock it out or only knock the alcohol out of it? If the latter, the guzzler can surely stand up to the bar longer and will have no limitation but the potentiality of his waist measure—and that, in turn, will be largely dependent upon how liberal ready-made tailors can be induced to be in the allotment of cloth at the girth in ratio to the length of the legs. If we could have a law that the girth (for instance) should be not less than twice the length of the leg, all men would have a better chance to keep their loose ribs afloat on an inland sea and the horizon line in the barley field would take on brighter colors, because in such a case there may be a demand for more rather than less barley.

The other obvious condition is what barley will be worth after the war. It will, of course, be much less than present prices, but will it fall below any profit to the California grower? The answer is not so obvious as the question. According to our figuring, based on the census of 1910, the value of barley from the separator in the field in 1899 was 40c per bushel and in 1909 it was 70c per bushel. Another lot of figures from the reports of the U. S. Department of Agriculture place the average field value of a bushel of California barley in 1913 at 68c; in 1914 at 59c; in 1915 at 62c; in 1916 at 95c, and in 1917 at $1.20. On these figures (including the high prices of 1907 to 1909) the farm value of a bushel of barley for a decade previous to the upgrade of 1916 would be about 66c—or about 85c per cental.

CAN WE GROW 85c BARLEY?

WE did grow it: at a range of from 25,427,000 bushels in 1908 to 46,500,000 in 1910 (65 per cent greater than the product of any other State), and though it was nip and tuck to get any profit out of it there must have been some profit on the average, for it is inconceivable that we would have kept on growing barley for a decade and losing money all the time. Can we do it again? Our judgment is that we cannot. Shall we have to try? That is the main question and the answer to it answers everything: because, if we have to try, we won't—and that will be the paradoxical end of it.

The question of how we did manage to grow 85c per cental barley at some profit is pertinent. It seems to us that the chief factor in it (remembering that our average acre-yield was only 28 bushels) was the cheap harvesting of it, which our harvest meteorology enabled our California-made harvesting machinery to accomplish. Our builders of combined harvesters proclaimed the kaiser's trust in "me and gott" and got away with the swag; it works better in farming than in welt-politik! But the time has passed when the possibility of profit in 85c barley could slide through on its harvesting end! That very end has itself lost its glide. A combined harvester cannot be bought for its old price and it probably never can be again. Some of the caterpillars and tanks which will be junked at the end of the war may serve good agricultural purposes, but they cannot be transformed into those magnificent warships of the field—the combined harvesters. They will require new materials and labor, and both are likely to have permanently increased cost. Besides the greater investment which an outfit will require, the man-power for operation will probably cost more than ever. It is apparently hopeless then that we shall have such cheap harvesting in the future as that which formerly made 85c barley carry a margin of profit for the grower.

Can any other factor in the production be cheapened to cover the coming increase in cost of harvesting? Possibly some one may suggest that the tractor will do it. That point is worth considering, for we see no other phase of the cultural operation which can be cheapened. But in this connection it must be remembered that before tractors were modernized and popularized as they now are, gas motors were already doing more for barley in this State than for any other crop. Many motors used in harvesting served also in plowing, harrowing and seeding—chiefly for the barley crop. Therefore, power-culture figured to some considerable extent in the possibility of 85c barley in the past and that discounts its future contribution. Is it possible now that the wider use of the tractor will compensate the barley grower for the increased cost of every tool and supply he uses and for the doubled cost of farm labor? The chance of this does not look good to us. The increased use of the tractor seems to be the only recourse in the effort to stay with the barley crop which California imperatively needs, but even the tractor can never again pull a profit out of 85c barley.

A DRIVE FOR NATIONALIZATION OF BARLEY.

THE reflections in which we have been indulging are provoked by the appearance of a special publication by the U. S. Department of Agriculture entitled "Cultivation and Utilization of Barley," which is Farmers' Bulletin 968, by H. V. Harlan. It has an outspoken promotive purpose—not specifically stated to meet a "war need" but inferentially in that line, for this is the chief inscription on its emblazonry:

Barley should be more widely grown in the Northern and Western States. It is a protection to our grain supply, as it produces a good non-glutinous flour and can be milled by wheat mills with little change of machinery.

It is an excellent grain feed for stock, being almost the equal of corn. It, however, competes with corn in few places, as it is mostly grown outside the limits of profitable corn culture. It produces more pounds to the acre than oats or wheat. It supplies the needed grain feed for increase of livestock which some time must come with diversified farming in the areas where grain farming is now the only enterprise.

To add attractiveness to this appeal for a greater barley product, the publication has a colored cover which is gray in tone and therefore does no credit to the natural beauty of the barley grain, but is still notable, as it is the first instance, so far as we have observed, in which Uncle Sam has undertaken a "farmers' bulletin" with a colored cover. Away from this coast, a thought of the use universally made of barley might cause one to wonder whether Uncle Sam's gayety may not be mistaken for anti-prohibition propaganda, in spite of the very sober declaration quoted above.

The publication goes into detail about the growth of barley—dividing the country into three main divisions: the "arid region," extending from the Pacific Coast eastward to a line halving all the States from Texas to North Dakota; the "humid spring" region, northward of a line extending eastward from Oklahoma eastward to New Jersey; the "humid winter" region, from the last mentioned line southward to the Gulf of Mexico. A map is given with a point for each 5000 acres of barley now grown, and this results in a pretty free spotting for California and the States northwest of Chicago and a scant fly-specking for the rest of the country, with most of the Eastern and Southern States free even from that.

The publication is very interesting and well prepared. It is rather notable as an effort to bridge the country for barley—employing the cantilever method of projection from California and from Wisconsin to span the great plains region: another cantilever starting from Wisconsin toward Florida, with nothing rising from the latter abutment to meet it. It is quite clear that the conception of a publication of this kind has arisen from the war and that its motive is to increase the production of food for man and animals. How far such a conception is otherwise safe and likely to be permanently serviceable may be questioned. Experience in many parts of the area included has definitely rejected barley as inferior to other crops, either agriculturally or economically. In other parts of the area (in the arid portion), barley has been fully approved by experience as the best feed grain to grow—so far as it is profitable to grow any. We are not objecting to this barley propaganda either from a war view or any other, but still we have a conviction that it is not a justified effort. Two lines of plant introduction and promotion seem justifiable: one is that of untried plants for experimental results; the other is improved varieties of types already demonstrated to be serviceable. Barley is too well known to enter the first category and is excluded from the second by the fact that it is not serviceable except in specific regions where decades of experience show that reliance can be placed upon it.

CAN WE FACE A NATIONAL UPLIFT OF BARLEY?

PROBABLY California can survive a national uplift of barley better than other States can. California has already won out with a grain which nine-tenths of the farmed area of the United States rejected as inferior for its conditions and uses. Of course, California would prefer to make the effort to grow barley profitably without competition with the results of a national uplift coming just at a time when St. Louis and Milwaukee seem most likely to lose at least some facets from their amber coronets through prohibition amendments, but that disfigurement will be first seen from the Northwest. If Europe tries to forget its war woes in an ocean of malt liquor, as seems likely, California will have the best chance to minister to that, for our barley is brighter, plumper and already better known than any other American product and it is grown nearer to salt water than any other and can probably be more cheaply laid down abroad. But the chances at the malt houses, either in this country or abroad, are but secondary in the present outlook for California barley. Its chief chance must lie probably in the local use to be made of it, and this is largely conditioned on the rate of speed with which our animal industry, which has been rapid in growth recently, continues to develop. It seems to be the conclusion of the experts in that line that world prices for all animal products will remain for years and perhaps permanently on a higher level than heretofore experienced—even after the war inflation goes out

of them. That is a reasonable expectation and, so far as can now be seen, it is the chief support for our barley production. Though we are increasing somewhat in corn and considerably in sorghum grains, it is not likely that either will supplant barley, because barley is the best plant to turn even a scant winter rainfall into a good crop, for it has sense enough to grow while the water falls and therefore wastes least of it.

ARE WE FAIRLY TREATING BARLEY?

CALIFORNIANS are not to be credited with much contribution to the greatness of barley in this State. It has usually grown itself and turned favoring conditions of soil and climate to its own account with little help from the growers. It is true they have paid some attention to choosing well-behaving varieties, and what we have called "common" for several decades has gained fame in other States to which it has been taken, but beyond choosing a few varieties from many which have been brought in for trial, Californians have done little to help barley to be good. They have grown it without spending a cent for fertilizers: they have not fed it as well as they did the tramps who used to throng the roadways. They have only accidentally given it a place in a reasonable rotation and have paid but little attention to the lessons of such accidents. As our crop-planning must become more systematic if we are to live on the land with all the increases in costs of production which have now arrived, it is clear that a great crop of barley must return the money which it can make out of the aviation-captures by beans and alfalfa and must recover the expenditure for deep tillage which sugar beets and other root crops require. Even if we cannot continue to grow barley as a sole crop for such yield and prices as were formerly secured, it is still quite probable that with such prices as higher valued animal products warrant and with such greater acre-yield as better farming and rotation will insure, barley will be a great cereal in California long after current war prices have disappeared and after picture books prescribing barley for parts of the country not well fitted to answer its requirements or for fields which can otherwise be made more profitable, may be forgotten.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Is It "Dodder" or "Morning Glory"?

To the Editor: I have about 25 acres, leveled and checked, ready for fall seeding of alfalfa. This land was prepared last fall and seeded to barley for hay. After cutting, as water was not available for corn, I let the piece go, intending to put in alfalfa this fall early. I notice now, however, that "love vine" or "dodder" is all through the star thistles that came up after the hay was cut. Would you advise putting in alfalfa or again seeding for hay, putting in corn next spring? I am afraid the dodder will kill off the alfalfa, but thought that the cultivating of the corn would kill it off.—M. L. E., Cottonwood.

You surely have raised an interesting question, and as you sent no specimen of what you call "dodder" we have to indulge in a few conjectures. Do you mean that the dodder attaches itself to the star thistles, twining around and digging itself into the stems? If so, it is one of the hundred or more species of cuscuta, but whether it is the one which is parasitic on alfalfa we do not know, for we never saw dodder on a star thistle, though we have seen these loving parasites on many other plants. It is doubtful whether, if you do find such a plant on the thistle, it would take to alfalfa, for the dodders pick out their host plants with some discrimination.

But suppose that the plant which you fear is a higher-up member of the convolvulaceæ than a dodder and contents itself with running over the ground and climbing the star thistles but not biting into the substance of the stems, and supposing that it has good-sized leaves and flowers instead of no leaves and very minute flowers, as the dodders do—then your intruder is morning glory and not dodder.

Our course in either case would be to go ahead and put in the alfalfa this fall. If the pest is not alfalfa dodder, it will not bother you. If it is morning glory, the best way to fight it perhaps is to smother it with a good stand of alfalfa well irrigated. If it is really dodder, you can run it out by pasturing or by close mowing, which prevents it from going to seed. Dodder has to come from the seed every year. The reason it is sometimes bad is because people are slackers. You go ahead with your plan; put up a good fight; don't be doddered yourself!

Summer Pruning of Apricots.

To the Editor: Our apricot trees grow very vigorously in this county, and particularly so in the Van Nuys section, and the custom has been to prune them very severely in the winter. The result has been that the trees are going to vegetative growth and produce little fruit. The question is how to prevent this. I have thought of three treatments: No pruning at all for a season or so, light winter pruning, a moderate summer pruning. It is my opinion that these three treatments will act to check the trees in their growth and induce better fruiting. I have understood that many apricot growers are coming more and more to a very light winter pruning, with moderate summer pruning just after the fruit is off.—Reader, Los Angeles.

You have the right idea about summer pruning of apricots. Such practice is approved by many years of experience in parts of the State where the tree makes excessive wood growth. Where the growth is less, the winter pruning seems sufficient. In the apricot chapter of our book, "California Fruits," you will find pruning after fruit gathering prescribed and an account by Mr. Neff of Anaheim, who was formerly a large apricot grower, gives detailed suggestions. The practice does not insure bearing of shy varieties like the Moorpark, but it probably helps them also. It is not safe to leave the trees unpruned, for they will break to pieces if they set a heavy crop.

Mildew in Sprouting Barley.

To the Editor: What conditions favor mildew in sprouting barley? I soak my barley in oil cans 10 to 12 hours and then put it in boxes 12 to 18 inches about three inches thick and cover the barley with a wet sack, and a dry sack over it to check evaporation, and place the boxes in the shade; and I repeat wetting the sacks night and morning. About the fifth day the mildew forms. I have washed out my boxes with formaldehyde solution. The bottoms of the boxes are made of old sacks. What amount of formaldehyde is about right to disinfect the boxes? Will boiling water do?—B. W. M., Redding.

Mildew cannot be wholly prevented by any disinfection of the containers before sprouting, though that is desirable to delay the attack. The sacks, the air and the water may contain the spores. Apparently the reason why it is so bad in your case is because the grain is kept too moist and has too little ventilation. If kept a little drier and still moist enough to grow well, you will have less mildew. Possibly a little more heat will also help. One pound of formaldehyde to 40 gallons of water or sufficient treatment with boiling water will kill the spores on the boxes.

Selling Direct to Jobbers.

To the Editor: Kindly tell me why a farmer cannot sell his fruit direct to some jobber. If I can do so, how can I get in touch with some reliable firm?—J. H. W., Fowler.

We know of no reason why you cannot make such a sale if you can find a jobber who wishes to buy such an amount as you have to offer. Jobbers are understood to be operators who buy products in bulk after they are graded, standardized and packed in commercial shape—generally with recognized brands which are in good request among retailers. Therefore, a packer usually comes between a grower and a jobber or a cooperation of growers does the packing and sells in bulk to jobbers or does its own distribution to retailers, or both. We do not know how you can get in touch with such a dealer as you desire. Perhaps by consulting your neighbors who have similar products you can find out who wishes to buy in your section.

What Can Be Done with Morning Glory?

To the Editor: We have patches of morning glory which are doing considerable damage. A crop of hay has just been harvested from a portion of the infested land and a crop of sweet peas will be removed in a few days. Would you advise plowing now, and then cultivating each week for the purpose of killing the weed, and do you think such process would destroy the glory so that the land would be clear of it for next season? Or do you consider that it is necessary to devote a whole year to continuous cultivation in order to kill it?—A. D., Watsonville.

If the work is well done as you propose and a flat weed cutter is used which completely undercuts the surface so no shoots are allowed to appear, you can so reduce the plant that its growth next year will be so weak and so late that crops maturing early in the summer will be practically uninjured by it and you can then treat the pest again as you propose to do this year. We have little faith in eradicating the plant, but it can be kept below the point of much injury on open land.

HAS YOUR SUBSCRIPTION EXPIRED?

(8-3-18)

The yellow label tells.

WIFE SHOWS BETTER JUDGMENT.

Red Bluff, Cal.

My wife subscribed for your valuable paper last year. She sure showed better judgment than I, for I thought I had all the papers I could read, but I find time to read it and find it very interesting. (Signed.)

History teaches us that many great men owed much of their success to the intelligent advice and good judgment of their wives.

A check, a money order, a dollar bill or postage stamps will show good judgment.

HAS CHIEF ASSET FOR ACHIEVING GREATNESS.

Elizabeth McHugh, Subscription Clerk

Rye Hay and Straw.

To the Editor: Kindly inform me as to feeding value of rye hay as compared with other grain hays and alfalfa for work horses; also the feeding value of rye straw as compared with wheat and oat straw. Could rye straw be used as a filler together with silage?—J. S., Doyle.

Oat hay is the best of the grain hays and rye is the worst from the points of view of nutritiveness and digestibility. As compared with alfalfa hay for horses, good oat hay is probably superior and rye hay inferior—though it is hard to compare things which are quite unlike in some respects and had better be mixed than contrasted. Oat straw is the best of the cereal straws, barley next and rye and wheat worst. As a filler the value of rye straw depends upon what the silage is made of: it balances better with alfalfa silage than with corn silage, but on the whole we would rather put rye straw under a horse than into him.

Cure for Crown Gall.

To the Editor: Is there any cure for crown gall? I have it on some peach trees and on one apricot tree.—J. W. R., Folsom.

This trouble is often called "root knot" and you are in luck not to have more of it. Some years ago a Napa county orchardist announced a cure which consisted of boring a hole into the substance of the knot and filling the hole with bluestone solution—as strong as dissolving in cold water would make it. This did more, however, than was desired, for it killed both tree and knot in too many cases. The present prescription is to remove the knot cleanly, without injury to adjacent bark, and paint the wound with Bordeaux paste—allowing it to dry before replacing the earth. This usually kills the knot growth at that spot.

Falling Tomatoes.

To the Editor: Why do tomato blooms fall off even after the little tomato has formed? The first blooms produced tomatoes; since then they fell off. I irrigate them lightly every five days.—C. A. T., Red Bluff.

Several possible causes are usually alleged. The trouble usually occurs on plants which are induced to make too free growth by over-rich soil and too much moisture. The plants do not require so much irrigation if the soil is fairly retentive.

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., July 30, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm
Eureka	...	.20	.11	62	50
Red Bluff	...	...	...	100	66
Sacramento	...	...	...	100	56
San Francisco	...	...	.01	70	54
San Jose	...	...	...	84	50
Fresno	...	...	...	102	60
San Luis Obispo	...	...	.01	82	48
Los Angeles	...	.00	...	83	60
San Diego	...	...	...	76	62

Prunes—Growing and Curing

[Written for Pacific Rural Press by John J. Fox.]

In three weeks' time the prune harvest will be under way, and growers have been busy cleaning and repairing trays and boxes, getting wood to the dippers and rolling down the soil for picking. This has been a pretty hard year on prune trees, for, although the crop is not heavy, this second dry year resulted in a very heavy June drop—the heaviest we have known, followed by a July drop, which in some orchards was fully as heavy. A part of the early fall of fruit seemed to be due to injury by thrips on the little stems, but in July it seemed to be an effort on the part of the tree to relieve itself. Even where irrigation is practiced there was some July drop.

LOSS BY JUNE AND JULY DROPS.

This is going to affect the yield not a little. Some men have estimated 15 per cent to 20 per cent of loss. This, however, will be partly made up by the increased size of the fruit remaining on the trees. There is very little new sturdy growth in old trees this year and it depends a little on the fall how the young buds develop and fill out for next year. This is a year when all sucker wood should have been removed throughout the growing season. So little of it is wanted, except to renew a limb, and it robs both fruitwood and fruit of nourishment.

Prunes this year will be generally small in size except where irrigation is practised, and even there there will be a lot of small fruit.

Quite a number of growers put in pumping plants this year where water was available, in an effort to bring their trees through in good shape—orchards that never before had been irrigated.

Here, we notice that those trees that were irrigated early in the season look quite the best. They have large flat leaves of good color. The late June watered trees look fairly well, but show many small yellow leaves, some of which still spoil the general appearance of the trees. In orchards that had a good drenching up to the middle of July there are some cracked prunes, except where they had had a previous flooding. But the fruit here generally looks good.

A CULTURAL CONTRAST.

We know of two orchards, on the same tract, side by side, the same age and equally good trees. One is always shallow plowed and generally laid away early. This one had a crop we would have estimated at 3½ tons to the acre a month ago. The other has always been plowed deep and kept well stirred throughout the growing season. This year the owner put in a temporary pumping plant and both trees and fruit look well. His crop should be, say, 1¾ tons (dried) to the acre and from appearances should make 60s or better. The unirrigated orchard adjoining will run pretty close to 100s. These two orchards are on a strong clay loam bottom. The irrigated orchard was also plowed in February, because of the dry winter, though it is generally plowed in March. The unirrigated one was plowed in April and lost quite a little moisture while waiting for another rain which never came.

HEAVY PRUNING.

Mr. Ham Johnson of Napa has been doing some summer pruning on his old prune trees this year and it will be interesting to see the outcome of this—quite heavy cutting. There is no doubt that growers will be actively engaged this year in pruning as soon as the crop is off, not only to relieve the trees but the better to observe dead or moribund wood, of which there will be a great deal after this dry year.

The drouth and low water table, which latter seems almost unprecedented, are chiefly responsible for the dead wood and this condition has been rendered worse in various sections by the attacks of "thrips," canker worm, tent caterpillars, red spider or bean thrips.

The mealy plum louse has not been bad generally, except in some cases on young trees just coming into bearing, so the number of split prunes from this cause will be negligible. The cool weather along the coast sections through July has been very helpful.

HINTS ON CURING.

If there should come a very hot spell during harvest, most men will have enough trays this year to stack their fruit and conserve its quality. If one can spare the labor it pays to take pains and watch this matter closely, especially with regard to Imperials and Clairacs. Two or three days at the critical period of exposure to a blazing heat and the best prunes (Imperials) settle down on the trays like fried eggs and are then often damaged in the turning. At the present price especially, it pays to move your Imperials, when ready, by hand and later to be ready to stack them if necessary. This year it will pay to take infinite pains over the curing of the crop, which will all be wanted. A field grader is almost a necessity, for unless it is used, the small prunes are dried hard by the time the large ones are cured. We all know what this means on the grade sheet, but how many of us pause to consider how much we lose also at the scale.

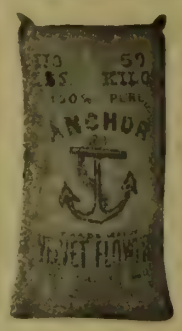
"DRYING" AND "CURING."

We have learned the difference between "drying" prunes and "curing" them, but the owner must stick to the drying yard if he wants his fruit cured right. The French must be doubled or stacked, or both, at the right stage or sometimes only moved on the tray. But to save on labor in the handling of the curing and cured fruit is false economy.

I hope in later articles to deal with results in different sections, with pruning, cover crops and spraying respectively.

Fruit and alfalfa growers in several districts of Yolo county are complaining of insufficient irrigation water owing, they claim, to an undue diversion of water by the Yolo Water and Power Co. to the use of the rice growers.

SULPHUR



Fleur de Soufre, Anchor Brand; Velvet Flowers of Sulphur and Eagle Brand.

Packed in barrels and double sacks; are the fluffiest and purest Sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, leaving no ash.

Try our new brand of sublimed 100 per cent pure Ventilated Sulphur for making Paste — Atomic Sulphur.

For Lime Sulphur Solution, use our "S" Brand Refined Flour Sulphur, which we will furnish at a price so cheap that you cannot afford to purchase ready-made solutions.

We are equipped to make immediate shipment. Send for illustrated booklet; also price list and samples.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Can't Afford Unirrigated Prunes.

"Try leaving a few rows of your prunes unirrigated this year to determine the value of irrigation definately," we suggested to James Sherriffs of San Benito county. "Prunes are worth too much. I can't afford to lose them by such experiments," said Mr. Sherriffs, whose pumping experience has convinced him that pumping pays for itself plus a profit. "Without irrigation the fruit is smaller, the leaves fall sooner, even before the fruit drops, and the next crop is reduced. I sometimes get four tons dry per acre and three tons is a fair average crop, with irrigation. They dry away about 2¼ to 1."

Give Melilotus Early Start.

The success of a melilotus cover crop depends largely on getting a good start in the fall, as experienced by W. E. Jones & Son, who have for some seasons grown melilotus among their almonds near Banning in Riverside county. Such cover crop sown late in September, 1916, on sandy gravel over porous subsoil, followed by furrowing and irrigation, proved far better than some of the same seed planted similarly in October, 1916, after the first rain. Where it got a good start before cold weather, it grew a little all winter and shot ahead when a warm spell came. Last fall, owing to scarcity of water, it did not get a good start and the growth was poor.

Bush Berry Shortage.

A shortage of blackberries, loganberries, raspberries, etc., appears likely during the next few seasons, due to the fact that much of the berry production has been from bushes and vines interplanted between orchard trees which have become too big to continue the double cropping. Berries come to full bearing the second year. Plants will not be ready for shipment until November, but orders for them should be filed early.

Water Increases Apple Sizes.

"Newtown apples will stand all the water you want to give them," says E. A. Hall, of Watsonville. The water increases their size, but that is not objectionable, as many 3½-tier Newtowns are used for baking. Bellflowers, which are mostly eaten fresh, should not grow over the four-tier size. The last irrigation may be applied a month before picking.

Where Alfalfa Cannot Rob Trees.

A case where alfalfa in an almond orchard does not rob the trees of irrigation water is that of the thrifty trees belonging to R. E. Liguori, in Livermore Valley. "A foot of water on the alfalfa would be out of sight in two hours," says Mr. Liguori. "The water goes down quickly, but not sidewise, and the alfalfa shows lack of water before the trees do."

Sulphur Per Ton of Peaches.

To the Editor: How much sulphur must I buy per ton of peaches which I want to dry?—H. M., Livingston.

[Answered by Cal. Peach Growers, Fresno.]

Used in connection with the ordinary compact sulphur house, one sack, or 110 lbs. of sulphur is enough for 15 tons of fresh fruit.

Water the Apricots Well.

The time to begin growing next season's apricot crop is just as soon as the present crop is off. Dig a few holes to see how far it is to moist earth—the moisture from below. Then put on enough water to meet that sub-moisture. But do it early enough so the growth that follows will ripen before freezing.

Folly in Shipping Poor Pears

[Written for Pacific Rural Press.]

The Pear Growers' Association is endeavoring to reduce the quantity of poor pears sent to San Francisco to get in the way of good fruit and to waste the shipper's labor and freight money. It is reported that one day last week an examination of the thousands of boxes piled upon the wharf showed that the growers, or their tenants, have been putting everything in the way of windfalls and wormy pears into the boxes, mixed in with the good windfalls, and with the good No. 2 pears.

The previous week, when only 300 to 400 boxes a day were coming in, the retailers bought such pears, took them to their stores or peddling wagons, sorted them over, threw away the wilted, the wormy and the rotting pears, and laid aside the good 50 per cent of the pears to ripen up. When they had enough for their immediate wants they would not buy the mixtures of trash and good pears when over 2000 boxes a day were coming in. Therefore, the grower who throws into the boxes all the refuse pears is bound to lose.

The growers on the Sacramento river will save, on the estimated tonnage of 3000 tons of windfalls, if they will sort them over and ship only the good ones, at least $7,000. What's the use of paying charges and using boxes to transport something to market that not only brings you nothing, but costs you $5 to $7 a ton loss?

Brown Scale on Apricots

To the Editor. What would you consider the best spray to be used now on apricot trees that are badly infested with brown scale? I intend to have the orchard irrigated as soon as the crop is off. The renter received two big crops, but this year the apricots were both small and smutty, through neglect.—W. K. B., Santa Rosa.

[You cannot spray apricot trees for scale while they are in foliage. Use lime-sulphur solution — winter strength—any time after the leaves are off and preferably when the buds begin to swell in spring. The fruit is probably small for lack of proper cultivation or insufficient pruning and thinning or both. It may help you to prune this year as soon as the crop is off.—Ed.]

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

GIANT FARM POWDERS

STUMPING — AGRICULTURAL

Uniformity is another word for economy and safety. When the same things happen with each pound of Giant Farm Powder, you know not only how much to use, but what results to expect and how to handle the explosive.

Giant Farm Powders are surer, safer and more economical because our tests guarantee every pound. We maintain our own completely equipped chemical division to inspect Giant Farm Powders during every process of manufacture. Absolute uniformity means absolute dependability. Like results always obtained under like conditions make western farmers prefer Giant Farm Powders.

"Giant Powder is the most satisfactory," says John Zurr, Santa Rosa, Cal. "I account for this because Giant Powder is made with the utmost care."

Caution: Be sure you get the genuine. That other explosives are often called "Giant Powder" indicates the high quality of the original. Look for the Giant trade-mark on every case.

The coupon (or a postal mentioning this paper) will bring you the big book "Better Farming." Tells how to remove stumps, prepare tree beds, and do all kinds of farm work cheaper and better. Write for it now.

Government Wants More Wheat

[Written for Pacific Rural Press.]

Under date of July 22, the U. S. Department of Agriculture has asked farmers to sow 47,500,000 acres in winter wheat this fall. This would yield approximately 667,000,000 bushels—the greatest winter wheat crop in history. While the request specifically mentions 45,000,000 acres as the area to be sown, it asks farmers if they cannot raise the total to 47,500,000 acres. The latter acreage would be a 12 per cent increase over last year, and would provide abundantly for the needs of the allied nations. When harvest time rolls around it will be known as the "Liberty wheat harvest," according to the plan of the department. Officials also plan corresponding increases in the production of spring wheat and livestock.

BILLION BUSHELS SOUGHT.

The last crop report forecast a 1918 harvest of 890,930,000 bushels of winter and spring wheat. If weather conditions next year are favorable, the 1919 harvest of winter and spring wheat will be well over the billion mark in bushels. From the 45,000,000 acreage, however, a total of 636,000,000 bushels would be raised, on the basis of an average yield of 15.7 bushels per acre and an abandonment of 10 per cent of the area sown on account of winter kill. Even with a normal good crop, such as is evident for this fall, the country's reserve supply, or "carry over," is practically exhausted, it is said, and, at all events, is the smallest on record. It is up to the farmers this fall and next spring to build up a sufficient reserve.

VARIOUS STATES.

This is how the department figures some of the States will have to increase their winter-wheat acreage this fall over 1917 to make successful the "Liberty wheat harvest" of 1919:

	1917 Acreage.	1918 Acreage.
Arizona	44,000	48,000
California	489,000	538,000
Utah	244,000	275,000
Nevada	5,000	10,000
Idaho	302,000	405,000
Washington	422,000	850,000
Oregon	562,000	692,000
Ohio	2,145,000	2,500,000
Indiana	2,645,000	3,100,000
Illinois	2,602,000	3,200,000
West Virginia	535,000	590,000
Iowa	450,000	900,000
Missouri	2,875,000	3,235,000
South Dakota	164,000	182,000
Nebraska	3,135,000	3,762,000
Kansas	9,479,000	9,479,000
Kentucky	952,000	1,142,000
Tennessee	840,000	1,010,000
Alabama	144,000	158,000
Mississippi	36,000	45,000
Texas	1,622,000	1,730,000
Oklahoma	3,264,000	3,400,000
Arkansas	288,000	317,000
Wyoming	80,000	92,000
Colorado	462,000	508,000
New Mexico	270,000	283,000

Many States are not asked for increases, such as Kansas, which appears in the table. They are States that have suffered from drought conditions. If conditions become favorable, however, an increase will be expected for them. In Michigan, Wisconsin and Minnesota large increases of winter wheat acreage is not suggested because of heavy increases for rye.

COLLECTING WAGES FOR PIECE WORK.

To the Editor: Is it true that the Labor Commissioner will not help a man to collect wages due him if he has worked by the piece and not by the day?—G. C. A., San Francisco.

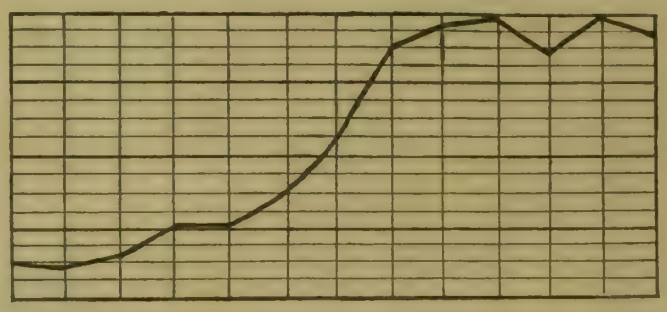
In answer to the inquiry signed "G. C. A.," permit me to advise that this office has not, to my knowledge, refused to assist in the collection of wages due a laborer who was working on a piece-work basis, if the complainant actually performed the work. We have refused to collect such bills for contractors, who were employing labor on a piece-work basis, the orchardist or farmer having refused to pay for the reason that the contractor had failed to fulfill the contract or agreement entered into. As regards an individual, this office is ready and willing at all times to render every assistance possible.

MANURE IN CONVENIENT FORM.

Over in Nevada manure from large herds of sheep and cattle fed on alfalfa oil cake and other highly nitrogenous foods has accumulated for years. The dry climate removes the moisture but prevents leaching or fermentation. The Pacific Manure and Fertilizer Company of San Francisco are operating a grinding mill of between two and three hundred tons per day capacity and pulverizing this highly concentrated manure and putting it out under the name of Groz-It. It is odorless and free from flies, insects, weed seeds and other objectionable features and contains many times the plant food value of ordinary manure, being especially rich in potash.

At present the greater part of the output is being shipped across the continent to Eastern and Southern States, in spite of the fact that the freight makes it $10 per ton higher there than here. O. W. Lehmer, general manager of the Yosemite Railroad, tried out a few tons on his citrus trees at Live Oak some time ago and is now using it exclusively in his grove at Live Oak in San Bernardino county.

During the month of June $8,343,430 were loaned to farmers of the United States by the Federal Land Banks on long-time first mortgages, according to the monthly statement of the Farm Loan Board. The Federal Land Bank of Spokane leads in amount of loans closed—$1,262,800. The bank at Berkeley, covering the Eleventh District (California, Utah, Nevada, and Arizona), loaned $468,200.



Why live stock prices go up and down

WHEN there is more dressed meat on the market than there is consumer demand for it, meat and live stock prices go down.

But when the consumer demand for meat is greater than the supply, meat and live stock prices go up.

This is the law of supply and demand. It is the law that determines the prices the producer gets for his cattle.

* * * * *

Between the producer of live stock on one hand and the consumer of dressed meat on the other hand is the service of the packer.

The packer turns the live stock into dressed meat and by-products and then distributes them to the retailer.

Out of every dollar the packer receives for this meat and by-products he pays 90 cents, approximately, for the cattle.

The remaining 10 cents on the dollar must pay for dressing, freight to market, operation of distributing houses, and in most cases delivery to the retailer.

Out of what is left must come the packer's profit. For Swift & Company during 1917 this amounted to a net profit of ¼ of a cent per pound of beef. On *all* products, it was only a little over half a cent per pound.

A reasonable profit margin is necessary to enable the packer to operate without endangering the efficiency of the business and its value to the producer as a marketing agency for live stock. Complete elimination of these profits would have practically no effect on the farm prices of live stock nor the retail prices of meat.

Swift & Company will gladly co-operate in the carrying out of any national policy that will tend to steady the prices of live stock and meat.

Swift & Company, U. S. A.

A nation-wide organization with more than 20,000 stockholders

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

GROWING LEGUMES WITH GRAIN

To the Editor: This company is farming approximately 6000 acres to grain this season. This land is the usual red color upland. We wish to know whether vetch inoculated with nitrogen germs and planted with wheat, barley or oats would increase the yield of grain enough to warrant the expense. The cost would be $2 an acre for inoculation and $1.20 an acre for the vetch seed. Please let us have your opinion. — Sacramento Suburban Fruit Lands Co., Sacramento.

[Answer by Prof. J. W. Gilmore.]

Several different species of legumes have been planted with small grain both winter and spring, in many parts of the country. This practice, however, has not been successful except possibly in a few isolated instances. The main difficulty is that the legumes and the grains do not ripen at the same time. In some instances, too, the grain and seed of legumes are difficult to separate. This would be especially true in the case of wheat and rye. Moreover, it generally happens that the competition between the grains and the legumes for space, light and moisture are great detriments to growth and development, especially yield of grain, than the advantages derived from the presence of the legumes. On the other hand, legumes of various sorts and grain have been planted together for hay with excellent success. This is especially true with oats and barley with peas, rye and wheat with vetch. In saying these things I do not wish to discourage the writer's desire to experiment, for we do need more experimental evidence on this question in California. Moreover, I would not go to the expense of $2 per acre for inoculating the seed if the experiment were tried. The Division of Soil Chemistry will supply directions for inoculating the seed, even if this were necessary at a cheaper rate.

(To emphasize one of the points made by Prof. Gilmore, we would add that to get a good crop of grain by rainfall on uplands usually requires all the moisture which one has reason to expect and to divide the moisture with a growth of legumes will be to run the risk of having too little water in the soil in the spring to make a grain crop. To increase the chance for grain, the field should be as clean of any other growth as practicable.—Editor.)

NEED OF IRRIGATION AVOIDED.

Charles Gelbke, who has 15 acres of extra-growthy pear trees on heavy loam soil in Contra Costa county, rightly ridicules the idea of cultivating so deep in dry weather with shovel cultivators or springtooth harrows that moist dirt is raised up to dry. His trees never had water until this spring, when they needed it on account of the drouth. Cultivation cannot make moisture where there is none. In normal years he held enough moisture by harrowing or clod mashing in the afternoon what he plowed in the morning and by using either disk harrows, weed cutters or shovel cultivators, with shanks about ¾ inch wide and broadened at the lower ends, to stir the subsurface without raising it where it would dry out more. A surface mulch was made and kept loose without mixing subsurface soil with it.

Let Us Tell You How To Cut Your Tire Bills

Blowouts are the most costly accidents that occur to tires—sometimes they result fatally to the occupants of the car.

We will tell you how to reduce the possibilities of blowouts in tires and tubes.

If you are paying 5 cents a mile for tires—or even 3 cents, or less, wouldn't you be interested in learning how you could save a cent or more a mile?

It won't cost you but a postage stamp to find out how we can cut your tire bills.

We are doing it for thousands of people today—actually helping the government in the conservation of rubber, cotton and labor by showing tire rims how to get more miles out of tires. We can show you how to save money, too.

You May Help Draft Good Seed Laws

[Written for Pacific Rural Press.]

The draft of new seed laws to be presented to the coming Legislature is to be worked out at a meeting of all people interested, to be held soon at San Luis Obispo under the auspices of the State Horticultural Commission. Senator Rigdon, who attempted to get such a bill through the last Legislature, will undertake that part of the work again. The plan to be presented by the State Horticultural Commission through O. W. Newman, who has been working on this problem some years, is to provide a workable separate law to encourage what Chief Deputy State Horticultural Commissioner George P. Weldon says is the most important thing—the scientific improvement of our various seeds, principally by selection of the best plants and heaviest seed and the certification of such by the State. Potatoes and cantaloupes are especially in need of such improvement. The tendency is generally to sell the best and earliest, leaving the culls to furnish seed. The Rockyford cantaloupe is known everywhere because a seed growers' association has standardized the selection and certification of the seed. Breeders would begin to select melons as soon as the first ones ripen, choosing those on best bearing vines, having the heaviest netting.

Potatoes are on the decline in yield per acre in California for lack of better seed. We have a potato inspection and certification law which is in general quite satisfactory, except that it provides no money with which to boost the work. The result is that so few growers have asked for certification that the traveling expenses have been so heavy as to discourage even these. With a competent man paid to carry on propaganda, this condition could be reversed. The demand for certified seed is far beyond the supply and at good prices. W. V. Shear, who has been considered the best man in California for the inspection work, but who is raising potatoes of his own in Modoc county because inspection work does not keep him busy, writes to Mr. Weldon that nearly all of the potato growing States have inspection and certification and the movement everywhere is making great progress except in California, where it is going backward. He urges that the potato certification law be amended to include sweet potatoes, onions, beans, celery, asparagus, beets, cabbage, etc., when grown for seed. Mr. Weldon agrees emphatically and points out that with these lines added to the potato inspection and with a small initial appropriation, enough inspectors would soon be needed to have one in each district. With the basic principles of plant breeding in mind, such inspectors could soon become expert in judging the quality of various truck crop seeds.

The growers themselves whose potato crops are now inspected pay for the inspection, and there has been no difficulty collecting on crops that are certified. But some collections have been difficult where certification was found impossible and an amendment is needed to cover this point.

Separate from the seed certification law is another proposal to strengthen the inspection of seeds on the market in regard to adulteration, weed seeds, ability to germinate, trueness to name, etc. Anyone who has sown foul weeds, wrong varieties, or weak seed realizes the value of such a law.

Before the primaries is time for farmers to ask candidates regarding their attitude on better and purer seed and to insist on their support of a workable law to that end.

SIDEHILL STRAW WAGON.

A sidehill grain hay and straw wagon which does not tip over is in use on T. D. Carneal's ranch in Alameda county. The rear axle is lengthened from the left end to about ten feet between the wheels and the wheel on the left side has been replaced by one with a flange which cuts into the ground and helps prevent slipping.

SQUIRREL EXPERIENCES.

"I sprinkled two quarts of poisoned barley in the cow paths where squirrels run, one morning early this July, and six hours later none of it was left, but I found dead squirrels," said A. E. Balmer, a fruit grower of Contra Costa county pretty well surrounded by pastures, grain fields, and range land. This seems to indicate that even while grain is plenty in the fields, squirrels will pick up poisoned barley that lies handy. Mr. Balmer one night heard dirt rolling down the hill. He set two traps in the forks of a tree root, expecting to get skunks, but in the morning two squirrels were waiting for him. Thirty apricot trees bore such a crop this spring that they had to be thinned before cherry picking time. While Mr. Balmer was busy on cherries the squirrels cleaned off the apricots "until there were not thirty fruits left on the thirty trees." He had wrapped newspapers loosely around the trunks so they would rattle, and squirrels left them alone until fogs stopped the rattling and squirrels climbed over them. Squirrel extermination seems to be making no headway in this district.

Farmers using lime are urged not to wait until the time of greatest demand, but to anticipate their needs and order early.

Napa County Fair

NAPA, CAL., AUG. 23-24-25

See Napa County at her best. Poultry, livestock, as well as general agricultural products, will be on display. Twenty thousand square feet of exhibits. The roads to Napa are good.

E. P. LOCARNINI, Manager — Napa, California

PROOF of Avery Tractor success is shown by the way Avery Tractor sales grow in the same community. When one farmer gets an Avery Tractor, his neighbors watch its work closely. It is not long before another Avery arrives and then another, for his neighbors see that Avery Tractors stand up under the work.

Likewise, when an Avery gets into a family, other members of the same family soon become Avery owners. Brothers, cousins, fathers and sons, uncles and nephews are buying Averys. We have many records of where two, three and four brothers in the same family have bought Avery Tractors. The fact that neighbors, friends and relatives buy Avery Tractors after they have watched carefully the work of the first Avery Tractor in their community or family, is the very best proof that Avery Tractors are a success.

Power for Every Farm Need

You can get an Avery Tractor to exactly fit your size farm. Avery Tractors are built in six sizes—a size for every size farm. With an Avery Motor Cultivator you can also cultivate your row crops with motor power. You can also get a size Avery "Grain-Saving" Separator and Avery Plow for any size Avery Tractor. For any kind of field work, belt work or road work, there is a successful and profitable Avery Motor Power Machine.

Built by Motor Farming Machinery Specialists

The five sizes of Avery Tractors, from 8-16 to 40-80 H.P., are all of the same design. They have low speed motors, renewable inner cylinder walls, adjustable crankshaft boxes, gasifiers that turn kerosene or distillate into gas and burn it all, and many other original and exclusive features.

Avery Tractors are built entirely in our own big factories and every part of an Avery Tractor is built especially for tractor work and only for the Avery Tractor. Avery Company are *builders*—not assemblers.

See the Nearest Avery Dealer

Go to your Avery Dealer and get the size tractor and equipment to meet the needs of your size farm. No matter how small or how large the acreage you cultivate, Avery motor farming machinery will fill your requirements. Or, write for complete catalog, showing the Avery Line in natural colors.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Resaw Silo Spoiled Feed.

Resaw silos are likely to spoil more silage in one season than the difference between their cost and the cost of a good air-tight one. J. M. Christen of Pacheco, who has a high producing dairy herd, is one who has found this true during this summer. Barley and bur-clover silage put up in May is rotten all around the edges and has to be thrown away. The rest of this silage is good feed, well cleaned up by the cows, although black and aromatic when taken from the silo. Cows eat 12 or 14 pounds per day, besides other feed while heifers get nothing but dry pasture and 10 pounds of this silage per day. It was put up when the barley was in the milk and the clover green but beginning to dry up. Mr. Christen thinks he did not use enough water, as the silage does not seem so good as vetch and barley silage previously used.

Bulk Grain Being Handled.

Grain is being handled in bulk into the 150,000 bushel elevator erected at Monroeville this season and everything is working fine, saving labor and sacks. The sack situation is not bad compared to what it would be if a normal yield per acre were being harvested. But we do not know that the sack and labor situation will be any easier for grain farmers next year, though we are expecting better rainfall and better crops. It is already time to begin planning for grain elevators to handle next season's crop.

Onion Seed Yield Spotted.

Only 40 to 50 per cent deliveries can be made on contracts for onion seed owing to the "seedburn" of June, according to T. A. Cox of the Pacific Seed Growers Co. The crop is now being gathered but it is still too early to tell accurately. The greatly increased acreage planted this season has been under such extremely varied conditions that many failures are reported with fields yielding all the way up to 1200 pounds per acre.

Wide Firebreaks Around Stacks.

Loss of grain or straw by fire is a public as well as a private loss, according to President Wilson. More growers than ever before have plowed firebreaks around their stacks, but many of these are not wide enough to stop fire if the wind is blowing. After taking all the trouble to get teams and plows to the stacks, very little more effort is required to plow a firebreak twice as wide as seems necessary.

Tomatoes Enclosed by Box.

Black aphis on our tomatoes has kept the sprayer busy whenever an odd moment appears; but one tomato plant has been free from the pest and has set fruit. It was protected by a tall, narrow, bottomless box, from which the tops are now protruding. The plant is thriftier than the rest in the patch, due both to its freedom from aphis and probably to its protection from wind.

Save the Cabbage Stumps.

From Christmas until April, deliciously sweet, tender, stringless cabbage sprouts are available from T. C. Holmes of San Francisco. In cutting his cabbage in the fall, he selects 20 or 25 of the largest stumps, cuts off their side roots and plants them deep. To retain an appetizing green color in cooking, a pinch of soda is added to the water. Fifteen or twenty minutes boiling are needed.

Tomatoes Need Water.

We have seen advice to withhold water from tomatoes persistently while they are blooming. If we did that we wouldn't get any tomatoes in our garden this season, whereas, with repeated soaking irrigations since the plants were big enough, they have made fine growth and are setting lots of fruit.

NAPA COUNTY FAIR.

The management of the 1918 Napa County Fair has found that canvas will not be available this year for the housing of exhibits. Arrangements have therefore been made whereby the exhibits will be housed in an immense tule constructed pavilion. This pavilion will be 200 feet long by 100 feet wide. It will be decorated with ferns and flags in the interior. Arrangements have already been made for an immense flower show in conjunction with other agricultural exhibits. This promises to be the most artistic exhibit ever shown in Napa county.

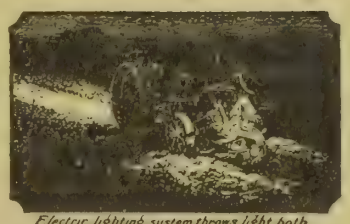
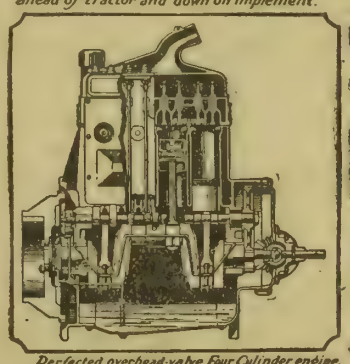
No Other Tractor Has So Many Good Mechanical Features=



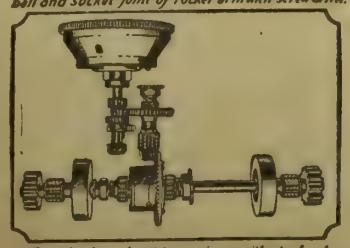
Electric lighting system throws light both ahead of tractor and down on implement.



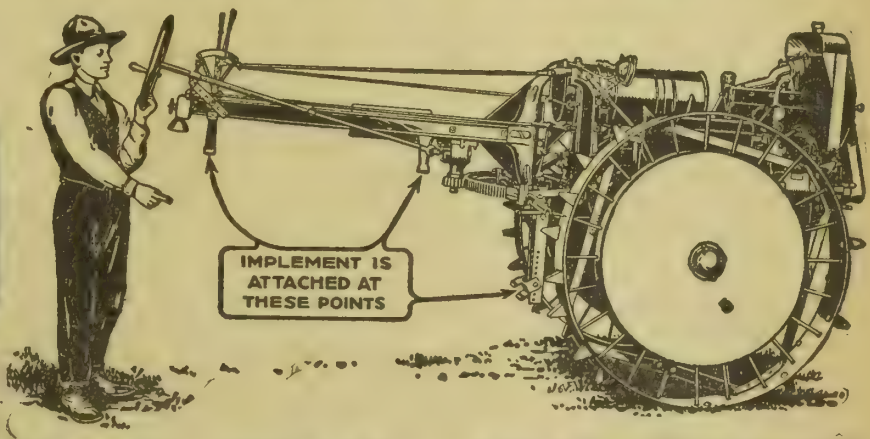
Perfected overhead-valve Four Cylinder engine, with force-feed oiling system under 35 lbs. pressure.

Diameter of connecting rod bearings 2¾ in. compared to piston diameter of 3½ in. insuring long life.

Valves placed in perfect adjustment by turning down ball and socket joint of rocker arm with screw-driver.



Completely enclosed transmission with steel cut gears, Hyatt bearings, differential lock, and brakes



MOLINE UNIVERSAL TRACTOR

It Solves The Farm Help Problem

EVERYONE who knows what a tractor should do, agrees that the Moline-Universal has three distinct advantages over all other tractors: lighter weight; greater economy and ease of operation; ability to do all farm work, including cultivating; and ONE-MAN control of both tractor and implement from the seat of the implement, where you have always sat, and where you must sit in order to do good work.

Aside from these distinct advantages which the two-wheel construction gives, the Moline-Universal Tractor, Model D, is still the best tractor on the market. In every detail it has been refined and perfected to the utmost limit of modern engineering knowledge.

Self Starter—Electric Lights

The Moline-Universal is the only tractor regularly equipped with a complete electrical starting, lighting, governing and ignition system. The starter saves many hours of productive work, besides eliminating back-breaking labor. Electric lights enable the tractor to be worked at night during rush seasons.

An electrical governor perfectly controls the engine speed. By simply turning a dial, within easy reach of the operator, engine manitains any speed from ½ to 3½ m. p. h., and automatically handles all changes in load.

Perfected Four-Cylinder Engine

The perfected four-cylinder engine is the latest development in overhead-valve construction. With a bore of only 3½ inches a 2½-inch crankshaft is used. The strength and thickness of the crankshaft eliminates all vibration. Oil is forced through hollow crankshaft to all the main and connecting rod bearings under a pressure of 35 pounds to the square inch. The bearings float on a film of oil, so their surfaces never touch.

Double valve springs give unusually quick action with soft seating. Rocket arms are swiveled on ball and socket joints that may be turned down with a screw driver, placing the valve mechanism in perfect adjustment at all times. This engine develops unusual power and is very economical in operation.

Steel Cut and Hardened Gears

The transmission is completely enclosed, with drop forged, hardened, and cut steel gears running in oil that reduce power loss to a minimum. All gears are mounted on heavy duty Hyatt roller bearings, with high grade ball bearings fitted with adjustable collars to take up end thrust. Fifteen Hyatt roller and five ball bearings are used in the Moline tractor. Seven splined shafts are used in locking gears to shafts. This is the strongest construction known, and has the additional advantage that it makes the transmission easy to take apart.

For pulling in soft ground, the two drive wheels can be made to revolve as one by means of a differential lock, doubling their pulling power.

Complete Enclosure of All Parts

The final drive is completely enclosed in dust tight shields, the edges of which are sealed by heavy grease used to lubricate the gears. Every part of the Moline-Universal tractor is protected against friction and wear.

All working parts are accessible. All the weight is so well balanced on two wheels that the rear end of the tractor can be supported with one hand.

The Moline-Universal Model D will give you longer and better service at less expense than any other tractor. It is built for positive reliability.

Our catalog describes the Moline-Universal in detail. Send for it. Address Department 97.

MOLINE PLOW COMPANY, Moline, Ill.

Manufacturers of Quality Farm Implements Since 1865

General Agricultural Review

FAIR DATES.

Field Crops.

The 1918 wheat crop in Kansas will probably total 102,000,000 bushels, according to the latest estimates.

Steps toward organization of an association of barleymen are being taken by the barley growers of Merced.

Several cantaloupe and melon growers have been arrested in Tulare for offering for public sale green fruit.

Hop growers of the Sacramento Valley are getting together to mature plans for the protection of their industry.

Sacramento Valley hop growers have set the wages for hop pickers this season at one cent a pound. The season opens August 10.

Hops and corn in the Ukiah and Potter valleys are not doing so well as the farmers would like, but the grain crop is good and is being threshed and delivered.

J. T. Brown, grain expert and one of the Food Administrators, has made the announcement that the Government will set no price on grains with the exception of wheat.

The U. S. Department of Agriculture is to investigate the destruction of rice by the ducks in the Sacramento Valley. There was considerable damage done to last year's crop.

Deciduous Fruits.

It is reported that the demand for Gravenstein apples in the Sebastopol district this season is very strong.

Quite a little fruit not coming up to the standardization laws is being confiscated here and there in the State.

Apricot drying is now on in the Armos district near Watsonville. The fruit is large-sized and well sugared.

C. D. Flowers, president of the Pear Growers' Association of Ukiah, has five acres which are six years old. He says they will easily yield ten tons this season.

Vandals are abroad in the orchards of Santa Clara county. It is reported that 300 apricot trees, valued at $3,000, were cut down wantonly in one orchard.

It is reported that California dried fruit packers will be allowed one cent per pound manufacturing and packing cost on 50-pound boxes of dried peaches, prunes, apricots, pears and other fruits packed in the same manner this year.

The California Peach Growers, Inc., located in what was the North Ontario packing plant, is now handling the apricots of the Prune and Apricot Growers' Association. All the association apricots in the valley will be cared for at this plant.

Butte county owners of black walnut are being urged to get in touch with the War Industries Board. Touching this matter an Eastern paper says: "If an agent sees a tree today, by tomorrow there'll be a sign on it reading "Property of the United States."

A party of officials of the Southern Pacific Co. have been looking over the fruit situation in Sutter county from the shipping standpoint, especially as to handling the cling peach output, which will be heavy this season. They say that plenty of cars will be furnished.

Fruit growers of Loomis, Penryn and Newcastle are donating a full car of fruit to be sent East for the benefit of the Newcastle Chapter of the Red Cross. The donations came from large and small growers and all races of men in the fruit business. From tree to car is donated.

The Department of Agriculture has issued a definite standard for evaporated apples and it will be necessary to conform thereto if they are to comply with pure food requirements. It reads: "Evaporated apples are evaporated fruit made from peeled, cored and sliced apples, and contain not more than 24 per cent of moisture as determined by the official method of the Association of Official Agricultural Chemists."

Citrus and Semi-Tropical.

What constitutes a record price for an orange grove in Tulare county was paid recently for the Copa de Oro Ranch, bordering the foothills near Exeter. It comprises 20 acres and brought $26,000, or $1.300 an acre.

Meetings of the citrus growers in the Porterville district are being held to discuss the best methods to dispose of their by-products. Growers believe a plan can be worked out whereby something can be realized from their culls.

Dr. W. P. Kelley of the Citrus Experiment Station at Riverside is now located in Lindsay. He will have field men in all parts of the district, who will supply data on irrigation, cultivation and other phases of the orange problem.

The heavier demand for the smaller sizes of olives this season and the larger tonnage being used for the processing of green olives and the manufacture of oil, is tending to restore the custom of buying olives orchard run, rather than on a graded basis.

From an inspection of the orange and olive groves in the Oroville district by County Horticultural Commissioner Earle C. Mills, it is estimated that the orange crop of Oroville district would not exceed 45 per cent of normal, and the olive crop 55 per cent.

In the thermal belt west of Owensmouth, Los Angeles county, the ground was broken recently for the preliminary work of planting several hundred acres of Valencia orange and lemon trees. The property is all under the Owens River aqueduct system, insuring an abundant supply of irrigating water.

The production of the orange growers in Southern California is very spotted, it is reported, and while some orchards will have a normal crop there are others in which the production will be scarcely anything. As a whole a 50 per cent output for the South is thought to be a safe estimate.

Grapes.

The grape crop of Imperial Valley, mostly early Thompsons and Malagas, amounted to about 160 cars.

Some shipping grapes have been condemned lately by the inspectors in Fresno and Tulare counties. They were picked too green.

The Muscat curing and boxing rate is raised from the $17.50 of last year to $20 per ton this year, an increase of 14 per cent, the difference being due to the higher rate of day wages which will prevail during the turning and stacking and boxing period, says the president of the San Joaquin Valley Fruit Growers' Association.

Miscellaneous.

In Argentina the cash price for wheat is $1.44 per bushel. Cash corn is selling there for 62c per bushel.

An agreement reached between the Oakdale and South San Joaquin Irrigation Districts and the Sierra and San Francisco Power Co. provides for the use of the water stored in the reservoirs of the power company at a price of 75c per acre foot.

At a recent meeting of the grain growers, held at Davis, with Mr. Merritt of the Food Administration it was thought advisable to form a State Grain Growers' Association, to look after the production and marketing of grain crops. To this end a State meeting will be held at Sacramento, August 8, at 10 a. m., each county to be represented by three delegates.

THE WORLD'S RECORD

for Tire Endurance

Established by

BRAENDER

Bull Dog Grip, Non-Skid

TIRES

at

Indianapolis, Speedway

has never been equalled!

Registered Trade mark

This wonderful demonstration of wear-resisting qualities built into Braender Tires astounded the racing world and was made by Ralph Mulford on the Indianapolis Speedway with the first set of Braender Tires ever used in track racing.

The four Braenders carried the heaviest car in the race and were the only tires that went through the entire grind of 500 miles without a change.

The performance eclipsed any record of tire endurance ever made on any track anywhere, **and still holds good.**

You can buy the same quality tires from any Braender dealer—safe, strong, speedy, they are dependable on track or road.

READ THIS!

"I came into possession of one Braender Tire in August, 1917, it being on a car which I traded for, since which time I have run this tire over 2,000 miles. It holding up so well caused me to inquire as to its age. I find it to have been in use about 3 years and in good condition yet; has never had a puncture or a break and has never been off this wheel.
I do not know of a dealer in this county and with the tire still in use with a reputation of over 3 years, I would like to have the agency of this tire in Cobb County.
(Signed) C. B. NORTON.
April 1, 1918. Smyrna, Ga."

FEED CONDITIONS IN SOUTHERN HALF OF STATE.

[Written for Pacific Rural Press by Ord L. Leachman.]

In Stanislaus county we find feed conditions very good, but the possibility of a shortage of water in the early fall will shorten the last two cuttings of alfalfa. The dairy industry is handicapped by the labor shortage, but many are installing milking machines with satisfactory results.

Through Merced and Madera counties the situation is not so good, as there is less irrigation and more dry farming. Farmers are saving all feed possible, such as wild hay and straw, which was formerly wasted. Some are erecting silos, others are drilling wells and pumping water for corn and other second crops. As a whole, they will have feed enough to carry them through the winter.

In Fresno county the ranges are about the same as Merced and Madera counties, but in the irrigating sections there are more grapes and fruit. Some are combining grapes and livestock, which is very profitable, as the cull raisins are used for hog feed, while cattle and sheep find plenty of rough feed in the vineyards after the grapes are harvested.

In Kings county alfalfa and corn in many fields and a large amount of pasture look fine for the stockman. In the Stratford district many tons of alfalfa hay are piled along the road for shipment. The alfalfa and corn crops are the foundation for so many prosperous dairy and hog ranches found in Kings county.

Many sections of Tulare county were overrun with grasshoppers, which in many cases have almost ruined the crops, but the farmers have put in second crops and with the use of more silos and feed choppers they will have some surplus feed.

We found Kern county feed very short, except in the irrigated districts, but the stock looks good under present conditions.

Los Angeles, San Bernardino and Riverside counties are very short of feed where dry farming is done, but are normal in the irrigating sections. They will need to import some feed.

The prospects are fine for a bumper bean crop in Ventura and Santa Barbara counties, which insures the stockman great quantity of bean straw. The alfalfa condition is about normal.

San Luis Obispo and Monterey and part of San Benito counties depend more on the rains, therefore feed conditions are bad. In many sections cattle are being shipped to feed in other parts of the State, and unless there are early rains there will be some losses.

BENEFICENCE OF BEANS.

To the Editor: I made a good bunch of horse bean hay. The cows licked up every inch of it. I am now thinking of trying several acres and getting it off in time for pink beans. Two bean crops make these old worn-out hills near Soquel bring good grain crops.—D. B. Stanforth, Santa Cruz.

The collection of the $7,000,000 inheritance tax due the United States Government from the estate of the late Henry Miller is now in progress.

The fine new $300,000 horticultural building will be ready at the opening of the State Fair this season and State Horticultural Commissioner G. H. Hecke is urging County Commissioners and fruit growers to boost for the best county exhibits ever put out.

"The Schmeiser Way Makes the Farm Pay"

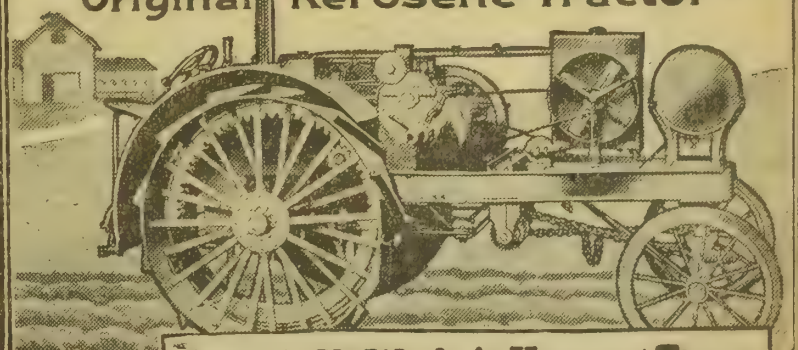
WATERLOO BOY
Original Kerosene Tractor



Speeds Up Work At Harvest Time

You need to do some fast work when your standing crops are ready to cut; and you can rely upon the Waterloo Boy one man, three-plow, cheap fuel tractor to make every minute count.

One man can harvest 25 acres per day with the Waterloo Boy and an 8-foot grain binder, or 10 acres per day with a corn binder—has a threshing record of 16 loads clover in 4½ hours.

Stands Severe Endurance Test

The Waterloo Boy motor has pulled a 25-H. P. load for 312 hours without stopping. A test run of eight months showed average kerosene consumption of less than 1½ gallons per hour.

As efficient in the field as at the belt—pulls three 14" bottoms in heavy soil, with ample reserve power. Light weight, large, wide wheels, with powerful quick-starting motor and easy control enable the Waterloo Boy to do good work "where heavier tractors would not dream of working," writes one owner.

Remember, the Waterloo Boy is made and backed by a responsible manufacturer, and has over four years' proven success to its credit.

Illustrated Catalog sent free, shows why thousands of farmers are buying the Waterloo Boy. Write for it.

Waterloo Boy at Work

John Schoepf & Sons, Seward, Nebraska, write: "We plowed 42 acres with 60 gallons kerosene in 5 days; we shelled 18 loads corn in 2½ hours; we threshed 16 loads clover and alfalfa in 4½ hours with a No. 6 huller, the largest in this section. We think the Waterloo Boy as powerful and as cheap to operate as any tractor."

Waterloo Gasoline Engine Company
6000 W. Third Avenue Waterloo, Iowa

The Engine Selected by over 150,000 Farmers

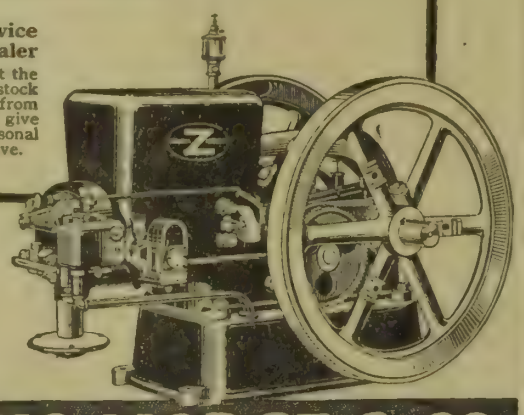
RECORDS made by over 150,000 practical farmers buying over $10,000,000 worth of Fairbanks-Morse "Z" Farm Engines have never been equaled in Engine history.

Demand, as they did:

1. Fairbanks-Morse Quality.
2. Economy in first and fuel cost, and low upkeep.
3. Simplicity and Staunch Durability.
4. Light-weight, Substantial, Fool-proof.
5. Gun-barrel Cylinder Bore.
6. Leak-proof Compression.
7. Complete with Built-in Magneto.
8. More than Rated Power.

You Also Get Service from your Local Dealer

Your local dealer has just the type "Z" for your needs in stock —waiting for you. Buy from him. He is prepared to give prompt delivery and personal service right where you live.



The 3 and 6 H. P. sizes are built to use kerosene, distillate, stove oil, tops or gasoline. The 1½ H.P. size uses gasoline only.

FAIRBANKS, MORSE & CO.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles

CUTTING BEANS BY TRACTOR.

To the Editor: In your article of June 29, "It Pays Us to Let George Do It," you mention pulling a bean vine cutter with a small tractor. I am trying to figure how to pull a bean cutter with an 8-16 I.H.C. tractor, but the spacing of the beans and tractor wheels does not seem to allow it and the width of the tractor wheels (12 inches) offers some difficulty.—R. L. Irwin.

The writer of the article plants his beans to fit his tractor and uses extra long lugs of the sort that fasten through the wheel rim, each one being only about three inches wide and projecting in line with the spokes. This helps avoid the threshing of such as are run over by the wheels. With your tractor similar lugs could be used, but you would have to adjust your drawbar to pull the cutter right with considerable side draft. We believe it has plenty of power and is built all right for such a job cutting two rows at once. There is no ready-made way of widening the distance between wheels or of using narrower rims on the machine. It may become necessary for a man to follow the machine bunching the vines out of its way on the next round.

MOTOR TRUCKS SAVE FOOD.

Decreased production of perishable foodstuffs due to labor shortage and the time required to haul to market is announced by the Food Administration. Meanwhile motor truck express lines have been established in many parts of the country to pick up small lots of perishables and other farm produce, haul them to market and bring back supplies, thus releasing the farmers for more time at their special work, actual production of food. Around Washington, D. C., motor truck loads of fruit and vegetables are delivered direct from producers to home canning clubs in the city at wholesale prices.

Arrangements are being perfected in a number of fruit growing sections to supplement the usual shipments by rail and boat during the rush period by using motor trucks. It has been found that a large number of trucks owned by farmers are used only a few days each week and the Highways Transport Committee of the U. S. Food Administration is attempting to have these used daily.

ALFALFA CUTTER AND MOLASSES MIXER.

A forty-inch Acme feed cutter with molasses mixer attachment was recently bought by the Western Meat Company, after demonstration in the South San Francisco yards. It was sent on to Visalia to prepare feed for sheep and another was ordered. It cuts the alfalfa clean into short lengths as fast as two men pitch it into the hopper. The chopped stuff drops into a trough containing two flights of conveyors which mix it with molasses or other feeds and shove it evenly into an elevator. A blower could be attached instead of the elevator if desired. One of the important pieces of work done was to chop rice straw and mix it with molasses, which makes a good maintenance ration for cattle. The machine is a new size and with a different feed but with the same knives as the Acme cutters, which have been used two or three years. Its capacity is about four tons per hour. Forage is too necessary and high priced this year to waste 20 per cent of it by feeding whole when it can be chopped at a cost of $1 per ton and all of it used.

SECOND ANNUAL PACIFIC AUTO SHOW.

Time—February 16 to 24.

Place — Exposition Auditorium, San Francisco.

Purpose—Showing of 1918 models of passenger cars in connection with truck exhibit and accessory display.

The manager is George A. Wahlgreen and the show will be held under the auspices of the San Francisco Motor Car Dealers' Association. We are promised the most beautiful show of its kind from an artistic and decorative standpoint ever held in the West. There will be 75 exhibitors of passenger cars of different makes, 45 truck exhibitors, 90 accessory exhibitors, also special music by Ferdinand Stark's orchestra. There will be special rates to San Francisco on all railroads under the certificate plan. The space in passenger car display will be 50,000 square feet; in truck exhibit, 21,000 square feet.

TRACTOR SAVES IRRIGATION WATER.

Irrigation water is expensive and should not be allowed to evaporate from the soil more than necessary by waiting too long before cultivation. James Sherriffs of San Benito county has a bean tractor which he found highly desirable in harrowing quickly after irrigation. He had already plowed a heavy covercrop under, had disced it twice and harrowed.

Cleveland Tractor

A Tractor That Does The Things You Want a Tractor To Do

The Cleveland Tractor is not confined to a narrow field of service. It does the things you want a tractor to do.

It plows, it harrows, it plants, it reaps. Its great power and small size enable it to work satisfactorily in difficult, awkward places. It works efficiently under and among small trees, close up to fence corners, around boulders, on hillsides, over ditches, gullies and rough ground.

With 600 square inches of traction surface, it goes through sand, gravel, gumbo, mud and even wet clay without packing the soil.

The Cleveland Tractor lays down its own tracks, crawls on them, and picks them up again as it goes along—just like the famous war "tanks."

It does *faster* and *better* work than was possible before. It plows 3½ miles an hour—eight to ten acres a day—equal to the work of *three* good men with *three* 3-horse teams under favorable conditions.

But the Cleveland is *far more than just a tractor.* With pulley and belt, it will saw, cut ensilage, pump—and do the things you demand of a stationary engine.

In addition it can be used for hauling the manure spreader, for grading, dragging logs and pulling road machinery.

It develops 12 horsepower at the drawbar and 20 horsepower at the pulley. Yet with all this power the complete machine weighs less than 3200 pounds, and can be housed in less space than is required for a single horse.

Rollin H. White, the well-known engineer, designed the Cleveland Tractor. It is built under his personal supervision, and is constructed for long service. The track sections are joined with hardened steel pins which have their bearings in hardened steel bushings. Gears are protected by dirt proof cases and are of the same high quality as those of the best trucks. The finest materials are used throughout.

Farming today demands the most comprehensive machinery obtainable—machinery that is useful in doing *many* different things—machinery that is adaptable to widely varying conditions.

Thousands of farmers are looking to the Cleveland Tractor in the present crisis. And the Cleveland is meeting the demands—severe as they are—and is *making more money* for its owners.

It is truly the tractor that does the things you want a tractor to do.

Nearly every farm can use one or more Clevelands to speed up production and cut down costs. Write *today* for complete information and the name of the nearest Cleveland dealer.

The Cleveland Tractor Co.

19079 Euclid Ave. Cleveland, Ohio, U. S. A.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

Mrs. T. A. Grady of Modesto has purchased a foundation herd of four Holsteins from A. M. Bibens.

R R. Ross of Tulare bought his first registered Holstein cow at the Frank Laurance auction sale.

Whittier State School reports its whole herd of Holsteins to make an average of three pounds of butter per day on official test.

Alternate green and dry alfalfa every day or two in feeding cows, says Jos. Metcalf of Monterey county. The change makes them do better.

Alex. Whaley of Tulare sold a young Holstein bull to W. W. Coke of Ontario. Mr. Whaley bought a registered Holstein heifer at the auction sale of Frank Laurance.

A junior two-year-old Guernsey owned by L. Dee Smith of Berkeley recently completed a seven-day test, making 21.5 pounds fat, equivalent to 26.9 pounds 80 per cent butter.

J. W. McAlister & Sons of Chino report sale of three Holstein bulls to Burr Creamery, Los Angeles, also one bull to Burt Kennedy of Arlington and one to M. L. Finch of Gardena.

Milking machines on the J. B. Cooper ranch in Monterey county resulted in no loss in the production of about 100 cows when installed last August. The men milk and strip 28 cows per hour.

A Holstein cow, Eske Hetty, the first British-bred cow of any breed to yield 19,324 pounds of milk in 365 days, was recently sold for $17,500 to the Olympia Purebred Stock Farm of Essex, England.

Dairy stock breeders showing at the California State Fair, August 31 to September 8, will receive cash premiums totaling $7,700, an increase of several hundred dollars over previous years.

Raphaela Johanna Aaggie of Napa Hospital Holstein herd has completed 180 days' strictly official test with a record of 18,784 pounds milk. She will continue on test for the balance of the year and has a splendid show of making the world's record.

Stadler Bros. of Riverside are preparing to show some of their fine Holsteins at the Los Angeles Fair. They have 115 head of registered Holsteins headed by King Pontiac Netherland Segis 3rd, who is producing about 75 per cent heifer calves.

Dr. H. W. Hand of Glenn has purchased from C. P. Hembree of Monmouth, Ore., the Jersey champion cow, Imported Brilliant Spray, and now has her in his California herd. This cow was grand champion at the California State Fair last year and will be shown this season.

The honor cow for May in the Oregon cow-testing association for butterfat production was Baby, a Jersey, owned by Joe Durrer, Tillamook, with 1785 pounds milk and 80.33 pounds fat. For milk production a Holstein owned by A. O. Jackson of Hebo took the honors, 2014 pounds milk and 70.5 pounds butterfat.

The Orland Jersey Cattle Club held a lively meeting at the Dr. Hand Farm, Thursday, July 25. It was decided that the club have a special "Jersey" booth at the Glenn County Fair, which will be held September 16-21 at Orland. The club is going to make a heavy entry at this fair. The Orland Jersey Cattle Club will be well represented at the California State Fair also. Dr. Hand and S. F. Williams are going to enter a carload of their fine stock.

Beef Cattle.

The Hereford Association of California is expecting to make some fine displays at some of the stock shows to be held in the bay cities this fall. Many very fine beef cows will be shown.

The Tagus Ranch of Tulare is pasturing about 700 acres of alfalfa, which is fenced in 40-acre tracts and used successively. They also have 700 acres of alfalfa from which they are cutting hay.

Curtis Miller of Ukiah, a farmer, reports the feed conditions in the ranges good and cattle in good shape. He says any man can keep posted as to the crop conditions and many other things worth while by reading the Pacific Rural Press.

Swine and Swinemen.

W. H. Taylor, superintendent of the Anita Baldwin Rancho, reports an average sale of 30 head of registered hogs per month.

Peters, Lamson & Walker of Devore, near San Bernardino, have moved all of their 1000 head of Durocs to the Sweetwater ranch at Bonita, Cal., San Diego county.

The Conejo Ranch of Newberry Park is feeding about 700 head of Durocs and Hampshires and is expecting to show one carload of each breed this fall in the different shows. They recently bought 16 sows and three boars from Herman Toelle, a Duroc breeder of West Point, Neb.

Sheep.

B. E. Nixon has just imported from the East a fine Shropshire ram to head his flock at Revada Farm.

The first car of wool for the season was shipped from Ventura by the Ventura Wharf and Warehouse Company last week. It went to Boston.

An expert sheep shearer employed on a ranch near Alturas earned $800, or over $29 a day, recently, for a period of 27 days, by shearing an average of 200 sheep daily.

Gives Greatest VALUE for LEAST MONEY. IT MAKES THEM FAT.

HAUSER PACKING COMPANY LOS ANGELES

Livestock Miscellaneous.

Rations for milch cows and work horses have been established in England and other livestock must live without any concentrated feeds.

Mrs. W. Anderson of Oak Ridge Farm at Kenwood, Sonoma county, has a registered herd of large Yorkshire hogs and a herd of purebred Jersey cows. She is now looking for a small flock of sheep and believes that a small farm can be made to pay. It is with the aim of helping in the big crisis of the world that Mrs. Anderson intends raising hogs, sheep, cattle, hay and grain this coming year.

The Frye Ranch near Oakville, Napa county, owned by the State and now under the management of the Napa State Hospital, is being developed into a sheep and cattle ranch to supply mutton and beef for all the Northern State institutions. The ranch comprises a large acreage of hill range and valley land. An abundance of water is available and is being developed for irrigation purposes. The acreage in alfalfa will be immediately increased from 75 to 200 acres and a silo will be erected this fall. Manager Owen Duffy expects to establish in the near future a purebred beef herd.

MILKING SHORTHORNS FROM THE EAST.

Thos. Harrison of Glen Ellen has a carload of milking Shorthorns coming from the East. Among them is Braemer Beauty, a Canadian prize winner with a record of over 9000, and a yearling bull out of imported cow and sired by one of the best bulls in England. Both of these are from the Otis herd.

SWINE.

Poland-Chinas.

I NOW OFFER my spring pigs, sired by Cook's Hancherdale Jones, a grandson of the famous Gerstdale Jones and out of big prolific sows, the best of the "Big Types." Write for prices and further information. J. H. Cook, Paradise, Cal.

BIG TYPE POLAND-CHINAS—See us at the State Fair with 16 pigs sired by Model Wonder, Reserved Grand Champion of 1917. We have two good boars of serviceable age for sale. Write us. Dimmick Bros., Box 811, Lemoore, Cal.

FORTY LARGE TYPE POLAND-CHINA open and bred gilts from such sires as Jumbo Equal No. 92441, My Choice 94329, and Long Nelson 180065; some are being crossed with the great young boar, Giant Ben 2nd No. 304871; bred for farrowing in September and October. L. C. Trewhitt, Hanford.

THE BEST IN THE WEST—California Gertsdale and President's Equal are my herd sires. Fall and spring boars now ready to move—each one a corker. Dr. J. A. Crawshaw, Hanford, Cal.

LAKESIDE STOCK FARM POLAND-CHINAS are money makers. Satisfaction or money refunded. Geo. V. Beckman & Sons, Lodi, Cal.

BIG TYPE POLAND-CHINAS—President, assisted by California's Smooth Jumbo, are the sires of my spring pigs. See them at the State Fair. Jno. M. Bernstein, Hanford, Cal.

BIG TYPE POLAND-CHINAS—Young serviceable boars and spring weanlings from my best sows, and Blucher, an exceptionally good boar. P. E. Mitchell, Atwater, Cal.

NOW BOOKING ORDERS for spring pigs, either sex, from my prize-winning, large type Poland-China hogs. H. I. Marsh, Modesto, Cal.

C. G. DE RAAD — Breeder of high-class Poland-Chinas. Choice young stock, $20 and up. Lemoore, Cal.

REGISTERED POLAND-CHINA SWINE — Prize winners. Finest stock in the State. $20 up. M. Bassett, Hanford, Cal.

BIG TYPE POLAND-CHINAS—Stock from the best herds of the Middle West. N. Hauck, Alton, Humboldt county, Cal.

REAOAKS RANCH herd of registered Poland-Chinas. W. J. Hanna, Gilroy.

HEWITT'S BIG TYPE POLAND-CHINAS—Bred sows and gilts. Hewitt & Hewitt, Dixon, Cal.

POLAND-CHINA PIGS — Bernstein, Trewhitt, and Ross blood. B. M. Hargis, Tulare.

Chester Whites.

"BILLIKEN" CHESTER WHITES — The Easy Feeding Mellow Type. All bred sows and gilts are sold. I have 15 gilts that were farrowed in May, 1917. These will be bred for September farrow. All are sired by Billiken. One young service boar that is just 13 months old. C. B. Cunningham, Mills, Cal.

HIGHLAND STOCK FARM CHESTER WHITES—Shipped on approval. Satisfaction guaranteed. Cholera immune. Write for booklet and prices to Robinson & Ward, Fair Oaks, Cal.

Berkshires.

BERKSHIRES—GUERNSEYS
GRAPE WILD FARMS
A few fall boars left, by Royal Superbus; also a limited number of fall gilts. We have early spring pigs of both sexes, and we are breeding some top gilts for fall farrow. Prices upon application. A. B. Humphrey, Escalon, San Joaquin county, Cal.

BERKSHIRE BARGAINS—Thirty pigs, three to four months old. Eight bred sows and gilts, grandly bred, fine individuals. Sows bred to one of the best boars in the State. Priced to sell at once. Come and see them or write us. Sold culls for pork. Twin Oaks Ranch, Linne, Cal.

ANCHORAGE FARM, ORLAND, CAL.—Breeders of Berkshires. Write for free booklet describing our herd sire, Star Leader, world's reserve champion. Special offering of weanling pigs.

BERKSHIRES—I have one of the best herds on the Pacific Coast, including grand champion sow, reserve grand champion boar under one year, third aged boar, etc. Frank A. Brush, Santa Rosa, Cal.

BERKSHIRE GILT FOR SALE—An outstanding pig, just old enough to breed; guaranteed to please. Glenwood Acres Stock Farm, Paso Robles, Cal.

CROLEY'S BALANCED HOG FEED—The cheapest feed to fatten hogs. Write Geo. H. Croley Co., Inc., Livestock Supplies, 8th and Townsend streets, San Francisco.

CASTLEVIEW BERKSHIRES are the typey modern, quick-growing kind, choicest blood lines. Prices reasonable. Castleview Ranch, Berkshires exclusively, Santa Rosa.

MAPLEWOODE RANCH, Calistoga, Cal., offer some fine Berkshire fall and spring pigs of both sexes. Prices consistent with quality and breeding.

BERKSHIRES—A few extra choice young pigs ready to ship. Write for description and prices. R. J. Merrill & Son, Morgan Hill, Calif.

BERKSHIRES—Sired by Star Leader, the $1,500 boar. Kounias Registered Stock Farm, Modesto.

FOR REAL GOOD BERKSHIRES write Frank B. Anderson, Box 724, W. Sacramento, Cal.

HOPLAND STOCK FARM—Registered Berkshires. Prices on application. Hopland, Cal.

CARRUTHERS FARMS BERKSHIRES — Cholera immune. Mayfield, Cal.

BERKSHIRES—Fair Oaks Ranch, Willits, California.

Duroc-Jerseys.

FOR SALE—Two King Colonel yearling boars sired by King Colonel, dam Crimson Wonder. Good enough to head any breeder's herd. Price $200. Two very typey fall boars and several fall gilts. H. P. Slocum & Son, Willows, Cal.

RANCHO RUBIO DUROCS—Thirty of the smoothest and best fall gilts we ever raised. Will begin breeding May 10th. Write for prices and pedigrees. Some choice weaned boar pigs for $25.00. Elmer Lamb, Ceres, Cal.

COMMITTEE CERTIFIED DUROCS — El Dorado County Duroc-Jersey Swine Breeders' Association. Dr. L. J. Anderson, secretary, Placerville

DUROC-JERSEYS—A few boar pigs for sale. Sired by the State Fair junior champion boar and out of prize-winning sows. F. M. Johnson, Napa.

LONE OAK DUROCS—Now booking orders August delivery, boar and sow registered weanling pigs. D. & H. J. Baughman, Oakdale, Calif.

RANCHO DEL SUR DUROCS—An exceptionally good December boar. Also few spring boars and gilts. Donald Graham, Lancaster, Cal.

FOR SALE—Boar, J. K.'s Model Chief, under two years; sire, Model Chief; dam, Beauty I Am. Price, $100.00. J. Stith, Hollister.

DUROCS—Defender, Clinton B. and Golden Model strain; the big type. Allen Thompson, Tulare.

BOUDIER DUROCS sold out excepting some choice boars ready for service. Breeding and satisfaction guaranteed. H. E. Boudier, Napa.

DUROC-JERSEYS.—Only a few sows and boars left. Am booking orders for September pigs. F. M. Barney, Hanford, Cal.

DUROC-JERSEYS OF THE BIG TYPE—Cholera immune. Reasonable prices. Derryfield Farm, Odd Fellows Building, Sacramento.

HEAVY-BONED DUROCS—A few service boars for sale. Ormondale Co., Route 1, Redwood City, Cal.

DUROC-JERSEY weanling sow pigs from champion stock. River Bend Farm, St. Helena, Cal.

REGISTERED DUROCS—All from prize-winning stock. W. P. Harkey, Gridley, Cal.

DOS HERMANOS DUROCS—Boars, gilts, and weanlings. Hans Duveneck, Ukiah, Cal

Yorkshires.

LARGE YORKSHIRES—The ideal hog for the progressive farmer. Young stock for sale. A. L. Tubbs Co., Calistoga, Cal.

DAIRY CATTLE.

Holsteins.

TOYON FARM HOLSTEINS — Straight, deep-bodied grandsons of King Valdessa, from 30-pound dams. Good values in sons of high record heifers. Address First National Bank Bldg., San Jose, Cal.

HIGH-CLASS HOLSTEINS—I have for sale some sons of Sir Veeman Korndyke Pontiac from A. R. O. dams. Write for particulars or come see them. R. F. Guerin, Visalia, Cal.

FOR SALE—4 Holstein-Friesian bulls from 8 to 18 months old. Pedigreed stock. Fine individuals. Will be registered on sale. Geo. C. Roeding Co., Fresno, Cal.

FOR SALE—34 high-grade Holstein heifers, long twos and short three-year-olds with first calf. Geo. V. Beckman & Sons, Lodi, Cal.

THE McCLOUD RIVER LUMBER CO., McCloud, Cal.—High-class thoroughbred Holstein bulls for sale. Write for prices and pedigrees.

WANTED—100 to 1000 young Hereford or Durham cattle. Write or phone, Alan Milnes, Phone Farmers 231, Riverdale, Cal.

Fitting Hogs to Win at the Fair

Written for Pacific Rural Press by R. H. Whitten, Los Angeles

IT IS SAID that Noah was the first financier, as he floated quite a lot of stock most successfully. But he was no more of a financier than the hog breeder of today can be if he will show his stock successfully, for the show ring offers an unequalled opportunity to acquaint the public with one's stock, create a demand for it, and secure much profitable business.

Furthermore, the true value of his animals is made known to the breeder by putting his herd in competition with other herds. Until it is measured by such comparison he can make very little progress in its development. The mistakes in selecting animals and in his methods of fitting them are made manifest, and if he will go to the fairs determined to bring back as much knowledge as possible, as well as a good bunch of ribbons, he will find the opportunity for excellent schooling.

Nowadays there are few tricks in the trade of showing hogs, and the chances for carrying away the blue and purple ribbons depend on having the right kind of hogs, properly fitted and trained.

QUALITIES A SHOW HOG MUST POSSESS.

There are three things that a show hog must possess—size, quality, and bloom. And to have all three features combined in one hog is enough to tax the skill of the breeder to its full capacity. It is a task requiring deep thought and careful preparation.

Select only animals that are healthy and vigorous, with strong backs and good feet and legs. Without these characteristics to start with, it is a waste of time to attempt to put on fat. Never pick out a pig of the roly-poly, butterball type, for it will not respond to feeding. A hog must have a good frame to start with, and must be a good feeder. Don't waste time on one that is a dainty eater.

Be particular to select animals that not only are good individuals, but also are uniform in type, and even in size for the different ages. This will enable you to make a better impression with your herd groups.

SELECT THE ANIMALS EARLY,

as it is much better to bring them along gradually for a comparatively long period than to force feed them for a short period. They will stand heavy fitting much better, and their breeding qualities will be less likely to be injured. The boars, especially, need to be selected early, as it takes longer to fit a boar than it does to fit a sow. It is better to show sows one year old or over in pig if possible, as they show better in this condition, and any danger of future barrenness is thus overcome. They should be bred to farrow soon after the last show of the season is over.

In selecting the show herd put in a few extra animals, so that you can reject some later on if any bad features develop.

Decide as early as possible where you will show, so that you can have your hogs ready at the right time. Finish is the big factor in winning recognition in the show ring. Your hogs may be of the right type and have size and scale, but if they lack in fitting they will not be able to win against animals of equal individuality that are shown "in bloom."

BLOOM IS THE MOST DESIRABLE THING IN A HOG.

When so fitted it is at its best, but this bloom only lasts a short time. It is like a peach that, when ripe, is at its best, but soon begins to decay. Consequently, your most important problem is to put your hogs in proper bloom at the right time. If you start too late, they will have to be rushed so fast that they cannot be put in proper condition, and if you start too early they will be at their best before the date of the show.

The hogs should be allowed the run of a good pasture of alfalfa or some other forage crop, if possible. The boars should be kept away from the sows, and all over six months of age should be kept in separate pens. Several sows may be kept together, but they should be selected so that they will feed evenly. If any are timid, and are driven away from the feed trough and fall behind, they should be removed to other pens so that they may have a better opportunity for development.

FEED THE HOGS WHAT THEY LIKE.

There are no hard-and-fast rules as to what hogs should be fed. Don't spend too much time figuring out a balanced ration. It is more necessary to feed what the hogs like. No two hogs feed alike, and an intense study of their individual requirements is one of the secrets of success. Some hogs will do well on a certain ration while others won't touch it. A thin, hungry hog will eat almost anything, but after one has been on full feed for some time he gets independent and wants a frequent change.

Feed the young animals three times a day and the older ones twice. See that they are free from worms and lice, and keep before them constantly a tonic which includes wood ashes, charcoal, salt and air-slaked lime. To prevent any weakness in the pasterns or feet, it is well to use bone meal—either mixed with the feed or tonic or kept where the pigs can have access to it.

Scales are almost a necessity. The hogs should be weighed every week, and you should know how much they should weigh each week to have them at a certain weight by show time.

GIVE THE ANIMALS PLENTY OF EXERCISE.

In addition to proper feeding, the show herd must have plenty of exercise. Hogs get lazy from fattening and unless they are forced to take regular exercise they do not show well, because, while they may be in the best of flesh, they cannot walk with ease. They should be walked a half mile or more daily. This hardens the muscles and assures the desired firmness of meat. It also provides an opportunity for training them to walk and stand as will be required later in the show ring. "Whip broke" hogs show best in the ring, so drive them at home with a whip instead of a club. Do not walk the hogs in the heat of the day. Furthermore, hogs should be fed in the cool of the morning and then left alone to digest the food.

CLIP A HEAVY COAT OF HAIR.

Very seldom will you have any trouble with the skin and coat of a good, thrifty pig, but sometimes old boars and sows shed only on the sides, and the hair on top is much longer than the new coat on the sides. If you have this trouble, or if hogs do not shed properly by the middle of July or first of August, they should be clipped all over. This should be done also in case a hog has a rough coat, so that it

Save Money and Feed With a CYCLONE SILO

Get Our Feed Book-It's Free

Built To Stay In Shape

Investigate silos and silo uses thoroughly—then you will realize that you cannot afford to feed stock without a silo. We have supplied wood tanks and wood stave pipe in all parts of the world for 25 years and NOW WE HAVE COMPLETED OUR SILO—it's the silo you will want for your farm—we call it

The CYCLONE Silo

because it is that kind of a silo. Can't blow down—can't warp or change its shape. Investigate it.

will have a new coat of hair on show day. A hog should never be shown with a long coat of heavy hair.

A liberal use of crude oil on the hog's skin will do much toward preventing large creases, as it keeps the skin soft and pliable. The care of the feet is one of the important points in fitting a hog. Watch them closely and keep them well trimmed, for if the toes are allowed to grow long they are apt to break up into the quick, which will cause the hog to go lame and probably to break down in the pastern of the well foot by carrying all of the weight on it. Also, after a hog becomes loaded with flesh, his feet will not stand his great weight unless they are properly trimmed.

Before leaving home, wash the hogs thoroughly, and if they are white ones they probably will require several washings to entirely remove the scale without irritating the skin.

UPON ARRIVAL AT THE FAIR GROUNDS, bed down the hogs, give a light feed and let them rest over night. The next day get busy and put them in the best possible shape. White hogs will have to be washed again; perhaps the red and the black ones. In dressing them to soften the hair, do not smear them. A light dressing is all that is required, and this should be so thoroughly worked in that it will not rub off readily when the hogs are being handled. Use equal parts of sweet oil and wood alcohol.

The hogs should be fed about the same as when at home, except that the feed should be a little more laxative. The pens should be cleaned out and rebedded each morning after feeding, the alley cleaned, and swept, all refuse taken away.

Feed lightly the evening before show day, and either feed late on show morning or give a filler just before driving into the arena. This tends to keep the hogs quiet and gives them a full flank. On show morning give the hogs their final grooming, brushing and oiling.

Have your hogs in the ring promptly, for a laggard always incurs the displeasure of the judge. Keep your eyes on your own hogs, and don't mind the other fellow's entries.

Half-length whips, known as sulky whips, are the best to use in handling hogs in the ring, as full-length whips are in the way in such close quarters.

DON'T GET GROUCHY AT JUDGE'S DECISIONS.

Obey the instructions of the judge promptly and courteously, and if he does not place the ribbons on your hogs don't get sore at him. You should not exhibit animals at any show unless you are willing to abide by the decisions of the judge. The directors do their best to secure judges of good reputation, who understand their work and who will be conscientious in making the awards. It is your privilege to ask the judge in a courteous way why he placed the ribbons as he did, but don't, don't kick. After the awards have been made, hang your ribbons over the hogs to show their winnings.

Forget about the horse races, balloon ascensions, side shows and other attractions. Stay right on the job and you will spend your time in the most profitable way. There is a tide in the affairs of every exhibitor which leads to fortune, and it is—TIED DOWN TO BUSINESS.

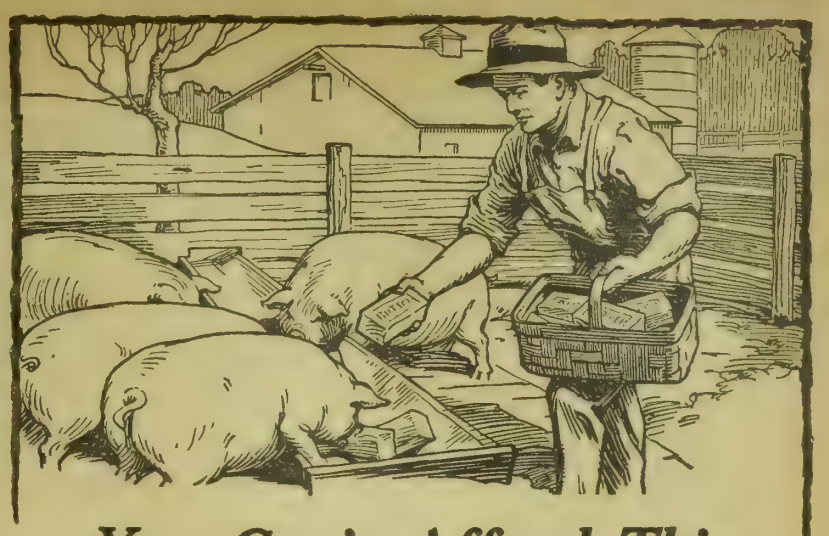
PERMANENT CATTLEMEN'S ORGANIZATION.

[Written for Pacific Rural Press.]

The most democratic organization of California cattlemen possible to work out was effected at the Cattlemen's Convention at Davis, June 28. The State is divided into five zones to correspond with the five markedly differing sets of feed conditions. Cattlemen in each zone are to elect five representatives to the central body of the State organization. One man is to be elected in each district as vice-president of the State Association and he will probably be one of the State Executive Committee of five. The president is to be elected by the central body of twenty-five, who will meet annually on the second Saturday in December. Dues are to be $2.50 per year for cattlemen with 50 head or less, and an increasing scale for men with bigger herds. All cattlemen of the State are urged to join and help make the association an effective unit in winning the war by accomplishing those objects much needed for prosperity of the industry and increase in beef production. D. J. Stollery and L. A. Nares of San Francisco are secretary and president until fall.

BOILED BARLEY FOR HORSES.

A horse breeder fitting 27 head for the fairs last fall suddenly found half a dozen of them breaking out with sores and he did not exhibit. He decided that the cause of the sores was the feed and the hot weather. To make them sleek and fat, with easily digested food, he was feeding them boiled barley hot. This year he is not feeding that way, but is giving green feed and not too much grain, none of which is boiled.



You Can't Afford This

No farmer is rich enough to feed 40-cent butter to his hogs or his calves in partially skimmed milk.

It's a waste of money.

It's a waste of food.

It's a waste that your pocketbook, your neighbors, your country, all condemn.

But it's a waste that is going on today on every cow-owner's place where an inferior or half-worn-out cream separator is being used, or where the farmer is skimming by the wasteful "gravity" method.

And it's a wholly unnecessary waste, too.

Because a De Laval Cream Separator will soon save enough cream to pay for itself, and put a stop to all the waste of cream and time and labor for many years to come.

There is no other cream separator that can compare with the De Laval in clean skimming, capacity, ease of operation, freedom from repairs, and durability. It's the world's greatest cream saver.

Order your De Laval now when you need it most and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

DE LAVAL DAIRY SUPPLY CO.

LARGEST DAIRY SUPPLY HOUSE ON THE PACIFIC COAST. Alpha Gasoline and Distillate Engines, Ideal Green Feed Silos, Acme Ensilage Cutters and Blowers, Irrigation Equipment, Centrifugal and Deep Well Pumps and Alpha Spraying Outfits. Catalogs of any of our lines mailed upon request.

61 BEALE STREET, SAN FRANCISCO

The MONEY-MAKER Owner Says:—

"I Can't Afford To Take Chances This Year"

When the forage crops and corn are right for silage, I must be *ready* to cut and *fill my silo* without delay. A few days wait on the job cutter may mean a big loss—and I *must* have plenty of *good silage* to *meet high feed* prices.

MONEY-MAKER

SAFE Silage Cutters

With a Money-Maker Cutter, your silage *don't* need to be too green, too ripe or frosted. You can cut it slowly, and let settle—fill the silo *chock full.*

Money-Maker Cutters are up to the standard of Indiana Silos. They cut like a new pair of scissors all the time. The Patented Safety Yoke makes it *impossible* to *get your hands* into the *cutting rolls.* Cushion Drive *absorbs shocks* of operation—*adds long life.*

VETERINARY QUERIES

[Answered by Dr. Edward J. Creely.]

Subscribers wishing an immediate reply should send money order for $1. No charge for questions answered through this department. Name and address of subscriber must accompany each query

Tuberculosis Most Likely.

To the Editor: My young pigs have been dying off. They begin getting thin, then they begin to cough and choke, and finally die. I found lungs enlarged and spotted with white spots. Is it tuberculosis?—C. V. M., Davis Creek.

Your pigs most likely have tuberculosis. Investigate your milk supply at once. If you receive the milk from a creamery, heat it to 150 degrees Fahrenheit for at least 30 minutes and then cool down before feeding. If you feed milk from your own cows, you should have all of them tested to see which one is affected. Some cows have so-called open tuberculosis, when the tubercular germs are discharged with the excreta and body fluids and swine become infected by rooting in the pasture and coming in contact with it.

Pigs Have Gastric Disturbance.

To the Editor: My two- to three-weeks-old suckling pigs, fat and fine, suddenly are seen to be shivering and trembling; next they walk in a weaving, swaying manner, then lose power to stand and tip to one side and lie on side with feet waving in air until death, which occurs in one and a half to two days.—W. W., Manton.

The pigs most likely have some gastric disturbances. Feed the sows good, clean food. I would suggest keeping the sow and pigs by themselves when weaning. Be sure that the milk you feed is heated to at least 140 degrees Fahrenheit and then cooled down.

Sheep Have a Nasal Discharge.

To the Editor: What causes sheep to have a discharge from the nose—thin, watery fluid? Is it a disease, or contagious, and how cured?—E. J. M., Williams.

A slight watery discharge is normal, but under certain conditions becomes a disease due to inhalation of dust, smoke or gases. If the discharge is due to this, removal of the above causes ends the trouble in a few days. If you keep your sheep in a crowded pen, scatter them out if possible.

Distemper in Dog.

Take any old rusty tin can and scrape enough tin off to make enough for about the size of a C. C. pill and give it in the morning in a piece of bread or meat. In 24 hours give a good dose of castor oil, in 24 hours another dose of tin, and then in 24 hours a dose of castor oil and your dog will be well.—J. W. Rogersdale, Folsom, Cal.

Formula for Tincture of Iodine.

To the Editor: How much iodine flakes or crystals should be used to the quart of alcohol in making up iodine for use on stock?—G. W. F., La Honda.

The Pharmacopoeia of the U. S. A., 1890, gives the following formula: Iodine crystals, 2 ounces; alcohol, 1 quart.

Diagnosis Indefinite.

The inquiry of J. E. R., Modesto, cannot be answered without a fuller statement of the symptoms.

California Can Almost Feed Her Cattle

[Written for Pacific Rural Press.]

The delegates sent from local cattlemen's associations all over the State to the late convention at Davis named two men from each of the five districts into which the State was divided to act on a committee to summarize the feed situation for the State. Following is a digest of their report:

Question 1. Ability to care for cattle on hand. In District 5, comprising Southern California and including Santa Barbara and Inyo counties, the cattle can be carried through the season if all bean straw is held for feed and not used for fertilizer; if the protein and fat content of cottonseed meal be set by the Food Administration in connection with the price; and if no feeder or stock cattle are shipped in from without the State. District 4, including the San Joaquin Valley and its foothills as far north as Galt, can take care of all its cattle provided a market for feeders is created in Imperial and other feeding localities. District 3, including the coast counties from Santa Barbara to San Francisco, can take care of its cattle if a proper price is set on beet pulp and if no cattle from outside are allowed on the beet tops and if no beet tops are plowed under. District 2, including the Sacramento Valley, Amador, El Dorado, Placer, Nevada, Yuba and parts of Mono and Sierra counties and the coast north from San Francisco, can take care of the cattle now within the district if no outside cattle are shipped in. District 1, including the northeastern mountain counties, seems to be in the worst condition and a great many feeder cattle must be disposed of. But if no cattle from outside the State are allowed to be shipped in except the usual number owned by local feeders, until after January 1, the market so created within the State will consume most of their surplus.

The committee recommended that within each district all roughage feed be conserved for stock and a survey of such be turned in to the head committee for the information of stockmen who wish to buy such.

It was also suggested that rice straw would keep cattle from starvation and it could be delivered for $6 per ton f. o. b. cars at a profit to the raiser and would save much beef.

A resolution was drawn in favor of growing grain and hay instead of cantaloupes, which require more labor and are of less food value.

A motion in favor of municipal stock yards developed the sentiment that the time is not yet ripe for such, other than private co-operation of small feeders in their local districts.

Silos and silage were highly recommended and stockmen were urged to get all the information possible from the Agricultural College at Davis, the United States Department of Agriculture at Washington, and through other mediums.

My Range Bulls Sire My Show Winners

The blood of the young Shorthorn stock I send to the fairs is the same as that in the range stock I offer for sale. All are purebreds from registered bulls and from the females on which my father kept up the registration papers from 1872 to 1893. More champion Shorthorn cows and bulls have come from my herd than from any other on the Coast. I have the facts to prove it and I am proud of it. You will make no mistake in getting some of this blood in your herd. I can supply animals singly or in uniform car lots.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

CULL OUT THE SLACKERS.

There are few changes to make this week in the poultry yards except to keep up the culling process. No matter if only half a dozen non-producers are culled out, they leave so much more feed for the producers. This culling business carried on in a methodical manner, instead of spasmodically, will eventually give you a profitable flock of poultry. Watch for those hens that commence to lose their feathers first and cull out the poorest, the good ones will be back to laying again in early fall when eggs are getting scarcer. A chicken buyer told me a few days ago that there is nothing doing in chickens any more; he has to quit and go to work. That indicates more shortage, and the reason a great many people have had to reduce their flock or go out of the business entirely is because they kept a flock composed of two parts non-producers. Nobody can afford to do that when feed is so high; besides, we are all coming to the conclusion that even if we can afford to do so, it is not right on account of the waste involved. We are just as much wrong in keeping the non-producers unknowingly because its everybody's business to know these things. How long does a dairyman keep a dry cow? No longer than he can get word to the butcher. He can't do it and stay in business. Neither can the poultryman keep non-producing hens and stay in business.

TURKEYS' FEET SWOLLEN.

To the Editor: My turkey hens are troubled with swollen feet. I've lost one and upon examination find the feet are full of gray pus.—O. I. J.

Bumble foot is the only thing I know of that causes the feet of turks and chickens to fill with pus. This is generally caused by a bruise or the presence of some foreign body. Whatever the cause, the cure lies in getting it out of the system by treating both internally and externally. Give the whole flock a dose or two of castor oil, allowing a good teaspoonful to each bird and mixing it in warm water so as to get it all over and in the quantity of mash you mix it in. Give no more than they will eat up quick, and repeat the dose three times in one week, at the same time feeding plenty of green feed and induce the hens to exercise for what grain you feed them. For those with very badly swollen feet where pus is formed, open the cavity with a sharp knife that has been sterilized and wash out the place with carbolated water as strong as your hands will stand. Dry off and keep the birds on a clean straw floor until well. For those that are swollen and no pus is formed paint the whole foot or feet with iodine. Sometimes the cavity will need opening again, owing to germs getting in the wound again, but you need not lose any if you look after them.

BLACKEYE BEANS FOR POULTRY

Question 1. Do you plant the blackeye beans in rows? Yes.

Q. 2. Do they make vine or bush? They are a bush bean.

Q. 3. Is the bean shelled, or ground, or fed whole? The bean is allowed to ripen like other beans, then gathered and either threshed out with sticks, or if a person has a quantity get a bean thresher in to do the job. We got ours cleaned at the mill and split or ground into small pieces, about like cracked corn. At first the chicken will not take to the beans because, as a matter of fact, chickens do not like any kind of beans. But even though they walk over them at first, when they see nothing else coming they soon give in. The best way to break them in, however, is to put the beans in a sack, tie it up and leave it laying around; you can always trust a chicken to eat what it thinks is not intended for it.

As with everything else, it requires judgment in changing feed. I always mix the feed, then they eat what they like first, try a little of the other, perhaps go away, but eventually they will return and eat more or less of it until gradually it is all eaten up.

MITES IN NEST.

Somebody wants to know if mites ever get in the nest boxes. Indeed they do, and when a hen stops on the nest over night its almost sure death to the hen. Nest boxes should be cleaned out at least once in two weeks and once a month sprayed with distillate or some commercial germ destroyer, going into every crack and crevice, then paint the inside with a straight solution of Kreso Dip or some of the commercial liquid insect killers. Put clean hay or sawdust in and sprinkle liberally with a good insect powder, which helps drive the body lice from the hens, or, if tobacco stems can be bought cheaply, crumble or cut up a few and keep continually in the nests and you will find your hens will not be troubled with many lice.

STARTING WITH CHICKENS.

Raising chicks in the fall without artificial heat can be done, but it requires constant care and watchfulness, and as you would have to buy or make fireless brooders there would not be much saving in it. A little warmth is more satisfactory both to chicks and to care taker. The Victor Incubator Co. of Decatur sells a good individual brooder that accommodates three hundred chicks well.

If you send me a three cent stamp I will send you the man's name of the $2 hen. Always glad to help, but we have to draw a line on expenses these days.

THE AMERICAN HEN IN THE BILLIONAIRE CLASS.

The president of the National Poultry, Butter and Egg Association, in a recent address to that organization at Chicago, stated that the poultry industry of the United States was now in the billion dollar class, the wholesale value of eggs alone in 1917 being $725,000,000. The producers, he said, got over $600,000,000.

Good Overalls Pay For Themselves

In the added comfort and safety and clothes-economy they give you—Boss of the Road Overalls easily pay for themselves. That's why they're good overalls.

We use the toughest indigo blue denim—properly cut and fashioned for comfort and wear. Double-stitched seams; hold-fast, patent buttons. Workmanship the best—materials the strongest.

Just a few reasons why it is *always* good economy to buy Boss of the Road Overalls—*a Neustadter product.* Look for the Bull Dog on the label. It is your protection. Never has this trade mark meant so much to you as it does today.

PROBLEM'S IN FOOTWEAR.

THE TAX ON SHOES.

My Dear Friends: A great many of the large shoe stores are having clearance sales, and while the reductions are not always heavy, any amount is worth saving now. That is especially true in the knowledge of the proposed tax on all shoes over a certain price. The consumer will have to pay that tax, of course. So it might be well worth while to look into the shoe needs of the entire family. The more conservative lines are usually less reduced, unless the lines are very much broken and an effort is being made to close out the broken sizes. All of the good houses do a mail order business and great care is taken to send what the customer desires at the desired price.

WOMEN'S SHOES TO BE STANDARDIZED.

It is reported that in another year women's shoes are to be standardized—no high heels, no fancy leathers, and all to be of a uniform height. Low shoes continue to be very popular, especially in the dark brown calfskin. These shoes hold their shape and wear very much better than those of the same last in the lighter kid. All tan and brown shoes should be well polished before wearing, to keep them from spotting with water.

WHITE SHOES HOLD THEIR POPULARITY.

White shoes in both high and low models, cloth, kid or buckskin, are seen a good deal everywhere and seem to be as permanent a part of every woman's wardrobe as a sweater.

SILK SOCKS EXPENSIVE GOING AND COMING.

For wear with the low shoes, a good looking stocking is necessary and they are certainly going skyward in price. Silk stockings have advanced in price and retreated in quality, so that you get the worst of the bargain in both ways. The fine lisle thread and good grade cottons have kept pace also.

White stockings are very popular with high shoes of any color, and with the low shoes stockings of the same color are usually worn.

ROSABELLA BEST.

SUGAR ALLOTMENT.

The allotment of sugar for August will be considerably cut down on account of the serious shortage. California will be allotted a certain definite amount and it cannot be exceeded because additional sugar is not available.

No householder may purchase more than twenty-five pounds for canning except on a special order from a county food administrator. Heretofore this was in the form of a request, but now it is an order. Dealers must keep a record of two and five-pound purchases and mail a copy of this record to the local food administrator each week.

Sugar purchased for canning or preserving must be used for that purpose only and should not be diverted to ordinary household uses. Any appreciable surplus left from that purpose should be returned to the grocer during the present emergency shortage and not retained for table or cooking.

MISS HEAD'S SCHOOL FOR GIRLS
Berkeley, California

A cheerful, home-like school that stands for earnest, honest work, and all that tends toward cultured, upright womanhood.

Accredited to the University of California, Stanford, and other leading colleges East and West.

Primary, Grammar, and High School. Excellent courses in music, art, domestic science, domestic art.

Commercial Course to train girls for war service.

Special attention paid to outdoor life. Five buildings. Attractive grounds. Outdoor study and schoolrooms. Separate house for younger girls. Gymnasium, tennis, basketball, indoor swimming pool, horseback riding, etc.

MISS MARY E. WILSON,
2544 Channing Way, Berkeley, Cal.

THE HOME CIRCLE

WARNING TO HOUSEKEEPERS.

The California State Board of Health is authority for the statement that no home-canned vegetables should ever be eaten without being re-cooked before serving. Also that no home-canned fruits, especially if put up by the cold-pack process, should be eaten if there is the slightest suspicion of fermentation. This advice is not given to discourage the home canning of products, but to acquaint the public with the facts relative to severe cases of food poisoning through the use of tainted home-canned products.

Housewives recognize that the present methods of home canning in the hands of untrained workers are not entirely safe, due to the inability to develop a high enough temperature to kill all organisms.

However, the poison produced by these germs is easily killed by boiling for a short time, so make it a rule to cook all such products before serving and avoid all danger.

BOTTLED FRUIT JUICES.

Bottling fruit juice is a simple process and lightens the labor of saving the fruit. The juices of all fruits may be bottled in season and used for summer drinks, or sherbets, or for the making of pudding sauces. In the winter, they may be made into jelly as needed or combined with dried fruits for preserves.

To prepare, cut and crush large fruits, stem grapes, use berries as picked. Heat slowly to simmering point. The flavor is finer if the fruit is not allowed to boil. Do not heat citrus fruit. Strain the fruit through a cloth bag and allow the juice to stand in a cool place to settle.

To bottle, scald the bottles and fill to within one and one-half inches of the top. Put corks in lightly and set bottles on rack in a boiler, or tie down the corks and lay bottles on side with enough water to cover them. A screen at the bottom of the boiler will prevent breaking. Heat the water to the simmering point and keep at this point thirty minutes. Remove the bottles, stand on end and dry the cork. When nearly cold press in the cork and cover with paraffine or sealing wax. A sealing wax may be made by melting together equal parts of rosin and beeswax. Store upright in a cool place.

HOME-CANNED MEATS.

PICKLED TONGUE.

Place a fresh tongue in hot water, let come to a boil and boil gently until tender. Remove from water, skin, put back into water and let cool. Slice in thin slices, put layer of sliced tongue in bottom of an earthenware crock, then a layer of sliced onions, a few thin slices of lemon, salt, pepper, a little sugar and mixed spices. Repeat until all material is used, having the onions and lemon on top. Cover with a mild vinegar.

PRESSED BEEF TONGUE.

Take 1 beef tongue, 1 veal shank, put on to boil in cold water and cook for three hours. When tender, skin the tongue, cut in slices or put through a coarse meat grinder. Add salt, pepper, cayenne and two tablespoons catsup, put into a mold and cover with the liquid in which it has been boiled. When cold it will be firm enough to turn out on a platter.

POTTED LIVER.

Wash and cut up two pounds of beef liver. Cover with cold water, let come to a boil and simmer until tender. Press through a potato ricer, add one-half cup of butter or butter substitute, one-half teaspoon of salt and a dash of pepper. Beat the mixture to a smooth paste and add a good-sized minced onion and a few sprigs of parsley. Put in jars in a cold place and it will keep for some time.

When the housewife can find such an excellent meat substitute and concentrated food as cheese almost at her very door, it is a duty to use it as much as possible. If purchased by the whole cheese, cover the cut edge with melted paraffine to prevent mold.

HUNGER
For three years America has fought starvation *in* Belgium
Will you *Eat less*—wheat meat—fats *and* sugar that *we* may still send food *in* ship loads?
UNITED STATES FOOD ADMINISTRATION

The Allies' Food Margins Are Thin

IF THE UNITED STATES fails to send the food that is asked of us, we lessen the perilously thin margin between mere food-lack and food disaster, and the Teuton yoke settles a little more heavily on Europe's galled shoulders—but heaviest of all on broken Belgium.

—U. S. Food Administration

THE CROSS.

On the Grave of an Unknown British Soldier.

The Cross is twined with gossamer,
The Cross some hand has shaped with care—
And by his grave the grasses stir,
But he is silent sleeping there.

The guns speak loud; he hears them not.
The night goes by; he does not know—
A lone white cross stands on the spot
And tells of one who sleeps below.

The brooding night is hushed and still,
The crooning breeze draws quiet breath.
A star-shell flares upon the hill
And lights the lonely house of death.

To Freedom's cause his life he gave
And dared the battle, purpose sure.
A hero. Write upon his grave:
"He died that England might endure."

THE FATHERLESS CHILDREN OF FRANCE.

A very strong appeal is being made to the American public to contribute to the support of the fatherless children of France. Three dollars a month will support or contribute largely to the support of one orphan child in its home. This money may be contributed through the local headquarters and it is certainly a worthy charity.

It is desired that in order to save postage and office expenses no monthly bills be sent out, so anyone assuming the care of a French child for a given time should remit the money promptly, preferably six months at a time.

If you have no local organization, you may carry out this charitable work through the San Francisco headquarters, 108 Sutter street. The committee desires to increase its membership and hopes that there may be many new subscribers to this worthy cause. Address The Fatherless Children of France at the address given above.

CUT AND STORE WOOD.

The war is making enormous additional demands for coal and fuel oil and to insure a full supply of fuel for next winter, the cutting and storage of wood is advised. It is necessary to get fuel to the big cities and industrial plants in its most compact form. They are the coal burners of America. The wood burners are the farmers and the residents of small towns where wood is nearby and can be delivered by the wagon load. This appeal is directed to the farmers. Make the woodpile a part of the landscape as in the early days. Cut wood and burn wood.

Good Health

[By H. E. Pastor, M. D.]

Does Clipping Hair Improve It?

To the Editor: Please tell me if cutting the hair off will cause it to grow thicker? I am 17 and have had my hair cut when quite young, but with no apparent result. If cutting it does not do any good, can you suggest anything else? What is good for a dandruff remedy?—R. E., Watsonville.

We do not think hair grows stronger, or longer, or thicker as a result of frequent cutting. It is our observation that where the custom of letting the hair grow long prevails the growth is thicker and the tendency to baldness less. If the scalp is diseased, treatment may be applied more satisfactorily when the hair is short or shaved off altogether. Perhaps short hair is more conducive to cleanliness and good ventilation than long; nevertheless, on the whole, wearers of long hair, whether men or women, have better heads of hair and retain it longer than do wearers of short hair. We printed a dandruff remedy last week. Whisky and quinine, a grain of quinine to the ounce of whisky, is another good remedy for dandruff and a tonic to the hair. Rosemary is considered an excellent application to stimulate the growth of the hair by increasing the blood supply to the hair-bulbs. It is often combined with the tincture of cantharides. Regular rubbing with the fingertips is helpful. Another good thing for the hair is not to think too hard or worry too much.

Is Ordinary Butter Dangerous?

"Is butter made from the cream of tubercular cows fit for use, and can we feel sure that all creamery butter is made from inspected cream?" we are asked. Well, we wouldn't knowingly use it, nor would we shy away from a golden cube of the butter of commerce through a haunting fear of its tubercular origin. We doubt very much if all the cream from which store butter, or other kinds, is made is pasteurized, even in these days of scientific and scrupulous sanitation, yet it is bought and eaten without question and without serious consequences so far as this deponent knoweth. And this has been the custom from time immemorial. We think the percentage of risk in this common practice is negligible. But don't eat market butter or drink market milk if you are afraid of it. The mental state brought on by fear may bring on something as bad as tuberculosis.

If You Want an "Inexpensive" Piano
Don't Buy a "Cheap" One

There is a big distinction between the words "cheap" and "inexpensive." Some folks like to get things "cheap"—only to find that in the end they proved to be the most expensive—because they had to buy another that would give service.

Now we do not sell "cheap" pianos, but we do carry a number of "inexpensive" instruments. The prices are within the reach of almost every home. These Pianos will render many years of satisfactory service—they are good, substantial values and are worth every dollar asked. We gladly arrange convenient terms of payment.

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.

Agricultural Summary

Thompsons Top the Record.

The two first cars of Thompsons from San Joaquin Valley sold for the highest prices in the history of the valley. The initial shipment, from the North Dinuba Packing Company, sold in New York at an increase of almost $1.50 per crate over last year. Sgobel & Day, Fresno shippers, announced the sale Friday, July 26. A fine quality of Thompsons is beginning to move to Eastern markets in large quantities. Shippers and packers attribute the excellent price to the high-grade quality and the unusual demand for San Joaquin grapes. They predict one of the greatest seasons of prosperity, but are doing all in their power to convince growers of the practicability of keeping shipments even and not glutting the markets.

The initial 1918 table grape shipment from the valley brought $3.93 per crate, or gross $3,834 per car. This and the second car was shipped via express by Sgobel & Day. The second car of Thompsons brought $3,680 in the New York market Monday, July 29. The early shipments of valley grapes are sent mostly out of Dinuba and other points of Tulare county.

Apricot Optimism.

At a meeting of farmers in Los Angeles recently E. N. Richmond of San Jose, in charge of the dried fruit department of the Food Administration, encouraged apricot growers by prophesying a wide market for their product next year. He argues that the dried fruits now under license — prunes, apples and peaches—are being ordered by the Government in such large quantities that it will turn the general trade to apricots. Bidding for this fruit is very active at the present time. It is rumored that a large packing corporation controls about 50 per cent of the crop, and that independent packers are hot-footed after the balance, running up the price several cents over opening quotations. The Prune and Apricot Growers have withdrawn apricots from the market for the time being and expect under the prevailing strong demand to clean up the entire crop shortly. A yield of 22,000 tons is the estimate for this season.

California's Fruits Abroad.

It may interest California fruit growers and others concerned to get a glimpse of prices of dried fruits in the United Kingdom of Great Britain. The following is from Consul General Robert P. Skinner, London, England, under date of July 2. The Ministry of Food, under date of June 25, 1918, has directed that from and after July 1 dried fruits may be sold at retail in the United Kingdom at prices not exceeding the following:

	Price per pound.
Dried pears	$0.32
Dried apricots	.32
Valencias	.28
Muscatels	.28
Sultanas	.28
Any other variety of raisins	.28
Currants	.28
Dried plums and prunes	.28
Dried peaches or nectarines	.28
Apple rings	.24
Dried apples	.24
Figs	.16

Tomato Crop Not Promising.

The early crop in Los Angeles county is light this year. It is reported that worms have reduced the volume of shipping stock 50 per cent in certain districts where Earlianas are produced. The crop of the Stone variety is larger and better. In Central California prospects for good yields are not generally favorable. Deficiency of moisture in certain districts of Alameda, Sonoma, Sacramento, Santa Clara and other counties gave plants a poor start and the serious development of diseases subsequently affected the crop. Unofficial estimates of the acreage and condition of the crop in important counties follows: Santa Clara, 10,000, 75; Alameda, 6500, 50; Sonoma, 2500, 80; Sacramento, 1600, 65; San Joaquin, 3000, 86.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, July 31, 1918.

WHEAT.

The release of those who had voluntarily agreed to total abstinence from wheat flour is regarded as a general easing up of both the wheat and flour conditions.

BARLEY.

Little business is being transacted. The supply coming in is sufficient to take of the demand, which is light.

Choice feed, per ctl............$2.40@2.50

OATS.

The market for oats is quiet, with red feed nominally unchanged. Some red seed has come on the market and is being quoted at $2.75 to $3.25.

Red feed, per ctl...............$2.50@2.65
Red seed .... 2.75@3.25

CORN.

There is very little yellow corn on the market and no Eastern. The prices for Eastern corn given below are nominal.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked ....$4.20@4.25
Milo maize .... 3.95@4.05
Egyptian .... 4.05@4.10

HAY.

Receipts of hay for the past week were 3142 tons, about the same as the previous week. The receipts have been heavy for two succeeding weeks. Concessions in price have been made so that at times hay sold at as low a price in the city as was charged in the country districts. Although the range of prices given as current quotations have not been changed, if hay continues to arrive in the same volume lower prices will prevail.

Wheat No. 1...................$22.00@24.00
do, No. 2..................... 19.00@21.00
Choice tame oat............... 24.00@26.00

FEEDSTUFFS.

Rolled barley and rolled oats were reduced in price this week.

New alfalfa meal, per ton......$33.00@34.00
Coconut cake or meal.......... 44.50
Cracked corn .... 86.00@88.00
Oilcake ....$75.00@76.00
Rolled barley .... 54.00@55.00
Rolled oats .... 56.00@57.00

POTATOES, ONIONS, ETC.

The onion market continues firm, but potatoes were somewhat easier. Garnet Chiles are now practically off the market. On the street they sold from $2 to $2.25. Garlic continues firm, with an upward tendency. Nearly the entire market shows a tendency to fall off in prices. The Bay tomatoes are now coming in and sell at $1 to $1.25.

Peas ....6@8c
String beans, per lb............3@4c
Wax beans, per lb...............4@5c
Carrots, per sack...........50c@$1.00
Rhubarb, San Jose, per box....$1.00@1.25

BUTTER.

Butter was steady throughout the week and showed a fluctuation of only a half a cent for extras. Butter has been strong throughout the month of July. It touched the top price, 53½c, on the 18th and 19th instant, for extra and was low on the first day of the month, when it was quoted at 48½c. Extra firsts showed fluctuations of only two cents during the month, from 47c to 49c, while the firsts varied only a half cent, from 46½c to 47c. The high price of butter on July 18 brought out a considerable quantity from storage, which had a steadying influence.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	52½	52	52	52	52½	52
Prime 1st	49	49	49	49	49	49
Firsts			Nominal			

EGGS.

Eggs were firm during the past week and each description touched the high price of the month and the season. During the entire month eggs showed a steady tendency to advance in price and the opening prices on July 1 were in each case the lowest for the month. During the month extras fluctuated from 45c to 49½c; extra firsts were not dealt in to any great extent and sold both high and low at 45½c. There was more business transacted in firsts, which varied from 40½c to 45c. In the extra pullets there is always a lively market and the price varied during the month from 40c to 47½c. Extra pullets firsts opened the month at 38½c, but the price was soon advanced to 44c, where it continued through the rest of the month.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.

CHEESE.

Cheese closed the month strong. The demand for California Y. A.'s practically came to an end early in the month. The advance in quotations of fancy California flats was 2½c during the month. California firsts advanced the same amount, while Oregon triplets advanced 2c.

Fancy California flats, per lb........27½c
First California flats 25c
Oregon triplets, fancy 27½c

CITRUS FRUITS.

Grapefruit is steadily climbing in price in this market, and it is reported that some growers are demanding as high as $5 f. o. b. shipping point. Oranges are stronger, with narrowing ranges, but with no advance on the top price. Lemons sell at last week's quotations.

Oranges:

HONEY.

No further advance in quotations is announced. Local dealers say the price of honey is too high for anything but export business, and this demand seems to take care of all offerings.

White, extracted 21c
Light amber ....18@20c
Amber ....15@18c

RICE.

Agreements are being completed between the rice millers of the country and the Food Administration with regard to the rice crop of 1918. The main provisions of these agreements are that the miller shall pay definite prices to the grower for rough rice and shall not sell clean rice at more than prices named in the contract, ranging from 7⅝c per pound for choice Japan to 9½c for Fancy Honduras. It is hoped that the result will be a stabilization of the rice industry and the distribution of rice to the consumer without speculation or manipulation. Consumers will, in the opinion of the Food Administration, be able to purchase rice at a price of approximately 10c to 12c per pound, depending on remoteness from the milling centers.

HIDES, SKINS AND TALLOW.

The prices of wet salted hides, as appearing below, are those fixed by the War Industries Board and are mandatory on all dealers:

Taken off after May 1 and before August 1:
Cows and steers, all weights,

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, Cal., July 30, 1918.

Irrespective of the fact that the week previous developed a record for the season for high prices and an unusual demand throughout the country, conditions remained this past week about the same, in fact there is a continued activity among the trade and competitive bidding and ability to dispose of and distribute the fruit to advantage has produced good results. Even under heavier offerings of Bartlett Pears, there has been only a slight decline in a few markets. We look, however, for a somewhat easier tone on Bartletts this coming week on account of the fact that the offerings will be the heaviest of the season to date.

Peach and plum shipments have been light, the demand exceeding the supply.

The offerings of Elbertas will increase from now on, both from the Valley and Placer County. The offerings will not be heavy in the auctions during the next two weeks, due to the fact that a liberal proportion of the stock has been sold at private sale.

There will be a noticeable falling off of plum shipments from now on and there is every evidence of an advancing market.

Information received from the Northwest advises that Washington Bartletts are on the market and are being quoted from $1.60@1.75 f. o. b. shipping point. We do not anticipate that these prices will affect our California quotations, as there is a difference in the quality of the Washington pear as compared with California stock.

Thompson Seedless are now being shipped from the Fresno district and the movement is heavier than it was originally anticipated, on account of the high market.

Malagas will begin to move this week and as soon as this variety is on the market the shipment of Thompsons will cease.

There is nothing new to report on Tokays, but the stock is beginning to show color and early shipments will begin to move about the 12th or 15th from the Vacaville and Winters districts.

Following are the averages:

New York—Bartlett pears, $5.05; Wilder H/B, $2.25; Malaga grapes, $4.15; Thompson Seedless, $3.93; Burbank plums, $1.97; Gaviota, $2.07; Wickson, $2.22; Tragedy, $2.13; Santa Rosa, $1.98; Cal. Blue, $2.07; Eureka, $2.05; Climax, $1.83; Kelsey, $2.40; Hiniori, $2.05; Splendor, $2.07.

Boston—Tragedy plums, $1.82; Santa Rosa, $1.86; Gaviota, $2.08; Duane, $1.60; Climax, $1.70; Botan, $1.23; Wickson plums, $2.13; Burbank, $1.64; Cal. Blue, $1.81; Splendor, $1.80; Ogon, $1.65; Bartlett pears, $4.63; Malaga grapes, $3.79; Thompson Seedless, $3.85; St. John peaches, $1.55.

Chicago—Bartlett pears, $4.02; Malaga grapes, $3.63; Thompson Seedless, $3.15; St. John peaches, $1.47; Tragedy plums, $1.93; Wickson, $1.91; Burbank, $1.80; American Blue, $2.06; Diamond, $2.02; Santa Rosa, $1.72; Gaviota, $2.08; Sugar, $2.06; Satsuma, $1.54; Cal. Red, $1.65; Climax, $1.58.

Total shipments July 20th to 26th: 197 peaches, 239 plums, 578 pears, 39 grapes.

Total shipments to date, 1918, 3754 cars.

Total shipments to date, 1917, 3577 cars.

LOS ANGELES

Los Angeles, July 30, 1918.

BUTTER.

While last week's advance was maintained the past week and the trade absorbed all offerings, the tone of the market was hardly so firm. Receipts for the week were 301,400 pounds against 344,800 pounds the same week last year. There was withdrawn from cold storage during the week 206 pounds against 8134 pounds the same week last year

California extra creamery..............51c

POULTRY.

Under the arrangement with the Food Administration, whereby prices are fixed once a week by a committee of producers and wholesale dealers, and higher prices agreed upon, the consuming trade is holding back and buying sparingly. Hence a slow market. The following prices were agreed upon last Friday, July 26, and hold good until the coming Friday:

Broilers, 1@1¼ lbs..................29@33c
Fryers, 2@3 lbs. 33c
Roasters (soft bone), 3 lbs. and up.....33c
Stags and old roosters, lbs 19c
Hens ....20@27c
Tom turkeys ....30@33c
Ducks ....22@28c
Geese 15c
Squabs, live, per lb. 30c
Squabs, dressed, lb. 40c

VEGETABLES.

Market well supplied the past week and all good fresh stuff met with a fair demand. Potatoes less active and lower. Onions unsettled. Garlic a little higher for best stock. Peppers are coming in more freely and lower. Lima beans dull. String beans in fair demand. Tomatoes steady. Cabbage steady and firm, but demand light. Corn steady and in fair demand. Summer squash dull. Egg plant dull.

We quote from growers—

Potatoes, new, per lug.................60@65c
New potatoes, per cwt. ....$1.50@1.75
Garlic, per lb ....5@6c
Onions Stockton Yellow Danvers, cwt. ....$2.00@2.25

Thompson's Seedless, per lb.............6@7c
Apples, Red Astrachan, per lug....65@80c
do, White Astrachan, per lug....65@80c

BERRIES.

Strawberries under light receipts sold higher the past week. Blackberries lower under freer offerings; demand fair. Raspberries coming in less freely and best bringing a little more money. Loganberries are also higher.

We quote from growers:

Strawberries—
Fancy, per 30-basket crate....$2.25@2.75
Poor to choice, per 30-basket crate .... 1.75@2.00
Blackberries, 30-basket crate.... 2.40@2.60
Raspberries, 30-basket crate..... 2.25@2.75
Loganberries, 30-basket crate... 2.75@3.00

MELONS.

Home-grown coming in more freely. Cantaloupes in good demand at the decline. Some casabas arriving and they are meeting with fair demand. Watermelons now in better supply and lower, but are selling very well at quotations.

We quote from growers:

Cantaloupes—
Tip Top, home-grown, standard crate ....$1.50@1.75
do, do, pony crate .... 1.40@1.50
Casabas, per lb........................2@2½c
Pineapple, standard crate.......$1.50@1.75
do, jumbo crate .... 3.00@3.25
do, Paul Rose, standard crate. 1.90@2.00
Shipped-in cantaloupes, small, pony crates ....$1.25@1.35

BEANS.

Market is quiet. Limas have become dull. Other beans are neglected. Prices unchanged.

HAY.

The past week was dull. Receipts were not heavy, but ample for the demand. Buyers taking lots only for immediate use. Prices unchanged.

We quote f. o. b. Los Angeles—

Barley hay, per ton ....$24.00@26.00
Oat hay, per ton .... 25.00@27.00
Alfalfa, northern, per ton .... 21.00@22.00
Alfalfa, local, per ton .... 22.00@24.00
Straw, per ton .... 9.00@10.00

COTTON.

The visible supply of cotton in the world is 3,136,000 bales, or 225,000 bales more than this time last year. Exports as reported by the Cotton Exchange up to date have been 4,104,000 bales, against 5,541,000 bales the same time last year. This caused a slow market the last days of the week. Monday, Augusta closed in New York at 24.76c and October 24.54c, against 25.72c a week ago. Spot middling in New Orleans 29.75c.

Special Livestock Market Report

San Francisco, July 31, 1918.

CATTLE—The cattle market is featureless just now, and the only noteworthy change is a further decline in the quality of the stock offered. Good choice steers sell readily at quotations, though the poor stuff is hard to move. Calves find ready sale.

Grass Steers—
No. 1, weighing 1000 to 1200 lbs.....11½c
No. 1, weighing 1200 to 1400 lbs..11½@12c
Second quality ....10@11c
Thin ....8@9c
Cows and heifers—
No. 1 ....8@8¼c
Second quality ....7@7¼c
Common to thin ....4@5½c
Bulls and stags—
Good ....6@7c
Fair ....5@6c
Thin ....4@4½c
Calves—
Lightweight 11c
Medium 10c
Heavy ....7½@8c

SHEEP—Mutton stock continues to be scarce and everything offered in this line is eagerly taken up at good prices. Lambs are also hard to get and the tendency of the market is upward, though consuming demand is light.

Lambs—
Yearlings ....12@12½c
Milk ....14@14½c
Sheep—
Wethers ....11@11½c
Ewes ....9½@10c

HOGS—The supply of hogs is fair, though the market continues strong and a higher price level may be reached.

Hogs—
Hard, grain-fed, 100@140...........16¾c
do, do, 140@300...................16¼c
do, do, 300@400...................16½c

Los Angeles, July 30, 1918.

CATTLE—No change this week. Thin cattle, canners of all kinds, dull and weak at quotations. Choice fed steers, however, are scarce and what are offering find a good market. Calves continue in good demand at old prices.

Per cwt., f. o. b. Los Angeles—
Beef steers, 1000 to 1100 lbs..$10.00@12.00
Prime cows and heifers........ 8.00@ 9.00
Good cows and heifers......... 7.50@ 8.00
Canners, per cwt................ 5.50@ 6.00
Calves, per cwt................. 8.50@ 9.50

HOGS—The market keeps up under light receipts. Killers all wanted a few for the fresh meat trade. The demand the past week was limited and the market was kept up by scarcity rather than the demand.

Per cwt. f. o. b. Los Angeles—
Heavy, averaging 275@300 lbs..$14.50@15.00
Mixed, 225@275 lbs............. 15.00@16.00
Light, 175@220 lbs. .... 15.00@16.00

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—There was less snap to this market the past week. Offerings were light and what were obtainable were mainly from California and Arizona and in fair condition only. The tone of the market was weak.

Per cwt. f. o. b. Los Angeles—
Prime wethers ....$9.00@10.00
Prime ewes .... 8.50@ 9.50
Yearlings .... 9.50@10.50
Lambs ....13.00@14.00

Portland, July 30, 1918.

CATTLE—Steady; receipts, 150 head. Steers, prime, $11.75@12.25; good to choice, $10.75@11.75; medium to good, $9.50@10.75; fair to medium, $8.50@9.50; common to fair, $5.50@8.50; cows and heifers, choice, $8.00@8.50; medium to good, $6.00@7.50; fair to medium, $5.00@6.00; canners, $3.00@5.00; bulls, $5.50@7.50; calves, $8.50@11.50; stockers and feeders, $6.00@8.00.

HOGS—Strong; receipts, 250 head. Prime mixed, $18.10@18.35; medium mixed, $17.85@18.10; rough heavies, $16.60@16.85; pigs, $16.00@16.50; bulk of sales, $18.10@18.25.

SHEEP—Steady; receipts, 200 head. East of mountain lambs, $13.75@14.25; valley lambs, $13.50@14.00; yearlings, $9.50@10.00; wethers, $8.50@9.50; ewes, $6.00@$8.00.

Special Citrus Market Report

Los Angeles, July 29, 1918.

While the citrus growers of California have had a subnormal production this past year, they have been partially compensated for their misfortune by the phenomenal prices obtained for their diminished output. The taste for oranges and other citrus fruits has grown so that they have come to be regarded as an indispensable article of diet in most households. Owing to the extreme scarcity of the fruit, the market for Valencias has been rising steadily. The movement eastward for the past week has averaged about 35 cars daily, quite an advance on the week before. There is said to be a residue of not over 1600 cars of the 1917-18 crop yet to go, but as consumption is light during the next month shipments will be correspondingly light so as not to depress the market with an oversupply, and the small balance on hand will be judiciously spread over the period between now and the approaching navel harvest.

The warmer weather East and the gradual diminution of summer fruits has strengthened the lemon market. Notwithstanding heavy receipts of foreign lemons in Eastern markets, rather liberal shipments of California stock are readily disposed of at good prices. The prevailing quotations on good stock is $7 in the Eastern market and $6.50 in Southern markets.

Quotations New York: Valencias, $6.85 to $9.25; lemons, $4.20 to $6.20.

Boston: Valencias, $7.30 to $8.00; lemons, $5.55 to $7.10.

Philadelphia: Valencias, $7.70 to $8.85; lemons, $4.60 to $7.85.

Total shipments to close of week are as follows: Oranges, 12,352 boxes, against 34,522 boxes for the same period last year; lemons, 4,427 boxes against 6,637 for the same period last year.

COUNTRY LANDS.

400-ACRE IMPROVED stock and grain ranch, 3½ miles Pleasant Valley R. R. station, Mariposa county, Cal. 100 acres cleared and tillable; nearly all could be farmed if cleared of large oak and other trees; 3 and 6-room house, large barn and outbuildings; blacksmith shop and tools; fenced and cross fenced, part hog tight; nice family orchard and garden irrigated from springs. Average rainfall, 29.88 inches. Grapes, olives, almonds, etc., grow without irrigation. No alkali or hardpan. Feed in pastures and free outside range adjoining, knee high. Elevation, 1500. School and church, one-half miles. Price, $30 per acre, including 300 goats, 3 horses, 3 head cattle, turkeys and chickens, and all farm implements. $3,000 cash, balance long time, 7 per cent. Fred B. Palmer, owner, Coulterville, Calif.

FOR SALE—120 acres, 5000 cd. oak and madrone wood on same. Three miles from town. House, barn, and fenced. Forty acres farming land on same. Spring water. Will sell all or half. Price, $6000. Address, P. O. Box 344, Healdsburg.

FOR SALE—Improved ranch, big fruit crop, pipe system. Cheap if taken at once. Geo W. Cheves, Paradise, Butte Co., Cal.

FOR SALE—500 acres land. Three million feet redwood; also fir, oak, and 100 cd. tan oak. Eighteen miles from railroad. Good truck road. Seven miles from famous mineral springs. Two running springs year round. Fine hunting and fishing. Price, $15 per acre. Address, P. O. B. 344, Healdsburg, Cal.

MARIPOSA CO. RANCH FOR SALE—480 fenced hog-tight, house, 2 barns, 12 horses, 25 hogs on grain, 15 tons hay, farming implements, harness, wagons, etc. Price, $9,600. Frank Solari, Hornitos, Cal.

BE PATRIOTIC—Raise stock on productive Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento.

ALFALFA RANCH IN FRESNO COUNTY—50-acre alfalfa ranch, subirrigation, with substantial improvements, work stock and implements. Price, $20,000, $6,000 cash, balance long time. J. Hargeshimer, Sanger, Cal.

53-ACRE RANCH in South San Joaquin irrigation district modern improvements, horses, implements, tools, sheep, poultry—$20,000. D. M. Berry, R. R. 1, Manteca, Cal.

WANTED.

WANTED—Responsible farmer and stockman to handle 250-acre ranch in Colusa County on shares. Must have money to buy stock. Sheep preferred. P. O. B. 597, Santa Cruz, Cal.

WANTED—To rent, a ranch suitable for hogs, about 60 acres farm land, part in alfalfa. Hans Duveneck, Ukiah, Cal.

WANTED—Married Swiss dairyman wants to take charge of a dairy on shares; 40 to 50 cows. Address, Box 1190, Pacific Rural Press.

WANTED TO HEAR from owner of good ranch for sale. State cash price, full description. D. F. Bush, Minneapolis, Minn.

SEEDS, PLANTS AND TREES.

FOR SALE—Baled alfalfa and grain hay, all grades and prices accordingly. Can furnish up to two thousand tons. Write at once, or better, come to see the hay for yourself. Can make immediate delivery. Bomberger & Co., Modesto, Calif.

CABBAGE AND CAULIFLOWER SEED—Also late plantings of many vegetables should be started now. Buy of C. C. Morse & Co., dealers in good seeds, San Francisco.

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

"I Cook in Comfort Now--

—for I have just bought a New Perfection Oil Cook Stove," says this housewife.

No dust or dirt, none of the bother of coal or wood. A touch of the match and in a jiffy your stove is ready for cooking. All the convenience of gas.

Bakes, broils, roasts, toasts,—all the year round. And a cool kitchen in summer.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

More Wheat to Put Hun Thru Smut Machine

What Uncle Sam demands from California in 1919 in way of increased Wheat Production, and how she can atone for her past transgressions

[Written for Pacific Rural Press.]

ACCORDING to an account which he is now publishing in some of the papers, an American dentist in Berlin hammered the kaiser on the jaw for fourteen years and now confesses that he did not realize how hard he deserved to be hit. It is much the same way with the rest of the world. All liberty-loving people knew that the kaiser's kind of Germanism led straight to hell; they thought it must be leading him thereto, and it will in the end, but they did not realize that he could make the world such a hell while on his own way to another. And now every American soldier and sailor is looking, longing and fighting for a chance to do a better job on the kaiser's jaw than the American dentist did!

It is not exactly in that way, but something like it, that California finds herself in relation to wheat. For the lure of the fee, California turned from her old and honorable task of furnishing bread to Europe and took to laving Europe with beer and did not realize that she was becoming herself a pensioner on the supply of bread and reducing the world's power to save itself from cruelty and oppression. But now, in the world's extremity, California is beginning to realize it and will try in some measure to retrieve her reputation for patriotic service to this country and the world.

California has many new places to grow wheat—Scene in Owens Valley, Cal., east of the Sierra Nevada.

On page 102 of our last issue is a definite statement of what Uncle Sam calls upon California to do in 1919 in increasing her wheat production. It is a very moderate demand—very considerate of our past transgression and consequent weakness, because the increased production does not equal our eating of other people's bread but only makes it a little less. It would have been just, even if not quite merciful, if Uncle Sam should have said: "Shame on you, California: if you are not patriotic enough to use your great capacity in producing wheat and you continue to snatch white flour away from my babies in the trenches and in the path of Hun devastation, you shall live on rolled barley mash until I finish my job."

California's Greatness Through Flour.

Such a decision by Uncle Sam would not only have been just to the world but just to ourselves and would have taught us a good economic as well as patriotic lesson for the future. For it is an economic crime for California to buy wheat from anybody. It would only take a part of our land which now lies open to grain, not only to grow wheat in quantity and kind to make our own flour, but we can go so far beyond it, without reducing our other products which the world pays well for, that we could build up our milling industry, not only to a wealth-product of export flour, but to a producing force of millstuffs for home-feeding which would fill our pockets, diversify our industries, preserve the fertility of our soils and do more than any one thing perhaps to put us on the state highway to a population of thirty millions. Therefore, let no one say or even think that Uncle Sam is unjust in expecting us to grow a little more wheat next year. Bless his dear old heart: he is only asking for himself a little fraction of an achievement which will give California a new greatness and outlook when the clouds roll by!

Preaching-Up and Punching-Up.

Of course, it is interesting to preach California wheat growing. We have always enjoyed it. We made a solemn protest thirty years or more ago when some sincere and well-meaning people were strongly insisting that we ought to abandon wheat while we were increasing our fruit acreage and building the special industry which is now our greatest. We promoted fruit planting; we believed in turning land from wheat to fruit, but we believed also in breaking more land for wheat because we knew very well that we could grow wheat on heavy, tight land and at elevations not suited to most fruits—and therefore we had no objection to taking the wheat away from the fruit loams of the valleys and foothills. The very same condition prevails today, although we have now about a million acres in fruit trees and vines. There is plenty of wheat land left.

But preaching wheat on such general grounds is not the best way to get more wheat seed into the ground and that is what is now needed. If you have a boring pain in your shoulder or your shank and go to see your doctor, the chances are he will advise you to have your tonsils pulled out or he will x-ray your gums and show you the picture to prove that there are pressures rising and falling in the abscesses under your molars which rival the tides in the Bay of Fundy. Well, it is all probably true, and the way to shake off pain is to get half the things there are inside of you taken out. Do you do it? Probably: in the end but not at first. You wander down the street till you hear a vender lauding liniment which cures all pain and you grab that and go to rubbing. It is much that way with preaching: you come to the truth of it in the end, but you need something else to start you to doing things which in the end will land you in heaven. And that is where a punch beats a preach.

California Millers Give a Punch.

Among the groups of millers in this State we have one which is widely known as the Sperry Flour Co., which at several points in the State makes the wheels go 'round in warehouses, elevators and mills—taking in much wheat and sending out much fine flour, together with the offal thereof as breakfast food for every creature from a king to a kangaroo, or a cockatoo. It has occurred to these millers for some time past that for the sake of patriotism, of State development and of plain business sense, they ought to do all they can to induce California to grow more wheat. And so, besides making good mill products and making people know it, which all millers try to do, they have undertaken to demonstrate that sacks for grain and other things in wheat-

THE AMERICAN WAY.

THE Huns are getting it in the neck in the American way. A third of a million of them are reported to be hors de combat since they made their last try for Paris via the Marne. That is the way to put it, of course, because it is happening in France, but nevertheless it is the American way. An American commander telephoned from an advanced position to the high command on Monday:

"My men must rest."

"Must rest!" exclaimed headquarters.

"Yes; our men are absolutely tired out running to keep up with the Germans."

The Americans are naturally peeved at getting tired because their opponents will not stand for a shot or a bayonet: they expect to get tired, of course, but they insist on doing it in an American way. They went abroad for "big game" which would turn and charge: they are weary of chasing jack rabbits and ground squirrels. However, they must be patient: it is still quite a piece to the Rhine!

But it is not in fighting alone that we are teaching Europe the American way. Our entry to the war will achieve its great purposes for human freedom and opportunity; but hardly less important perhaps will be the demonstration of the way to seize opportunity—the American way. Victor Cambon wrote recently in a teachers' journal in Paris as follows:

And while they prepare for our common victory, the Americans continue to furnish us with everything—iron, copper, cotton, machinery, and, above all, lives. In order to assure us flour and all other kinds of provisions, they voluntarily deprive themselves of wheat, meat, sugar, etc. Ships lack to transport these; they set themselves to construct more than England herself has launched. Two months suffice them to complete a vessel which with us remains two years in the shipyards.

As they pass through our country their engineers, their pioneers, their commissary, finding our implements out of date and our methods too slow, undertake at once, at their own expense, the remodeling of these old things; and it is amazing to see on their route the structures, railways, depots, warehouses, workshops cover the ground, as if the wand of a fairy had caused them to spring from the earth. Never has there been so incomparable a lesson offered to the eyes of our people.

To you, teachers, whose mission it is to instruct the French people, I have felt it my duty to tell you these facts; it is your duty to spread them among those that listen to you.

Remember that the foregoing was published in a French teachers' journal—a suggestion of what should be taught the youth of the rising generation to enable them to meet the needs of their ravaged country. One hundred and forty years ago the French spirit fired the American heart, now the American way is destined to achieve the rehabilitation of France. The butchering of the boche is indispensable, but it is a disgusting job which German deviltry forced upon the world, and it must be done in the American way.

THE AMERICAN WAY IN WAR.

AMERICA has always fought for principle—for the preservation of the integrity of our country—because it stands in the world as the foundation for the attainment and protection of human rights. France understands that better now than she did in 1864, when the French Government made an offer to intervene for peace, a peace without victory. To this overture President Lincoln replied: "We have submitted to this war; we have accepted it. We fight toward an end and for a cause which is vital to the entire world, and before God, this war shall not be finished until this end has been attained."

This is the American way, and the president of the American Chamber of Commerce in Paris translated it into modern terms when he declared in that city last year: "A hundred million Americans repeat today the words of Lincoln. They defy all, neutrals or enemies, who still doubt the complete victory of the allies. The American sword has never been drawn except for the cause of liberty; it will not be sheathed until after victory."

THE AMERICAN WAY IN PEACE.

BUT of course it is not war for its own sake, which German philosophy maintains, and not war for conquest and dominion, which German practice aims at, that is the American way in war. It is really devotion to the development of a new life in Europe which inspires our undertaking, and that, too, will be attained in the American way.

And it is not alone in devastated countries that our unselfish purpose will shine beneficently and awaken emulation of the American way. This, too, is being clearly recognized abroad. It is cabled from Madrid that articles dealing with the magnitude of the American effort are appearing in Madrid journals, contributed by Jose Martinez Rinz, novelist and literary critic, the first Spanish writer to visit the American front. Senor Rinz has declared that he will use the full strength of his pen to make his country "know the truth about the United States." He added:

In 1898 we suffered a disastrous disillusionment because of our own ignorance. It shall not occur again. The future of Spain is bound up with the future of America, and this must be recognized.

Spain is not the only country which has failed to discern the inner meaning of the American way, either in war or in peace, but probably no people ever blundered over it as the Germans did. They are just beginning to appreciate the fact that it is not the gun that fights, nor is it the man behind the gun who overcomes, but it is the spirit in the man behind the gun which wins war victories in a just cause—the same spirit which wins peace victories also—"for peace hath her victories no less renowned than war." Senor Jose Martinez Rinz is thinking and talking straight. Spain will do well to get next!

APPROACH OF THE RAINY SEASON.

CALIFORNIANS in sections where the rains are usually enough for cropping are almost always glad twice in the year—when rains begin and when they end. We have annually surprised ourselves at the way we could long for rains in the fall, after the crops are gathered, and still become so tired of them when watching for a chance to get in early spring work—but that is the common California way, in sections where the clouds count for anything at all. It is now the last of the dry months and usually the driest of them, and everyone who is not busy with the later fruits is beginning to long for rain and to be glad if he could be caught out in it. It is not strange that one should feel that way this year, for we have been vexatiously short for two years, and a lot of fruit trees are likely to be dried nearly to death unless there are early rains to help the roots resist desiccation. Of course, some can prevent this by a light irrigation if they have the outfit for it, but most of the rainfall orchards probably have to stand up and take what comes or does not come. It is announced from Sacramento that the river is lower than it has been since 1857—the water having fallen below the intake pipes in some of the older irrigation installations, and "in some cases the delay in extending the suctions has been serious for the crops. Irrigation, it is said by the farmers, has been given its supreme test this year." It seems to us that it is the lack of irrigation which has had the "supreme test this year," not the fullness of it. Surely those who secured irrigation in case of need have never been farther along on Easy street, and no one's trees are so well conditioned as theirs to go forward toward another year's production.

It is not too soon to begin to get ready for the rains if other work is done. Much land should be put in shape dry for fall sowing of alfalfa. Land which has been used for summer cropping should be leveled and leveed for a run of several years in alfalfa, because there is great prospective need of the crop and the profit promises to be great. Get in some new alfalfa and if summer crops promise good value next spring break up some old weary alfalfa next winter and get the advantage of the rotation. We should have alfalfa going in and coming out all the time.

EARLY WORK TO GET WATER IN.

SUPPOSE September does bring a lot of rain, as sometimes happens, what will become of it? Much ground is now so hard from the long drouth that the dust will cement the surface with the first dash of rain and all that follows will be quickly shunted into the run-off and, while you are waiting for rain enough to plow, what little did enter will be lost by fly-off. It will be a great mistake to let hard ground lie after you get a chance from crop-gathering to tackle it. Get a tractor to break it up dry and crush it down somewhat if cloddy. Grade and check it up if it is for irrigation ahead of the rains and you will get surprisingly deep wetting and safety in fall sowing of alfalfa or of grain, while both may be in much danger if you wait for working after rains. Get all you can done while the clock rises ahead of the sun, for Congress will be turning it back an hour in October and then you will have only an old-fashioned day to work in—and a short day and long wages do not mix well in farming.

It is also desirable to begin very early to get ready for wheat if you have land suited to it. We have an exhortation on that subject on another page. Some of the other staple crops have rather a shaky outlook for price and anyone who can wisely tie up to the old California reliance, the wheat crop, gets about as much of a cinch on the future as is possible in this wobbly world. Of course, we cannot guarantee that everyone will do as well as a Merced telegraphic reporter declares his constituents have done in this item:

MERCED, August 3.—The first wheat crop in this section of the county to be sold this season is reported from Livingston, where Love & Winton, farming a large tract, disposed of 5130 sacks, approximately 11,027 bushels, for $23,285.61, showing a profit of $2.10 per bushel.

It would be fine to tell our readers how to grow wheat so that it would be all profit—for $2.10 was evidently the selling price. But even if it is not all profit, it is splendid to put out that much wheat when wheat is our country's greatest need. Surely one way to be sure to get all there is in wheat is to begin early, get good seed, get the land in shape to catch and hold all the rain and sow early so that the plant may have a very long growing season. Therefore, we urge all with whom wheat is possible to get everything going early so that nothing will have to be jumped in at great disadvantage late in the season.

ANOTHER POINT IN FRUIT ORGANIZATION.

OUR friends in Santa Clara county are tackling another problem in fruit organization and it is surely an interesting and important one. Our first news of the proposition is that it is modeled something after the lines of the Prune and Apricot Growers and its purpose is to handle fresh fruit for local sale—presumably chiefly to canners. The reason for farther organization seems to lie in the fact that existing organizations are so strictly specialty efforts that they do not cover even all the commerce of a single fruit. The Prune and Apricot Growers do not handle shipping or canning fruits, but they do catch on when the same fruits are dried. The Pear Growers as now organized do the job for the fresh fruit for canning, but cut out the same pears when shipped or dried. The Raisin Growers cover the sun-cured grape, but not the grape when it falls on a table instead of a tray. If we are not mistaken, the Peach Growers come nearer to covering a fruit in all its conditions and uses than

any of the current "big four" associations on the deciduous line.

What is best to do to cover the exposed fractions of several fruits and bring them to the same protection which is making the handling of the covered fractions so much safer and more satisfactory? It is interesting and important. We have no particular conviction on the subject, for lack of sufficient thought and inquiry about it, but at first suggestion it seems more rational to have an association cover the whole of a fruit if possible or the whole of two fruits, if its name runs that way. In the unripe leather business, for instance, it has been the practice to have "the tail go with the hide" and the tanners have bought that way from time immemorial. There is probably some reason why a butcher does not have to sell the hide to the tanner and the tail to a soup factory. But we are not writing about oxtails but about the tail end of a fruit crop. Therefore, it seems to us that unless there should be some insuperable objections it would be better to have one association handle all there is of a single fruit—even to the pit thereof, as the Peach Association is now doing. There would seem to be some very close relations between the different uses of a fruit and the values created thereby, which could be better handled by one association than by two or three. However, the Santa Clara fruit growers are bringing themselves squarely up against the proposition and all growers will be watching to see how they hit it off!

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Do Not Plant Poor Trees.

To the Editor: Of a hundred deciduous fruit trees planted this spring, at least half are now dead. The trees were ordered last fall, but were not delivered until February 22. They were so dry and poor on arrival that the inspector and the tree planter agreed that it would be a most doubtful matter to plant them. However, as the agent, through whom I bought the trees, stated that the nursery would make good any excessive loss, we proceeded. He now refuses to do anything about it. I claim damages on one of two grounds: First, either the borers were in the stock when it arrived; or, second, the exceedingly poor quality of the stock and the late planting gave the trees such a backward start that they were easy victims of sunburn and injury, thus offering opportunity to the beetle to lay its eggs. Which of these theories is more likely to be the correct one in this case?—Planter.

Your second theory is the more reasonable—but the trees should have been rejected resolutely and not planted. In our judgment, you will waste time and money in trying to recover damages for their behavior unless you have testimony to establish a verbal contract of the agent upon which you can make him or his principal responsible to make the loss good. It is idle to claim that the borers were in the trees before planting (or had been therein) unless you have testimony that their work was seen when the trees came to you. The flat-headed borer is so abundant and always so ready to seize upon sunburned bark that you cannot inferentially claim that it came in with the trees.

As for the poor condition of the trees, the late delivery, etc., you cannot recover for that because of the fact that you received and planted them, knowing they were bad and that there was risk of failure with them, and (apparently) the agent did not try to convince you that they were otherwise. Thus you become "accessory before the fact" to the horticultural crime of planting poor trees and cannot claim that you were imposed upon. In our judgment, your only chance of recovering anything depends upon whether you can establish a contract with the agent to make good if the trees failed—as your advisers claimed, and the agent apparently admitted, they were likely to do. It is possible, of course, that the nurseryman may decide that it would be better for him to supply new trees than to defend a suit which would give him much undesirable publicity. On your own part will be the decision as to whether it would be cheaper for you to buy new trees than to hire a lawyer to compel the nurseryman to give them to you.

Is the Satsuma Shy?

To the Editor: In 1913 I planted some Satsuma plum trees. They look healthy and thrifty, but they do not bear much fruit. For three years they have been white with blossoms, but they set only a few fruits. The trees are large enough to carry 300 pounds of fruit to the tree; they bear about ten pounds. One Burbank plum tree, standing in the same row, bears every year more fruit alone than all the seventeen Satsumas together. I have some French prune trees, looking healthy and clean, but they bear very lightly; this spring they hardly had any blossoms on them. I noticed lately that the bark of the trunk cracks. What can I do to them? My apricots and peach trees bear every year abundantly.—H. A., Puente.

The Satsuma is not largely grown and we do not know much about it. It is more popular in Southern California than elsewhere in the State. It is usually rather shy when young and is in contrast to the full bearing of the Burbank—which is fortunate, for the Burbank is a much more satisfactory commercial fruit. Our conviction is that the Satsuma will give you more fruit as the trees gets older. The French prune, and other plums of the domestica ancestry, are usually shy in Southern California, although in some places they bear well. Plums with Japanese ancestry are much better bearers under Southern conditions. The cracking of the outer bark, if not accompanied by gumming, is not serious. It seems mechanically necessary to permit the enlargement of the trunk. We have nothing to suggest about the treatment of your trees. The behavior of the trees which do bear indicate that the growing conditions you secure are all right.

Army Worms on Castor Beans?

To the Editor: I find among my castor beans, which are now nine inches, some whose stalks, often a quarter of an inch in diameter, are partly cut through. The only explanation I can find is a green caterpillar with one yellow stripe extending full length on each side of body. The ones found are from an inch to an inch and a half long and about a quarter of an inch in diameter. I had understood castor beans were practically immune to insect pests. The damage so far is not very serious. Can you suggest any remedy?—R. H. P., Coachella.

You seem to be growing the castors not for the army but for army worms. Army worms do not usually stop an offensive when they are partially through. Probably the castors are putting up a stiff counter-attack on their own account. As for plants of any kind being immune, we are not sure that we ever saw a plant which some fool bug would not attack, though some plants are immune enough to stop them short of serious injury. If your pests should become numerous enough to threaten, you can use the bran-arsenic bait on the ground around the plants which is used for cutworms and grasshoppers, or if they take to eating the leaves you can spray with lead-arsenate—if you think the crop will be worth the cost.

Thrips Injury to Peaches?

To the Editor: I am sending sample of peaches which have failed to develop properly. About 25 per cent of my Tuscan clings are affected in this way. There has been some fruit thus injured in the past, but never so many as this year. Please tell me the cause and remedy, if any.—A. R. D., Pomona.

The peaches are "runts," not more than half size, knobby and deformed—apparently by the uninjured parts growing over and enfolding parts which could not enlarge. This is a trouble which has occurred to greater or less extent in several parts of the State, and it has been given some study. We are not aware that the cause has been fully demonstrated, but the conviction prevails that it is the work of thrips which abraded the fruit when or soon after it formed in the bloom-jacket. The treatment would then be the distillate emulsion-nicotine spray applied as the bloom buds are swelling and after the petals have fallen—one or both, as must be experimentally demonstrated to be desirable.

Aphis on Corn.

To the Editor: I have a patch of sweet corn which is growing wonderfully, but is now full of black aphis and millions of small black ants, and some of the stalks are just black with aphis and ants. Did you ever hear of such a case before? It is the first time that I have ever seen anything on corn stalks besides ladybugs. What shall I spray the corn with? I am afraid they will ruin the ears, and the stalks have two or three and sometimes four ears on.—F. W., Oakland.

There is a root aphis which sometimes knocks corn out at the start, but the one you now have is probably some other member of the aphis family which has multiplied because you do not have ladybugs this year to keep them down. Spray at once with a good sprayer which makes a fine mist and shoots it hard on the lice—not a mere sprinkle. Use the aphis remedy described in detail on page 723 of our issue of June 8, or buy an insecticide at the seed stores. Almost any florist's insecticide will kill aphis if you get it on right.

WAR-TIME WORK FOR HALF-CENTURY MEN

Are you a little too old to fight at the front, and not trained for one of the war-time industries, yet anxious to do your bit in helping Uncle Sam lick the kaiser? If so, this is your opportunity.

Food will win the war, and the Pacific Rural Press is playing a most important part in helping farmers raise the necessary food, for our pages contain practical articles which cover nearly every phase of agriculture, horticulture and livestock raising.

The paper has always been a valuable aid to farmers, but right now it is an absolute necessity. Hardly anyone is able to solve his own problems in these critical times. He needs the advice of experts, and on the editorial staff of the Rural Press he finds men who are authorities in their lines—men who know his circumstances, anticipate his needs, and contribute timely articles which enable him to overcome every difficulty and make a grand success of his work.

This increased need for our paper means that we must have more field representatives, and if you have an automobile or motorcycle, want pleasant work that bears an important relation to the welfare of the nation, and also pays well, let us hear from you at once.

No experience necessary. We give you proper coaching and bang-up support. Straight salary; permanent work; no investment required. Big fall campaign just starting. Best time to begin. Write for full particulars, and tell us a little about yourself.

Hulling Walnuts.

To the Editor: Having a very heavy crop of walnuts this year and being new at ranching, we are puzzled as to removing the heavy skin and just how to prepare them for market.—Subscriber, Grass Valley.

There will be something the matter with your trees if the hulls do not open and let the nuts fall out when they are sufficiently ripened. When they are in the habit of sticking tight an irrigation just before ripening may prompt the tree to let them go. The few nuts which bring down their hulls on their backs are usually hulled by hand. After getting them free, dry them well before sacking. If they are too dark colored, spray lightly to wet the outside only and sulphur them just as you would fruit for drying. In large orchards they are dipped for bleaching—rather an elaborate process which the small grower seldom outfits for.

Walnut Drying.

To the Editor: Having read the Rural Press for thirty years, I would like to ask a question. Will the walnut drier (Sidwell's), as used about Los Angeles, work in the Santa Clara Valley? Will walnuts dry in the shade under a roof if there were fans used to create a change of air?—D. W. L., Santa Clara.

It is kind of you to ask such easy questions after waiting so long. Some readers are so cruel as to drive us up to a high perch as soon as they get the first issue. The answer is yes to both your questions. Any autumn drying outfit will in most years have an easier job in Santa Clara than in places more open to coast fogs. That is where the high range between you and the ocean gets in its work.

Blenheim and Hemskirke.

To the Editor: I have some four-year-old Blenheim and Hemskirke apricot trees. Please advise me how to tell them apart.—J. D., San Leandro.

The most obvious and sufficiently distinguishing characters are that the Blenheim has a plump, roundish form and the Hemskirke is considerably flattened on the sides.

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., August 6, 1918:

Stations—	Rainfall Data			Temperature Data	
	Past Week	Seasonal To Date	Normal To Date	Max'm	Min'm
Eureka	...	.20	.12	68	50
Red Bluff	...	...	...	100	64
Sacramento	...	...	...	98	56
San Francisco	...	...	.01	74	52
San Jose	...	...	...	88	46
Fresno	...	...	...	102	62
San Luis Obispo	...	...	.03	92	50
Los Angeles	...	.09	...	100	64
San Diego	...	...	...	82	64

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

The Dry Season in the Santa Clara

[Written for Pacific Rural Press.]

The Santa Clara Valley, like other horticultural sections in California, shows the effects of the dry season. Farmers who plowed early and cultivated faithfully and thoroughly throughout the season have results in the increased vigor of the trees and improved condition of both foliage and fruit. The crop generally will run small, though there are some orchards that show extra fine fruit. The latter, however, are not many and on the whole there will be a disappointing yield.

When a crop is spotted and uneven, as it is this year, the invariable tendency is to overestimate the yield, while where it is evenly distributed all over the trees an underestimate is usually the result.

PLAN OF CAMPAIGN FOR NEXT YEAR.

Several growers have expressed their intention of not only giving their trees a severe pruning this winter so as to force more wood growth, but to abstain from growing a cover-crop this year. The idea is to conserve all moisture possible until the water-table is back to normal. This is a pretty good idea where no water is available, though one to be used on an occasion like the present only. Where water is available, however, and used, the cover-crop will go in as usual.

EFFECT OF MATURING COVER-CROPS.

We have been taught that cover-crops, plowed in year after year in a green, succulent condition, do not possess fertilizing value to the same degree as matured crops; also that they have a tendency to sour the ground. We grant these two premises, though I have repeatedly tested the soil after long-continued cover-crops and found no sourness. Nevertheless, an application of lime once every three or four years should suffice to rectify this fault, provided the sourness did not arise from imperfect drainage or some other cause.

Regarding the maturing of the cover-crops in our deciduous fruit orchards before plowing under, it seems to me to be a mistake. In what condition does it leave your ground? When you turn it under the soil is moist at the roots near the surface and dry deeper down. The evaporation through those heavy masses of foliage after March must be enormous, for even after a heavy dew—that is gone in a few hours. After barley or melilotus gets woody it will not rot that year, and often prevents a perfect dust mulch.

MOISTURE THE FIRST CONSIDERATION.

When the cover-crop conflicts with the conservation of moisture it must be sacrificed. Where it is possible to obtain manure, and such places are now few and far between; the cover-crop in dry sections can be dispensed with.

L. Woodard of Campbell is doing this. He has thirty acres of young prunes from two to five years old, twenty of 'cots and four of almonds, all interset in old vines. Mr. Woodard's young trees, growing on gravelly loam soil, show excellent growth and good color, and he cultivated only, but cultivated continuously, after applying manure. Probably a plowing first would have been even better, but he shows results in the foliage and growth.

Apricots generally seem to have stood the season pretty well everywhere, though the fruit is a little undersized, and of course the new wood is light. But the trees have a thrifty color. Growers will probably cut pretty hard again this year and there should be fair fruit wood for next season.

Cherries are in for a rather hard siege of it in the dry sections, even if we get early rains. Throughout the State they have a forlorn look, except where water is plentiful.

To summarize our observations in the Santa Clara Valley, we would say: Apricots lead in condition, then follow pears, peaches, prunes, almonds and cherries in the order named. Those orchards show best that have been plowed early and cultivated continuously, while the worst sufferers are those plowed late, harrowed, rolled down, and left—a practice that is obsolete among scientific growers.

The California Fruit-Canning Season

[Written for Pacific Rural Press.]

The following tabulation prepared by the California Fruit Canning Association shows the periods during which the specified canned products are made in this State:

Asparagus—March 12 to June 7.

Peas—April 20 to August 31.

Strawberries—May 8 to October 23.

Gooseberries—May 15 to June 19.

Cherries—White, May 15, to July 2; Black, May 17 to July 4; Royal Ann, May 21 to July 18.

Blackberries—May 31 to October 19.

String Beans—May 2 to December 30.

Apricots—June 5 to August 25.

Currants—June 6 to July 28.

Raspberries—June 6 to August 7.

Plums—Egg, June 25 to September 25; Golden Drops, June 30 to September 21; Damson, June 1 to October 23; Greengage, June 2 to September 18.

Peaches, Yellow—Freestone, June 2 to October 24; Clingstone, June 10 to November 12.

Nectarines—July 15 to September 6.

Pears—July 16 to November 8.

Apples—July 18 to December 30.

Peaches, White—Freestone, July 22 to October 15; Clingstone, July 31 to October 11.

Grapes—August 11 to November 7.

Tomatoes—August 20 to November 25.

Quinces—September 14 to November 10.

Entire season, all varieties, March 12 to December 30.

PEACH MARKET BUOYANT.

Packing of peaches of all varieties is proceeding actively throughout the San Joaquin Valley, and the market could not be better. Due to a light yield both here and in the East, the demand is insistent and prices excellent. The bulk of this season's crop of freestone peaches in the Porterville district have been bought up by packers on a $50 per ton basis, as compared with $35 last year and $25 in 1916.

GROZ-IT

HIGHLY
Concentrated - Pulverized

Manure

A mixture of cattle and sheep manure from animals fed on cotton seed meal and cake and alfalfa (highly nitrogenous foods) aged for several years under climate conditions that remove moisture but prevent leaching and fermenting.

No odor.
No flies or insects.
No weed seed or foreign matter.
Many times plant food values of ordinary manure.
Guaranteed contents.
Nitrogen, 1.5 to 2%.
Phos. Acid, P^2O^5, 1.25 to 2%.
Potash K^2O water soluble, 4 to 5%.

We are shipping GROZ-IT in immense quantities to Southern and Eastern states, where present freight rates make it $10 per ton more than cost to you
Place your order now to insure delivery.
Sold in bags or bulk.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Strawberries at Watsonville.

H. A. Hyde of Watsonville says that the crown disease of strawberries should be investigated. The strawberry industry in California, though it is so largely in the hands of Japanese growers, is large and of growing importance, and this mysterious disease is becoming a menace to it. We suggested trying crop rotation, preferably a cereal the first year. Mr. Hyde has changed the characteristics of the Klondyke strawberry. He says that in one double row of these berries, 150 feet long, 105 pounds of fruit was picked every week for six weeks running. The patch was watered every ten days. He also told us of a field of Marshalls that produced 18,000 pounds of fruit its third (peak) year. This field was kept in bearing four years. Mr. Hyde has a row of the Surprise ever-bearing raspberry that has borne fruit every day in the year.

Budding Walnuts.

Leonard Coates buds walnuts twice a year—in May and June—with buds from wood saved in dormant stage and put away in damp sawdust. A large shield is used in both instances. The second budding may be done in August by preparing buds three or four weeks previously. This is done by cutting off the leaf of the bud desired to within an inch of the bud. After the bud on its large shield has been inserted, it must be bound very tightly in place and should be allowed to stay uncut for about two weeks, when the string may be divided. Mr. Coates grows beets and stock carrots between his young trees.

Killing Argentine Ants.

W. H. Volck, formerly Horticultural Commissioner of Santa Cruz county, and now with the California Spray Chemical Co. at Watsonville, says that paris green is the best remedy for exterminating the colonies of Argentine ants. These are the little fellows that get into the pantry and sample the provisions. The way to use the poison is to fill a small, light cotton bag with paris green and shake it out through the bag along the runways of the ants. A little care in dabbing along with the bag will keep the poison local and the ants will disappear.

Light Orange Drop.

On the Stanley place, five miles east of Terra Bella, oranges have not dropped enough to spoil the crop, we hear. M. Boulware, who manages forty acres, took off 2300 packed boxes last year and will have as many this year. The ground was thoroughly irrigated in February and to the winter irrigation is attributed the trees' ability to mature the fruit.

Bud Selection.

R. McCorkle of Green Valley, Santa Cruz county, has 500 trees of Royal apricots that have run, on twelve selected trees, over half a ton of fruit to the tree for five years in succession. He has 500 four-year-old Royals budded from the above trees that averaged 100 pounds of fruit to the tree this year.

Thompson Vines in Row Centers.

When Thompson grapes begin to run on the ground and intermingle a vine cutter with sharp disks about two feet wide run down the row centers will avoid lots of entangled feet and make pruning easier next winter.

Prolific Apple.

There is a Bellflower apple tree on the Brahusen place in Brown Canyon, near Watsonville, that has averaged for five years 85 lug boxes per season. One year it produced 104 boxes.

New Method of Grading Nursery Stock

[Written for Pacific Rural Press.]

At a recent meeting of representative nurserymen at San Francisco, the matter of grading trees by caliper instead of tree length came up for consideration. According to specifications to date, length was the determining factor and was given precedence. But as a matter of fact, in determining the grade of a tree, caliper, stockiness and root development are of greater importance than the length of the tree.

So in order to adapt specifications that would determine more nearly the true grade of the tree it was deemed advisable to give the caliper specifications the precedence, while the length of the tree is of secondary consideration.

To that end the following schedule of grades was adopted:

On all varieties of deciduous fruit trees, consisting of apples, apricots, cherries, chestnuts, peaches, pears, pecans, plums, nectarines, quinces and walnuts, the caliper and height combined will determine the grade of the tree, the caliper always taking precedence.

The following schedule of caliper and sizes effective on the varieties named:

VARIETIES NAMED ABOVE.

Caliper not less than 1 in. on 8 to 10 ft. trees.
Caliper not less than ¾ in. on 6 to 8 ft. trees.
Caliper not less than ½ in. on 4 to 6 ft. trees.
Caliper not less than ⅜ in. on 3 to 4 ft. trees.
Caliper not less than ¼ in. on 2 to 3 ft. trees.

On almonds and figs, because of their inclination to grow stocky, the caliper measurement will govern the grade of the tree, regardless of height, and the following is the schedule of caliper adopted:

ALMONDS.

Caliper not less than ½ in. represents 4 to 6 ft. trees.
Caliper not less than ⅜ in. represents 3 to 4 ft. trees.
Caliper not less than ¼ in. represents 2 to 3 ft. trees.

FIGS.

Caliper not less than ⅝ in. represents 4 to 6 ft. trees.
Caliper not less than ½ in. represents 3 to 4 ft. trees.
Caliper not less than ⅜ in. represents 2 to 3 ft. trees.

The action on the part of the representative nurserymen of the State will, we believe, overcome the irregularity of determining the grade of a tree by length and will work to the advantage of both planter and nurseryman.

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

For more than 50 years Giant Powders have cut the cost of western blasting. In all this time they have been constantly improved and adapted to western conditions by a western company. Naturally they make western land clearing easier, faster and cheaper.

Giant Farm Powders—Giant and Eureka Stumping—go further than ordinary dynamites. Farmers and orchardists find that they can do more and better work at less cost with Giant Powders. Hundreds write us that Giant brands "save money"—"give better results"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

Caution: Be sure you get the genuine Giant Powders, the product of the manufacturers who originated the name. Look for the Giant trade-mark. It is your only sure protection against imitations.

Send coupon (or postal mentioning this paper) for the big free book "Better Farming." It tells you scores of money-saving ways of doing farm jobs. Write for this gold mine of information today.

Two Young Orchards Worth Seeing

[Written for Pacific Rural Press.]

Elmer Bros. of San Jose have two young orchards that for shape training, growth and results are out of the common.

The older orchard of twelve acres of Tuscan clings is five and six years old. The trees are low headed, averaging perhaps a foot above the ground. They are kept well open in the center and are supported by an encircling wire about six feet from the ground to carry the crop, which is well and evenly distributed inside and out of the tree.

Last year 136 tons of fruit were sold from this orchard; 108 tons of it were picked by standing on the ground, a small step-ladder serving for the remainder.

This year's crop promises to exceed that of last year and has been sold to the cannery at $70 a ton. The orchard has just received its second irrigation and is now worked down ready to harvest the crop, about the third week in August.

Apart from the vigor and size of these trees, and the scientific care apparent in their handling throughout, the fact that about three-fourths of the crop can be gathered without the use of a ladder means a saving of labor that will appeal to every orchardist.

The low head also means that the tree protects itself against sunburn from the first and can be better secured against breakage.

The second orchard of eighty acres is half peaches and prunes and half peaches and apricots. The trees are now making their second year's growth, are also headed low and show the same care as the older orchard. This orchard is interplanted with tomatoes and truck, which should more than offset the cost of cultivation.

The apricots are of the Loose variety, which ripens with the Blenheim. Peaches are Tuscan clings and the prunes French. The trees are 20 feet apart on the square, which will allow the cots and prunes plenty of room when the peach trees have fulfilled their mission.

Summer pruning on cots has already been done and next winter all inside growth will be removed to keep the wineglass shape and the leaders cut back hard to promote a strong wood growth again next year. And this will again be summer pruned. The year after they will be allowed to fruit some, but good wood growth will still be forced till the trees have attained a size that suits the growers.

Butte Prune Crop Heavy

[Written for Pacific Rural Press.]

The Butte county prune crop will be nearly as great in tonnage as last year, which was fully normal; and the sizes will be 80 or larger, while last year they were generally 80 or smaller, as reported by Reynolds & Son of Chico. A heavy drop occurred during July, but is all over now. The drop occurred mostly from old trees, due partly to drouth and partly to the hot spell in June, which cooked the leaves and turned them yellow in the worst way Mr. Reynolds ever noted. This will probably affect next year's crop more than this one of 1918. The prunes remaining this season are so large, however, and young orchards just coming into bearing will produce so much, that growers' cash returns will equal or be greater than those of last year. Peaches were not hurt and red spiders seem not so prevalent as in other seasons.

COST OF CARING FOR ORCHARD.

To the Editor: Please advise me what the present charge is per acre for caring for an orchard, including spring plowing and frequent cultivation and one irrigation, water provided. The place I refer to is four to five years old.—J. W. Hoefling, San Francisco.

No data are given to go on, so I will assume you have a strong clay loam soil. At present prices of labor, plowing, and working down will cost about $4 an acre; cultivating about 75c to $1, according to what you want done. The first disking will be the heaviest generally. You have given no data as to water supply, pipe or ditch, or the lay of the land. Could you not get it cared for one more year for the use of the land for intercropping?

ADVANTAGES OF LATE PICKING.

"I find that if I wait until September 1 to pick Thompsons they are well sugared and will cure in two weeks into heavy, well-colored raisins," says C. A. Bloyd of Kings county. Mr. Bloyd has 4½ acres, which 15 pickers clean up in 1½ days. He believes in quick action.

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

Golden Gate Weed Cutter

Kills the Weeds and Cultivates the Soil

Greatest weed killer on the market. Cuts them off clean, under the surface, close down to the roots. Besides, it breaks up the ground so thoroughly that one user says he saved $200 in a single season because after cutting the weeds he did not have to plow. Cuts seven feet or less. Weighs but 230 pounds. Cut adjustable to any depth. Constructed of steel throughout. No other implement like it.

WRITE FOR CIRCULAR which illustrates and describes the Sigurd Weed Cutter and contains letters from many users.

Under Rossiyn Hotel

Yellow "Sweet" or "Sour" Clover

To the Editor: Enclosed please find sample of seed which I have noticed growing on my ranch in one place for several years. It seems to spread very slowly. Is this a noxious weed or what? I am enclosing postage and would appreciate an early reply, for if it is all right would like to save some seed. —Subscriber, Philo.

[Answer by Prof. J. W. Gilmore, University of California.]

This seed is Melilotus indica, small yellow flowered melilot. It is a legume, distributed very widely throughout California and in all the Pacific States.

In recent years it has become quite popular as a cover-crop in the citrus groves of the South and is used to a considerable extent for a cover-crop on other lands. It has practically no value as a forage crop. It seems to be becoming more and more prevalent in our grain fields throughout both valleys, especially the San Joaquin, but this apparent spread is probably due quite largely to the use of the combined harvester. The grain is usually not cut until after the plant has ripened its seed. Under proper cultural methods it is easily controlled and should not become a pest. This seed, however, is extremely bad in wheat that is to be used for milling purposes, although it is fairly easily separated, yet there is always a chance that one or two seeds will get by and one or two seeds, if tempered with the wheat, will lend an odor to the flour manufactured from it. Thus the millers have an' eagle eye out for the seed of this plant in their wheat and rather than take any chance with it they often dock the prices of the wheat considerably.

The best remedy against it in our wheat fields is to plant clean seed and cut the crop when it is ready to cut, for at that time the melilotus has not ripened its seed.

Berkeley.

MANTECA CROP NOTES.

Ten to twenty sacks of wheat and twenty to forty sacks of barley per acre have been raised this year on subirrigated land in the Manteca district, where three sacks of rye per acre was a big crop before the South San Joaquin Irrigation District was organized, as told by W. J. Woodward, who visited our office recently. Beets are generally light both in acreage and stand. It was cold, dry, and windy around planting time. The sugar factory expects to start about August 12 for a thirty- or forty-day run. Tomatoes never had better prospects. There are over 3000 acres of tomatoes in this district and four canneries in town to handle them. A little blight has developed and some growers are spraying with a power outfit furnished by the Manteca Canning Co. A heavy acreage of beans, largely as a second crop after grain, is looking fine. There are many teparies, which sold well locally last year. Gyp corn is also looking well on a large acreage.

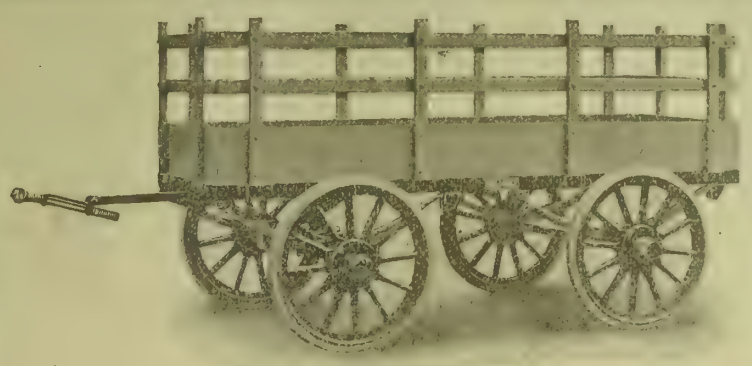
LOCAL BERRY GROWERS HIT HARD.

The new Government freight schedules are not received with great jubilation by some of our fruit shippers. In certain cases an extraordinary hardship seems to be imposed. For instance, the berry growers of the Santa Clara Valley formerly shipped their berries to the bay markets for 6c per 100 pounds and had their empty boxes returned at 15 per cent of the first-class rate. Under the new schedule the rate for the local haul is 25c per 100 pounds and full charge for the return of the empties.

TRACTORS AT STATE FAIR.

Tractors at the State Fair, August 31 to September 6, will occupy much more space than last year, as indicated by interest of the manufacturers in the past few weeks. No machines will be in motion inside the tents and the dust nuisance will be abated outside. One firm has already asked for 7000 square feet. Six firms last year had 1000 to 4000 square feet. All will be under the auspices of the California Tractor and Implement Association. No sanction will be extended for tractor exhibits at the Oakland Land Show.

Hit hard and quickly for all we have and are and hope to be!



AUTO TRAILERS $85 AND UP

SERVICE VALUE TIRES

HARVEST MILES

Where You See This Sign Goodrich Tires are Stocked

Buy from Goodrich Dealers Located Everywhere

TIME was when a pneumatic tire meant luxury and pleasure to you men of the farm. To-day it spells quicker work, and more of it.

Hauling by automobile and motor truck make the tire a bigger and bigger item of expense in farming.

The hour has come for you farmers to reckon a real dollar-and-cent profit out of tires, just as from your ploughs and reapers, and count pleasure extra profit.

That is the Goodrich point of view, and Goodrich urges you to get profit by putting the speed, efficiency and economy of Goodrich Tires into harvesting your crops and hauling them to market.

Nearly a half century of scientific and practical rubber making has built a maximum service in Goodrich tires for all road conditions.

Goodrich prestige and reputation for square dealing, the Goodrich name and brand guarantee their service, and farm experience has taught the value of a trustworthy name and brand.

Whatever tires you need for a small or large automobile, for your motor truck, motor cycle or bicycle, the Goodrich trademark is your guide to durability and dependability in tires.

A glance at the big, generous size of Goodrich Pneumatic Tires gives you confidence in them. Goodrich Truck Tires have outworn steel in actual work.

Cut the cost of tire expenses on your farm with SERVICE VALUE TIRES.

Pod-Dropping of Beans

[Written for Pacific Rural Press by Alfred Guillou of Windsor.]

In your issue of July 20, G. A. R. of Glenn writes a query concerning his bean vines which have bloomed freely but do not pod. This is the first public recognition I have seen of this very perverse trait of beans in some localities, and I take the liberty of supplementing your answer to G. A. R. by giving the results to date of my own experience and inquiries, for I can find nothing in the books or otherwise authoritative on this particular subject.

The stand of the field and the growth of the individual vines do not seem to make any difference. Small whites (navy beans) seem to be most subject to this pod dropping, and teparies least subject thereto. It is not a case of shriveled pods, such as occurs in a hot spell among Ventura county lima beans, but the whole bloom, ovary and all, lets go from the receptacle and leaves only the blunt stump of the receptacle.

Last year there was a field of navy beans near Santa Rosa, planted in 24-inch rows, which had grown so thriftily as to close up compietely the rows; and the vines were crowded with blooms. Sacramento Valley bean men said they had never seen such beans. This field threshed five sacks to the acre!

The Italians in Sonoma county assert that white beans are more subject to this drop than are colored beans, especially kidney beans. In my experience kidneys drop as badly as large whites; and pinks and blackeyes are worse than either kidneys or large whites.

I know of but two theories to explain this phenomena. One theory concerns the pollen. It has been found by experiment—in Utah, I believe—that there is a certain optimum atmospheric condition for alfalfa pollen; and any marked departure from this renders the pollen sterile. As it is sometimes said: "The pollen burns." It may be that in certain localities the absence of night dews, or marked changes between day and night heat, render the bean pollen sterile.

The other theory is that the dropping of the pod is analogous to the June drop of oranges—the plant has enough vigor to grow lustily, but not enough to carry it over the critical time of setting the pod. In the neighborhood of Healdsburg and in many other parts of Sonoma county Kentucky Wonder beans will grow thriftily and climb enormously, but unless they are irrigated they will not set pods; irrigation makes them yield abundantly.

If the first theory is the correct one, there would seem to be no help for it. If the second theory is the right one, then thorough wetting while the plants are blooming will materially help in securing pods.

The Mills ranch, near Hamilton, I am told, uses irrigation in this way quite successfully. "Keep them soaked from the time they begin to bloom freely," is the way their foreman put it.

Is A "Bush Tick Bug" A "Sow Bug"

[Written for Pacific Rural Press.]

To the Editor: I think M. M. G.'s "brush tick bug" is our common wood louse or sow bug. This spring I planted squash in hills finely prepared with lots of fertilizer. They grew very luxuriantly. I noticed a couple of dead vines and investigated. I found the customary pests, old diamond back and the diabolical eleven spot, but nothing to account for the vines dying outright. On examination I found the vines were girdled just at the top of the ground. Next day three others passed in their checks. I hied me to town and talked with both farm advisers; neither could give me any information. I then looked up Napa county's most famous pumpkin grower. He'd had 'em, but could give no remedy. Looked up three other growers. They were not in the least interested, as they had already lost their patches. Then I sailed for home, investigated again, dug around plants and found sow bugs by the thousands. As I thin out to a single plant, it was an easy matter to scrape loose dirt from around the plant and scatter a little tobacco dust, break off a leaf to make shade for the exposed stem and let her rip. There was no more loss. Lime, gypsum or wood ashes would probably have served the same purpose. —Chas. Blom, Napa.

SEED POTATOES MAY BE SCARCE.

Seed potatoes are likely to be scarcer this year than last, according to H. A. Hyde of Watsonville. Mr. Hyde tells us of American Wonders in Washington that produced 309 bags per acre, and of a strain of British Queens that has set and produced 35 marketable potatoes in one hill.

ROTTED CORN LEAVES SPOIL SILAGE.

Corn left too long on the ground after cutting before chopping for silage may have its leaves decayed on the under side of the bundle or pile. If these are cut up, they are likely to rot the silage around the pieces, according to an extensive silage user.

Twenty beans are enough for a family if they are of the old-fashioned scarlet runner variety.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

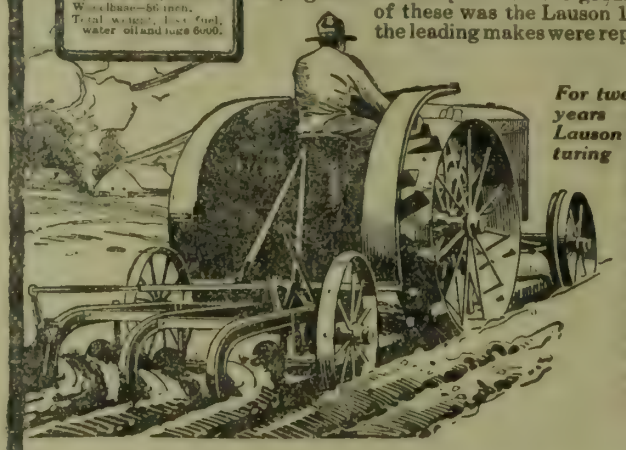
The LAUSON 15-25

DUST PROOF-ALL GEARS ENCLOSED

At a recent demonstration out West only two, wheel type tractors went up a 33% grade with all plows in the ground. One of these was the Lauson 15-25. All the leading makes were represented.



For twenty-three years the John Lauson Manufacturing Co., has been making farm engines and has been making them so well that their reputation is second to none.

This experience has enabled them to build the Lauson 15-25 Kerosene Tractor so that it is years ahead of its competitors.

It has all the mechanical refinements of the best engineering practice combined with a ruggedness that makes it stand up under the hardest kind of service without annoyance of expensive breakdowns. **Durability** is built into the Lauson.

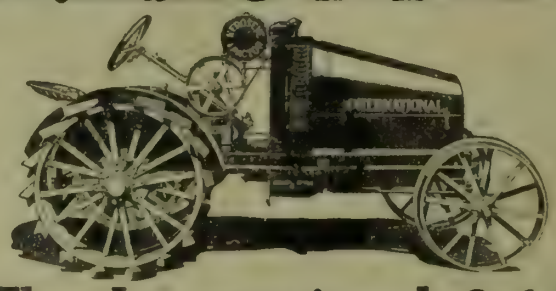
The frame is mounted on four wheels on the three point suspension principle. This gives flexibility without the danger of tipping on hillside work. The entire weight of the machine is sufficient to give good traction, without slipping and not so heavy as to cause packing of the soil. The front wheel crowds the furrow and requires no steering. The Lauson 15-25 will travel the entire length of the field without the operator touching the steering wheel.

Twenty-four Hyatt and Timken roller and ball bearings on the Lauson give it the name of the "full jewelled" tractor. **All gears**—including the bull gears are enclosed in a dust proof casing and run in oil. This reduces friction and wear to the minimum, saves fuel and increases draw bar pull.

Builders of Lauson Frost King Engines

For 23 years Lauson Frost King engines have been the standard of farm engine excellence—built in 2½ to 50 H. P. sizes.

THE JOHN LAUSON MFG. CO., 1028 Monroe St., New Holstein, Wis.



The International 8-16

A Handy Tractor

A FEW minutes in the seat of an **International 8-16** gives you a new idea of the ease and comfort of doing farm work with a kerosene tractor. All the controls are right at hand—spark and throttle controls just under the steering wheel; clutch and brake operated by foot pedals; speed changing levers just where your hand falls on them—everything as handy as on an automobile.

International 8-16 has one reverse and three forward speeds: 1¾ and 2½ miles per hour for plowing, disking and other field work, and 4 miles per hour for road work and when traveling from one job to another.

You will like this tractor when you see it. When you run it you will like it better. When you find out how light your bills are for kerosene and for general upkeep you will like it best of all. Go to the dealer soon and see it or write us for information because it looks as though the demand for **International 8-16** tractors is going to be much heavier than we expected and we shall have to fill orders in their turn.

Wheat to Put Hun Thru Smut Machine

(Continued from first page.)

handling, which stand idly between the grain field and the flour sack, are a needless expense. But they did not stop there, but, finding much of the wheat California grows not of high milling desirability, they secured large tracts of land of different types of soil, bought the best foreign wheat samples shown at the Panama-Pacific and started in growing all of them to see whether some would not yield better and be better for milling than the kinds best known here — thus complementing and extending the agronomy work of the California Experiment Station. And they are sure from their experience in field and mill laboratory and bake oven that they have found such wheats, which will serve the grower and the miller better than kinds now grown. Nearer to sowing time we shall probably offer more detailed information about these wheats of which the desirability and the fact that seed will be available of them, are all that we are able at this moment to emphasize. Our present purpose is simply to exalt Uncle Sam's considerate appeal to California and to correspondingly depress the kaiser with California's loyal response that she will go over the top with wheat as with everything else she has been asked to bring forth!

A NEW TANK DRIVE.

No doubt a resolute effort will be made by our California Food Administration and by all our institutions for defense and education to show Californians who have lands, tools and capital for it that it will be good patriotism as well as good business to increase a crop which will surely sell at a profitable price than to take too many chances at shifty products. But we doubt whether all such preaching efforts will be more picturesque and more directly effective than the drive which will be made on all the cereal fronts in this State by the great white tanks of the Sperry Flour Co., which will soon be spinning over the countryside showing things to the Missourians, over-running the objectors, uplifting idealists and enlisting the warm patriotism and cool judgment of all in the endeavor to grow more wheat of the right kind and to begin now to get ready to put in the crop this fall as early as natural conditions warrant or require in the different parts of the State.

BUSINESS PUSH WILL BEAT THE KAISER.

It is not the habit of this writer to drop from the tripod and root for an undertaking which some may chant simply as business enterprise. We see much more in it than that. Our business men, like our soldiers, sailors, preachers, poets, orators and editors, are all out of their skins over this hell-born war and are doing things which are beyond their ordinary conceptions of duty and propriety to crush the originators of it out of human consideration. This matter of more wheat in California next year is fundamental to the success of the war: in more distant view it seems to us fundamental to the whole development of our greater, more diversified agriculture. Who shall say then that to secure one end and to open the way to the other is simply a business enterprise and should be restrained from our publicity by maintaining ordinary editorial attitude? We know that ordinary editorial and platform exhortation will not get all the wheat that will be possible and profitable. Therefore we hail with delight the great white tanks of the Sperry wheat propaganda. Let all other millers do their parts also in the best ways they can devise. Let them all get to work to insure California wheat production so that our flour export shall better represent the capacity of the State—but first and above all get the kaiser into the smut machine and clean him out!

Nearly 300,000,000 bushels of wheat is stored in Australia, it is reported. The Australian Government has guaranteed 83c per bushel and to this the Commonwealth has added 12c, making the price 95c to the producer.

General Agricultural Review

Field Crops.

By order of the War Trade Board, importation of rice for consumption in the United States after July 31 was prohibited.

The condition of the Butte county rice crop as a whole is improved, as the water shortage has to some extent been corrected.

Record wheat crops are being reported from the Tulare lake region, where irrigation before seeding time was practiced.

V. Taylor of Byron was offered $23 a ton for his third cutting on a half-section f. o. b. his shipping point. Mr. Taylor is not selling.

The hop growers of the State will send a representative to Washington in an effort to prevent the passage of legislation which may interfere with the disposal of this year's hop crop.

The plant of the San Joaquin Valley Sugar Company at Visalia is operating on beets from the Bakersfield country. It is stated that the crop is running from 12 to 20 per cent sugar content.

The early-sown grain in the Covelo Valley is good, but the late-sown is almost a failure. One farmer said that if they had only kept on sowing and had not stopped because of the dry winter, they would have had fine crops all the way through.

Corn is proving to be a very profitable crop in many of the islands in the Delta districts. It is replacing the asparagus in a good many fields. Very little trouble is experienced with worms and the corn fills well. Both the dent and flint varieties do well.

The cotton crop for 1918 will be far below the 1917 harvest, due principally to droughty conditions in the western part of the cotton belt, especially in Texas. The acreage and production forecast of Egyptian cotton by States is: Arizona, 75,000 acres, 42,000 bales; California, 5000 acres, 3000 bales.

According to President W. D. Egilbert of the Western Rice Growers' Association, the California rice crop for the 1918 season will be 3,000,000 bags, worth at the Government price $13,000,000. Egilbert figures there are 100,000 acres planted to rice in the State this year, an increase of 25 per cent over the acreage planted last season.

Deciduous Fruits.

The prune crop in the vicinity of Chico is maturing earlier than usual.

Harry Williamson, on the Folsom road, Sacramento county, has an enormous crop of prunes on his trees.

Growers of the Hemet Valley state that their apricot crop was picked almost entirely by women and high school boys.

Five fresh fruit packing concerns are operating in Kings county on Elberta peaches for Eastern shipment. The fruit is of good quality.

The Yolo County Horticultural Commissioner and his deputy confiscated a shipment of 138 boxes of Bartlett pears at Winters last week.

The first annual conference of Western horticulturists, who are planning to form an association for mutual exchange of ideas and discussion of problems, met this week at the Oregon Agricultural College.

It is reported that buyers have been offering growers high prices for almonds throughout the State this year. Twenty-three cents has been offered for Nonpareils and I. X. L.s are hard to get at 20c a pound.

The United States Government has agreed to take about 60 per cent of the peach crop handled by the Peach Growers' Association, time of delivery at option of the Government any time between September 1 and January 1.

Almond poling is starting in both the Contra Costa and Oakdale districts on the earlier varieties. The crop in these sections is below normal, but the exceptionally high prices offered for all varieties will make it a profitable crop, even at that.

W S. Kilpatric, Sacramento Valley representative of the California Prune Growers, Inc., marvels at the extent of the young prune orchards in the Gridley, Biggs and Live Oak districts, which will begin bearing in the next three years, and which he believes exceeds 3000 acres.

Citrus and Semi-Tropical.

The almond harvest is two weeks earlier than usual in some orchards south of Chico.

Placer county olive growers meet at the Lincoln Cannery today (August 10) to discuss the processing of the Placer olive crop within the county.

The California Association of Olive Growers, through which practically all of the olives of this district are controlled, have voted to lease their cannery and processing plant here to the Pacific Products Corporation for a period of two years. The new company is financed by Boston capital.

Representatives of large citrus interests in Southern and Central California have been canvassing the Porterville citrus districts with a view to establishing one or more marmalade factories, which would utilize the bulk of the culls now thrown on the markets and thus create an opening for the better grades of citrus fruits.

Grapes.

Many of the vineyards in Yolo county are suffering from a lack of sufficient moisture caused by the light rainfall of the past three years.

Wine grapes are beginning to ripen in the Contra Costa county section. It is hard to get an idea of prices. No sales were heard of. Growers talk of offers being made ranging from $30 to $40 per ton.

Women grape pickers are wanted in Lodi this month, according to Mrs. Clarence Smith of the Woman's Land Army. A large tent city is set up for the workers in the public park at Lodi by the State Immigration and Housing Commission.

Miscellaneous.

"Better to grow more than to have to eat less" is the legend displayed by C. C. Morse & Co. at various exhibitions since the war began.

The Sacramento river has reached the lowest mark recorded since 1857. At low tide, July 7, the water level was only 2.2 feet.

A cement bottom put into a cement irrigation pipe and washed inside and out with thin cement paste keeps water cool all day.

Through co-operation with State institutions the Bureau of Markets now has thirty-two field agents located in various States assisting individuals and associations on local marketing problems.

The tension in the wool market is easing up somewhat, as the rules governing the sale and distribution of wool becomes better understood, and this staple is beginning to move more freely as a result.

Despite the shortage of ships and two shipwrecks, farmers have received 75,000 tons of nitrate of soda from Chile, bought through the War Industries Board and distributed by the U. S. Department of Agriculture.

All bids for the issue of $150,000 6 per cent bonds for the Terra Bella irrigation district that was offered at public sale at San Francisco last week were rejected. It is understood the bonds will be offered again.

The Food Administration Grain Corporation is now arranging for increased quantities of Australian wheat to reach California, in order to augment the California crop, which has not turned out as favorably as was hoped for.

Although as a matter of necessity seed production has increased in this country since the war, ex-

PLAN NOW

TO ATTEND THE

Mammoth Third Annual TRACTOR DEMONSTRATION

WHITTIER BOULEVARD

One-Half Mile East of Los Angeles City Limits

On September 17 will open the biggest and most comprehensive outdoor demonstration and exhibition of modern farming devices and machines ever held in America.

Thousands of dollars are being expended by the Los Angeles Traction Engine and Implement Dealers' Association to make this gigantic demonstration of compelling interest to every farmer and prospective food grower in the Southwest.

As surely as Food will win the war, Victory lies in the wake of the Tractor. The importance of the Tractor cannot be overestimated. It is the Farmer's heavy artillery. Learn of the Tractor's immense value at this crucial time.

Make plans NOW to arrange your work so as to attend on these dates —September 17, 18, 19, 20 and 21. You'll be well repaid by the valuable first-hand knowledge gained.

WHAT YOU'LL SEE AT THIS GREAT EDUCATIONAL EXHIBITION

Over 40 Kinds of Tractors in Action
Every Type of Farming Implement
New Stunts—Distinct Tests
Different Exhibition Events Each Day
Special Entertaining Features

Exhibits by leading tractor, implement, motor, automobile, oil, accessory and electrical distributors.

No Admission Charges Free Auto Parking Space
Accommodations for Over 40,000 Visitors Daily

TRACTION ENGINE IMPLEMENT DEALERS ASSOCIATION OF SOUTHERN CALIFORNIA

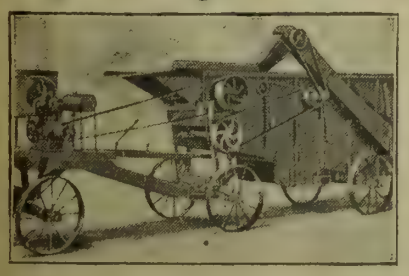
Cushman
Light Weight Motors



for Bean Threshers
Ensilage Cutters
Corn and Grain Binders
Shellers and Hay Presses

Combined Harvesters, Potato Diggers, Rice Binders, and all other farm work.

4 to 20 H. P. Weigh only about one-fourth as much as ordinary engines, yet run even more steadily and quietly.

Moving parts run in oil, absolutely enclosed; free from dust.

Equipped with Throttling Governor, Carburetor and Friction Clutch Pulley. Cooled by circulating water system, driven by engine pump.

Thousands are in use in this state, doing more different kinds of work than any other type of engine. Sold by California Representatives and distributed from stock in California Warehouses. Write for Book on Light Weight Engines.

CUSHMAN MOTOR WORKS

956 N. 21st St. LINCOLN, NEBR.

The large quantities of flour shipped from the Pacific Coast to our own troops abroad have been increasing month by month, as newly constructed tonnage has been available.

The Government is interested in the cotton situation and is watching closely the plantings in the new sections of the West. So far, no diseases of importance have developed.

It is stated that Government agents are visiting the fruit belts of Yolo county, offering to pay $45 per ton for apricot pits to use in the manufacture of an absorbent charcoal to be used in the gas masks of the allied forces. The peach growers have also been approached.

An official appraisement of the estate of the late Henry Miller, "cattle king," places its net value at $31,951,010.19. On this estimate, the State of California will collect an inheritance tax of $1,500,000 and the Federal Government a sum approximating $5,000,000.

The Federal Board of Farm Organizations has called upon the farmers of the United States to assemble in person or by their representatives in the city of Washington, August 27, 28 and 29, to consider and to take such action as will best promote the production of farm crops in 1919.

Regulations under which drought-stricken farmers of the Northwest and Southwest may obtain loans for seed from the $5,000,000 fund set aside for that purpose by President Wilson were announced August 1 by the Treasury and Agricultural departments, which will administer the fund jointly.

The great Government contract is absorbing the bulk of the product of the Horst dehydraters. The company has a small amount for sale and will keep the product before the public with a view to educating the housewives and hotel proprietors in the use of this new form of food.

The S. P. Company will "spot" returning stock cars on side tracks along the line if ranchers will clean them out for fertilizer contained. Mixed with sand, there is usually a load or more of manure, all of which may be had for cleaning the car. See the local agent or the Farm Adviser if free manure is wanted.

The average of late onions in the Delta district is estimated as follows: San Joaquin county, 7765 acres, and Contra costa county, 1439 acres ,a total of 9204 acres. This represents a substantial increase in San Joaquin county and a decrease in Contra Costa. The movement of this crop will begin in August.

A recent report by the Geological Survey on the Government examination of deposits of nitrate of soda in the Zabriskie field of the Amargossa Valley, California, says the quantity of nitrate in this district is so small and the cost of production would be so great that the district as a whole cannot be regarded as a source of commercial nitrate.

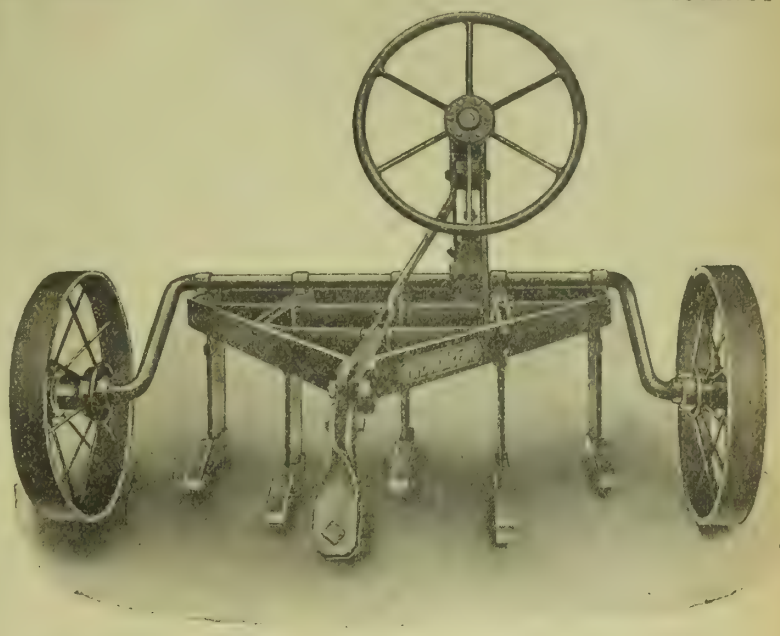
Late forecasts of the U. S. Department of Agriculture indicate an increase of almost 5,000,000 bushels in the bean crop, with a total of 19,791,000 bushels and an increase of 267,000 tons in the sugar beet crop, with a total of 6,247,000 tons. The hop crop promises 32,494,000 pounds, an increase of almost 5,000,000 pounds over last year.

C. M. Pilgrim of San Diego county owns something like 500 acres of land, of which 12 acres is mesa, and on this particular 12 acres the hay tonnage had been very light. He gives us a summary of the tonnage from these 12 acres of mesa land as follows, covering a period of three years before and after sub-soiling. Cut 3 tons first year, the second year 5 tons; then Mr. Pilgrim purchased a Killefer five-standard subsoiler and the third year after tearing up the ground to a depth of about 18 inches he reports cutting 19 tons of hay, and after only having had 8 inches of rain. Mr. Pilgrim says that the moisture after sub-soiling is well up to the surface.

KILLEFER QUALITY

Five Standard Subsoil-Plow

KILLEFER EFFICIENCY



Subsoiling on the 800-acre ranch of C. H. Hudson, of Marysville, Cal., last fall, produced a $35,000 crop. This land had been abandoned because a paying crop could no longer be grown. Subsoiling brought it back.

Thousands of acres of land in California today, producing light crops, can be brought back and made to produce more food by subsoiling. We have advocated subsoiling for a number of years to increase production. Your land can be broken up to a greater depth, and at less expense, with a subsoiler than with a plow. Our subsoilers are not an experiment. They are built to meet any soil conditions and for all sizes and makes of tractors. We use the best quality of steel in their manufacture and guarantee satisfaction. Now is the time for you to get busy and help win the war.

THINK IT OVER

The Killefer Manufacturing Co.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles

SMOOTH SIDE OF BELT INWARD.

Always use a leather belt with the rough flesh-side outward and the smooth hair-side next to the pulley, is the advice of L. J. Fletcher, instructor in agricultural engineering at University Farm. Directions to this effect are usually stamped on the belt itself, but the ordinary belt user ignores this fact. The belt has been displayed in the store rolled up with the smooth, pretty side outward to create a favorable impression. It is already curved to put on the pulleys that side out and he hates to bend it backward. Often when he buys a belt already hooked together at the ends the hooks are such that they must be removed and turned over before he can put the belt on right. When he buys a machine with a belt on, the pretty side is often outward to help create the favorable impression on the prospective buyer.

But the smooth side should always be run next to the belt wheel. When it runs over a wheel, it is bent sharply. If the smooth, hard side is inside, the bending tends to compress it. If on the outside, the bending tends to crack it and its life is much shorter. The strength of the belt is in its hard, smooth side and this should be closest to the wheels to and from which it transmits power.

On University Farm a belt was used with the soft surface inside to run a buzz saw. It kept slipping, so Mr. Fletcher turned it over when the operator was away and it transmitted 30 per cent more power. The hair side, being closer grained and smoother, presents many more particles of surface in contact with the belt wheel; and this is why it can transmit more power.

HOT ENGINE RUNS BEST.

Most automobile engines work with greatest economy at the temperature of boiling water, 212 degrees F. If water could be replaced as it steams away, as it can with stationary engines, it would be good economy to keep the water boiling. This is partly because the high temperature causes more perfect and rapid vaporization of the fuel and therefore more complete use of its power in the explosion. It permits more rapid explosion, thus using more of its power (heat) to move the piston and losing less of its power (heat) by way of the water-jacket. A slow-burning explosion boils the water in the jacket quickly. At University Farm stationary engines have been kept cool while running by circulation of city water under pressure through the water-jacket. This resulted in the necessity of using 25 to 30 per cent more fuel to develop the same power, according to Prof. J. B. Davidson.

TRACTORS REDUCE BEEF.

Increased crops in spite of great labor shortage are being grown in England due to the use of tractors. According to information from the American Consul General in London to the U. S. Food Administration, 33 per cent more acreage is planted this year to wheat, barley, oats, rye, corn and potatoes in England and Wales than in 1916. Since the beginning of the food campaign in November 1915, when it became evident that the war would be long, Great Britain has imported more than 8000 American tractors and has orders outstanding for about 5500 more. Much pasture has been plowed up, thus increasing human food but decreasing cattle feed, so more beef will be needed from the U. S. than before.

The "Beaumont lugs" are a special angle irons put on Avery wheels in rice fields which have similar soil to our adobe. The angles are bent at the edge of the wheel to prevent sidewise slipping.

DEEP WELL TURBINES

No valves to pack or plunger to get out of order. For use in any well ten inches in diameter or over.

A complete line of irrigating pumps of all descriptions, horizontal, and vertical for belt drive or direct connection to electric motor.

Prices as low as are consistent with good quality and workmanship

Test Special Belting

What a lot of chores there are to do.

There's the farm pumping plant, a busy, humming wheel, turned by the TEST SPECIAL belt, to bring up the water and send it on its useful course, raising crops and watering the animals.

TEST SPECIAL is the practical belting for the churn, the wood-yard saw, and the feed-mill, just as TEST SPECIAL is the dependable belting for the lighting plant, and for all the domestic needs.

Why buy a miserable, cheap belt which gives way and renders such poor service, when TEST SPECIAL is so reliable, so worthy of confidence, so sure to last and give years of permanent value?

If you will write us, giving details of your requirements, we'll be glad to furnish plans and specifications to help you decide how to get the best service, greatest efficiency and most economy out of TEST SPECIAL belting.

Protect belting from weather to insure longer life.

SOUTHERN CALIFORNIA TRACTOR DEMONSTRATION.

The growing importance of tractors in food production with shortage of men and of draft stock will be reflected in the demonstration of tractors and farm implements one-half mile east of Los Angeles city limits, on Whittier boulevard, September 17 to 21, inclusive. Preparations are under way for the largest exhibition of tractors and farm implements ever held in Western America.

According to officials of the Traction Engine and Implement Dealers' Association, over forty models of tractors will be displayed and demonstrated, the largest number ever demonstrated in the history of the industry. Scores of up-to-date farming implements and accessories will also be exhibited. Big circus tents covering over sixty acres of ground are to be erected for housing the motor truck, automobile tire and automobile accessory dealers' displays. According to the committee in charge of the big demonstration, special events will take place each day of the meet, so that it will be important that the spectator attend every day. The tractors themselves, forty kinds, will run in size from simple Ford attachments to huge powerful track-type tractors and will include every successful variety of machine now on the market. These tractors will all be operated under various conditions, so that one will be able to judge which model will be best suited for one's particular needs.

The introduction of the modern tractor has revolutionized farming methods and wide-awake farmers and ranchers are realizing that it is an easy matter to increase production at a less expenditure of money by using a tractor best suited for their needs.

This year's demonstration will include numerous demonstrations which Western ranchers have never seen before. Meals will be served on the grounds. A definite program will be announced later. Last year's tremendous demonstration at Los Angeles is proof of the association's ability and the people's interest.

FUEL TANKS LOWER THAN CARBURETERS.

It is an advantage to have the fuel tank on a tractor or automobile low down to avoid lifting fuel high to fill it. But with the tank low down, how does the fuel get into the carbureter? An automatic pump would be hard to regulate; but a vacuum suction device is installed on most machines for this purpose. During the suction stroke a partial vacuum is created in the inlet manifold. Generally a small pipe runs from the inlet manifold to the upper chamber of the device to transfer the vacuum thither. This sucks fuel through a pipe from the fuel tank into the chamber until a float rises enough to trip a valve and stop the flow, preventing return of fuel to the tank but cutting off the suction and letting air in so the fuel gravitates into the lower chamber of the device and the operation is repeated automatically.

PUMP INCREASED BELLFLOWERS

"My Bellflowers were so small I had to dry all of them when I was cultivating them without irrigation," says E. A. Hall of the Pajaro Valley hills. "Now I pump water with a 10-h. p. electric motor and 3½-inch centrifugal pump from the lake to a maximum of 60 feet high through 1000 feet of six-inch redwood pipe. From the pipe it is distributed down the slopes and now I have to watch or my Bellflowers get too large for the four-tier pack, which is the largest desirable. The trees this year needed water late in April, again late in June, when the fruit was 1½ to 2 inches in diameter, and again three or four weeks before picking, about October 1st.

Automobiles running through grass or grain with cutouts open have frequently set fields on fire. Do not drive into a dry grain field.

"Hurrah! Dad Got the Whole Avery Outfit"

WHEN the "whole Avery Outfit" arrives on your farm you can say good-bye to a lot of expense and look forward to bigger crops and more profits. Your work will be easier and more interesting.

The "Whole Avery Outfit" Will Give You

an Avery Tractor for doing your heavy work, such as plowing, preparing the seed bed, harvesting your grain crops, and road work,—

an Avery Motor Cultivator for planting and cultivating your corn, beans, cotton, and other row crops,—

an Avery Grain-Saving Separator for threshing your grain, clover, kaffir corn, rice, etc., and putting it where it belongs, in the wagon box and not in your straw stack,—

an Avery Plow in either light or heavy style to fit the soil conditions on your farm.

Power For Every Size Farm

Avery Tractors are built in six sizes. You can get a size Avery Tractor to exactly fit your size farm. The five sizes from 8-16 h. p. to 40-80 h. p. fit all farms from the average up to the largest sizes. The little 5-10 h. p. is built especially for small farms or for doing the light work on larger farms.

You can also get an Avery Plow in any size from two to ten bottoms. Avery Threshers are built in small, individual sizes as well as for large threshing runs.

The Avery is the one complete standardized line of farming, threshing, and road building machinery.

It is built entirely in the Avery factories and is backed with Avery service through Branch Houses and Distributors covering every state in the Union.

The Tractor that turns Distillate into Gas

You want a real distillate burning tractor. That is what you get in the Avery. They are the only tractors with a Duplex Gasifier fuel system. It does the trick—turns distillate into gas.

Avery's are the tractors with the patented sliding frame transmission that makes expensive intermediate gears, shafting and bearings, unnecessary. The tractors with the renewable inner cylinder walls. The tractors with the adjustable crankshaft bearings. The tractors with the low-speed tractor motor specially designed for field work or belt work, etc.

Write for the Avery Catalog The Avery catalog shows the complete Avery line of motor farming machinery in their natural colors and gives you valuable facts on motor farming. Let us put you in touch with the nearest Avery dealer. Address

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

H. P. Slocum & Sons are looking for a herd of Jersey cows.

A. J. & Nellie A. Morey of Orland recently sold a Jersey bull calf for October delivery to Shasta county.

W. G. Gurnett of Orland recently sold a registered Jersey bull to Fred Hines of Willows, who is looking for registered females now.

The Aliso Dairy at Santa Ana has installed a six-unit Hinman milker for its herd of 150 cows. McAlister & Sons of Chino also recently installed Hinman machines.

J. Seits and Stanley H. Jones have purchased a registered Shorthorn bull of the milk strain from W. T. Roberts of Penn Grove. He was sired by Adirondack Duke. His name is Lone Star.

The Kounias Registered Stock Farm of Modesto sold a fine six-months-old registered Holstein bull calf to Lester H. Hall of Lovelock, Nev. Mr. Kounias also sold a registered Berkshire boar to Jacob R. Spane of Turlock.

S. F. Williams, who has been handling his own Jersey herd in connection with that of Chas. L. Leonard, near Glenn, has just moved back to Orland. If he cannot lease a ranch on the Orland project, he expects to find one in the Modesto district.

J. Fox of the Central Creamery Dairy at Oakley recently purchased forty-five head of high grade and purebred Holsteins. The purchase was made near Marysville. Twenty-five head were choice purebreds and are proving to be heavy producers. This makes over 350 head of cows for the dairy.

A. A. Jenkins of Tulare reports sales of registered Jersey cattle as follows: Bull to L. A. Walker, Tulare; bull to George Gibb, Tipton; heifer to A. B. Sherwin, Tulare; bull to I. Abscher, Tulare. All are out of register of merit cows and sired by Gertie's Son's Victer. Irene Federa, a heifer owned by Mr. Jenkins, made 460 pounds fat in six months. She is now in the ninth month of her period and is giving 19 pounds of milk per day, testing over 5 per cent. She will make over 800 in the year.

Beef Cattle.

Stock raisers in the western end of Glenn county are driving their cattle from the foothills to the valley and are selling because they cannot secure pasturage with a sufficient water supply.

The American Shorthorn Breeders' Association has increased its appropriation for the California State Fair to $937.50. This means that Shorthorn breeders will have a chance to draw down a total of $2,187.50 as premiums.

How to get 100,000,000 pounds of beef per month shipped to the allies without a return to meatless days is the problem before cattlemen today, as told by former President D. B. Heard of the American Livestock Association at the California Cattlemen's Convention. We now have the shipping and the export demand. It is up to the producers.

Clinch & Peters, who on May 25 bought the W. H. Hammond Shorthorn herd and ranch at Chico, are taking considerable pride in their stock. They have 800 acres at Quincy, Plumas county, where Mr. Clinch is taking care of a bunch of registered and grade Herefords while Mr. Peters cares for seventy-eight registered Shorthorns on the 1700-acre Chico place. Both outfits are in the partnership.

W. M. Carruthers of Live Oak reports a very heavy demand for Berkshires and Shorthorns. He has called a meeting of the directors of the Western Berkshire Congress at Sacramento, Saturday, August 10. At this meeting fall sales to be held at the several fairs will be settled. The Carruthers Farms have entered a good show string of Shorthorns and Berkshires for the State Fair and the animals are now showing up well. Count Glory and also the new yearling heifer recently received from the East will be big attractions.

Foxy Jersey Blood

Son of Foxy Laddie of L. and out of Cella of Venadera. Son of Clover Blossom's Noble Boy and out of Trillia Crita. Grandson of Owl of Belleview (owned by University Farm) and out of the first prize cow at Chico last year.

W. G. GURNETT, Orland

Swine and Swinemen.

Frank B. Anderson sold a Berkshire boar to W. L. Erwin of Rio Linda.

Allen Thompson of Tulare sold to the Tagus Ranch his Duroc-Jersey herd boar, Orion's Golden Model.

V. F. Dolcini of Davis reports the sale of a Duroc boar to Henry Struve of Watsonville and a boar pig to Dr. Bancroft of Concord.

Dr. J. A. Crawshaw of Hanford reports sales of registered Poland-China hogs as follows: Boar to Lee Mattei, Pescadero; bred sow to Joe Bush, Graton.

Mrs. E. A. Hardy of Anchorage Farms, Orland, is offering a daughter of Star Leader and a daughter of Iowana Peer, valued at $75 each, as prizes at the Glenn County Fair.

K. S. Welman of Los Altos is well pleased with the registered Poland-China sow he bought from Hewitt & Hewitt of Dixon, as she farrowed fine pigs soon after reaching her new home.

Elmer Lamb of Ceres reports recent sales of Durocs as follows: Boar to William Ballen, Patterson; Chas. R. Bardrich, Oceana; Stanten K. Hedsley, Ceres, and W. R. French, Germantown. Gilts to S. G. Stewart, Healdsburg; boar and bred gilts to J. B. Harold, Dixon; 10 bred gilts to Windsor Ranch, Bonita; bred gilts to Lydia G. Wild, Lancaster; Patterson Rancho, Patterson; J. M. De Vilbiss, Patterson; J. A. Borge, Los Banos, and W. R. Rhoades, Ceres.

Sheep.

E. A. Kirk of Orland is stocking up with sheep instead of cows, which required too much labor. He has had no experience with sheep and is therefore putting in grades, with the intention of replacing them with purebreds later and more safely.

Chas. Kimble of Hanford sold over 700 Rambouillet rams last week. Three hundred head went to John K. Hart of Rollins, Wyo.; two carloads to Geo. Scott, Holbrook, Ore., and one car to B. A. Joques of Holbrook, Ore.

J. R. Bloom of Dixon reports the following sales: John Maurer of the Maurer Co., 60 two-year-old Shropshire rams to be shipped to Catalina Island; 4 head of two-year-old rams to Marian de Vries of Lodi; 10 head of two-year-old rams to E. E. Cady of Stockton.

From 100 to 150 carloads of sheep and lambs are being shipped weekly from Alturas and stations of the Oregon-California-Nevada Railroad. This movement will continue for at least four months, it is reported. The sheep come from the extensive ranges of Modoc county, Cal., and Lake county, Oregon, where favorable conditions have existed during the last year.

Livestock Miscellaneous.

Word comes from the secretary of the Los Angeles Liberty Fair, to be held October 12 to 26, is that interest is growing very fast. The livestock department is creating the greatest comment. Never before has there been as many head of stock shown in Southern California as will be at this show. Approximately $33,500 in cash prizes will be given to

My Range Bulls Sire My Show Winners

The blood of the young Shorthorn stock I send to the fairs is the same as that in the range stock I offer for sale. All are purebreds from registered bulls and from the females on which my father kept up the registration papers from 1872 to 1893. More champion Shorthorn cows and bulls have come from my herd than from any other on the Coast. I have the facts to prove it and I am proud of it. You will make no mistake in getting some of this blood in your herd. I can supply animals singly or in uniform car lots.

SHROPSHIRE AND MERINO SHEEP ALSO FOR SALE.

Hillcrest Stock Farm

T. S. GLIDE, Prop. DAVIS, CAL.

Shorthorns and Berkshires

Our second annual sale of Shorthorns will take place in January. Demand is very good for Berkshires, but we can supply your wants.

ORMONDALE SHORTHORNS

Are all heavy boned, and of Scotch and Scotch-topped breeding. Suited for either the range grower or breeder.

EVERY ANIMAL POSITIVELY GUARANTEED

Whether you buy or not, visit our ranch, 7 miles from Palo Alto on Woodside Road. We welcome inspection. Prices and pedigrees on application.

SHORTHORN CATTLE DUROC-JERSEY SWINE ORMONDALE CO. R. D. No. 1 REDWOOD CITY, CAL.

Dairy Shorthorns for Milk and Beef

Dairy Shorthorns lead in butterfat production in many cow-testing association reports. Their calves make fine beef, more economically than other dairy breeds. Dairy Shorthorns are the best breed to range hills and stubble for roughage where help is scarce. My young bulls can increase the production of your herd when their calves come to milking age. Write for details of a few bulls I have to sell.

Three Years of Machine Milking

[Written for Pacific Rural Press.]

Milking machines have been used three years on the Shoreacres Dairy, near San Leandro, owned by Collins Bros., and superintended by L. J. Kelley. Careful weights of production by the cows during two years before the machines were installed and the three years since have shown no difference in production. Four men with twelve units are milking 230 to 240 cows. The milk goes to Oakland, Berkeley, and San Francisco with a bacterial content always under 10,000 and averaging under 5000, according to Mr. Kelley. The cattle are in perfect condition, garget has never bothered them, and the machines have worked perfectly.

"It is a question of the operators' carefulness," says Mr. Kelley. "Before installing the machines I went away to work on a dairy where they were being used. When I came back I knew the machines, could fix anything wrong with them, and could talk with authority to the men. That makes a great difference with them. They know I can run the machines if they quit, and we have very little trouble keeping them. We prefer to hire hand milkers and teach them machine milking here, because then we can teach them to do it our way. They learn pretty well in two or three weeks and can be left alone after four weeks. Each man operates three units and strips the cows while the machines are working on others. Extra buckets are provided, so the machine caps are taken from the filled ones and used on others while the filled buckets are rolled away to the creamery on overhead roller carriers. Two buckets, holding 70 pounds of milk, are hung on each carrier to save time and keep them out of the dirt.

It takes about the same time to milk 60 cows (2¾ to 3 hours) as to milk 30 by hand. The men take care of their own pulsators and pipes and rinse the machines with cold water at the end of each milking. Then the machines are washed and sterilized in the creamery in about three-quarters of an hour by one man. He takes them apart after each milking, scrubs them with brushes, and puts them, with the rubber parts, into a vat that holds 15 gallons of cold water. A steam pipe into the vat heats it slowly to 180 or 190 degrees and the heat is held forty minutes above pasteurization point and the rubber parts are simply left in this sterile water until the next milking.

On ranches where milking machines have proved unsatisfactory, Mr. Kelley believes carelessness is the great fault. Operators forget to regulate the pulsators and keep the back pressure suited to the texture of individual teats. Some men are rough in approaching cows. Special care is desirable when they are not accustomed to milking from either side. If a teat cup falls off, the first thing is to stop the machine. Extra teat cups are always kept handy to replace those which may fall and become too dirty to wash clean quickly. The cement floors are washed out after each string of cows is milked. The cows are washed before milking. With watchfulness to remove the machines when the milk is all taken, and with cleanliness, the machines have every advantage over hand milking.

Livestock Freight Increases

[Written for Pacific Rural Press.]

Some misunderstanding exists regarding the freight rate increases on livestock which went into effect June 25. Western State tariffs are quoted by the carload on the basis of 36 feet long with percentage increases for greater lengths. The freight rates for local and long distance shipments were increased 25 per cent; but with the provision that no such increase shall be over $15 per car, according to Traffic Director W. J. Shotwell of the Food Administration. Thus long distance shipments are not appreciably increased, while local shipments are charged the full 25 per cent additional. This discourages local movement of stock, which is desired in order to relieve car shortage and traffic congestion due to criss-cross shipments and other unnecessary movement. This local shipment has in previous years reached a total near 4500 cars in July alone.

THIS COW PAID HER WAY.

[Written for Pacific Rural Press.]

Few cows in California beef herds have paid so well as Highland Mary, a registered Shorthorn bought two years ago by Jas. McDonald of the Ormondale Co. of Redwood City. Highland Mary had a bull calf at her side sired by Imperial Victor. She was in calf to the same animal and dropped another bull. Then she had a heifer calf by Golden Goods, Jr. The first bull calf sold for $800, the second for $500. The heifer calf sold for $400 and she now has another fine heifer, with the cow still in her prime.

EXHIBITING GRADE CATTLE TO PROVE VALUE OF PUREBREDS.

[Written for Pacific Rural Press.]

Purebred livestock breeders already know the superior merits of pure breeding. This does not need demonstration to them by showing at the fairs. But there are still thousands of people in the State using scrub or grade sires which very rarely can be depended on to transmit the best qualities to their offspring. These thousands of people really need a demonstration of the way purebreds generally transmit the most desirable producing characteristics. Such a demonstration would make ready customers for purebred breeders and would increase food production without proportionately increasing its cost. But most of these prospective customers are hardly able to buy many high-class registered females, though none of them can in any way afford to do without a high-class registered bull if they expect to replenish their herds with heifers of their own breeding.

With this in mind, J. M. Christen of Pacheco, himself eight years a user of registered bulls and only recently graduating slowly into purebreds, is urging the San Francisco Livestock Show to provide a class for grade daughters of registered sires along with registered bulls of their own age. Such exhibits would be still more striking if accompanied by the dams and the sires of the grade heifers where possible. The improvement of daughters over their dams could be made the most convincing exhibit in the show in favor of purebred sires.

AUCTION

Complete Dispersal Sale

ARO HERD

35 Pure Bred

Registered Holsteins

(TUBERCULIN TESTED)

At the ARO HOLSTEIN FARM, 4 miles southeast of Artesia and ½ mile south of

CYPRESS, ORANGE COUNTY

Tuesday, August 20th

at 10 A. M.

This herd is one of superior excellence, some of the most noted blood lines of the Holstein breed being represented. This sale will offer the established breeder or those looking for foundation stock a rare opportunity to secure some exceptionally well bred cattle. Owing to the lack of time, no catalog will be issued, but tabulated pedigrees of every animal will be on hand day of sale. Arrangements for credit can be made prior to sale. For full information write,

1505 South Main St., Los Angeles, Calif.

Put the Best Blood in Your Herd

The cow making the highest official yearly butter record for 1917-1918, as shown by the report just issued by the Holstein-Friesian Association of America (and it is the world's official record for one year) is Aaggie Acme of Riverside 2nd. She is out of the same dam as our senior herd sire.

Prince Riverside Walker

The junior three year old heifer making the highest yearly butter record for 1917-1918 as shown by the report just issued by the Holstein Friesian Association of America, is Miss Valley Mead De Kol Walker. She is by the same sire as our senior herd sire, PRINCE RIVERSIDE WALKER.

Buy your herd sire in the blood lines that are doing things TODAY and that will increase in value in the records they are bound to make in the TOMORROW. We have just a few good bull calves by PRINCE RIVERSIDE WALKER, out of splendid dams. They move young at our prices.

OUR ENTIRE HERD IS TUBERCULIN TESTED

Tulare Holstein Farm

Veterinary Queries

[Answered by Dr. Edward J. Creely.]

Reduced Milk Flow.

To the Editor: My cow, five years old, milking about three months now, has been giving about four gallons of milk a day up until a day ago. Her milk flow has gradually decreased to about a pint. This milk is thick and stringy. Until recently she was fed on oat and barley hay mixed and she gave her natural flow of milk; now she has nothing but green alfalfa to eat. The butter is so soft that it will not separate from the milk. What can we do to make her milk return and what should we feed her?—A. N., Walnut Creek.

Rule out the feed as a cause of this condition. The stringy milk is due to the invasion of non-disease-producing germs into the udder. There may also be a slight inflammation to other organisms. Look for hard lumps and tenderness in the udder. Treat her with hot applications, such as antiphlogistine, or a hot bran mash, and relieve the weight of the udder by placing it in a bandage or suspensory, with the straps tied over the back. Gentle massage of the whole organ with warm olive oil is indicated.

Pigs Have Bad Cough.

To the Editor: What makes the pigs cough? I am a beginner in the pig game and do not understand much about the pigs' diseases. I lost one about six months old from coughing and have two smaller ones that must have caught the cough from the one that died. What would you advise?—W. J. M., Stockton.

The cough may be due to inhalation of dust, exposure to cold, chronic hog cholera or tuberculosis. Give plenty of fresh air and be sure not to keep them in crowded quarters at night or overheated. Give the hogs a teaspoonful of kerosene to a quart of raw linseed oil to which 1 ounce of oil of cade has been added. Give 1 tablespoonful of this mixture morning and night.

Spavin.

To the Editor: I have a horse fifteen years old that has formed a big bunch on front and inside of hock joint. It seems soft and has been forming for six months.—R. A. E., North Fork.

It is a spavin. If the animal is not lame, leave it alone; but if he is, the absorbine you inquired about may bring about a cure or render the animal serviceable. Rest is essential. While the animal is quiet, apply a cold water bandage.

Curing Fistula.

A correspondent writes: "You may tell 'W. R.' of Fallon, Nev., that I have successfully used bichloride of mercury for the cure of fistula. Dissolve one tablet in a pint of water, put on large wet pack, using light saddle without stirrups to hold same in place. Wash two or three times daily."

Cow Holds Milk.

To the Editor: How can we make a cow let down her milk? We treat her gently and she has great capacity.—C. S., Pacheco.

Dairymen who have succeeded are invited to answer. Names will be withheld if requested.

WHY HE QUIT ADVERTISING.

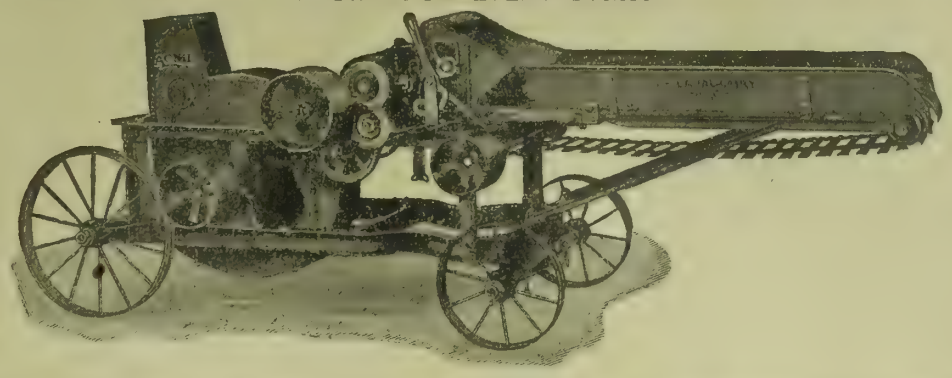
To the Editor: I very recently discontinued my classified Duroc-Jersey ad in the Press because I have nothing left to sell. I have four brood sows and my boar left and some 30 barrows. Every sow pig and gilt has been sold. Grant A. Mumford of Atwater got my last surplus stock—two bred gilts and one bred sow. Since January 1st I have sold 35 pigs and hogs of all ages and sizes. Probably 75 per cent of the business resulted from Rural Press advertisements. As soon as I have a surplus to dispose of again, my use of the advertising columns will be resumed. This may be several months.—Geo. L. Horine, Winton.

There were 2900 mules sold to farmers around Phoenix, Ariz., this spring and summer.

ACME

Feed Cutter and Silo Filler

A SIZE FOR EVERY DAIRY



Your silage should be evenly cut and well packed in a leak proof silo

THE ACME CUTTER DOES THE WORK

Light Running Safe Durable

Filling the Silo

THE spiral cutting knives are set at the correct angle and make a clean shearing stroke which cuts the silage—does not bruise or shred it. The silage produced is of uniform lengths — packs tight and avoids spoilage.

The rigid STEEL FRAME adds strength and durability not found in other cutters. It is securely riveted—can't warp or sag or throw the bearings out of alignment like the old style wood frame cutters.

Cutting Dry Feed

THE same Acme Cutter that fills your silo will cut up all kinds of dry feed and make excellent alfalfa meal. Use it with profit at all seasons of the year.

Cut all your dry feed. 25 per cent of all bulk hay fed to stock is wasted—trampled under foot or nosed out and not eaten. Run it through an Acme and avoid this waste. Save $4 to $6 on every ton of hay you feed. Figure out what YOU can save.

Special hay feeding attachment gives all Acme Cutters enormous capacity. What are your requirements?

ORDER EARLY

Our stock is complete, but the demand is heavy. Factory shipments are uncertain. Order your Acme now and have it ready for business when your corn is ripe.

SEND NOW FOR CUTTER AND SILO CATALOGS

IDEAL GREEN FEED SILOS

LEAK PROOF PERMANENT

We use the finest grade of selected redwood tank stock in the refrigerator doors, in the staves and throughout the silo. It's hard to get. It takes time to transport material and erect the silo. Look ahead. Order your IDEAL GREEN FEED SILO NOW.

Aims to Breed Large, Prolific Sheep

[Written for Pacific Rural Press.]

Few flocks of registered sheep are to be found in California. Many flocks have descended from registered ewes and rams, but registration has not been kept up on the females. One of the long-time Shropshire breeders of California is J. W. Marshall of Solano county. He had been breeding purebred Shrops a number of years before June, 1909, when he sold them and imported 50 ewes direct from England. Thenceforward he has kept his stock registered, though he breeds only about 150 ewes per year. Of his aim in improving the band of 500 sold in 1909 and in his breeding operations since then, Mr. Marshall says: "This band of 500 was, I think, one of the best purebred bands of Shropshires, the largest sized and most prolific ewes in California at that time. I had taken great pains to breed them for these qualities—just what I am trying to do with my present band. But it is mighty hard to get hold of good sized bucks."

Ten of the original foundation ewes are still breeding in the Marshall flock, being well over ten years old. A buck is still in use that was bought from Bishop Bros.' before the judging at the P.-P. I. E., where this animal later won grand championship. He has hams almost like a hog. Several of his daughters weigh around 235 pounds, their rumps are well carried out, their backs straight, and their faces so woolly that the lambs have to be sheared around the eyes in springtime to avoid foxtail. Mr. Marshall has no stock for sale now.

Glenn County Fair

[Written for Pacific Rural Press.]

"More Jersey cattle were shown at the Glenn County Fair last year than were shown at any State Fair or any other county fair in America," said J. J. Flaherty of the First National Bank at Orland, whose activities toward making Orland the Jersey center of California have been chronicled in the Pacific Rural Press. One hundred and sixteen head were shown last year, but W. G. Gurnett, superintendent of livestock, says there will probably be over 150 head there this year. The Hembree and Samuels Jersey herds have been dispersed mostly in this county since the last fair.

Over 12,000 paid admissions were recorded last year, and 20,000 are expected. The fair, which is to be held at Orland, September 16 to 21, has over twice the space under cover that was provided last year, according to Manager E. J. Falk of Orland, and the writer found stockmen all over the upper Sacramento Valley intending to show. Other breeds of cattle last year were rather scarce at the fair, but will not be so this year. Last year it was decided not to ask the business men to contribute special prizes in 1918, but before the first of August Secretary E. A. Kirk, also of Orland, had what is probably the largest and best list of special trophy awards ever offered at such a fair. About thirty silver trophies, valued at $25 to $100 and aggregating over $1,000, have been volunteered. Mr. Falk tells of one business man who was indignant because he had not been solicited. Several special prizes of registered livestock have also been offered. All regular premiums will be paid in War Savings Stamps, as the whole tone of the fair will be toward winning the war by more and better food production more economically.

A good display of Hampshire, Shropshire, Lincoln, and Carricule sheep was staged last year and probably more will come this year. About seventy-five hogs of all breeds were shown. Premium lists are available by addressing either Manager Falk or Secretary Kirk.

BIG HEREFORD BREEDERS.

A plunger in registered Herefords after using registered and purebred bulls on their eleven ranches in Arizona, California, and Mexico a long time previously is the C. H. & O. B. Fuller Co. This outfit last season bought 100 registered Hereford heifers in Kansas. They put them on the Jalama Ranch in Santa Barbara county, recently acquired from the Dibblee Estate. They bought 300 registered bulls in Kansas last year, according to O. B. Fuller, and are raising their own purebred bulls. The Fuller Bros. fed 10,000 head last year, mostly in Imperial Valley, from which they shipped 4000 fat cattle East, besides a couple of trainloads from other sections. O. B. Fuller says California ought to ship 30,000 head East every spring, but that they ought to go in cans or refrigerator cars rather than alive, as noted in another article.

WHY HE BOUGHT PUREBREDS.

R. C. Sturgeon of Tulare was farming with his father-in-law and buying and selling stock. On one occasion he paid $100 for a yearling Holstein bull. Two other parties had bought at the same price and another had just paid $100 each for ten purebred heifer calves. This started Mr. Sturgeon to thinking. He went back to the same breeder and bought a cow in calf for $150. Within three months he sold the calf for $100 and the cow for $250. Such values were way beyond those of grade stock he was handling all the time and Mr. Sturgeon laid plans to go into purebred breeding in a strong way. This he did last spring, and the State has another booster for the economical producing ability of purebreds.

Jim Jefferies of Burbank is making preparation for testing every cow in his herd this fall.

Live Oak Stock Farm

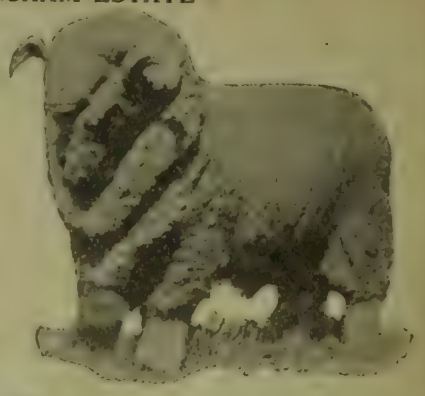
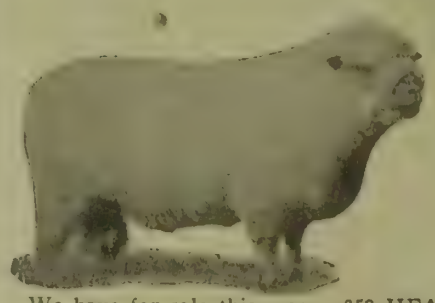
Take Electric Cars at Petaluma or Santa Rosa for Live Oak Station

Importers and Breeders of

Red Polled Cattle, Shropshire Sheep, American Merino and Rambouillet Sheep





SHROPSHIRES, RAMBOUILLETS and AMERICAN MERINOS

We have for sale this season 350 HEAD OF PUREBRED SHROPSHIRE RAMS, yearlings and two-year-olds. They are sired by sons of the famous Senator Bibby, one of the best Shropshires ever imported into the United States. He is now nine years of age and is still hale and hearty.

WE HAVE 500 AMERICAN MERINOS AND RAMBOUILLETS. Our Rambouillets are all from prize winning rams at the P. P. I. E. Strong, hardy, range raised stock. We have a fine lot of yearling American Merinos of our own breed.

ALL STOCK SOLD SINGLY OR IN CARLOAD LOTS.

Also a fine lot of young Red Polled bulls and heifers sired by Teddy's Best of Jean Duluth Farms.

Shropshire Rams

IMPROVE YOUR LAMBS

The G. C. Wheeler sheep ranch of Reno, Nevada, has sold all but 2000 of their purebred Shropshires, which Wheeler Bros. have brought to the old Taylor Ranch, near Santa Rosa, Cal. These are vigorous, hardy animals, all descended from registered rams and from the original importation made from England by Governor Sparks of Nevada.

Their new location is being fitted as a breeding and show ranch. Come and see them or drop a card telling what you want.

Ewes and yearling and two-year-old rams for sale.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

FALL HATCHING AND ITS PROBLEMS.

Before this reaches our readers the month of August will be making history, so it is well to think about that hatching question. Go over the birds that are to be mated for breeding with as much care as if you were picking them out to exhibit, only more so, for there is more at stake. Let your male birds be of known qualities as breeders and not later than August 10 mate up your pens. If you are hatching the heavy breeds, do not put too many hens to a male nor put two males in a yard where one runs the other around, for neither attends strictly to duty. You will get more and better chicks by feeding an extra male or two if necessary. While we can beat nature at her own game in many things, there are some that we cannot—and one is the breeding instinct of poultry. To bring this instinct up to its highest pitch in springtime requires little effort, for nature is working with us; but in the fall of the year nature is against us. It's the time all wild birds separate and each goes its own way.

THWARTING THE NATURAL INSTINCT.

The natural instinct has been partially bred out of domestic poultry, but close observation shows that the hen does not seek the male's attentions as in spring or early summer, nor does the male pay the many little attentions to his flock that he does in the spring. We can keep them keyed up to the breeding point only by good feed and care and by making things as near like spring as possible.

A hopper filled with bone and good beef scrap should be within reach, so that they can help themselves. If they eat more at first than you would feed, after a day or so they will regulate the quantity themselves. Furnish plenty of green feed to offset the craving for animal food.

NECESSARY PRECAUTIONS.

Keep them free from lice and mites and gather your eggs often after you commence saving for hatching. I like to leave the sexes together ten days before using the eggs for hatching. It may not be necessary, but it's safe. If you have plenty of males and all of them proven breeders, change them off every ten days. It will give you a larger percentage of male chicks and they will be stronger. Keep your breeding stock fairly well supplied with scratch litter and feed all grain in the litter, making the hens exercise for it; also see that they have good grit and shell. If you have granulated bone, it adds to the interest of the hens if you throw some of it in the scratch litter and let them find it.

Watch your male birds to see that they get enough to eat and dust them once a week if you value their health and that of the hens. If people would keep the male birds entirely free from lice, hens would never cause any trouble. Hens dust themselves, but the male birds rarely do. It is not really necessary to dust them oftener than ten days, but if you neglect this matter longer trouble is likely to begin, as nits hatch in that time, whereas if the dusting is done once a week there will be no nits to hatch.

EVERYTHING FAVORABLE FOR FALL HATCHING.

So far everything is in the poultryman's favor for good fall hatching, and September chicks hatched from hens that have not molted will come near being money found

Those breeders who had hens molt from the effects of electric lighting during winter and early spring months should be in good shape for fall hatching, because the hens will not molt as early as will those that were not forced. Mr. Norton of this place says he never did hatch in the fall months, but he is going to try it out this year because he sold so many more chicks during the summer season than he should have done that his flock is getting small.

STATE FAIR.

We should be preparing for the State Fair this month. Look up your best specimens and try them out at the Poultry, Pigeon and Pet Stock Show. Entries close August 26; and while the interest may not be quite so keen as if we had no war on our hands, Californians especially cannot afford to lose interest. It will be this State's lot more than of any other to supply the needs of other countries that have let their poultry fall below normal.

Get your best birds picked out, separate the sexes, and give some good, clean straw for scratch litter, then the birds, except white ones, will clean themselves. White birds need washing, but judges are not very harsh on that score at early shows, because nearly all birds are molting. For information and premium list, write to Chas. W. Paine, secretary, Sacramento, Cal.

RESERVE SPACE NOW FOR SAN FRANCISCO POULTRY SHOW.

At the meeting of the executive committee of the San Francisco Poultry Association this week the details for the annual poultry exhibit to be held in connection with the San Francisco Livestock Show, November 2-9, were worked out. At this time the prospects for a large exhibit are fine, as breeders have learned that San Francisco shows offer the best purchasing crowds of any on the Coast. George H. Croley, the show secretary, at 525 Market street, is anxious to get in touch with every intending exhibitor. Write him at once if you wish to show either fancy or utility birds. Space may be at a premium, so get in your reservation for space early.

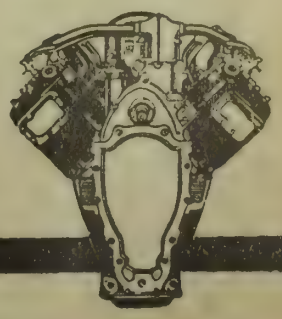
The Choice of Those Who Know

Manufacturers and leading motor car distributors *recommend* ZEROLENE. The majority of motorists use ZEROLENE. ZEROLENE reduces wear and gives more power because it keeps its lubricating body at cylinder heat. Gives less carbon because, being refined from selected California asphalt-base crude, it burns clean and goes out with exhaust.
ZEROLENE is the correct oil for *all types* of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.
At dealers everywhere and Standard Oil Service Stations.
STANDARD OIL COMPANY
(California)

ZEROLENE
The Standard Oil for Motor Cars

Correct Lubrication for the "V"-Type Engine

This, the "V"-Type of automobile engine, like all internal combustion engines, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*



Mrs. Best's Letter.

FASHION HINTS FOR THE LITTLE FOLKS.

My Dear Friends: Any of you who have little girls to outfit for school this fall would surely be interested in the many pretty wash dresses that are being shown. Of course, there are voiles and printed lawns made in simple styles or in quaint old-fashioned ones with smocking, but the dresses you see the most of both on the street and in the stores are the ginghams.

STYLES FOR YOUNG GIRLS.

For girls from six to fourteen, there are many styles, but this year practically all of them are simple. Nearly always these dresses are in one piece, hanging straight from the shoulders and belted either with a patent leather belt or one of similar or contrasting material. Plaids are trimmed in harmonizing plain material and plain materials are combined with plaids in many new and original ways.

The jumper or suspender dresses are worn a good deal, the skirt usually pleated and the straps and skirt of plaid, while the waist is of plain or white material.

MIDDIES HOLD THEIR POPULARITY.

Middies seem to never lose their popularity, and very properly, too, for they are one of the most comfortable garments children (and grown-ups, too) wear. They are shown with colored collars and cuffs, but the all-white are really more satisfactory, for after each laundering they are just like new.

For sizes up to fourteen it is really surprising how reasonably you can buy ready-mades. They are higher than if made at home, but many times they have a style that is lacking in the home-made garment.

For wear with these simple dresses are the droopy sailors in fine Milans with hanging velvet ribbon ends or the mushroom shapes of fine straw, trimmed with a tailor bow.

A great many of the smaller girls do not wear petticoats at all, bloomers of white or the material of the dress taking their place. This is a style of which most mothers heartily approve, as it is both tidy and modest.

SUITABLE FOOTWEAR.

Children's footwear is as carefully looked after these days as that of their mothers, and all children should wear the low-heeled, broad-toed lasts of shoes that mean comfort both now and in the future. For wear with either the white or black shoe, white stockings are high in favor, and they certainly do give a child a well-cared-for appearance.

Coats for the little people are practically in the same styles as their mothers'—loosely belted models, large collars that can be worn either open or buttoned snugly about the throat, and a very great similarity of materials. This last fact makes it more easy to utilize old garments for children by remodeling. Sometimes materials worn by older people are entirely unsuitable to be re-made for the younger generation.

SATEENS ALWAYS EFFECTIVE.

If you are thinking of making over a coat for a child, look up the flowered sateen for linings. It is very effective, wears well and is much cheaper than silk, and its beauty would appeal to the childish heart. ROSABELLA BEST.

THE HOME CIRCLE

RELISHES.

Home-made sauces from home-grown fruits and vegetables are first aids in serving cold meats or stretching the roasts. Every well-stored pantry should have chutney to serve with chicken, corn relish with fish, cucumber catsup with steak, spiced currants or grapes with cold meats.

APPLE CATSUP.

One quart apple sauce, 1 teaspoon each of ginger, cinnamon, cloves, pepper, mustard and onion extract, 2 teaspoons salt, 1 pint vinegar. Simmer slowly until thick, bottle and seal. A similar catsup may be made from plums or grapes and sorghum or molasses added if a sweet sauce is liked.

CUCUMBER CATSUP.

One dozen large cucumbers, 1 quart vinegar, 1 tablespoon salt, ¼ teaspoon cayenne. Gather cucumbers before the sun strikes them and keep in a cool place until used. Peel and grate and drain off the water. Heat vinegar and spices to boiling point, pour over the grated cucumber, bottle and seal. This makes a particularly good sauce for steak.

INDIAN CHUTNEY.

Two dozen ripe tomatoes, 6 medium onions, 3 red peppers, 3 green peppers, 1 dozen tart apples chopped together, 1 pound seedless raisins, 1 cup celery cut fine, 2 quarts vinegar, 1½ cups sugar, 1½ cups corn syrup, salt. Combine the ingredients and cook until all are soft and the chutney thick. Pour into hot, sterile jars and seal.

CORN RELISH.

Five pints sweet corn cut from cob, 3 green sweet peppers, 2 red sweet peppers, 4 pints finely chopped cabbage, ½ pound sugar, ½ pound corn syrup, ¼ pound mustard, 2 tablespoons salt, 4 pints vinegar. Seed and chop peppers. Mix ingredients and cook until corn is done, about 25 minutes. Seal air-tight in hot, clean jar. Serve with fish.

DIRECTIONS FOR KNITTING THE SPIRAL SOCK.

Cast on 64 stitches. Knit 2, purl 2 for four inches. Mark beginning needle. Knit 2 stitches together, leaving 21 stitches on each needle. Knit 3, purl 3, "knit 4, purl 3," repeat from "to" for four rounds. Knit 5, purl 3, "knit 4, purl 3," and repeat for four rounds. Purl 2, "knit 4, purl 3," and repeat for four rounds.

Each time a change is made, the 3-purl stitches move one stitch to the left. Always begin the change on the first needle which is marked, and continue knitting four rounds of each change until the sock is 23 inches long, then knit 5, narrow, knit 5, narrow all the way round. Knit 5 rounds plain. Knit 4, narrow, knit 4, narrow, and repeat round. Knit 4 plain rounds. Knit 3, narrow, knit 3 narrow and repeat round. Knit 3 plain rounds. Knit 2 narrow, knit 2 narrow, around. Knit 2 rounds plain. Knit 1 narrow, knit 1 narrow, repeat round. Knit 1 round plain. Divide stitches left on two needles in equal parts and finish with Kitchener toe.

This sock has no heel, hence is very serviceable and well liked by the boys at the front. Mind, it is knit in rounds, not in rows. There are no lumps or bulges to hurt the most tender foot.—Susan Swaysgood.

SUGAR FOR CANNING.

The U. S. Food Commission for California makes the announcement this week that grocers are allowed to sell housewives what sugar they need for canning fruits. Women may purchase the first twenty-five pounds on verbal statement that the sugar is to be used for canning or preserving. Successive purchases in twenty-five-pound lots can be made only on certificate issued by the Food Administration or its official representatives.

TO CLEAN GLASS BOTTLES.

Editor Home Circle: I have quite a quantity of glass bottles that have been used for oil containers. Could some of the Rural Press readers tell me how best to clean them to be able to use them for fruit juices?—Mrs. E. L. R., Oroville.

If some of our readers have had any experience along this line, will they kindly communicate with us?—Editor.

In making scrim curtains for windows that are kept open a good deal, it will add to the life of the curtain if the tops and bottoms are finished exactly alike. Then they may be turned end for end and equalize the wear.

WILL.

Not what we would in selfish plight,
Seeking our own regardless of right.
Not what we would—but what we should.
That's the will.

The strength of the man, not of the mule,
To grace, to obey, if not to rule.
Whatever is true, that to do.
That's the will.
—Selected.

FRUIT PASTES.

Fruit pastes or the old-fashioned fruit leather may be made from berries, figs, apricots, peaches and blue plums. Overripe peaches and apricots may be used and all fruits must be thoroughly ripe. Mash to a pulp, spread on lightly oiled platters and dry in the sun or in a dryer. When dry, sprinkle lightly with sugar, roll up like a jelly roll, cut in slices, sprinkle again with sugar, and pack away in jars or very tight boxes lined with wax paper.

Peaches and figs make delicious leather and need only a light sprinkling of sugar. Serve in the winter instead of candy or with cream cheese and nuts for dessert.

Fruit paste proper is made by boiling down the fruit until thick, then adding the sugar, and after long, slow cooking place on platters to dry. Cut in squares or fancy shapes, sprinkle with sugar and pack in boxes lined with wax paper. But under the present sugar shortage it is much better to dry the fruit slowly without cooking either in the sun or in the dryer and pack away in jars without sugar.

Fancy varieties of paste may be made by adding citron or by arranging pastes of different fruits in layers when nearly dry. Cut in half-inch strips and dry.

STRAIGHTEN KNITTING NEEDLES.

If your knitting needles become bent, pour hot water over them and straighten immediately with your fingers. Then immerse the needles in cold water. It only takes a few moments to do this and they can be made as straight as new.

HATED TO WALK BACK.

United States Senator Howard Sutherland of West Virginia tells a story about a mountain youth who visited a recruiting office in the Senator's State for the purpose of enlisting in the regular army. The examining physician found the young man sound as a dollar, but that he had flat feet.

"I'm sorry," said the physician, "but I'll have to turn you down. You've got flat feet."

The mountaineer looked sorrowful. "No way for me to git in it, then?" he inquired.

"I guess not. With those flat feet of yours you wouldn't be able to march even five miles."

The youth from the mountains studied a moment. Finally he said: "I'll tell you why I hate this so darned bad. You see, I walked nigh on to one hundred and fifteen miles over the mountains to git here, and gosh, how I hate to walk back!"

Put a thimble over the end of the curtain rod when putting up freshly laundered curtains and the rod will slip through with much less trouble.

Good Health.

[By H. E. Pastor, M. D.]

Goes Off at Half Cock.

A correspondent, too modest or too forgetful to sign his name, writes as follows with reference to a brief paragraph printed in this column two weeks ago:

"Is not resorcin a proprietary article? Isn't the enclosed clipping ('Eradication of Dandruff') an advertisement? Should it not have something printed with it to show that it is an advertisement? I look on these "fake" recipes as one of the worst forms of advertising swindling and am surprised that you should assist in it. Bad enough when they have 'adv.' printed after them."

No; resorcin is not a proprietary article. The paragraph was not an advertisement. It did not need something printed after it. It was not a "fake" recipe. And the only surprise about the whole matter is that anyone so densely ignorant of the materia medica should rush into print and make a consummate ass of himself (or herself). We are somewhat familiar with the fake form of advertising to which our anonymous critic so tartly refers, and regard the practice with as much abhorrence as the most punctilious; but our censor is barking up the wrong tree. The Rural Press is not in that business.

Physical Decadence—Its Prevention.

A rather important gathering was in session in Berkeley the latter part of this last month. It was the first annual convention of the Western District Physical Education Society. This writer is not familiar with the genesis of the society, nor with the details of its workings, except as its title indicates, and the importance of its deliberations depends much on what was done rather than what was recommended to be done. But the potential value of such an organization is beyond calculation. The necessity for some such body of workers was disclosed in a statement of one of the speakers, who said that 45 per cent of the youth drafted for military service were rejected because of physical defects. It is proposed to remedy this fundamental weakness in our youth by proper instruction in the public schools. This is one of the agencies through which the physical fibre of our budding manhood can be strengthened and toughened, though most schools already have the studies of physiology and hygiène in their curricula, and enforce various forms of physical training. Just what is proposed to add to these is not stated in the press reports of the society's meeting, though some added agencies are doubtless set forth. One suggestion may be made to supplement any plan of physical instruction or training that may have been drafted to accomplish the end in view, and that is that some effort be directed to the suppression of customs and amusements that tend inevitably to weaken the physical constitution and undermine the morals of those addicted to them. Space limits will not permit even a partial specification here, but they will come, most of them, to the minds of our readers. A remedy for an evil is a good thing, but the prevention of the evil itself is better. Stop the sapping of our boys' virility by saving them from the evils of contaminating influences. "Evil communications corrupt good manners." Eliminate demoralizing public amusements and debilitating social customs, and a long step will have been taken toward a rejuvenated manhood from which to recruit an army of defenders in times of national stress. The strength of the nation depends on the strength of its individual units.

California Not a Lazaretto.

The State Board of Health has taken up a rather important and very delicate question. The fame of California's superb climatic conditions has resulted in inspiring a large number of discharged tubercular soldiers with a desire to locate here. The Board decided at its last monthly meeting that immigration of this kind on a large scale was undesirable and is taking active measures to discourage the contemplated movement, which is regarded as a menace to the health conditions of the State. California hospitals and charitable and public institutions are reported to be already overtaxed with this class of patients.

Barley an Excellent Substitute.

Of all the substitutes suggested for wheat, so much needed by our soldiers and allies, none is superior to barley. The fact that it is nutritious and easily assimilable is attested by the fact that it is so generally prescribed by physicians for infants and invalids.

Replace Your Old-fashioned Plumbing Fixtures

The added convenience of modern plumbing fixtures will more than compensate you for the slight cost involved in replacing them for your present fixtures.

The attractive designs of Pacific Plumbing Fixtures will make you proud of your bathrooms.

Pacific Plumbing Fixtures are guaranteed forever against any defects in workmanship or materials, and although their quality is higher, cost no more than any other reputable brand.

Write for a free copy of The Book of Bathrooms. It is a 96 page book, brim full of ideas.

WHEAT.

There is nothing new in wheat this week.

BARLEY.

The local barley market is weaker, with little business. Receipts are larger and lower quotations are looked for unless the growers stand firm for their price. With lower Eastern prices, this will be difficult of accomplishment.

Choice feed, per ctl.....$2.35@2.40

OATS.

Oats are quiet, with few shipments arriving on this market.

Red feed, per ctl.....$2.50@2.65
Red seed ..... 2.75@3.25

CORN.

The corn market is dead. There is practically no whole corn on the market at present and almost no demand.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked .....$4.20@4.25
Milo maize ..... 3.95@4.05
Egyptian ..... 4.05@4.10

HAY.

Receipts of hay for the past week were 2432 tons, compared with 3142 during the previous week. Although considerable less than the previous week the market is crowded with the arrivals which are moved with difficulty. The warehouses during the past two weeks have been taxed to capacity and the large quantities of hay arriving by boat have congested the hay wharf. Considerable hay has been moved only by concessions in price which have meant a distinct loss to the dealers. Dealers are advising growers to sell in their own location wherever possible rather than to ship to this market at present.

Wheat No. 1.....$22.00@24.00
do, No. 2..... 19.00@21.00

Oilcake .....$75.00@76.00
Rolled barley ..... 54.00@55.00
Rolled oats ..... 56.00@57.00

POTATOES, ONIONS, ETC.

Both potatoes and onions have fluctuated more or less during the week, but the prices today are the same as a week ago. The market is somewhat more active, due to some large Government orders, but street trading is at unchanged quotations. Bay tomatoes and eggplant have arrived in good quantities and are quoted at lower figures.

Peas .....6@8c
String beans, per lb.....3@4c
Wax beans, per lb.....4@5c
Carrots, per sack.....50c@$1.00
Rhubarb, San Jose, per box....$1.00@1.25

Ducks .....25@27c
do, old .....23@24c
Belgian hares (live) .....15@17c
do, dressed .....19@22c

BUTTER.

Like the previous week butter has been firm and shows but slight variation in price. Prime firsts were somewhat more active and showed an advance of 1 cent over the close of last week. The receipts were about seventy per cent of the previous week. Compared with last year's prices at this time butter shows about 5 cents advance. The first week of August, 1917, butter sold at 43 cents. Under the methods of commission calculations used last year today's butter price would be about 48 cents, or 5 cents higher than last August.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	52½	52	52	52½	52	52
Prime 1st	51	50½	50½	50½	50	50
Firsts			Nominal			

EGGS.

For the first time since spring extra eggs sold at above 50 cents on the exchange, and pullets touched 49 cents. Eggs at above 50 cents in August have passed that mark a month earlier than a year ago. Remembering the different methods of calculating commissions, eggs today, figured on last year's basis for purposes of comparison, are 47 cents. Last year at this time they sold at 43½, and did not reach 47 cents until September 8th.

Oregon Y. A. fancy.....27½c
C. S. Oregon triplets, fancy.....28c
do, Oregon Y. A. fancy.....27c
Monterey cheese .....21@23c

FRESH FRUITS.

The refrigerator car situation in the Turlock district is said to be much better and a considerable percentage of the stock of cantaloupes is now going East instead of being brought to this market. This had the tendency of strengthening the market and somewhat higher quotations prevail here in this fruit. The whole berry market was stronger and higher with the greatest advance in prices being made in raspberries.

Apples .....$1.50@2.50
Apricots, per crate ..... 1.00@1.25
Peaches, 4-box crate ..... .75@1.00
Figs, black, per box.....None

CITRUS FRUITS.

The market for grapefruit remains strong, but for other descriptions there is a downward tendency. This is especially the case with lemons.

Oranges:
Valencias, fancy .....$6.75@7.00
Valencias, choice ..... 6.25@6.75
Lemons:
Fancy, per box ..... 7.00@7.50
Choice ..... 5.50@6.50
Standard ..... 4.00@4.50
Lemonettes ..... 4.00@5.00
Grapefruit, fancy, new ..... 4.00@5.00

DRIED FRUITS.

Buyers claim that apple dryers are holding their stock at too high a figure for purchase. Buyers say the dryers are demanding 13½ to 14 cents a pound, and that in view of the fact that the Eastern crop, which is large and excellent, is bringing less than 12 cents to the dryers, California buyers cannot make purchases.

Prunes, graded, price to growers:

HONEY.

The supply of honey is constantly showing marked increases, but the demand for shipment seems to be able to take care of all offered so far at the prevailing prices.

White, extracted 21c
Light amber .....18@20c
Amber .....15@18c

RICE.

The California rice crop for 1918 is estimated at 3,000,000 bags and its value at Government prices at about $13,000,000. Approximately 100,000 acres of rice were planted in California this year, and according to these figures each acre will yield a gross of about $130 per acre.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, August 5, 1918.

Auction offerings during the past week continued heavy, though at no time did the supply exceed the demand. Some difficulty was experienced in the Atlantic Seaboard markets on account of cars not getting in on time and being held over until the following sale, which temporarily depressed the market.

There was a sharp advance on peaches, owing to the light supply from Eastern sources and a limited offering of California stock. We look, however, for prices on peaches to be normal from now on, on account of the heavy shipments of Elbertas from this State, the movement averaging 100 cars a day for a period of two weeks. As quite a block of Elbertas have been purchased by Eastern speculators, it is conceded that a liberal amount of this stock will be placed in the auctions.

The difficulty experienced by shippers during the past week in getting sufficient cars has affected the shipments to some extent, though the situation cannot be considered serious up to this writing, but packing houses have held over for forty-eight hours fruit that ought to have been iced and it is not unlikely that some of this stock will show up in the Eastern markets in over-ripe condition. If this situation continues when the movement of grapes is heavy, the growers will unquestionably face a serious situation. There is hope, however, that the Government will in the meantime regulate matters so that the cars of which there appear to be plenty, will be iced and placed for loading in time to move the crop without damage.

The shipment of Bartlett pears from the Sacramento River will be considerably lighter this week and next, and the season will probably close in about ten days. The stock is now showing color and most of what is left is being moved to the canners.

The lighter shipments of plums had a tendency to cause an active demand in all markets and this will probably remain throughout the balance of the season.

Thompson Seedless and Malaga grapes are meeting a ready demand and though the movement has hardly commenced, sufficient grapes have been on the market to date to enable us to forecast that the demand, at satisfactory prices, will continue throughout the season. A few Tokays have been shipped, but the crop will not be ready to move for two weeks. We look for a good demand.

Averages for the week:

New York: Bartlett pears, $4.08; Malaga grapes, $2.98; Thompson Seedless, $2.78; Elberta peaches, $1.60; Crawford, $1.36; Tuscan, $1.76; Wickson plums, $2.11; Tragedy, $2.06; California Blue, $1.95; American Blue, $2.02; Kelsey, $2.29; Grand Duke, $1.97; Diamond, $2.18; Gaviota, $2.14; Burbank, $2.02; Santa Rosa, $1.89; Yellow Egg, $1.85; Duane, $1.80.

Chicago: Bartlett pears, $3.80; St. John peaches, $1.77; Crawford, $1.73; Elberta, $1.74; Tuscan, $1.64; Foster, $1.54; Malaga grapes, $3.35; Thompson Seedless, $2.71; Tokay (Imperial), $4.24; Muscat, $3.16; Wickson plums, $2.35; Tragedy, $2.33; Giant, 1.85; Sugar, $2.18; California Blue, $2.45; American Blue, $2.41; Kelsey, $2.24; Grand Duke, $2.55; Diamond, $2.43; Bradshaw, $2.05; Burbank, $2.50; Climax, $2.40; Santa Rosa, $1.87.

Boston: Tragedy plums, $1.85; Kelsey, $1.95; Wickson, $1.91; Burbank, $1.58; Grand Duke, $1.62; Diamond, $1.85; Gaviota, $2.01; Bradshaw, $1.65; Santa Rosa, $1.86; Climax, $1.57; Bartlett pears, $3.83; Thompson Seedless, $2.55; Malaga, $4.00; Muscat, $3.75; Decker peaches, $1.65; Crawford, $1.67.

Shipments by cars, from July 27th to August 2nd, inclusive: 579 peaches, 117 plums, 476 pears, 160 grapes.

Total shipments to date, 1918, 5078 cars.
Total shipments to date, 1917, 4408 cars.

New Feed Selling Schedules for California

The price-selling schedules on mill feeds telegraphed to the Pacific Coast under date of August 1 have undergone revision. The figures below for principal California milling points were obtained from the offices of the Food Administration in San Francisco just as our last form went to press, and are the wholesale prices to retailers, bulk basis, carload lots. To these prices, of course, must be added the retailers' legitimate profit, cost of handling, and cost of sacks where so delivered.

	Bran.	Mixed Feed.	Middlings, etc.
Sacramento	$25.65	$26.90	$27.65
Stockton	25.15	26.40	27.15
San Francisco	23.75	25.00	25.75
Los Angeles	27.45	28.70	29.45
San Diego	26.81	28.06	28.81

LOS ANGELES

Los Angeles, August 6, 1918.

BUTTER.

There was a more quiet and weaker tone to this market the past week. The receipts were the best for some time. The high prices not only encouraged better nearby receipts, but brought in some Eastern butter. The result was that the market on 'change broke Monday 1c on extras from the high prices of last week. Demand good, however. Receipts for the week were 375,400 pounds, against 322,100 pounds the same week last year.

1917—						
Extra	44	44	44	44	44	44

EGGS.

A strong market was had the past week for all arrivals; and extras closed the week a little higher while case count remain unchanged. Receipts by rail for the week were 1710 cases, against 1060 cases the same week last year. The receipts by truck continue to run about four times as large as the arrivals by rail, making the supply for the week 8650 cases, against 5300 cases the same week last year.

Pullets	34	34½	34	35	37	32

POULTRY.

Not so many light broilers in. Fryers and young roosters arriving more freely and demand only fair. Other prices remain unchanged.

The following prices were agreed upon last Friday, August 2, and hold good until the coming, Friday:

Broilers, 1@1½ lbs. 30c
Fryers, 2@3 lbs. 31c
Roasters (soft bone), 3 lbs. and up.....31c
Stags and old roosters, lbs.....19c
Hens .....20@27c
Tom turkeys .....30@33c
Ducks .....22@28c
Geese 15c
Squabs, live, per lb. 30c
Squabs, dressed, lb. 40c

VEGETABLES.

The offerings the past week were liberal of most everything and sales generally slow. The weather was very hot and against the market.

We quote from growers—
Potatoes, new, per lug.....70c@80c
New potatoes, per cwt. .....$1.75@2.00
Garlic, per lb. .....5@6c
Onions—Stockton Yellow Danvers, cwt. .....$2.00@2.25
Onions—Small Bermuda, per crate..80c@90c
Garlic, lb. .....5@7c
Cabbage, per 100 lbs. .....$2.00@2.50
Bell peppers, per lb. .....3@4c
Chile peppers, per lb. .....3@4c
Peas, Northern, per lb. .....10@12c
Summer squash, local, per lug.....25@30c
String beans, per lb .....4½@5c
Tomatoes, home-grown, per lug....30@75c
Eggplant, Imperial Valley, per lb....4@5c
Cucumbers, home-grown, per lug..25@40c
Corn, per lug of 3 doz. .....65@75c

FRUITS.

Sales were draggy of most everything. Peaches, plums, apples and pears all arriving freely and the liberal offerings caused buyers to hold back and do much picking around. Nectarines made their appearance during the week for the first time and met with a fair demand. Crabapples were in good demand. Apricot season is over. Plums selling fairly well and generally steady. Apples in fair demand. Figs slow sale but steady.

We quote from growers:
Figs, Black Spanish, 7-lb box.....50@75c
do, White, 7-lb. box.....50@60c
Peaches, freestone, per lug.....$1.00@1.35
do, clings, per lug..... 1.25@1.50
do, Northern, freestone, lb.....3½@4c
do, do, clings, lbs.....3@3½c
Pears, per lb. .....5@7c
Crabapples, per lug .....$1.00@1.25

Tragedy, per lb. .....7@8c
Satsuma, lb. .....5@6c
Burbank, lb. .....4@4½c
Santa Rosa .....6@7c
Nectarines, lb. .....5@6c
Grapes—Imperial Valley Malagas, per lb. .....6@7c
Thompson's Seedless, per lb.....6@7c
Apples, Red Astrachan, per lug....65@90c
do, White Astrachan, per lug....65@80c
Banana apples, per lug .....90c@$1.00

BERRIES.

The season is fast drawing to a close. A few scattering lots are still coming in, and they bring more money. The demand is only fair. Too much other fruit on the market.

We quote from growers:
Strawberries—
Fancy, per 30-basket crate....$2.25@2.75
Poor to choice, per 30-basket crate ..... 1.75@2.00
Blackberries, 30-basket crate.... 2.50@2.75
Raspberries, 30-basket crate..... 2.50@2.85
Loganberries, 30-basket crate... 2.75@3.00

MELONS.

The market was full the past week with all kinds of melons and prices broke sharply. Demand fair, however, at the decline. Cantaloupes broke faster than watermelons. The hot weather, however, helped them out.

We quote from growers:
Cantaloupes—
Tip Top, home-grown, standard crate .....90c@$1.00
do, do, pony crate .....60@75c

Columbia jumbo, crate	$1.75@2.00
Casabas, per lb	2@2½c
Pine apple, standard crate	90c@$1.00
do, jumbo crate	90c@ 1.00
do, Paul Rose, standard crate	$1.50@1.75
Watermelons, per 100 lbs.	1.00@1.25
Honeydew melons, special	2.00
do, do, flats	1.25

HAY.

This market is very dull. Receipts keep up fairly well, while most buyers are pretty well supplied for the present. No one seems to care to buy ahead. Hence the market has a downward tendency.

We quote f. o. b. Los Angeles—

Barley hay, per ton	$24.00@26.00
Oat hay, per ton	25.00@27.00
Alfalfa, northern, per ton	21.00@22.00
Alfalfa, local, per ton	22.00@24.00
Straw, per ton	9.00@10.00

Special Citrus Market Report

Los Angeles, August 6, 1918.

The offerings for the fag-end of the Valencia orange crop, which on the first of this month was reduced to about 1600 carloads, border on the sensational. It is reported that as high as $8 to $9.50 per box is offered at the Eastern distributing centers for fancy stock, and that even inferior grades are selling up to $6 per box. As against the residue of 1600 cars on hand on August 1, there were 5800 cars available at the same time last year. Although choice fresh deciduous fruits are plentiful in competition in the Eastern markets, Valencia prices are well maintained. It is believed that there will be further advances before the November crop of navels are on the market.

Lemons, however, have not fared quite as well. Several factors have militated against a buoyant market for this fruit. Firstly, weather conditions have been unfavorable. Secondly, the restriction on the consumption of sugar to two pounds per month per person has discouraged the consumption of lemon juice. Thirdly, there have been heavy importations of Italian fruit during the past week, and, although they are too low-grade to come into direct competition with the California article, they nevertheless operate as a check to their consumption among a certain class of trade. The best brands of California stock show a base price of $7 per box in the New York and Boston markets.

Total shipments of Southern California citrus fruits to date are: Oranges, 12,598 cars (last season to same date, 34,930); lemons, 4592 cars (last season to same date, 6819).

Special Livestock Market Report

San Francisco, August 7, 1918.

CATTLE—The cattle market on cow stuff continues weak, but is very firm on good-weight steers, which are in good demand. The dressed meat market is dull.

Grass steers—	
No. 1, weighing 1000 to 1200 lbs.	11½@12c
No. 1, weighing 1200 to 1400 lbs.	11½@12c
Second quality	10@11c
Thin	8@9c
Cows and heifers—	
No. 1	8@8¼c
second quality	7@7½c
Common to thin	4@5½c
Bulls and stags—	
Good	6@7c
Fair	5@6c
Thin	4@4½c
Calves—	
Lightweight	11c
Medium	10c
Heavy	8@8½c

SHEEP—The sheep market is steady, with only light offerings. Lambs are being sent in too rapidly for the market to absorb, and too large a percentage of the stock is in an unfinished condition. This is especially true of the Northern California product, due to unfavorable feed conditions.

Lambs—	
Yearlings	12@12½c
Milk	14@14½c
Sheep—	
Wethers	11@11½c
Ewes	9½@10c

HOGS—There is still a dearth of hog receipts, and notwithstanding a very moderate demand for hog products prices are on the up-grade, as will be noted in our quotations.

Hogs—	
Hard, grain-fed, 100@140	17c
do, do, 140@300	17½c
do, do, 300@400	16½c

Los Angeles, August 6, 1918.

CATTLE—The market the past week was quiet all round. But few really good fed steers in. A good many thin and medium cattle are being offered, with poor market. The dressed meat trade is dull.

Per cwt. f. o. b. Los Angeles—

Beef steers, 1000 to 1100 lbs.	$10.00@12.00
Prime cows and heifers	8.00@ 9.00
Good cows and heifers	7.50@ 8.00
Canners, per cwt	5.50@ 6.00
Calves, per cwt	8.50@ 9.50

HOGS—There was a further falling off in the receipts the past week and under scarcity and high markets East prices were advanced. The demand, however, is still limited and the higher prices are due to scarcity rather than any improvement in demand.

Per cwt. f. o. b. Los Angeles—

Heavy, averaging 275@300 lbs.	$15.00@16.00
Mixed, 225@275 lbs.	16.00@17.00
Light, 175@220 lbs.	16.00@17.00

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—Few sheep and lambs are wanted, as the mutton market is dull. What few taken the past week, however, brought steady prices.

Per cwt. f. o. b. Los Angeles—

Prime wethers	$9.00@10.00
Prime ewes	8.50@ 9.50
Yearlings	9.50@10.50
Lambs	13.00@14.00

North Portland, August 5, 1918.

CATTLE—An insistent demand characterizes the cattle trade here. The run of cattle consists of 1150 head. The calf trade is holding up good. The choice light veelers are selling at $11.00@11.50. We quote as follows: Prime steers, $11.75@12.75; good to choice steers, $10.75@11.75; medium to good steers, $9.50@10.75; fair to medium steers, $8.50@9.50; common to fair steers, $5.50@8.00; choice cows and heifers, $8.00@9.00; medium to good cows and heifers, $6.00@7.50; fair to medium cows and heifers, $5.00@6.00; canners, $3.00@5.00; bulls, $5.50@7.50; calves, $8.50@11.50; stockers and feeders, $6.00@8.00.

HOGS—Hogs have advanced by leaps and the trade is 50c to 75c higher than a week ago. Receipts today are 1150 head, the larger majority of which are prime stuff. The market is strong at quotations: Prime mixed, $18.85@19.15; medium mixed, $18.65@18.85; rough heavies, $17.35@17.65; pigs, $16.00@16.50; bulk, $18.65@18.75.

SHEEP—Sheep receipts for today are 1300 head, which are meeting with good demand at steady prices. We quote: East of the mountain lambs, $13.00@14.00; valley lambs, $12.50@13.00.

ALL SIZES OF PIPE and screw casing, both new and second-hand, dipped and undipped. Guaranteed. Prices right. Shecter Pipe Works, 304 Howard St., San Francisco.

COUNTRY LANDS.

400-ACRE IMPROVED stock and grain ranch, 3½ miles Pleasant Valley R. R. station, Mariposa county, Cal. 100 acres cleared and tillable; nearly all could be farmed if cleared of large oak and other trees; 3 and 6-room house, large barn and outbuildings; blacksmith shop and tools; fenced and cross fenced, part hog tight; nice family orchard and garden irrigated from springs. Average rainfall, 29.88 inches. Grapes, olives, almonds, etc., grow without irrigation. No alkali or hardpan. Feed in pastures and free outside range adjoining, knee high. Elevation, 1500. School and church, one-half miles. Price, $30 per acre, including 300 goats, 3 horses, 3 head cattle, turkeys and chickens, and all farm implements. $3,000 cash, balance long time, 7 per cent. Fred B Palmer, owner, Coulterville, Calif.

FOR SALE, in lower San Joaquin Valley, 80 acres good tillable land, all fenced hog tight and rabbit fence. Forty acres leveled and checked, ten acres in alfalfa, good well and reservoir with cement pipe. New electric pumping plant, 7½ H. P. motor. New five-room bungalow, water pipe from tank, domestic well with small engine. Garage, washhouse, milk house, barn, chicken house. Four horses, four cows, eight hogs, chickens, turkeys, young family orchard and implements. $14,000, part cash. Address, Box 1200, Pacific Rural Press.

FOR SALE—120 acres, 5000 cd. oak and madrone wood on same. Three miles from town. House, barn, and fenced. Forty acres farming land on same. Spring water. Will sell all or half. Price, $6000. Address, P. O. Box 344, Healdsburg.

FOR SALE—500 acres land. Three million feet redwood; also fir, oak, and 100 cd. tan oak. Eighteen miles from railroad. Good truck road. Seven miles from famous mineral springs. Two running springs year round. Fine hunting and fishing. Price, $15 per acre. Address, P. O. B. 344, Healdsburg, Cal.

MARIPOSA CO. RANCH FOR SALE—480 fenced hog-tight, house, 2 barns, 12 horses, 25 hogs on grain, 15 tons hay, farming implements, harness, wagons, etc. Price, $9,600. Frank Solari, Hornitos, Cal.

BEAUTIFULLY LOCATED INCOME HOME—67 acres. Nuts, fruits, alfalfa, etc. Full equipment. Horses, tractor, etc. Terms. Good schools, roads, and conveniences. Box 163, Elk Grove, Cal.

BE PATRIOTIC—Raise stock on productive Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento.

ALFALFA RANCH IN FRESNO COUNTY—50-acre alfalfa ranch, subirrigation, with substantial improvements, work stock and implements. Price, $20,000, $6,000 cash, balance long time. J. Hargeshimer, Sanger, Cal.

53-ACRE RANCH in South San Joaquin irrigation district modern improvements, horses, implements, tools, sheep, poultry—$20,000. D. M. Berry, R. R. 1, Manteca, Cal.

FOR SALE—Improved ranch, big fruit crop, pipe system. Cheap if taken at once. Geo. W. Cheves, Paradise, Butte Co., Cal.

WANTED.

WANTED—Responsible farmer and stockman to handle 250-acre ranch in Colusa County on shares. Must have money to buy stock. Sheep preferred. P. O. B. 597, Santa Cruz, Cal.

WANTED—To rent, a ranch suitable for hogs, about 60 acres farm land, part in alfalfa. Hans Duveneck, Ukiah, Cal.

WANTED—Married Swiss dairyman wants to take charge of a dairy on shares; 40 to 50 cows. Address, Box 1190, Pacific Rural Press.

SEEDS, PLANTS AND TREES.

FOR SALE—Baled alfalfa and grain hay, all grades and prices accordingly. Can furnish up to two thousand tons. Write at once, or better, come to see the hay for yourself. Can make immediate delivery. Bomberger & Co., Modesto, Calif.

CABBAGE AND CAULIFLOWER SEED—Also late plantings of many vegetables should be started now. Buy of C. C. Morse & Co., dealers in good seeds, San Francisco.

Brentwood Irrigated Farms

In Eastern Contra Costa County, California

Land planted to Alfalfa, also First Class Orchard Land

Tracts of twenty acres and up with easy terms of payment

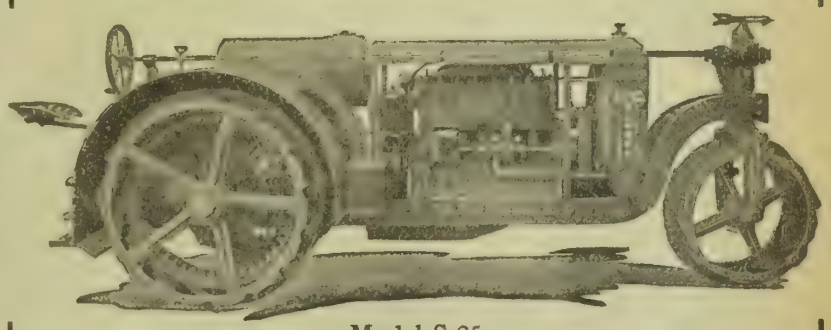
GMC TRACTORS **SIEVE-GRIP** GMC TRACTORS

Tractor



Model S-25

THE GMC SAMSON SIEVE-GRIP TRACTOR is pleasing thousands of owners. It will please you. For nearly two decades it has been subjected to acid tests and has met them all successfully. Designed for service, simply, correctly and honestly constructed, it has more than made good the claims of its manufacturers. As a result, the demand for GMC SAMSON SIEVE-GRIP TRACTORS is constantly increasing.

Why experiment when you can secure a tractor, time-tested, that has demonstrated its ability to meet any and all tractor requirements on the farm, from plowing and cultivating to the hundred and one odd jobs?

The GMC SAMSON SIEVE-GRIP TRACTOR, during its many years of service, has firmly established a record for strength, durability and economy, combined with great simplicity of construction and operation.

It performs the work of ten horses and does it better, more economically and quicker, in fair weather or foul, day in and day out.

We are sure the GMC SAMSON SIEVE-GRIP TRACTOR will please you. Ask the man who owns one or write for our booklet, "Better Farming."

TRADE MARK REG.

The Thrift Car

Reins or Steering Wheel?

A LONG, tiresome, time-wasting drive with horses is a short, pleasant, time-saving ride with an Overland.

Let an Overland perform innumerable *work duties* for you and *in addition* be an endless source of recreation and benefit for every member of your family.

Select this beautiful, roomy Model 90 and you save money in the first costs and maintenance.

You cannot get complete satisfaction from less advantages than it gives—

And you cannot get as much *value* in any other car for the low price of this Model 90.

It has a powerful, fuel-saving motor; narrow turning radius; rear cantilever springs; 106″ wheel base; 31x4 tires, non-skid rear; electric Auto-Lite starting and lighting and vacuum fuel system.

Because this Overland Model 90 gives *every* essential for complete satisfaction, the farmer's family can *enjoy* it as much as the farmer can *employ* it.

Five Points of Overland Superiority:

Appearance, Performance, Comfort, Service and Price

Light Four, Model 90, Touring Car, $895.

Alfalfa Growing Made Sane and Safe

Written for Pacific Rural Press by W. G. Kerckhoff of Kerman

GREAT CHANGES have already taken place in the production and marketing of practically all farm products. There can be no doubt any more that we are in the midst of a period of transformation, partly brought about by co-operation, partly by the war and its effect on labor, money, etc., and partly by direct Government measures. This is bound to also lead to great changes in general business, financial and social-economic conditions, and it is of the greatest importance to our individual interests to adapt ourselves to these changing conditions. Considering the alfalfa grower's problem from this standpoint, it is clear that it is also one of the vital problems facing the entire population of California, and, in fact, the nation, as on its permanent and all-around solution depends the solution of the food question in respect to milk, butter, meat, etc., all necessities of the first order, not to mention the important bearing which the successful solution will have on the general prosperity of the State.

Where the Hay Farmer Finds Himself.

In the big farming family of our State the hay farmer occupies the place of a step-child: neglected, abused and under nourished. Look back ten or fifteen years in the hay industry and follow it up to the present. You will remember but few years in which the farmer obtained a good price in the sense of making enough above expenses, wear and tear, etc., to give him and his family a fair living and enough more to reduce his debts or accumulate something for the future. There were more years during which he could barely make both ends meet, and almost as many others when he went behind and deeper into debt. As conditions have been and still are today, they compel most of the hay farmers to sell the largest part of their crop at the lowest prices of the year, or, to put it another way, under existing conditions they are forced to demoralize the market against themselves and the rest of the growers, and this at the very time when its support is a matter of life and death for them.

A California method of field-handling of alfalfa hay.

What did these poor years mean for the hay farmers as a class? They were then and are today poor men, struggling to get on their feet; but many fell by the wayside, discouraged and embittered. Others take their places, encouraged by years of fair prices following the low ones; but years of low prices again came after these; again many fields were neglected or abandoned and a large number gave up the struggle. This has been the cycle in which the industry has been moving all these years. It is not different today; in fact, it is worse, in so far as this year and the year before were apparently years of fair prices in the circle. But as far as my observation goes, the new acreage planted this year and last is decidedly below normal, while the acreage plowed up is far above normal, and this in the face of the fact that the acreage in the State is quite insufficient for present requirements.

Why is this when the price is now twenty dollars a ton, baled here, and even better? I can see one explanation only, and this is that even present prices are not very attractive under present general conditions of vastly higher cost of everything, and that the farmer can do as well and better, and in any case safer, in other lines of farming. It seems to me that this is proved by the fact that for several years past considerable alfalfa acreage in almost all parts of the State has been plowed up and, according to the respective local conditions, the land has been put in cotton, etc., in the Imperial Valley; sugar beets, beans, etc., in Southern California; vines, trees, etc., in the San Joaquin Valley, etc.

Why Not Feed the Alfalfa?

Why do these hay farmers not go more into the dairy business and sell their product in the shape of milk and cream instead of as hay? The answer seems to be that the dairyman-alfalfa grower who makes milk suffers largely from the same drawbacks as the hay farmer, though perhaps not quite to the same extent. Low prices of alfalfa also mean low prices for milk and cream; and then there are additional drawbacks peculiar to dairying, the principal one the marketing question of butter, which presses down as hard on the dairyman as the hay marketing drawback does on the hay farmer. Right now we seem to be again in a period where dairy herds are being reduced. Probably the causes are similar to those which bring about the plowing up of alfalfa. However, the Milk Producers' Association now seems to be an assured fact and will, together with the Alfalfa Growers' Association, undoubtedly remove most of the drawbacks now handicapping the dairy industry.

But, even supposing that many of the hay farmers were to engage in the dairy business, where in that case is the hay supply to come from which is of absolute necessity to the dairies near the cities which depend on them for their milk supply, as also in parts of the country where no alfalfa or not enough of it is raised? Or, again, where is the hay for stock cattle to come from as far as it is dependent on alfalfa hay bought from the hay grower and fed?

The Solution of the Problem.

Clearly the situation is very unsatisfactory all around, and even alarming, and it is just as clear that there is only one solution, which is to put the hay farmer in position where he can feel assured of fairly stable conditions and where he can do about as well as in other lines of farming, taken one year with the other and considering the amount of his investment, work and risk.

There is nothing revolutionary in this solution. On the contrary, it will be a constructive measure, assuring not alone the milk, butter and meat, etc., supply, but it will at the same time also prove a well-paying investment for the entire commonwealth, as the prosperity of the hay farmer means more all around prosperity for the community. And another factor worth considering—a prosperous farmer will, as a rule, work a good deal harder and to better purpose and will therefore be a

EDITORIAL REORGANIZATION.

FROM the rearrangement of the emblazonry higher up in this column, the reader may be informed that the editorial work on this journal has been definitely classified and considerably extended. The purpose of this progressive step is to improve our equipment so that the Pacific Rural Press may strengthen its position of unquestioned leadership in editorial service to the prosperity of its patrons and to the farther development of California in the industry of food production. California is so great in agricultural achievement and potentiality that it deserves a publication which shall exhibit breadth of resources, clearness of vision and accuracy of declaration commensurate with the quality of the present and prospective attainments of the State. For nearly half a century this journal has striven to render such service. It is the conviction of the present publisher that the time has come to enter upon a new phase of effort and investment on his part to the end that the publication shall be recognized as truly great from the point of view of service to California and truly representative from the point of view of all who seek to know and to love California and desire to live, to labor and to invest their resources for the development of the State.

To this end it is conceived to be essential to equip the journal with an editorial staff composed of writers and critics recognized as knowing particularly well the subjects assigned to each of them—as the result of their natural ability, long experience and wide observation of the attainment of others. That such qualifications are possessed by those whose names appear above will be more apparent to the reader as the chief message of each in each issue will bear his name and betoken also his choice and preparation of subsidiary matter under his subject. This detail is noted to indicate to the reader that the classified staff which we announce is composed of workers each of whose chief business is the service of this journal and not a group of persons whose names are displayed because of some honorary connection or incidental contribution.

It is a joy to this writer, who is now closing his forty-third year in the editorship of the Rural Press, to realize that the journal has attained position and patronage which justify the publisher in largely increasing his publication cost on the surety that his added burden and responsibility are a reasonable investment to enable this journal to assume the leadership and discharge the service which the progress of well-related and widely diversified agriculture in California requires.

This writer also desires to say to his personal friends that unfortunately this announcement does not mean that he will have an easier time or that he will do less in the making of this journal in the future. In his devotion to the upbuilding of his great public utility enterprise the publisher perhaps has overlooked the fact that in addition to doing our own particular work we shall now have to keep each of a bunch of acknowledged experts from jumping on each other's neck and all of them from jumping on our own! It is unfortunate that this crisis could not have been postponed until overwhelming victory sets Foch free for another job. It seems to be up to us to show him something in the line of allied command—but the result, whatever it may be, will be for the good of the reader!

* * *

UNITED FARMERS OF SANTA CLARA.

WE ARE comfortably relieved of our apprehension that the new farmers' organization of Santa Clara county might be the creation of an alien enemy or might have some other tainted ancestry. Three members of the association—C. E. Warren of Cupertino, R. P. Van Orden of Mountain View and H. G. Keesling of Edenvale—have given us the advantage of an afternoon's conference on the nature, methods and purposes of their organization and definitely assured us that they were working from their own initiative, that their immediate purposes were to do some political back-firing to check the progress of machine politics which pander to the desires of groups of irresponsible voters who strive to advance their own wills and profits without fairness to the dependable producing interests of the country. To secure such a square deal to the farming interests, the United Farmers propose three things: First, to go into politics; second, to exclude machine politicians and professional office-seekers from membership in their organization; third, to accumulate a strong voting and working force by unifying the agricultural electorate in effective promotive and protective effort for better citizenship and for fairness to the farming industry. These policies of the organization commend themselves to our judgment as fundamental and desirable. It is essential to the purposes of such an organization to get into politics and to prevent politics from getting into them.

* * *

STRICTLY A CLASS ORGANIZATION.

WHILE we approve the effective arrangements for exclusion of undesirable candidates for membership through an absolute censorship of nominations by an executive committee (consisting of all the officers and four other members from each of the five supervisorial districts of the county), we do not approve the prescription of eligibility for membership which says that "any farmer or any person wholly dependent upon farming for his livelihood" shall be eligible for election. Our objections to this provision are those which we have set forth in our previous discussions of the kind of organization which will be durable and effective in the promotion of agriculture. In brief, these objections are three: First, such a standard of membership aims to establish a "farming class" when no such thing really exists in this country; second, all organizations projected on such a basis during the last half century have failed to reach their objectives; third, ineligibility of persons not "wholly dependent upon farming for livelihood" is suicidal to the organization because it excludes from membership many of our best farmers—who are best because they have demonstrated their ability to do other things than farming successfully. The agricultural need of the time is the force of farmers who also know law, banking, trade, education, etc., because the advancement of farming depends upon these things. When absolute censorship of individual membership is, in our judgment, wisely provided for, as stated above, it is ridiculous to handicap such censorship by an exclusion act which will prevent admission of many whose cooperation will really insure the success of the undertaking. It is, of course, essential that genuine and sufficient agricultural interest and activity should be a qualification for membership—to be determined by the executive committee, just as integrity, innocence of partisan motives and purposes, etc., are determined. When you install a committee of twenty-five or more to pick and choose valuable members, they should have the power to choose from all who are genuinely in the business of farming. Of course, the three "united farmers" named above, who kindly came to talk over matters with us, did not agree to accept these views nor did we consent to forsake them!

IN POLITICS BUT NOT POLITICAL.

WE FIND much in the constitution of the United Farmers, of which we now have a copy, to approve and to allay our apprehension of their heading-in wrongly. The association is armed against disorder by this provision:

No person shall be admitted to membership who is a member of any I. W. W. organization or who is not wholly and completely loyal to the Government of the United States of America; and any member who, after joining this association, becomes a member or adherent of any I. W. W. organization or proves to be disloyal in word or deed to the Government of the United States of America, shall be promptly and speedily expelled by the executive committee.

We were also verbally assured that the United Farmers is not a scouting party for the drive which the Non-Partisan League of the Northwest is credited with framing up for the invasion of California and that the purposes of that organization, as commonly understood, do not receive the approval of the Santa Clara farmers. But of course the organization must be on the alert against an enveloping movement by acute organizers, whose arts "wholly" farmers are not always able to penetrate. They do say that a Non-Partisan promoter can go through a farming region on the quiet and get away with a bushel of promissory notes for dues, etc., before the smartest local gossip can float the first whisper of his presence. They surely are sharp about it and we doubt if their organizers are of the "wholly" farmer class. The organization must also be alert not to be "enveloped" by one of the gubernatorial candidates: there are a half dozen now doing still-hunting for the wholly-farmer votes at the coming primaries. Therefore, though most of the aims and purposes of the United Farmers as they are explained to us are commendable, we must advise our friends that it will be no fool's job to keep them so. Doing politics as farmers and doing politics with farmers often look alike and it takes keen insight to differentiate them.

* * *

WHAT POLITICS FARMERS SHOULD DO.

THERE are, of course, local purity politics which farmers and all other groups of exemplary citizens should work together to enforce. We understand that the United Farmers of Santa Clara are keen on this job and they probably have a good place for it. But it is in another and wider field, to which local purity politics is a gateway, which we believe all whose labor and capital are invested in farming should enter unitedly and effectively. Its purpose is two-fold: first to promote a square deal for farming in representation in a democratic government and in enactment of laws which shall insure to the business of farming economic equality of opportunity with other vocations; second, to protect the business of farming from exploitation by greedy and unfair interests, all the way from the bank to the bunk-house. To organize for this colossal undertaking only those "wholly dependent upon farming for a livelihood" is, in our judgment, to exclude from the effort a mass of farmers whose industry and investment naturally impel them to strenuous effort for a square deal to farming and whose experience in public affairs enables them to put up a winning fight. This is the reason why we contend that to secure these greatest things for farming, organization should proceed upon the basis of the business of farming and not upon any social basis which is conceived of as forming a farming class. California has now probably more than thirty thousand farmers tied together in co-operative business and they could certainly co-operate to cut that business free from outside imposition and exploitation, by doing the few political things which such freedom requires and which can be more surely done by influencing existing political parties than by trying to create another on a narrow class-basis.

* * *

ATTACKING ON A BROAD FRONT.

AGRICULTURE, as compared with other vocations, is a broad, all-pervading industry and must attack its difficulties on a broad front to make a great drive. The Santa Clara offensive is too narrow. It decimates its man power by ordering out only the "wholly livelihood" class, as has been suggested. It reduces its penetration by rejecting too many large-caliber shells. It

limits its outlook by trying to break the wings of its aerial craft. It ignores the fact that for more than fifty years the agricultural interests have striven unceasingly for recognition in education and scientific research and have succeeded in convincing people of other vocations and of no industrial vocation that all state and national institutions must provide for the discovery and dissemination of agricultural science as the foundation of more intelligent and profitable practice. And now we are given to understand that some, at least, of the projectors of the Santa Clara enterprise hold that the way to secure farmers' rights is to disown the educational victories of their fathers, knock out the supports of the institutional electroliers which they installed along a broad road of development and progress, and by lighting a lot of partisan torches strike out across a political mud-flat to intercept a moonrise! It is our conviction that such a notion of the way to get what agriculture needs is so clouded by prejudice and lack of understanding that it can compass neither victory nor even strategical advance. But, of course, the impulse to go forward, which the new organization embodies, is good. Possibly the determination to advance is more important at this moment than the manner of the going. The main thing is to get ahead: it is not hard to change the step.

FARMS FOR RETURNING SOLDIERS.

WE HAVE previously discussed the land settlement demonstration provided by the California Legislature of 1917 and the disposition of private owners to subdivide on the same plan, as involved in preparation for the enlistment of returning soldiers in self-supporting occupation. The same idea has been accepted and provided for by Congress and it was entrusted to Secretary of the Interior Lane to make ready parts of the national domain for such use. Naturally Secretary Lane selected to plan and project the undertaking, Dr. Ellwood Mead of the University of California, whose development of ready-for-cropping farms for the Government of Victoria, Australia, and later for the State of California, demonstrated his quality for leadership. Dr. Mead is now on a leave of absence from his university work and is in Washington, where he will probably be occupied several months assisting Secretary Lane in planning and setting in motion a system for making ready-for-occupation farms out of the raw lands of Uncle Sam's estate. It is also very interesting from a California point of view that H. T. Cory, the well-known irrigation engineer, who so tamed the rebellious Colorado river that it not only stopped its ravages in the Imperial Valley but carried its master to fame as the hero of one novel and the near-hero of another. And it is not strange that Uncle Sam calls these two California irrigation engineers to his novel service of making homes for returning war heroes. One can cut up land and the other can tie up rivers—both lines of action being indispensable to home making in the arid region which will be moist and the desert region which will be productive of added crops and multiplied citizenship. And California is well pleased to have had these engineers trained, experienced and ready for such an important national task. It would be a contribution to very proper State pride and satisfaction if someone would list and describe the functions of all who have gone from California to serve the country during the present war. It is very creditable to our State to have developed so many men and women with talent, training and patriotism to do such unique things in the service of humanity and of the nation. And having done their duty they will return to life and action in this State all the better Californians for their patriotic exile.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

A Straw-Prophet Needed.

To the Editor: Will it pay us to bale our barley straw this year? We have been told that it will cost us $5 per ton to get it baled. Will there be a very great shortage of feed this next winter so that the straw will be needed badly for feeding? And what would baled barley straw probably be worth next winter? What would be the best to use along with the straw—cotton seed meal or linseed meal? And how many pounds of meal should be fed to the hundred pounds of straw? What is the best way to mix the meal in with the straw, and can it be mixed before baling? What would cotton seed or linseed meal, or something else that would take the place of either of these, probably cost per pound?—B. D., Orland.

You need a straw-prophet and all whom we know of that grade are working full time on the agricultural division of the State Council of Defense and out of our reach. What baled straw will sell for next spring and how short the supply will be depends upon how much rain we get this winter. We should make a good stack of the straw and bale it out whenever we could see any money in it. We certainly would not ante up $5 per ton now to get into the straw game next winter.

The idea of making a balanced ration in the bale instead of in the tummy does not appeal to us. There can be no fixed ratio of oil meal to straw because the amount of meal to be fed to the animal depends upon the kind of animal and what it is being fed for. The range might be from 4 pounds to 24 pounds per 100 pounds of straw. Or, to put it in another way, supposing an animal would eat 25 pounds of straw a day and in one case you might wish to feed one pound of oil meal a day and in another six pounds. If you bale-in 4 pounds of meal to 100 pounds of straw, it might fit your first case all right, but if you wished to feed a steer six pounds of meal a day he would have to eat 150 pounds of straw to get it—which would make an elephant pot-bellied. Besides, we seriously distrust the durability of good flavor either in the straw or the meal after a time of such intimate association, and it might be that no animal would eat any of it—unless starving. Besides, again, linseed meal is worth about $75 per ton, or 3¾c per pound. There would be no business sense in adding from 15c to 90c to the first cost of 100 pounds of baled straw and meal without knowing whether anybody would buy the combination or whether any animal would eat it after a period of storage. The absurd calculation also shows that the intrinsic value of the straw which an animal can eat in connection with heavy feeding of oil meal is practically negligible.

All your questions seem to point to the chance of selling your improved straw to others to feed and we have discussed the proposition from that point of view. Of course, if you intend to feed it to your own stock, you had better save the cost of baling and let it help to buy the meal. If, however, you feel that you must bale the straw for the sake of convenience and desire to bale something in to improve its feeding value, let the balers put in alfalfa hay with the straw, about half and half. And if you wish to add linseed meal, do that sparingly at feeding time and with an eye out for the effects produced.

There is another aspect of straw-futures which you do not ask about, but you should have it in mind. How much straw will be required at the cantonments for doughboy and animal bedding? That is now being inquired into and it may influence coming values of all that is available.

Saving Old Paper Trays.

To the Editor: Will you print in the Press a suggestion to all grape growers to save their paper trays this coming season—at least not scatter them over the landscape? We have seen the wastefulness in former years and wondered why.—G. E. D., Reedley.

Certainly we will print it, and we presume you are right that the landscape would be handsomer if not littered up with old paper, but whether it would be desirable to gather up the old trays for future use in drying raisins is another question and one which we are not able to answer for lack of practical knowledge in that line. We can imagine that old, dusty and warped paper is not very good to put fresh, clean fruit on, and we are not sure that the effort to reclaim the dirty, misshapen stuff is worth the labor cost. As a rule the farmer who pays the bills may be trusted to save all he can, and if he lets such stuff go it is because it is not worth saving. Perhaps you had better organize a rabbit-drive and go after the trays. They say the Germans are making shrouds of it and they are needing a great many these days.

Alfalfa in August.

To the Editor: I would like to know if it will be all right to plant alfalfa in August. And would it also be all right not to cut until next year? I must leave my ranch in September. We have irrigation. I want to plant it before I leave. How much barley should I plant to the acre with the alfalfa, as that is the way I want to plant it? —F. C., Ellisworth.

If the land is a fine loam and you can fill it up by irrigation and then, when it gets dry enough to work well you plow and harrow down well, sow the seed and roll lightly, you may get a stand of alfalfa which will hold on well if you get a few showers in September. If you are not sure of all these things, you had better get the land in shape now, leaving the surface loose, and then work down and sow after the rains begin and the sun loses its edge. It need not be cut until next spring. Do not sow any grain with the alfalfa unless you wish grain more than alfalfa. If the latter is put in roughly and left to take its chances, the cost of the seed and work will be rather a risky investment.

Corn from Tassel to Silo.

To the Editor: In case of yellow corn, how long after tassels are out before corn should appear? About how many tons of silage to an acre? —G., San Jose.

Of course, the frame work of the ear is already developed when the tassel appears and connected up with the silk so as to receive the pollen from the tassel. If you mean the time from the tassel to the proper stage of the ear for the silo, we do not know how much variation there may be in it, but there is record of careful observation that from the first appearance of a tassel on August 6 the ears were fully glazed and ready for the silo on October 1—about eight weeks. The amount of silage per acre depends upon the crop you get—say from six to twenty tons.

Split-Pit in Peaches.

To the Editor: What is the trouble with my peaches? All varieties are attacked in the same way. The seeds split and the peach next to the seed has a hard, waxy substance and cannot be used unless it is cut out. All the peaches are perfect on the outside. Is there a remedy?—J. W. M., Earlimart.

The trouble is called split-pit, from its most obvious characteristic. It has been the subject of long and careful investigation by plant disease experts, but no causative organism has been found and therefore no killing or preventive medicine can be prescribed. The trouble is supposed to be caused by some growth condition which prevents normal development of the fruit, but what that condition is has not been conclusively demonstrated.

For Worms in a Lawn.

To the Editor: What can I do to exterminate a worm that has infested my lawn? It is about 1½ inches long and has only appeared in the last few days. They remain in the ground until the lawn is watered and then they come out in hundreds. You can see the effects of their work already. They are a little larger than the fish worm.—D. M., Rio Vista.

Possibly a light sprinkling of nitrate of soda would get the worms, but be careful not to use too much. Apply before watering. Our way, however, would be to borrow all the hens which are handy and let them loose after watering and watch the fun. Do it late in the afternoon, so they can go home without scratching down the front steps!

California Weather Record

The following rainfall and temperature record is furnished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., August 13, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm
Eureka	...	.20	.12	62	48
Red Bluff	...	...	...	100	62
Sacramento	...	...	...	96	54
San Francisco	...	...	.01	70	52
San Jose	...	...	.01	90	50
Fresno	...	...	...	98	60
San Luis Obispo	...	...	.08	74	52
Los Angeles	.02	.11	...	80	62
San Diego	.03	.03	...	78	62

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

Apple Growing in Watsonville District

[Written for Pacific Rural Press.]

Last week we visited a number of apple orchards in this section, accompanied by Donald D. Penny, Horticultural Commissioner, and Inspector H. B. Hopkins. The trees show a marked improvement in condition over that of a year ago. This is probably partly due to the dry year, but in the orchards we visited the results of careful spraying and cultural methods were apparent.

This well-known Rodgers Bros.' orchard has a full crop of apples—mostly Newtown pippins—and was getting its last good irrigation. Here the foliage was broad and flat, protecting the fruit and bark thoroughly. The large crop was well thinned, clean, of large size, and comparatively little mildew was noticeable. Mr. Rodgers sprays in winter with crude oil emulsion one year and lime-sulphur the next; and this appeals to us as being a "safe and sane" method of proceeding. We found the same course followed in other fine-looking orchards.

With regard to the mildew, all infected twigs are clipped off in winter. Then milled sulphur is used, with the arsenate of lead in April—about ten pounds to the tank.

The Wylye orchard on the Riverdale road showed a full crop of apples, while one not far away, on similar ground, was carrying a poor one of inferior fruit, partly due, doubtless, to a very thrifty growth of morning glory that carpeted the ground. This is one of the evils of renting an orchard. The average tenant will take off all he can get at the least possible cost to himself, because he is not interested in the permanent welfare of the orchard.

Silliman Bros.' apples were sprayed with lime-sulphur in winter and milled sulphur with arsenate of lead in April—crop 90 per cent normal, fine, clean fruit.

G. W. Bird has 40 acres of apples, part sprayed with crude oil emulsion and part with lime-sulphur. There appears to be less mildew where the oil spray was used.

The crop and the trees are clean and thrifty.

Fred Nohrden has a full crop of Newtowns on his 20-acre ranch. The foliage and fruit look well and the trees clean. He cultivates every two weeks and the trees are grateful.

The Baldwin orchard next door is planted to Bellflowers and Newtown Pippins in alternate double rows—a good plan for pollenization purposes. These trees are heavily propped.

As a summary of our observations in the above-named orchards, the trees had all received careful spraying, pruning, cultivation and thinning, carrying good, strong foliage and a good crop of clean, merchantable fruit.

The trees that were sprayed with crude oil emulsion showed less mildew than others.

Other orchards not so very far away were noticeable for poor foliage and inferior fruit by reason of (a) scale (we saw some on the fruit), (b) poor plowing and lack of cultivation, (c) morning glory.

In short, the orchards that have been treated with scientific care and faithful working, throughout the season, will yield handsome returns. Those that have been handled indifferently will give an indifferent profit.

Last year good apples sold at $25 to $27 a ton, orchard run, while the poorer orchards obtained about $22.

Very few wormy apples were noticeable—one grower claims he will pay a dollar a worm for any found in his fruit. The leaf roller has been rather troublesome here and there, but there will be a good, vigorous campaign waged against him next winter with the crude oil spray.

Bark-Paring for Pear Blight

To the Editor: I send a branch from a pear tree. I am anxious to know if it is pear blight.—J. S., Colfax.

[Answer by Prof. W. T. Horne, University of California.]

This is a genuine case of pear blight. There are some small beads of exuded material on the twig and when these beads were placed in a drop of water they diffuse and show great masses of bacteria under the microscope. Blighted twigs should be cut out carefully as fast as they appear and the blighted areas of the limbs should be dealt with. The old method of treating blighted limbs was to either entirely remove the affected limb or to cut away all of the affected bark and some of the good bark adjacent, since the blight travels somewhat beyond the point where it is recognized. Disinfect the tools and cuts with a solution of corrosive sublimate, one to one thousand parts in water. A more recent method for dealing with the blighted limbs cuts away the outer bark, but the inner bark is left. This treatment is said to check the progress of the blight and often succeeds in keeping alive enough inner bark so that the limb in question may be saved and not completely girdled.

Do Not Recognize the Worm

To the Editor: What can I do with my young apple trees, on whose body and limbs brown spots appear? These afterwards break and upon investigation I find a little wood worm, from one-fourth to one-half inch long, burrowing under the bark, even into the wood. I find also some four-year-old prune trees whose bark becomes rough and breaks, and I find a dust under the outer bark, and a new growth forming underneath. The trees seem vigorous and all right otherwise.—J. C. Mayberry, Los Molinos.

You had better cut out and send a section of the infested wood to the University of California, Department of Entomology. We know of no worm such as you describe common to your district. The flat-headed apple borer is not usually found far from the base of the tree—certainly not in the limbs, unless they are very badly exposed. You might knock off the rough bark and give the bodies of the trees a good dressing of Bordeaux paste.

GROZ-IT

HIGHLY Concentrated - Pulverized

Manure

A mixture of cattle and sheep manure from animals fed on cotton seed meal and cake and alfalfa (highly nitrogenous foods) aged for several years under climate conditions that remove moisture but prevent leaching and fermenting.

No odor.
No flies or insects.
No weed seed or foreign matter.
Many times plant food values of ordinary manure.
Guaranteed contents.
Nitrogen, 1.5 to 2%.
Phos. Acid, P^2O^5, 1.25 to 2%.
Potash K^2O water soluble, 4 to 5%.

We are shipping GROZ-IT in immense quantities to Southern and Eastern states, where present freight rates make it $10 per ton more than cost to you.

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Table Grapes at Lodi.

Probably not over 2500 cars of table grapes will go out from the Lodi district this year—about 70 per cent of last year's output. Shipping will start about the 20th to 25th of the month. Drought has been hard on the vines in some sections and the vine hopper is apparent in many vineyards, their ravages laying the vines open to such an extent as to affect the yield. Forty dollars has been offered for Tokays unpacked. Several thousand tons of wine grapes have been contracted for in the above district at $20, $25 and $30 a ton. Others are contracted for subject to legislation. We noticed one crop of Tokays and Cornichons that has been sold entirely to the winery and the reason was apparent. Another vineyard of Tokays and Muscats was receiving a good irrigation (August 10). We noticed some cracked grapes here, but as the second crop was double in amount to first crop, the irrigation will doubtless help to mature this without damage to the fruit, unless mildew supervenes. The almond crop in the Lodi section will probably reach 65 per cent of a crop.

Red Spider Ravages Almonds.

Almond trees have suffered considerably, first by reason of the dry year but especially through the ravages of the red spider. It is noticeable from the roads as one passes along, many trees being almost bare of foliage. Being the worst sufferer from the action of mites, the almond should be watched each year and sprayed with some form of sulphur or dusted. This must be regarded as part of the year's work each year and the trees watched about the end of May and then treated promptly. It is no use waiting until half the leaves are grey and then expecting the function of those leaves to be restored to their pristine vigor. It is as important to look after this work as it is to supply oil to your crank bearings. A number of orchards will have to be pruned for new wood this year to take the place of that devitalized by drought and mite and on which there are now a number of stick-tights. In pruning back, the cuts will be made to good live wood—not merely to where it shows "signs of life."

Red Spider Attacks Prunes.

To the Editor: I have some 3000 or 4000 young Sugar and French prune trees which the red spider is working very hard on. Would lime-sulphur spray, 50 to 1, burn the young trees?—W. L. B., Morgan Hill.

We noticed quite a little mite injury in your section when we were through the valley last week. If you use lime-sulphur on them now, you can use as much as 40 to 1 without burning the young trees; or you can use a dust of one-half sulphur and one-half hydrated lime if you do not want to spray. It is a good plan to watch for these mites each year before the damage has been done, say the latter part of May in your section, and use your dry or atomic sulphur then, as leaf tissue once destroyed cannot be rebuilt in the same leaf. Spray thoroughly next winter with lime-sulphur.

Lye in the Prune Dipper.

The amount of lye used in dipping prunes varies. About 1 pound to 20 gallons of water is the usual solution, but prunes have to be watched to see the amount is not overdone, too much lye being injurious by toughening the skin, and all concentrated lye is not always of equal strength. The function of the boiling lye is to remove the water-proof coating (bloom) so that it may cure more rapidly and evenly. This process is considerably shortened and, it is thought, more weight retained in the cured fruit if they are dipped or sprayed with clean water after coming out of the dip and before going onto the trays.

How Cut Fruit Gets Moldy.

Clean trays are very essential in drying apricots and peaches for quality. Mold quickly gets from dirty trays onto cut fruit. Pine is preferred because redwood is likely to stain the fruit.

Good Crops and Prices.

Sonoma and Napa counties have bumper crops of grapes, and we hear of wonderful prices having been offered, though little business has yet been done.

Interstate Quarantine Conference

[Written for Pacific Rural Press.]

G. H. Hecke, our State Horticultural Commissioner, is proceeding with his customary energy and devotion to California fruit industries to the realization of his plan for an interstate quarantine conference, which will be held in Riverside, November 11 to 16.

Under the present arrangement each State has its own particular set of ordinances, each drafted in particular regard to its own needs and without consideration of its relation to the others, leaving its neighbors to practically work out their own salvation. It has long been Mr. Hecke's desire to bring about a better understanding among the Western and Pacific States in regard to quarantine problems of mutual interest. Correspondence has proven entirely inadequate, as there still persists an element of conservatism.

After a long study of the question, Mr. Hecke concluded that the first move was to bring together the officials directly concerned in this work in the various States and effect a permanent organization of the different States whose interests are directly involved. He presented his plans to the officials of all of the Rocky Mountain and Pacific States, eleven in all, and they have all signified their desire to be represented. In addition to these the Federal Horticultural Board, Canada, Hawaii, Florida and Lower California have declared their interest and desire to send delegates.

It will be the week after the next State convention of fruit growers and farmers and therefore all will have opportunity to join with our nurserymen and county horticultural commissioners and the delegates from other States in discussion of subjects of mutual interest. It promises to be one of the greatest conventions in the fruit growing interests ever held in the State.

The FAMOUS HARDIE JUNIOR SPRAYER

We believe this is the greatest small power sprayer ever manufactured. And placed on the market with phenomenal success in every fruit section in the United States, and vouched for by thousands who own the FAMOUS HARDIE JUNIOR. Equipped with 1½ h. p. engine, battery ignition, 150-gallon tank with mechanical agitator, capacity of 4 gallons per minute with a steady working pressure of 200 pounds, and two 25-ft. of the best spray hose, fitted with spray rods and nozzles; 4-inch tire truck with pole or shaft.

ALL FOR $275.00, DELIVERED ANYWHERE IN THIS STATE.

If truck is not needed, deduct $45.00.

These prices are subject to change without notice. The wise buyer will place his order now for future delivery.

This low price is made possible by big production.

If you are interested in other types and sizes of the HARDIE POWER SPRAYER, write us for the big spray catalog, and learn why we can offer more spray pump value than any other spray pump manufacturer. Hardie Spray Hose is the Safest Hose to Buy.

GIANT FARM POWDERS

STUMPING — AGRICULTURAL

Western soils, stumps and climate need western explosives. That's why Giant Farm Powders cut the cost of clearing western land. Manufactured for more than half a century especially for the West, they naturally give better results on western farms and orchards.

Giant Farm Powders lead in economy because they go further than ordinary explosives. They break up the stumps thoroughly thereby cutting down labor cost. Money and trouble are saved because of their low freezing qualities.

Warning: If your work is done with any other powder or dynamites, the chances are it will not be done as well as with either of the two Giant brands: Eureka Stumping or Giant Stumping. Look for the Giant trademark on every case, and be sure of the genuine,

How to make the farm pay more money is explained in "Better Farming." This big free book, fully illustrated, will be sent you as soon as we receive this coupon.

Pear Growers Association Sold Out

[Written for Pacific Rural Press.]

In an interview with Frank T. Swett, manager of the California Pear Growers' Association, he stated that association members in Contra Costa county have received 11c for their dried pears. The association this year did not undertake the selling of all the dried pears of its members owing to the fact that the organization did not complete its plans till the 1st of July. Next year it is probable that it will perfect plans for marketing all the dried pears for its membership.

NEW PLANS FOR COMING SEASON.

Plans are being considered for an association dry-yard, to be financed by the growers of the Sacramento district, whereby all their windfalls and No. 2 pears may be dried, thus insuring a uniform grade of output. This season an unusually large tonnage of windfalls and No. 2s have been used by the canneries, owing to the heavy Eastern shipments, which left the canners short of No. 1 pears.

ONE CAUSE OF SHORTAGE.

The probable loss in one of the shipping districts was, it is estimated, in excess of one ton of wormy pears to the acre, which will aggregate a loss of $210,000 in this district alone. Worms have been exceptionally bad this year, probably partly owing to a divergence from the usual time of applying the arsenical sprays because of the shortage of experienced labor. To avoid this in the future the growers in one section may decide to contribute toward the expense of obtaining an entomological expert for a couple of months to determine the time of the activities of the broods and the psychological moment to swat the bugs. If the association can be the instrument of an educational campaign for the control of codling moth, it is possible that it can save the growers of California a quarter of a million dollars a year, or one hundred times the expense of the entire operation of this association.

MEMBERSHIP OF THE ASSOCIATION.

The association within ten days will have completed most of its deliveries to canners. The membership of the association at present comprises some 250 growers. Out of this number there have been only four growers, so far, whose deliveries have been below standard. These instances have been largely due to the inability of growers to secure sufficient experienced help. In every case the association has made adjustments satisfactory to both the canner and the grower.

REGULATING DISTRIBUTION.

In previous seasons a considerable tonnage of pears has been sent to Los Angeles. This season it has been the policy of the association to discourage shipments to Los Angeles, as the fruit has been needed for the use of the canners in Northern California. This distribution has been of material assistance to the association members in the South by protecting the Southern California markets from being glutted by Northern California pears.

The representative of the Pear Growers' Association, W. C. Howe, will be in Sonoma and Napa counties for the week. A large number of growers who failed to secure the benefits of membership for this season are now signing up for future seasons. From other sections of the State applications for membership are coming in by mail.

Condition of the State's Fruits and Nuts

[Written for Pacific Rural Press.]

The following shows the condition of some of the various California fruit and nut crops on August 1, 1918, and comparisons with 1917 and 1916, as per report compiled by the Bureau of Crop Estimates, U. S. Department of Agriculture, received through the California Field Agents:

The past month has been generally favorable to fruits and nuts, with the exception of oranges and lemons. The June drop continued well into July, affecting the navels particularly. The condition of navels was 56 and Valencias 82, and 65 for all oranges. Conditions are much better in Los Angeles, Orange and Ventura than in other citrus-producing counties.

Products—	1918	1917	1916	Average
Oranges	65	45	90	82
Lemons	86	55	89	83
Apricots	80	70	59	*72
Almonds	70	64	73	*74
Prunes	72	95	67	*78
Olives	70	67	82	*80
Walnuts	83	80	80	*83
Figs	100	94	..	..
Plums	74	84	..	..
Grapes: For wine	93	93	78	..
For raisins	101	98	85	..
For table	92	95	91	..

*Seven-year average

How Fruit Pits Are Used

To the Editor: I saw in your paper a few weeks ago about saving peach and apricot pits for the Government. Now, the report here is that it is pro-German and they are not wanted by our Government. Would you please answer through your paper as to this report?—C. A. C., Potter Valley.

The Prune and Apricot Growers' Association, in their contracts with growers, guarantee their members $31.50 a ton for apricot pits, cash on delivery, and whatever further profit may develop from their operations, which is quite an addition.

The kernels are valuable for the essential oil that is extracted from them, which is used in various chemical and commercial preparations. The meal resulting from crushing and expressing is used in the preparation of macaroons and other confections. The shells are going to the Government. We understand they are burned to a charcoal, which is used in the gas masks in a preparation through which the air is filtered for clarification. Peach pits are burnt for the same purpose, and the Peach Growers' Association is gathering them. We cannot understand the saving of these for any useful purpose being pro-German.—Editor.

Hop picking began in the neighborhood of Wheatland early this week.

TANGLEFOOT FOR CANKERWORM

Cankerworms were so destructive to foliage and fruit last year in certain sections that orchardists were compelled to spray them, but not before considerable damage was done. The female moths, being wingless, can be caught by tree tanglefoot as they ascend the trees to deposit their eggs. These bands must be in place by the middle of September and occasionally renewed till spring, as late as the end of April for both species.

The Sacramento Valley Irrigation Co. orchards south of Hamilton City, on the Sacramento river, have a heavy crop of peaches and a good crop of prunes on young trees. The Smyrna fig trees look thrifty, but are not bearing much yet.

Big Game Rifles
and Metallic Cartridges
for Shooting Right
STILL-HUNTING—stalking your game, like a sportsman—appeals as strongly as ever to the man who is all man. But to bring home venison it is necessary nowadays to shoot *right*, at the first opportunity—it may be the last.
When that well earned chance comes, be ready with a Remington UMC Big Game Rifle (either pump action repeater or the autoloading model), made to shoot *right*. Has the speed, the accuracy and the punch to do its work quick and clean.
Easy to shoot because fit, balance and design are *right*—no lever or bolt to blindly grab and wildly yank, your hands stay *right* for shooting—handles nicely and is comfortable to carry—simple, strong and reliable.
To complete *the perfect shooting combination*, buy Remington UMC metallic cartridges, for years the *right* choice for use in all kinds of rifles all over the world. When improvements are made in metallics, Remington UMC makes them first.

How Sulphur Acts in Fruit Curing

To the Editor: I desire information on the chemical action of burning sulphur on peaches. Is it the first fumes which bleach the fruit, or is it the action which follows after the sulphur is burned out and all gas and fumes apparently settled? When one enters a bleacher in the morning after the fruit has remained in the closed house all night and every bit of sulphur is burned and trays are cold, there is still a something in the air almost choking. Unless the fruit is overripe or the amount of sulphur excessive, I find the fruit holds its color better and makes the best fruit. Is there anything whatever in the theory that the amount used should be divided and the last half put in after the first half has burned out?—F. G. W., Red Bluff.

[Answer by Professor J. S. Burd.]

When sulphur is burned it is converted to a gas known as sulphur dioxide. This gas is invisible. A very small proportion of it, however, is probably converted into sulphur trioxide, which absorbs moisture from the air, forming sulphuric acid, which is visible, even when present in minute quantities. Presumably the bleaching of the fruit is not due to this visible material but to the invisible material, which, on coming in contact with the fruit, oxidizes. This oxidation of sulphur dioxide and the concurrent reduction of certain constituents of the fruit causes the latter to change its appearance in the characteristic way observed in sulphur fumigation.

In fumigating dried fruits the practice varies as to the length of time the fruit is kept in contact with the gas, depending principally upon the kind of fruit and the preference or experience of the person applying it. Most fruits are sulphured for about three hours. In order to save time, however, I believe that many fumigators put a batch of fruit into the sulphur house the last thing before stopping work for the day and allow it to remain over night. With the same amount of sulphur burned, this treatment is of course more rigorous because of the greater length of time during which the fruit is exposed. Doubtless any fruit kept under this condition would be bleached to a greater extent than that bleached for a more limited time with the same amount of sulphur. However, some growers probably do not use as much sulphur when bleaching the fruit in the house over night as they would if they were going to leave it only for three hours. Whether or not the same bleaching effect would be produced would then depend upon two factors—one, the greater length of time to which the fruit was exposed, and the lesser concentration. Under these circumstances the bleaching effect might be the same.

With reference to the specific questions asked by your correspondent, I would state that the first fumes of the burning sulphur do bleach the fruit, but the action is progressive and is a function of the entire time during which the fruit is exposed. I do not see any reason for dividing the treatment except that for leaky sulphur houses the concentration might fall so rapidly that an additional treatment would be necessary.

University of California, Berkeley.

Where Deep Plowing is Folly

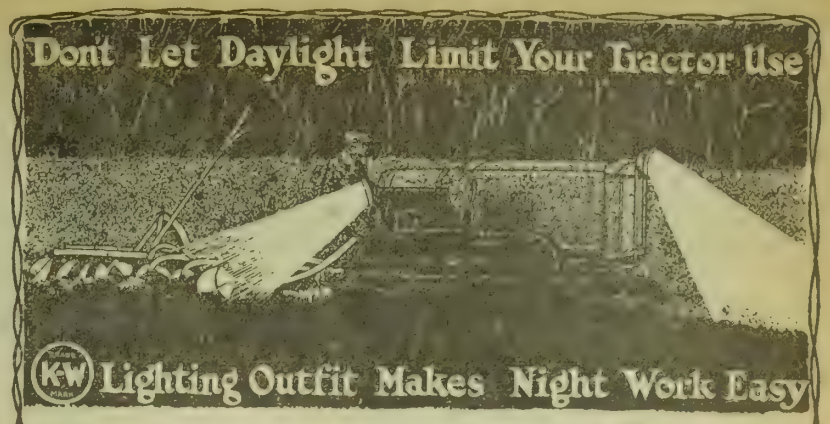
[Written for Pacific Rural Press.]

Two reasons make deep plowing for grain objectionable in the adobe hills of Alameda county, as stated by T. D. Carneal, whose ranch covers 2000 acres there. One reason is that deep plowing turns up the mustard seed that have fallen into cracks and cannot grow until turned up nearer the surface. Mr. Carneal bought a five-bottom heavy disk plow a few years ago and turned over 40 or 50 acres pretty deep, using a tractor. He wants to sell the plow now, because the next year nothing but mustard could be seen, and it grew so coarse that it would not go through the draper. There is a way of avoiding this, as practiced by Mr. Mitchell, a neighbor of Mr. Carneal. He mowed the mustard and grain when it was a foot tall. The grain recovered vigorously and the mustard branched out with fine laterals, which did not hinder in harvesting.

But two inches of tilth are enough here. More is worse, because it is so hard to compact the under soil after plowing, even with a corrugated roller, which Mr. Carneal says is one of the greatest implements on a ranch. If the under soil is not compacted, it dries out and the roots cannot grow there. The only practicable way is to fine the stubble surface well with a disk harrow, without plowing. This gives wheat and barley plants a good start and mulches the soil against evaporation. The grain roots eat their way readily through moderately moist adobe, such as prevails here under such treatment in all years when the winter moisture goes deep enough to meet the moisture from below. If there is a dry layer between, look out for a short crop. It must be admitted that less of the winter rains can be retained than if the land were plowed deep; but that this is a minor consideration is shown by this year's almost full crop of grain hay on the Carneal ranch.

PUMP SAVED PRUNE TREES.

"I irrigate in the fall and save my trees for the next crop," says W. J. Percy, prune grower of southern Santa Clara county. Four acres of Mr. Percy's French and Imperial prunes have averaged $347.70 per acre for four years. He irrigates late in September or early in October and in dry years again in December and February. It was during the dry years of 1912 and 1913 that Mr. Percy saw that a centrifugal pumping plant for his five-acre place would cost less than he might lose without it. He put in a well 134 feet deep in which water usually stands 16 feet below the surface. He threw up high checks and pumped about six inches of water into them late in October. That wet about two feet deep, as he found by digging, so he left the checks and irrigated again about February 1. In March he filled the checks again, so about 18 inches of water had been applied. The loss of water by evaporation after such flood irrigations was figured at about 30 per cent, so since that time Mr. Percy has irrigated by six to eight furrows per center.



IN selecting a lighting system, you want powerful, steady light—instantly available without complicated electrical devices to maintain and give trouble.

With a K-W Lighting Outfit there is *no* storage battery to sulphate or short circuit or need weekly attention, whether you are using your lights or not. There is *no* commutator or brushes to burn out—*no* complicated cut-out to go wrong, *no* delicate ammeter or voltmeter to watch or become inaccurate through jolts and jars. The K-W *needs no* attention except for an occasional oiling. There is *no* upkeep expense.

A trouble proof, low tension K-W Magneto or generator furnishes the current. Voltage and current output is automatically regulated without governor or other device. The three bar generator furnishes current for a trouble light and two 1600 candle power headlights; the four bar generator for two 2000 candle power headlights and trouble lamp.

The K-W Lighting Outfit consists of a generator, two parabolic headlights, wire, switch, bulbs and trouble lamp. It can be belt or friction driven and is provided with mounting to fit *every* tractor.

The K-W Lighting Outfit gives a steady, powerful light, at a moment's notice, when engine is running. Should you ever require light at any other time, a hand flash lamp will give you all the light required. Surely you don't want to put up with a lot of complicated regulating devices, storage batteries, delicate meters, etc., for such an occasion. Remember, with a K-W there is no maintenance expense.

Write today for further details, prices, etc., giving make and model of your tractor.

California Grain Growers Organized

Written for Pacific Rural Press

The California Grain Growers' Association formed a temporary organization in the Senate Chamber at Sacramento, August 8, 1918, and will meet again during the State Fair to act upon the report of the "Committee on Permanent Organization" and other committees. Delegates were present representing Tehama and Imperial counties and all the grain districts between those extremes. Dr. W. H. Walker of Willows, much experienced in organization matters, was elected temporary chairman. E. A. Brim of Williams acted as secretary. There was warm discussion of problems confronting grain growers, and of the necessity of an organization to get fair prices to producers for this year's crop and all the crops to come, especially in view of the miles of wheat stored in Australia awaiting the boats which will carry it at the end of the war. No resolutions were adopted, however, pending the reports of several committees, to be made, if possible, at the next meeting. These committees are as follows:

PERMANENT ORGANIZATION.

Committee on Permanent Organization: L. Tarkey of Sutter county, J. H. Harlan of Yolo county, E. Lindstrom of Glenn county, Martin Kuster of Yuba county, E. L. Sisson of Tehama county, R. S. Seydel of Placer county, J. L. Davis of Madera county, G. H. Winton of Merced county, R. G. Hill of Imperial county, and Aubrey Collier of Solano county. This committee decided to meet in Market Director Weinstock's office, August 22, after conferring with all the growers possible in their own counties. There they will agree on a form of organization to take back to their home counties for further criticism. They will meet again just preceding the general grain growers' meeting at the State Fair and revise their plans into one which will be reported to the delegates. If found satisfactory, a campaign will at once be inaugurated to get every grain grower to co-operate in producing results for the good of all. Col. Weinstock has placed the records and facilities and legal talent of his office at the committee's disposal.

MARKETING THE PRESENT CROP.

A Committee on Storage and Distribution of the present crop was appointed, as follows: C. A. Kilkenny of Solano county, Andrew Kaiser of Glenn, C. C. Cook of San Joaquin, W. E. Dengley and J. Poundstone of Colusa. This committee's job will be to devise ways of getting a right price for this year's crop and of financing growers who want to store and hold their grain until the bulk of the crop is marketed. Mr. Kilkenny says we may take off our hats to the committee if it succeeds. Part of its duty will be to present recommendations regarding the bulk handling of grain, as already practiced at six or eight points with marked success. It was noted that the Food Administration Grain Corporation, which blocked the movement for bulk handling of this crop, will not oppose it any more.

STANDARDIZATION LAWS NEEDED.

A Committee on Legislation has what Dr. Walker deems one of the most urgent duties to perform—that is to formulate suitable laws providing for State standardization, grading, and certification of grain, as now practiced in Iowa, Illinois, Wisconsin, Minnesota, the Dakotas, and others. Additional legislation in the interests of grain growers may be proposed. The committee is composed of George Carr of Yuba county, George Sawyer of Stanislaus, and J. L. Mendenhall of Colusa.

NEXT YEAR'S PRODUCTION.

The ever-present and pressing need for increased production next year, as urged by the Government, is to be pushed by a Committee on Increased Production representing each grain-growing county. Not all have been appointed, but the following were named: C. T. Day, Arthur Kech, W. D. Cardwell, A. Hagemann, W. W. Foster, R. M. Filcher, B. D. Irvine, Carson C. Cook, S. L. Heisinger, Frank Bennett, E. L. Sisson, O. L. Raper, F. A. Edinger, and O. E. Lambert. State Leader of Farm Advisers B. H. Crocheron pointed out that the Government asked for 80,000 acres of wheat in California in 1917-18 and that California "went over the top." The Government now asks 45,000 additional acres for the next crop.

SEND IN YOUR SUGGESTIONS.

All the committees ask grain growers to submit suggestions promptly so the organization may fit California conditions in the most universal way. Mr. Sisson pointed out the need of organization by saying that grain buyers are out using every conceivable device to induce growers to accept prices which the latter deem ruinous. Some are telling growers that all restrictions as to substitutes for wheat are to be removed, that the crop is a whopper, and other common arguments?

INVITED TO SEE ELEVATOR.

Grain growers in general are invited to inspect Andrew Kaiser's grain elevators a few miles south of Hamilton City and northeast of Willows on August 20, when Mr. Kaiser will show how grain is handled in bulk, paying the extra costs by the saving in labor, sacks, etc., the first year.

Bean Straw for the Silo

To the Editor: We do not have, and are unable to obtain, as much information concerning the making of silage from bean straw as we would like to have. We have sought information on this subject from various experiment stations scattered over the United States, as well as the agricultural colleges. In a State like yours, where there is so much of this waste product, there must be a few isolated cases, at least amongst the growers of beans, where this idea has been pretty thoroughly tried out. Can you give us any information on the subject or the names and addresses of a few farmers who may have knowledge of who have tried this out. We will greatly appreciate it if you will give us any information you have on this subject or put us in touch with anyone who can give us reliable information about it.—Subscriber, Oregon.

[Answered by Professor F. W. Woll.]

The writer does not know of anybody who has made bean-straw silage. In bean-growing sections of our own and other States this by-product accumulates in large quantities and is generally utilized for feeding stock, especially cattle and sheep. As it is quite dry at the time of harvest and, as a rule, contains no more moisture than ordinary hay or cereal straw, it can be readily stored until wanted for stock feeding. This fact renders it rather unnecessary to make silage of the straw, and there would be two other objections to this method of preparing the straw for stock feeding, viz.: the inconvenience and difficulty of adding sufficient water as filled into the silo to insure correct silage fermentations, and the rather strong odor of the resulting silage, since bean straw is relatively high in protein, like other leguminous plants or plant materials. I cannot, therefore, see any advantage of making silage out of it. If there is any difficulty in getting the straw sufficiently dry to keep it from molding, the silo offers a method of utilizing it for stock feeding. The quality of the silage would be improved by mixing the straw with green sorghum or corn, and this method would also render it unnecessary to add much water, if any, in the filling of the silo.

Bean straw from different varieties varies considerably in its content of valuable feeding materials, as will be seen from the analyses of "California Beans and Their By-Products" as published in Bulletin No. 294 of this College of Agriculture—"Bean Culture in California," by G. W. Hendry. Most of them furnish at least one-half as much feed, ton per ton, as the average grade of alfalfa hay, and in these times of scarcity of feeds and high feed prices every ton should be utilized for stock feeding. This holds true with cereal straws as well.

Potato Markets May Be Closed to California

To the Editor: Recently some eight or nine carloads of California potatoes have been condemned in Seattle alone for tuber moth infestation and have been ordered returned to shippers. In Portland a carload of potatoes was found infested recently and steam was turned into the car and the whole lot cooked. Seattle papers advertise these facts and claim that half our California potatoes are infested with the moth. This means a great loss to potato growers and shippers and to the good name of the State. As you mentioned in a recent issue of the Pacific Rural Press, Washington finds it necessary to send an inspector to California to inspect shipments of potatoes bound for his State to prevent the shipment of infested stock. If for no other reason than State pride, California should see that no potatoes are shipped to Oregon and Washington that are infested with tuber moth. The tuber moth can be controlled here and inspection should be so rigid that our neighboring States should have no fear of such an important food product as the potato. California needs this northern market and these States need our potatoes, and some action should be taken to prevent this annual recurrence of losses to those engaged in this industry. Idaho now has a strict quarantine on California potatoes and Oregon and Washington markets also may soon be entirely cut off unless some steps are taken to prevent the shipment of infested potatoes.

Another pest now threatens the potato industry of our State. The Colorado potato beetle has been in Oregon for several years and is spreading in that State. The Colorado potato beetle bears the same relation to the potato industry that the codling moth bears to the apple industry. If this beetle is permitted to enter the State, it means that potato growers will be obliged to continually spray the vines to prevent the ravages of this insect. At present the California potato growers, except in a very small portion of the State, do not find it necessary to spray for foliage troubles.

The potato industry of the State is an exceedingly important one and it has not received its share of attention from the agricultural interests of the State. Our present inspection law deals only with seed potatoes and this places the whole burden of expense upon the grower, which, in the present stage of the industry, is too great for him to bear. This law should be amended to cover other phases of potato production and distribution, and should also be sufficiently comprehensive to include other important vegetable crops as well, with a sufficient appropriation to make it possible to do real constructive work for the vegetable industry.—W. V. Shear, Fairport, Modoc county.

FARMERS AND THE FOURTH LIBERTY LOAN.

To the Editor: From all indications the fourth Liberty Loan, which comes on in October, is going to be a whale. It does not require any argument to show you that the farmers will have to absorb a large part of this loan. They did splendid service in the last loan, but that was only a beginning.

The point I am trying to make is that it will be necessary for the people of agriculture to dig deeper than they have ever dug before. The participation in the fourth Liberty Loan by the farmers is largely up to you. Harvest time is at hand and it is needful for the farmer to convert his crops into cash. It is also needful that he should be told by someone in whom he has confidence that he must lay aside part of his money to be used in buying Liberty Bonds. Just at this time it is not wise to buy additional farm lands, build new houses or do anything that might in any way interfere with the success of the fourth Liberty Bond issue and the winning of the war. May I, therefore, ask you to ring the changes loud and strong on the necessity of the farmer saving a large part of his income this time for Liberty Bond investments in October?

The failure of $2.40 wheat, the lack of labor with which to plant and harvest, and the inequalities under which the farmer labors are all worthy of consideration, but regardless of these or anything else the bond issue must be sold, and saving of what money is possible for Liberty Bonds is immediately urged.—D. O. Lively, Director Agricultural Division, Twelfth District, San Francisco, July 17.

Prices to govern the sale of flour and milling products were given out by the U. S. Food Administration this week. These prices will be in effect through the crop year of 1918-1919 and are made on the base price at seaboard points. Jobber's prices must be not more than 25c to 50c a barrel above delivery cost and retailer's prices not over $1.20 a barrel more than his cost price.

THE SANDUSKY TRACTOR

"THE LITTLE FELLOW WITH THE BIG PULL"

How Will You Meet the Labor Shortage?

Farm help has always been a serious problem. Today it is far more so. The "boys going to the front" is no longer a dream—it is a grave and serious reality.

While this condition is serious for the manufacturer, it is far more so for the farmer. When we stop producing food stuffs everything stops.

How are you going to meet this emergency? Are you going to depend upon Providence to send you help when you need it, or are you going to prepare yourself to do the work of several men and teams?

The Sandusky Tractor will enable you not only to get along with less help, but it will also make it possible for you to do your work in better season—in less time—at less cost than formerly.

By plowing early and deep, thoroughly preparing your seed bed and planting on time—all single handed with a Sandusky Tractor, you will produce bigger and better crops, serve your country and make more money.

There is today no good reason why you should not fortify yourself with a good farm tractor. If you do not have the ready money available, your banker will help you, providing you are considering a good, tested and guaranteed machine, adapted to your needs and backed by a reliable manufacturer with a reputation for standing behind his product.

Satisfaction Guaranteed

When buying a Sandusky Tractor you take no chances. We demonstrate its adaptability to your work, personally instruct you in its operation and care, and then back each machine, whether purchased direct or thru a Dealer's Sales Room and Service Station, with the only Guaranteed Free Tractor Service plan in existence.

Write us today fully outlining your local conditions and requirements. Give your acreage under cultivation and to be cleared, crops, per cent of grades encountered on the farm and road, belt work, etc. We will gladly give you the benefit of our experience in advising you without obligation.

Ask for copy of "Power On The Farm," issue J-83 covering the 10-20 Model J, or E-83 covering the 15-35 Model E Sandusky Tractor. Write today.

SOME REMARKABLE PROOF OF SANDUSKY STAYING QUALITY

"I got my engine in May, 1915, hauled wheat with it, then drove 150 miles to another farm with a load of machinery and plowed 550 acres, prepared and drilled it to wheat, then drove back home and did our threshing. In 1916, drove out there again and hooked the header and boxes to it and cut the wheat, then prepared 550 acres of ground and drilled 750 acres. This year we hooked on two tanden discs and summer-fallowed 575 acres and drilled it. My boy and I have done all the work, and excepting harvesting and threshing we have never used a team for anything only to take the header boxes to stack and haul the wheat from the separator.

Yours truly,

H. R. BALL."

General Agricultural Review

Field Crops.

A yield of a bale of cotton to the acre on the 1500-acre tract planted by the Dodge Land Company in Butte county is expected.

Orange county has the biggest bean acreage in its history. By the end of August the bean harvest will be going at top speed.

The $2,000,000 factory of the Spreckels Sugar Company at Manteca has begun operations on a large supply of new beets.

The first sweet potatoes exported this season brought 5c a pound, and it is expected that this will be the season's ruling quotation.

They are now harvesting their grain on the Mendocino coast, and much of the late-sown wheat yet to be harvested is as green as spring time.

Organization of the State-wide alfalfa association is progressing favorably. Alfalfa acreage in the State so far signed up totals between 18,000 and 20,000.

It is reported that California hop growers will demand elimination of tobacco fields should Congress pass legislation detrimental to the hop-growing interests.

Alfalfa silage spoiled far back from the doors because they were not properly tightened on the J. B. Cooper ranch in Monterey county, but the rest of it made fine feed.

The factory of the Sacramento Valley Sugar Company at Hamilton City anticipates that the sugar production at the mill will be probably twice that of last season, when 59,546 bags of sugar were turned out.

Rice growers of the Sacramento Valley are preparing for an offensive against ducks, which swarm into the fields and damage the crop. This movement is being taken in spite of the protests of the State Fish and Game Commission that the killing of ducks out of season for crop protection is illegal.

The success of the bulk handling of grain in elevators is shown by Andrew Kaiser of Hamilton City, who says he is now saving the labor of 18 men in operating three harvesting outfits. Four of the six big bins, each holding a million pounds of grain, have been filled with only one man in attendance to operate the weighing, cleaning and operating machinery.

A special reporter states that onion prospects fell off considerably during the past month. Bulbs are small to medium size. A few large shipments are beginning to move. An average yield of 200 sacks of 100 pounds each per acre is expected. Some field 300 sacks. Growers are receiving $1.80 to $2 per sack on river bank. Indications are they will hold for higher prices this year.

Deciduous Fruits.

California has sent to her soldiers in France $23,000,000 worth of dried and canned fruits in the three weeks' period ended August 8.

Fruit growers of Sutter county complain that they are likely to suffer considerable loss as a result of the inadequate supply of boxes in which to ship their fruit this season.

The first commercial shipment of peaches from Patterson were made last week, four cars going to canneries. It is estimated there will be 1000 tons harvested in the next two weeks.

Of 44,573 packages of pear and plum shipments out of West Sacramento during July, only 66 packages were condemned. At Winters for the same month, of 7600 packages inspected at that point, 367 were condemned.

The prune crop of Anderson Valley will amount to 1500 or 1700 tons, according to reliable estimates. Most of the crop has been sold on an 8c or 8½c basis. The harvest will open on August 20 for Robe de Sargents and about September 1 for French varieties.

H. A. Hyde of Watsonville says that apricots will be planted largely this year in his section, chiefly Blenheims and Royals. Pear trees come next in demand, the varieties asked for being Bartletts, Beurre Clairgeau and Winter Nellis respectively. Comparatively few prunes will be set out in this section.

Ruehl-Wheeler report a large demand for French prunes on Myrobolan stock, with considerable demand for French on almond. The demand for Bartletts on Japan stock is good, but very few peaches asked for and those are chiefly Tuscans. In almonds the Nonpareil seems to be the favorite, coupled with a demand for some Drake's seedlings for pollenization.

Leonard Coates is prepared for a large demand for prunes—especially French on Myrobolan—with apricots a close second. There is also a good demand for Bartlett pears on the Japanese root. In almonds there is a demand for Nonpareil and in a certain section for I X L and selected seedlings of the I X L type. They are being planted extensively on the Balfour-Guthrie ranch.

A special report of the U. S. Bureau of Crop Estimates places the condition of the commercial apple crop at 76 for California and 63.8 for the United States, indicating a production of 3,252,000 boxes and 24,385,000 barrels respectively. Peaches are given a condition of 75, indicating a production of 11,663,000 bushels, and, in the United States, a condition of 53.4, forecasting a production of 20,912,000 bushels.

Citrus and Semi-Tropical.

Shipping approximately 1200 cars for the year to August 1, the Orange County Exchange received the sum of $2,260,000 for that period. This is more than the entire year's receipts during an ordinary season. L. D. Palmer of the exchange estimates that the entire season's receipts this year will reach $4,000,000 and that independent growers will receive at least $1,000,000 more.

Although there has been considerable uncertainty on the part of the growers and shippers of the citrus fruits as to the use of the "bulge pack" this season, which has caused some delay in the manufacture of boxes, notice has been received from the U. S. Department of Agriculture at Washington that no ruling prohibiting the "bulge pack" has been passed nor is there any likelihood of such being passed this season, says the bureau.

Grapes.

Fruit growers around Lodi have agreed that grapes shipped from that point in lug boxes shall comply with the State fruit standardization law as to sugar content. Emperors, Gros-Colemans and Cornichons must contain 16 per cent sugar for shipping. Other grapes must show 17 per cent of sugar.

Miscellaneous.

The Government would like employers to seek their labor through Government or co-operating employment offices. This will avoid criss-cross travel of workers, which is not economical of either time or railway facilities.

An immense dam is to be built in the Little Rock Canyon, Southern California, which will impound sufficient water to supply two acre-feet of water for each of the 4500 acres around Palmdale and 2500 acres in the Little Rock section.

With the exception of a small amount used in the manufacture of phosphorus, practically all phosphate rock produced in this country is now being used for agricultural purposes, Secretary Houston reported to the United States Senate this week.

It is reported that the bees in the southern San Joaquin Valley are storing up but little alfalfa honey this season despite a fine crop of blossoms. There appears no evidence of disease and as far as investigation has been made no cause for the condition has been discovered.

The Woman's Land Army is operating in conjunction with the State Housing and Industrial Commissions to safeguard the women workers in every way. The organization has already placed 100 women on California fruit ranches and farms this season and is out to find 200 more women workers from San Francisco and other cities.

Loss of 171,000,000 bushels of corn and 13,000,000 bushels of wheat from the prospective production of this year's important food crop, as indicated a month ago, was shown in the Department of Agriculture's crop report resulting from a canvass made August 1. Despite this adverse report, however, corn and wheat will be bumper crops this year.

The Glenn County Farm Bureau's principal new activities, according to Farm Adviser W. H. Heileman, are the completion of separate departments for the sheep, bee, and poultry industries, a survey of the grain yield of the county through reports from threshermen, and organization of a boost for greater grain production next year. A map of the county is being blocked off to indicate sections that could undertake increased grain acreage.

NEVADA NOTES.

Truckee Meadows, Nevada, is having one of the most prosperous years in the history of the State. The biggest wheat crop ever raised is being harvested at this writing. No trouble is experienced getting help to handle the crop.

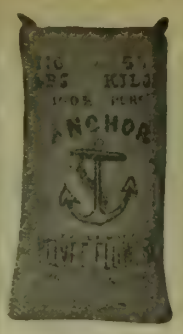
The second cutting of alfalfa is ready to cut and promises a big yield. The first cutting was also large, a lot of it making as high as four tons to the acre. Most of the May raised is stacked and fed to beef cattle in the winter time. A great deal of wild timothy or meadow hay is put up here, too. Twenty dollars per ton is being paid in the stack this summer for both alfalfa and meadow hay this year. This is the highest price ever paid in this locality. Twenty-five dollars is paid for baled hay.

The spud crop is looking fine now, and though the acreage is not as large as last year the yield per acre will be a great deal heavier. Three and a quarter cents per pound is being paid.

Truckee Meadows is one of the few places in the State where there is plenty of water for irrigation. This is due to the fact that the canal system heads in Lake Tahoe. The older settlers get their water for the very cheap rate of 75c per miner's inch per season. Those who have moved into the district within the last couple of years pay $6 for the same amount.

Feed is very scarce in the mountain ranges, as is also the water. Streams that have never been known

SULPHUR



Fleur de Soufre, Anchor Brand; Velvet Flowers of Sulphur and Eagle Brand.

Packed in barrels and double sacks; are the fluffiest and purest Sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, leaving no ash.

California GARDEN-FLOWERS

SHRUBS, TREES AND VINES

By Edward J. Wickson

Hon. President California State Floral Society

This book aims to tell the beginner in California, whether he be a scholar struggling with his school-garden, or a suburbanite gazing vacantly on his residence lot, or the farm-home maker, who is puzzled to translate his experience with teams, plows and pasture fields into trowels, pruning-shears and lawns, just what to do to make garden-soils, grow plants and surround his abode with beauty under the peculiar climatic conditions of California.

76 So. Market St., San Jose, California

to run dry haven't a drop this year. A small acreage of barley and oats has been tried out this year and in most places has produced a large yield. Wheat is the largest grain crop here and nearly always yields good crops.

The furrow system of irrigation is almost entirely used in irrigations. This is largely due to the rolling nature of the land. This system requires a more frequent irrigation; most land requires water every ten days.

A WORD OF APPRECIATION.

We are pleased to note that the Pacific Rural Press has recently established a department to specialize on horticulture with Mr. John Fox as horticultural editor. Mr. Fox as Horticultural Commissioner of Napa during a number of years past has certainly demonstrated an ability to appreciate and truly assist growers with their cultural problems and as he plans to personally take up problems as they are presented, the results of his work should be of great value to all growers.

The Pacific Rural Press, as edited by Prof. E. J. Wickson, has developed into a most useful and valuable farm paper. We should all appreciate the present great difficulty of maintaining publications and support good farm papers, for, properly handled, they can become of inestimable value to us.—H. C. Dunlap in Sunsweet Standard.

The 1918 Napa County Fair dates have been postponed from August 23, 24 and 25 to October 10, 11 and 12. This change the management thought advisable, in view of the fact that the farmers in Napa county are at present busy in the handling of the crops, while in October the crops will have been harvested. The other reason is that at present the roads leading to Napa county are not in first-class condition, as in several places construction work is under way. By October 1 the highway from Vallejo, from Cordelia and from Sonoma county will all be in first-class condition. People can then come and see the products of the Napa Valley, traveling by machine, and enjoy the ride. The county fair this year promises to be the best that has ever been undertaken. The fair will again be held at the East Napa Pavilion.

FIELD CROP PRODUCTION AND CONDITION.

The following table shows the condition and production figures for the principal field crops of California, as per crop report of August 1, 1918, prepared by the California Field Agents of the Bureau of Crop Estimates, U. S. Department of Agriculture:

Crop—	1918 Condition	1918 Production	1917 Condition	1917 Production
Corn (bu.)	88	2,675,000	92	2,400,000
Winter wheat (bu.)	85	6,240,000	94	7,425,000
Oats (bu.)	81	5,839,000	90	6,860,000
Barley (bu.)	78	34,220,000	93	39,150,000
Potatoes, Irish (bu.)	79	11,020,000	87	15,225,000
Potatoes, sweet (bu.)	94	959,000	93	1,002,000
Rice (bu.)	91	6,388,000	95	5,600,000
Hay (tons)	81	4,147,000	92	4,819,000

MAXIMUM FLOUR AND MILL FEED PRICES.

Schedules of maximum prices, as shown on attached list, for flour and mill feeds at the various mills in this zone of the cereal division of the Food Administration, comprising California, Nevada and Arizona.

The prices are for carload lots at the mill door, on a bulk basis, and for cash. To this price must be added cost of bags, freight from the mill to point of consumption and the legitimate margin of profit allowed jobbers and retailers in distribution. As most of the large mills in this zone are located on the Coast, at San Francisco and Los Angeles, the maximums allowed many of the smaller interior flour mills are above the basis of the reflection of the Government wheat price paid at Los Angeles and San Francisco. As mills are now conducting their business on a competitive basis, competition may adjust prices below maximums.

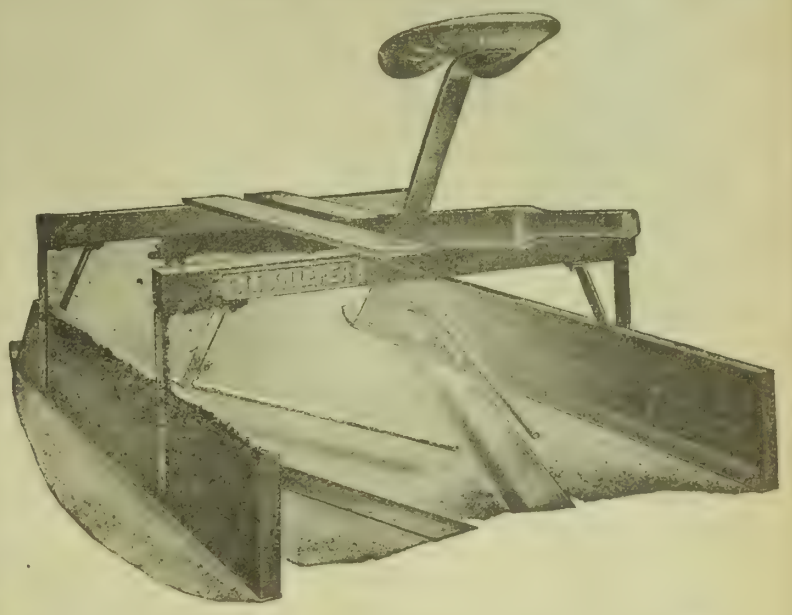
BEAN CUTTER

KILLEFER QUALITY — KILLEFER EFFICIENCY

SEE CATALOG No. 281



There will be a big demand for Bean Cutters this year and when the time comes they will be needed quickly. Do not delay putting in your order for what you need right away.

We build two weights of sled cutter, the one shown above being our regular wood frame cutter. For heavy ground, where a strong cutter is required, we make a steel arch frame at an additional cost of five dollars. Give your order to your dealer and insist upon having the Killefer kind.

BEAN CUTTER BLADES

You will need extra blades and we can furnish 5/16 x 6 inch x 6 foot blades at $12.00 per pair f. o. b. Los Angeles.

DEALERS WRITE FOR DISCOUNT.

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

PREPARATIONS FOR LOS ANGELES TRACTOR DEMONSTRATION.

More than forty kinds and types of tractors and as many, if not more, different kinds of farm implements are to be on display and in the demonstration field at the Third Annual Tractor Demonstration to be held at Los Angeles, September 17, 18, 19, 20 and 21. The mammoth meet, which will be held on Whittier boulevard, one-half mile east of Los Angeles city limits, is expected to draw over 150,000 farmers and other people interested in up-to-date farming appliances, according to various Los Angeles dealers. This demonstration will be the largest of its kind ever held in the United States, and farmers from every Western State will attend. Every spectator will be given an opportunity of seeing tractors of all sizes and makes operating under the same and various conditions, so that prospective tractor and implement investors can see at first hand just which type is best suited to one's particular needs.

The entrance of the United States into the great conflict has been a great factor in bringing the importance of the tractor and other modern methods of farming to the fore. It is declared that the tractor is fortifying the allied nations against famine.

According to latest reports, there are now over 100,000 tractors in service on the farms of the United States, but this number will doubtless be doubled during the next twelve months.

The Los Angeles tractor dealers intend to make the third annual demonstration one of the most instructive and interesting exhibitions ever held in the State. In addition to having on display and in the demonstration field scores of successful farming devices, there will be a large number of special entertaining features, which will differ each day. Something of interest will be taking place during every minute of the day and the spectator will be able to see some new features every day of the meet. No admission is to be charged and parking space has been provided for ten thousand automobiles within the demonstration grounds.

WHAT SIZED PULLEY?

People waste a lot of time writing to manufacturers to ask what size pulley to use on a machine run by their own engine. It is of course necessary to use the right pulley to avoid running the machine so fast it might shear bolts and hurt the operators or so slow that it would not do the work.

The pulley on the engine is usually called the "driver," the one on the machine is the "driven." To get the diameter of the driven pulley required, use the following formula:

R. p. m. × diameter of driver = r. p. m. × diameter of driven pulley. For instance: If the engine runs 450 revolutions per minute and its driver is 12 inches in diameter and if the machine must run 900 r. p. m., let X = the unknown diameter of the driven pulley. Then $450 \times 12 = 900 \times X$ or $5400 = 900 \times X$. Divide both sides of the equation by 900 and you have $6 = X$ and the diameter of the driven pulley should be six inches to give the speed required by the machine. Since pulleys come only in diameters of even inches or half inches, if X = a fractional number, the size next smaller must be obtained and the pulley "lagged" to increase its diameter properly. The lagging is material to be wrapped around the pulley and cemented or otherwise fastened in place.

If the flywheel is geared to the engine so its speed is different, the speed of the flywheel can be found by turning the engine over and counting the revolutions of the flywheel, then multiply by the r.p.m. of the engine.

ENGINE CHOPS GRAPE PRUNINGS

Twenty acres of grape-vine prunings were chopped into pieces averaging less than an inch long and were broadcasted over the ground last spring for Paul Minassian of Yettem, Tulare county. The machine is a modified 15-inch Acme silage cutter with specially tempered knives, a big hopper, and a three-horsepower engine, all mounted on one truck. A man would pitch prunings into the hopper as the outfit was driven along. There was no trouble with its feeding except that occasionally it fed too much and had to be reversed to loosen the gorge. The bits of vine up to an inch in diameter dropped from the cutter to a revolving table, which scattered them far and wide. The knives were not sharpened for the entire twenty acres.

TRACTOR PUSHES HARVESTER.

A tractor has been pushing a grain harvester through the wheat in Butte county with perfect success. The tractor had to be remodeled slightly for the purpose by the Chico representative of the F. H. Poss Co. for Avery tractors. The change was designed especially for rice harvesting; and since it has worked so well in grain, six more 8-16 tractors have been delivered to be remodeled for the Dodge Rice and Land Co. to use in their rice harvesting.

GRAIN FIELD-ELEVATORS.

Wooden field bins for bulk grain are springing up in the Willows district of Glenn county, anticipating completion of the co-operative elevator in time for use this season. One of the field bins is a wooden one already in use by Alvin Delko. A four-horsepower auxiliary engine from a rice harvester was attached to the short bucket elevator. In a tryout it elevated 100 sacks of grain into the bin in one and a half hours.

A 12,000-gallon water tank over 30 feet high is often filled three times a day for ranch headquarters use on the Hillcrest Stock Farm at Davis. A Luitweiler pump, run by an electric motor, has given satisfactory service four years.

President J. B. Bartholomew of the Avery Co. wired at the end of the National Tractor Demonstration at Salina, Kansas, August 3, that fourteen Avery outfits on the field at once pulled all kinds of tillage and planting machinery and that a much larger volume of sales was made than at any previous demonstration.

Arrange your work so you can be sure to attend Mammoth 3rd Annual Tractor Demonstration

Whittier Boulevard, One-Half Mile East of Los Angeles City Limits

This is the crucial time when production of food is of paramount importance. Food must be raised on a larger scale than ever before. The United States Government is urging farmers to bend every effort to augment the food supply.

The greatest single factor in increasing food production is the Tractor. Every farmer and rancher in the Southwest should plan now to attend the great tractor demonstration to be held September 17, 18, 19, 20 and 21.

There will be hundreds of interesting features—a galaxy of special events daily that will astonish you. Over 40 kinds and types of tractors will be on display and in actual operation. Many entirely new types of tractors received direct from the factories will be exhibited. Scores of interesting farm implements, as well as motor trucks, automobiles, tires, oils, accessories, etc., will be displayed.

—bring the family along

PUMPING FOR STRAWBERRIES.

To the Editor: I am growing strawberries. At times we get a very dry spell that upsets all calculations as to returns. The land is gravelly and light loam and does not hold moisture long. At a depth of 15 to 20 feet there is an everlasting supply of water. How to best raise this water and distribute it regularly is my problem. The land is level.—H. M. Nelson, New Zealand.

Assuming that you have a considerable field of strawberries and that water sinks away rapidly through your soil, we suggest that you make flat ridges about two feet wide and 100 feet long, with flat trenches about 18 inches wide and four inches deep between them. Plant the strawberries in rows on top of the ridges and near their edges. Install a centrifugal pump nearby which will throw about 225 gallons per minute per man you will have irrigating. A three-inch pump will throw about that much. Run the water by means of a surface or underground pipe to the head of the rows in your strawberry field. There divide the water into two streams if the soil is not too open and run one stream into each of two trenches. The trenches ought to be short enough to be filled in about five minutes. They must be filled quickly to avoid water sinking away before it has soaked sidewise enough to wet the strawberry roots.

If it requires a maximum of 500 feet of pipe from pump to heads of trenches, with five-inch pipe and 225 gallons per minute you would have to lift the water at the pump about seven feet above the level in order to overcome friction in the pipes and deliver the full amount of water at the far end. This is accomplished by pumping into the base of a vertical pipe over seven feet tall from the base of which the irrigation pipe leads, preferably in line with the pump outlet. The friction will cause back pressure that will raise the water in the vertical pipe until the weight of this column nullifies the back pressure. If you have a maximum lift of 20 feet plus seven feet above ground, or 27 feet total, it will require an engine or electric motor of about 3½ horsepower to operate such an outfit as one man can handle.

DRY SEASON SWELLS PUMP ORDERS.

As an outcome of the second dry season the Bean Spray people have had to turn down more orders for centrifugal pumps than they could fill, though they are working night and day. They are shipping a number of Bean tractors now to New Zealand and Australia, which countries have used their spray pumps for twenty years. A large demand for spray outfits is expected the coming season.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler of the "Giant" Type WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL.

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

Send today for full information and our latest catalog of earth-moving machines.

One Man Does All The Work With WATERLOO BOY
The Original Kerosene Tractor

Farm labor shortage is no bugbear to Waterloo Boy operators. This one-man, three-plow outfit does more work with less expense than any three of your drafted farm hands. Distinctively simple, strong construction, with automatic trouble-preventing features wherever feasible, gives you assurance that

You Can Place Your Trust In Waterloo Boy Guaranteed Power

for continuous hard work at plowing, discing, harrowing, planting, harvesting, threshing, corn shelling, silo filling, etc.

Jno. E. Cox, Calipatria, Cal., owner of three Waterloo Boys, writes: "These tractors are working every day, doing heavy work—each of them with a load equal to a liberal 10-horse pull."

Some features of Waterloo Boy construction which appeal strongly to tractor buyers are: Unusual fuel economy due to our patented inbuilt carburetor and manifold, which gets full power from inexpensive kerosene; large, wide wheels, which, with extra transmission strength and a powerful motor, give great tractive power, enable the Waterloo Boy to move easily over soft ground without packing soil.

Learn more about this tractor. Our Illustrated Catalog gives many proofs of Waterloo Boy superiority in construction and performance. It is free. Write for it.

Live Stock and Dairy Notes

Livestock breeders all over the State are invited to send, on postal cards, notes regarding their sales, State and County Fair intentions, new stock, etc.

The Dairy.

The crops on the coast of Mendocino county are reported poor, because of no late rains. Many farmers are supplementing the cow feed by raising peas and beets.

At a meeting of the board of directors of the Ayrshire Breeders' Association, held in New York in July, James G. Watson was elected secretary and treasurer.

A contract for the construction of a new $20,000 cheese factory as a department of the Riverdale Co-operation Creamery Association plant at Riverdale has been let.

The Western Meat Co. has just completed a $35,000 cheese and butter plant at Patterson and gave a big reception for the farmers of that district last Saturday evening.

Minnesota's co-operative creameries, of which there are 646, paid their patrons for butterfat 10c a pound more in 1917 than in 1916. The price for 1918 promises to be still better.

Butter for the Navy is being inspected by dairy manufacturing specialists of the Department of Agriculture to insure a uniformly high quality. There are 60 specialists inspecting the output of 90 creameries in various parts of the country.

Cows are often worried by their mates during the few days after breeding, and this often results in the need for another service. L. J. Kelley of the Shoreacres Dairy, in Alameda county, says they are more surely bred with one service when each one is kept isolated a few days.

The ranchers from Pt. Arena to Ft. Bragg report that their cows never fell away in their milk so rapidly nor so early as this year; that everything seems to be drying up so soon. Ben Cuthbertson, who is running the old Cuthbertson place, is shipping in alfalfa costing him $30 per ton.

Dairymen of this State have organized the Association Dairymen of California, Inc., the largest co-operative combination in the United States. This is an entirely new association. The aim is to accomplish in behalf of the dairymen that which has been done by the raisin growers and the citrus fruit producers for their several interests through combination.

Mrs. N. M. Iversen of Elk, Mendocino county, who is milking ten cows, says her milk check in June was $150, besides two veals for $24.50 and two pigs for $50. Her neighbor could not get help to milk his cows and would have had to let them go dry but for Mrs. Iverson, who told her husband to go and help their neighbor and she would do their work. This is one way in which the farmers' wives are meeting the labor problem.

Beef Cattle.

The Ormondale Co., Redwood City, recently sold a registered Shorthorn bull and two heifers to Rafael Larco, one of the largest plantation and cattle owners in South America. All were sired by the Ormondale herd sire, Golden Goods, Jr.

In the improvement of beef cattle care has been taken to develop to the greatest extent those portions of the body from which are secured the high-priced cuts of beef. These points should be kept in mind when selecting breeding animals.

The average weight of French cattle slaughtered has been steadily diminishing since the outbreak of the war. Prior to the war the average weight was from about 770 to 880 pounds. Now the average hardly exceeds 550 to 570 pounds. This means that for the French to obtain the same supply of meat a constantly increasing number of cattle must be slaughtered.

For an auction sale of registered Shorthorns, under auspices of the California Shorthorn Breeders' Association, there ought to be a fixed charge per head for all stock sold, says James McDonald of the Ormondale Co. He thinks this would prevent the offering of inferior stuff, which dampens the ardor of the bidders, is no credit to the association, and does not help the next sale.

Prizes offered in the beef Shorthorn classes of the California State Fair's livestock show, August 31 to September 8, have been increased from $1,875, as listed in the premium list, to $2,187.50. The additional money is offered as the result of action taken by the American Shorthorn Breeders' Association, whose directors, at a meeting in Chicago, July 26, voted to increase the appropriation to the California State Fair 50 per cent, or $312.50.

Swine and Swinemen.

Anchorage Farms, Orland, has just sold a Berkshire boar picked out by Prof. J. I. Thompson for Mr. Alps of Reno, Nev.

Bert Chappell, former newspaper writer, with Frank B. Anderson of Sacramento, has yielded to the lure of purebred Berkshires and will be with Mr. Anderson hereafter.

Hewitt & Hewitt of Dixon report the sale of two big type Poland-China sows to A. C. Harding of Lincoln. They sold a fine sow to B. E. Tyle, who shipped her to his ranch in Oregon.

H. E. Boudier of Big Ranch, Napa, reports sales as follows: One boar to Napa Chapter, Red Cross; to James H. Daly, one boar; to Mrs. Henry Harmon, one boar; to W. L. Bohannon, one boar.

The Galland & Lowenstein ranch, near Willows, has started to replace its Berkshires with Durocs. They recently bought three sows from H. P. Slocum & Son of Willows and a boar from Elmer Lamb of Ceres.

The Jas. Mills Orchard Co. recently received a letter from Julio Donoso Foster of Melipilla, Chili, ordering a Berkshire boar by Ames Rival 70th or out of Forest Grove Laurel 8th and two sow pigs out of Silbirfa Lustre 9th and Penrith Champion.

G. S. Oliver of Chico had a notion to sell his Poland-Chinas, but has decided to look around for a man who will take care of them right. He has a large type boar from J. H. Cook of Paradise, a medium type sow and four gilts sired by Woodrow, C. L. Van Schoiack's medium type herd sire.

H. P. Slocum & Sons of Willows are shipping a Duroc boar and three sows to Honolulu. The boar is a full brother to last year's Nebraska State Fair junior champion and all are fine stock. Before shipment a certificate had to be signed saying there had been no cholera within five miles for the previous six months.

To let pigs in and out of the farrowing house with least effort, J. Francis O'Connor of the Castleview Ranch, Santa Rosa, has fixed the outside door to each pen so that it slides up and down in a groove. A light rope runs from the top of the door through a pulley directly over it and thence to a pulley over the central aisle in the farrowing house.

Sheep.

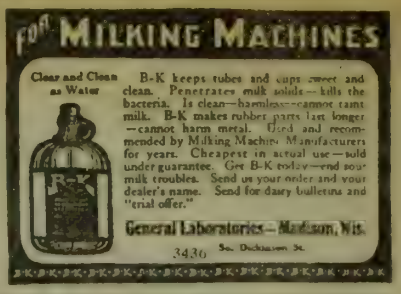
Efforts are being made in the several wool-growing districts of the State to pool all the different lots and make up carload shipments direct to Portland, Ore., which is the nearest Government wool-receiving station. Each grower is allowed his proper apportionment according to grade and quality, the wool being graded by wool experts.

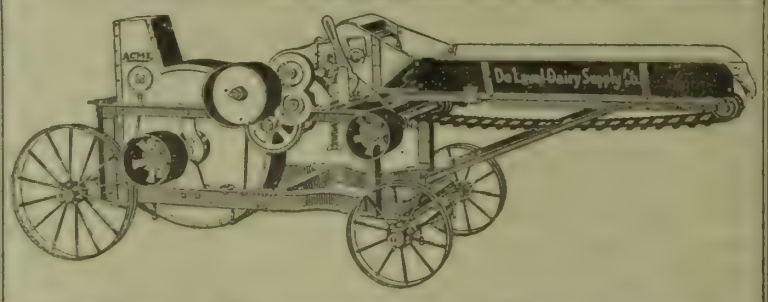
Wool so far shipped from Red Bluff district has averaged growers about 74½c. The Government allows the grower a rebate of 50c on each wool sack furnished.

CALIFORNIA INTERNATIONAL LIVESTOCK SHOW.

Evidently Joseph E. Painter, the energetic manager of the California International Livestock Show, to be held in San Francisco in November, has been quoting scripture to Eastern breeders and exhibitors, for he seems to have persuaded them to obey the Biblical injunction not to hide their light under a bushel.

He has just received the good news from Longview Farm of Kan-





The ACME Cutter

FILLS THE SILO — **CUTS DRY FEED** — **MAKES ALFALFA MEAL**

THE STEEL FRAME holds every bearing in perfect alignment. Prevents wear and vibration. Adds strength and durability to the machine.

THE SPIRAL KNIVES produce a clean cut silage of even lengths that packs properly in the silo and avoids spoilage.

A large number of Hereford and Shorthorn breeders have agreed to exhibit, among them being the Hereford Corporation of Wyoming, W. N. M. Blaney of Denver, John E. Painter & Sons of Roggen, Colo., Maxwell & Miller of Steamboat Springs, Colo., and Frank Brown of Carlton, Ore.

AN UNIQUE PRODUCT.

We call the attention of our readers to the unique products of the California Corrugated Culvert Co., announced on this page. The material used in their manufacture is the rust-resisting "Armco" iron, proven to be much superior to the ordinary commercial article commonly used, which corrodes rapidly and calls for frequent repairs and renewals. The stock-watering trough to which particular notice is drawn this week will outlast any other form of similar device.

Alfalfa Growing Made Sane and Safe

(Continued from first page.)

better producer than the same man under discouraging conditions, a rather important factor in these days of increasing scarcity of labor.

Overwhelmingly important as the combined hay and corn production is for the East, hay production has out here the importance of both hay and corn put together, as alfalfa here takes the place of both hay and corn. The only way to safeguard and insure this tremendously important production is to make alfalfa growing sufficiently attractive to the farmer as a business proposition.

THE GROWER GETS THE WORST OF THE MARKET.

One of the greatest difficulties in making hay prices stable and profitable to the grower lies in the fact that the alfalfa crop comes in during about five months, but is consumed only in the course of twelve months, while the average hay farmer is unable, under existing circumstances, to spread his sales over the twelve months corresponding with the rate of consumption. Being as a class chronically hard up, he had to crowd sales as soon as his hay was available, and as he could find a market, regardless of price.

The usual result year after year was an oversupply beginning early in the cutting season and, as it progressed, a glut of hay in San Francisco and Los Angeles, the leading markets; prices went down and kept on declining, in the absence of support of the market, so that in years of heavy crops and even in years of only normal crops the price would often go down below that of the cost of production. This would continue, with the cheerful assistance of dealers, until these thought that prices could not be forced down any lower, usually late in summer, when they would begin loading up for their winter trade at bottom prices. After that it would be their object to steady the market and lift up prices. In this they would usually succeed, but the majority of the farmers, having by that time sold what they had to sell, received no benefit from the higher prices prevailing during the balance of the crop year.

HOW THE TAIL WAGS THE DOG.

If this were the whole story as far as the farmer is concerned, it would be bad enough, though not of vital importance to the industry as a whole, as the total amount of alfalfa hay handled in those two markets is quite insignificant compared with the total alfalfa production of the State. I do not know what the percentage is, but presume conditions are similar to those of corn, of which, according to statistics, about 85 per cent never leaves the county in which it was raised. This would only leave 15 per cent shipped out of the county, and I doubt that even as much as half of this goes to San Francisco and Los Angeles. But it is this insignificant quantity sold in these places which makes the price for all the rest of the crop, and it is this combination which grinds the life out of the hay grower in California.

It seems strange to me that while almost all alfalfa farmers nowadays understand the working of the San Francisco market in its direct effects, a good many seem to be ignorant of its far more serious and, in fact, ruinous indirect effect just described. These men say that they do not have to sell to San Francisco or Los Angeles and are therefore not concerned about the markets there, being able to do better at home. It is true that in our section we can nearly always sell at home at relatively better prices than the so-called market prices published in the San Francisco papers, given them by the dealers. As a matter of fact, these dealers themselves, when they are ready to buy from the grower, usually go above these quotations.

But it is of course plain that nevertheless the sales of all kinds made by the farmers in our section are, after all, based on these San Francisco quotations.

HOW THE GROWER IS PUT TO SLEEP.

A grower would therefore fool himself badly if he thought he did not need the Association, in view of the fact that he generally manages to get what he thinks is a better price than the market, or more than most of his neighbors are getting. For instance, last year, early in the season, the parity of published San Francisco price for new alfalfa hay was equal to about ten dollars loose Fresno, while at the same time we could net at home about twelve dollars loose. With the Association in successful operation, the market would certainly not have been allowed to open at so low a price, which was under cost of production, besides which it was already plain at that time that the production of the season would fall short of requirements. What, therefore, would have been better for the farmer—a price of, say, $20, without any premium, assured him for his entire season's production by the existence of the Association, or the San Francisco price of $10, with a premium of one or two dollars added? It is true the market went afterwards much higher, as high as $35 Fresno, but this was late in winter, when the farmers, with few exceptions, were all sold out and got no benefit from it.

Extremely high prices are almost as injurious to the farmer in the long run as unreasonably low prices, because they react afterwards on him through the unsettling of related conditions all along the line.

What the farmer needs is the assurance of a reasonably remunerative price for his crop all the way through, and this will prove the most satisfactory arrangement for all the hay-consuming interests. This policy can be established by the Association but not without it.

WISE HOLSTEIN PLUNGE.

A. E. Slater & Sons of Pacheco were accused of being crazy when they paid $750 for Prince Riverside Walker, now owned by W. J. Higdon of Tulare. They had decided to start in purebreds and they took $500 to the State Fair to buy two females and a bull. Prince Riverside Walker, then a calf, looked so good to them that they paid Morris the entire $500 and sent him $250 more on their return home. That bull has sired many calves for them.

My Range Bulls are Shorthorn Show Bulls

All of them have been at the Fairs and have generally won something. Their get are uniform, vigorous, and hardy, raised to service age on the range. King Lancaster, three times Grand Champion at the State Fair and now 13 years old, is still getting fine calves. My bulls won Grand Championships every year for eleven years (1904 to 1914, inclusive), except 1907, when I showed only calves. I have a breeding herd of 400 cows and can supply service bulls in car lots, but they are going fast. Write me your wants pretty soon, or come and see.

Dairy Shorthorns for Milk and Beef

Dairy Shorthorns lead in butterfat production in many cow-testing association reports. Their calves make fine beef more economically than other dairy breeds. Dairy Shorthorns are the best breed to range hills and stubble for roughage where help is scarce. My young bulls can increase the production of your herd when their calves come to milking age. Write for details of a few bulls I have to sell.

Spread on Beef Feeders

[Written for Pacific Rural Press.]

The spread in price between feeders and fat stock should depend on several factors influencing the cost of the feeding. With half-fat cattle eating alfalfa hay two or three months, the best returns will come the first month on a half-cent spread, according to M. D. Lack of Shasta county. To do equally well in the second month, the spread should be ¾c and the third month 1c. A 1000-pound steer should gain two pounds a day the first month and nearly that the second month, if very thin. This does not mean that cattle could be fed only one month on a half-cent spread, because the overhead charge would be too heavy per pound. "How much spread ought there to be?" started real live discussion at the California Cattlemen's Convention. Following are digests of some of the replies:

NORTHERN CALIFORNIA.

"One cent per pound per month for four months to cover cost of ½ ton hay at $20 per ton."

"Feeding straight alfalfa hay at $20 per ton, 3½c will give a living profit."

"Three and a half cents is O. K."

"Cattle on alfalfa hay only will gain 1½ to 2 pounds per day for 40 days. During the next 20 days they will put on a pound a day. After that there is still less gain. Seldom are cattle fed over four months—mostly 60 to 90 days."

CENTRAL CALIFORNIA.

"If the animal can be fattened in three months, 3c spread is enough. Can't feed profitably four months."

SOUTHERN CALIFORNIA.

"Four cents spread will just break even on a feed of alfalfa silage and cottonseed meal with about nine dollars per head to cover losses and tailenders. Figure silage $8 per ton, but corn silage and alfalfa do not fatten fast enough, so cottonseed meal is added."

ARIZONA.

"The average feeding period in Arizona is four months."

The resolution finally adopted by the convention was in favor of a $3.60 spread.

Why Ship Live Beef East?

[Written for Pacific Rural Press.]

There is an economic waste of well over 50 per cent in freight costs on live cattle shipped East; and the West loses the benefit of fertilizer, by-products, and industrial development that would accrue from butchering them here. Cattle generally lose nearly 50 per cent of their weight in dressing, they shrink heavily on a long trip alive, and a carload of live cattle transports less total weight anyway than a carload of beef.

Then comes the question, "Why is not all of our beef killed here?"

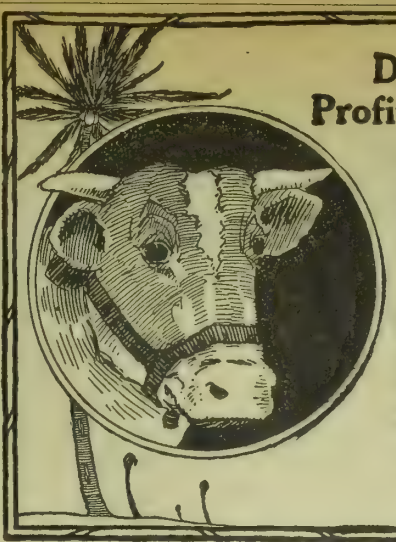
A partial answer in a drouth season like this is that we haven't the feed to put them into marketable condition. At least a partial remedy for this situation is urged by O. B. Fuller of the C. H. & O. B. Fuller Co. of Arizona, Southern California, and Mexico, who last year shipped 5000 head alive to Eastern markets and fed as many more. Mr. Fuller urges construction and operation of a cannery in San Francisco to care for a lot of stuff that is now sent to Eastern feeders or direct to Eastern canneries. "Instead of San Francisco killing 200 canners a day during part of the season, we are selling them to Kansas City at a low price and paying extra freight East," says he.

There is one cannery in Los Angeles with a capacity of 100 head per day and another with a capacity of 50 head per day, according to Mr. Fuller, but a big one in San Francisco would stabilize and strengthen prices for the whole State on such stock. The demand for canned beef at this time is strong, 26c to 30c being paid by the Government.

GOOD BULL IGNORANTLY SOLD.

What is the value of your young bull? How can you tell? Are you going to sell him before you know what he is worth? The Holstein bull, Diosa Paul, was considered a scrub purebred, but one good cow in the herd persistently did not get with calf. Finally she was bred by this scrubby bull and the calf was Laura Meka, State four-year-old record cow, with a production of 32.9 pounds butter in seven days from milk testing 4.99. Another of his daughters was Athalva, whose record was 25 pounds. But before the records were made the bull was sold at a low price to head a grade herd in Arizona.

One thousand breeding ewes, the experimental flock at the United States sheep experiment station at Dubois, Idaho, have recently been moved to the Targhee national forest reserve for summer and fall grazing. They will be kept under practical range conditions and the adaptability of range for different types of sheep will be studied. Investigations will also be made relative to the practicability of running sheep loose in fenced pastures as compared with the "herding" method.



Do You Want Profit Producing Cattle?

Then feed them profit producing food. Because of the easily digestible protein in COPRO its nourishing value is exceptionally high and the percentage of waste in assimilation is exceedingly low.

Copro

is a nourishing, economical, profit producing form of food for cattle and poultry.

Mix it with your rations and watch the results. FREE SAMPLE and a copy of our booklet containing valuable information on the subject of "SUCCESSFUL FEEDING" gladly sent on request. Write today. If your DEALER can't quote prices write us direct.

Built To Stay in Shape

Investigate silos and silo uses thoroughly—then you will realize that you cannot afford to feed stock without a silo. We have supplied wood tanks and wood stave pipe in all parts of the world for 25 years and NOW WE HAVE COMPLETED OUR SILO—it's the silo you will want for your farm—we call it

The CYCLONE Silo

because it is that kind of a silo. Can't blow down—can't warp or change its shape. Investigate it.

VETERINARY QUERIES

[Answered by Dr. Edward J. Creely.]

Subscribers wishing an immediate reply should send money order for $1. No charge for questions answered through this department. Name and address of subscriber must accompany each query

Sow Had Pneumonia.

To the Editor: I had a sow which farrowed July 16. I continued her feeding and care as usual. Next day she refused to eat and appeared sick. She did not give milk, her udder caked, and she ran a high fever for four or five days. Now she wheezes and seems to have difficulty in breathing and hardly tastes food.—C. W. K., Madera.

Your animal most likely had pneumonia. The milk always dries up when fever is present. Keep her in a dry place with plenty of straw and highly nourishing food, such as milk, boiled potatoes, etc. Rub camphorated oil over the region of the lungs. Give morning and night two tablespoonfuls of brandy to which add a half teaspoonful of oil of eucalyptus.

Treatment for Thrush.

To the Editor: We have a valuable horse which has had thrush for four months. We are syringing it out every other day with bluestone and packing the frog with karona wool fat, keeping the horse on a dry floor. Can you suggest anything better?—F. W. S., Gilroy.

Keep the animal in a dry stall, remove the shoe and discontinue the bluestone at once, as it is too severe treatment and does more harm than good. Keep the foot clean by washing with soap and water, then pare out all of the diseased tissue with a hoof knife and apply a 2 to 3 per cent solution of formaldehyde in water as a pack twice a day.

Cow Will Not Breed.

To the Editor: After a number of attempts at intervals of about twenty days, my cow fails to breed. I drenched her once with a solution of sheep dip and water about 40 to 1, but that did no good.—L. L. E., Acampo.

Your solution is entirely too strong. Use 1 to 1000 permanganate of potash. A good examination should be made to see if any abnormalities are present. If so, call a veterinarian, and if none are present, irrigate the vagina and more internal organs with the above solution once every other day until she comes in season. Just before breeding irrigate thoroughly both the cow and the sheath of the bull.

Twin Calves as Breeders.

To the Editor: I maintain that twin heifer calves are useless to save for cows, as they will not breed. Am I right? Also if twins, heifer and bull, will the heifer breed?—J. W. F., Fresno.

In investigations carried on by experiment stations it was found that when twin calves were heifers both proved just as sure breeders as if born singly, but that when one twin was a bull and the other a heifer the bull would prove a breeder, but only one heifer out of nineteen would breed. Consequently, only when a heifer is a twin with a bull should she be vealed because of her doubtful value as a breeder.

Butter Comes Soft.

To the Editor: My cow's calf is now eight weeks old and we have not been able to get the butter hard enough to work the milk out of it and often it is hard to get the butter to come at all. We sometimes let it stand until next day and then the butter will come, but just a soft butter.—J. L. McN., Bellflower.

The condition you describe is quite common when cream is not kept at a low temperature. Keep all utensils clean and scald them with boiling water. Cream should be kept at as low a temperature as it is possible to attain under ordinary conditions. When ready to churn bring the cream down to a temperature of at least 60 to 62 degrees Fahr.

Warts on Cow's Teats.

To the Editor: What shall I do to get rid of large horny warts on my young cow's teats. They are literally covered and become hard unless greased morning and evening.—C. M. B., Meridian.

The teats should be well oiled daily, and give each cow one-half tablespoonful of Fowler's solution daily in the drinking water.

Hoof Very Brittle.

To the Editor: I have a fine ten-year-old mare whose front feet are brittle so that shoe nails split the hoof. Can you tell me what to do for her?—C. R. G., Delano.

Apply oil or vaseline over the hoof up to the hair. Then have your horse shod and the sole packed with tar and oakum.

DR DE LAVAL DR BABCOCK DR. McCOLLUM

The Rural Press is in receipt of a cut presenting pictures of three men so intimately associated with the development of the dairy industry that we gladly give it space in our columns. Dr. De Laval's invention of the centrifugal cream separator revolutionized farm dairying by doing away with the old slow and wasteful methods of milk separation. Dr. Babcock's discovery established a new standard for appraising the market value of milk and supplied the means of gauging the worth of the individual breed and the individual cow as a producer. Dr. McCollum's discovery proved beyond dispute that there is some unknown substance contained in butterfat which is absolutely necessary in the human diet. He laid bare the folly of a decreased consumption of milk.

BOYS!

Here's a regular, bang-up, man-fashioned overall that takes to rough play like a duck to water. Easy-breezy, loose-cut overalls that stand for rough treatment—and, like Oliver Twist, come back for more.

Tell mother to get you Boss of the Road Overalls—the kind dad wears. Tell her we make 'em of the toughest, fast-color denim; double-stitched, can't-rip seams; hold-fast, patent buttons; roomy, *swinging pockets;* reinforced at all points where lively youngsters' clothes first show trouble.

San Francisco NEUSTADTER BROS. Portland

Buy them from your local dealer—he will gladly show you what we mean by swinging pockets.

Look for the Bull Dog on the label. It is your protection. Never has this trade mark meant so much to you as it does today.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

EXTRA WATCHFULNESS CALLED FOR IN HOT WEATHER.

Hot weather calls for diligence and, above all, watchfulness. Keep your eye on the flock to note changes in them. Morning is the best time to see the difference in appetite and health. Only last week my son wanted to know what ailed a hen that flopped her wings while she was eating her breakfast and then turned turtle. I said she is too fat internally and the heat got her. He said he knew better than that.

"All right," I said, "bring her up and open her. If she is not full of fat, I'll lose the price of her. So he brought the hen and opened her and, although she had been laying heavy, she was lined with fat until her liver and gizzard were buried in it. He wanted to know what made her so fat when he fed very little mash at all and dry grain.

Now that is just the trouble. People think in order to make hens get too fat they must stuff them; but that is only one side of the question. The trouble in this case was that he never examined his hens to find out what condition they were in, and he had some Leghorns, some Minorcas, and some Brahmas all running and feeding together, when the treatment for Brahmas should be quite different.

EXERCISE THE HEAVY HENS.

Scratch material is high, granted; but eight-pound hens alive are worth between two and three dollars, and that much scratch material would go a long way. I have warned him repeatedly that if those heavy hens did not have more exercise some of them would come up missing; and now I want to warn those who are preparing to hatch fall chicks that, unless the hens are kept in scratch material, even though the chicks hatch, they will drop by the wayside one by one.

Exercise is the greatest thing in the world for breeders. Fat, slobby parent stock never produces healthy young, and when you are hatching what account is the number of eggs to you unless they hatch livable chicks. What is wanted is quality, and that can only be gotten by care and watchfulness.

Plenty of fresh water these warm days, for both grown fowl and chicks, is among the necessities, also shade and a moist, cool place to dust themselves. Last Saturday it was a very hot day, the hottest of the season, but where the yards were sprinkled down and the fowl furnished with plenty of drinking water there were few if any losses.

CARE OF HATCHING EGGS.

Hatching eggs will require a good deal of care to keep in right condition for hatching. They will need gathering twice or three times a day, not allowing the hens to sit on them for several hours in succession. Then as fast as they are gathered they must be put in a cool place, where the temperature is not over 50 nor under 45 degrees. A cement floor with a covering of excelsior on the bottom of the case and the cover kept on is about right.

ALLIES WILL NEED NEW STOCK AFTER THE WAR.

Last week I mentioned the State Fair. Now the time is getting short and those who intend to exhibit should be preparing for it. We Californians ought not to let the standard bred poultry business die, for when things get normal once more the whole world will be looking towards us for supplies. Italy, the native home of the Leghorn, will have to be started up with new stock, so will Belgium, France and Serbia. Indeed, all our allies will need new stock to get started again, and they will want purebred stock, not mongrel.

BRINGING PULLETS TO THE LAYING PERIOD.

The best thing in the world to bring a bunch of pullets to the nest and give them staying qualities is sour milk and sprouted grain, either barley or oats. If there is a spare piece of ground on the premises, soak a few bucketfuls of the grain and cultivate it in, then turn the pullets on the job of digging it out and put a crock of clean sour milk in the shade and another of water and let them have their choice. One month of this sort of treatment will make the most stubborn cases begin to redden up and get ready to pay their board bill.

RESTORING AN AFFLICTED FLOCK.

To the Editor: Your answer to my query in a recent Rural Press is correct. My chickens have worms by the carload. Now I would like to know if my laying hens are injured by the worms. I used to get from ten to fifteen dozen eggs a day from 200 hens. Now I don't get one egg a day. They are molting now. Will they lay again?—C. S., Oakley.

If your hens are good layers, it will pay to go to some trouble to cure them. You would have to go to almost as much trouble before you could profitably keep chickens on that ground again, so while they are molting get to work and make a good job of it, then your hens will be just as good as ever.

For 200 hens, take two pounds of finely cut tobacco stems, steep for two hours in sufficient water to keep them covered, mix this liquid and tobacco with half the usual quantity of mash feed. If you could feed light a day or two before giving the treatment, all the better, and give no breakfast at all that day. Then about 2 p. m. give this moist mash with the tobacco in it. At 4 o'clock give about one-fourth as much mash in which you will dissolve twenty-two ounces of Epsom salts in the mash water. See that every hen gets some of each of these mashes. If you can buy tobacco stems, the treatment costs but a trifle; but if you have to buy good tobacco it will cost more.

Remove the chickens from the yards and houses they are in now in order to clean up better. Clean up and burn all the droppings around, then spray the yards, houses and dropping boards with a 1 to 1000 solution of bichloride of mercury (corrosive sublimate), of which use one ounce to eight gallons of water. It will take one gallon of the solution to every ten square feet of ground. Use wooden vessels to mix in. For a week after treatment carefully sweep up and burn all droppings and feed your hens well, so that they can get new feathers and get to work again.

A CASE OF NEAR CHOLERA.

To the Editor: My chickens have a drowsy appearance. They are very thirsty. Their eyes are swollen. They have a slow gait, and the discharge is like sulphur and water. At last their combs get almost black and in a few hours they die.—Mrs. A. O., Vacaville.

This lady omitted the most essential points to enable me to diagnose the trouble with certainty, but from her description I would judge this to be a case as near to cholera as we have in California. Generally speaking, only corn-fed, hence over-fat poultry have true cholera. In cholera there is always thirst, and the droppings are always yellow. It is best to treat this case as we would true cholera, though it is very doubtful about its being the real thing.

It is only the man or woman who is quick to notice any slight difference in the appearance of his flock that ever succeeds in stopping the ravages of cholera, and if this lady saves any of her hens it may be set down as a case of near cholera or indigestion.

Remove all sick birds to a hospital, clean up and burn all rubbish and spray ground and houses with a good commercial disinfectant. Give the whole flock an antiseptic drink. A teaspoonful of creolin to a bucket of water will serve the purpose, and see that they have no other drink.

Kill and cremate all birds badly affected, and give the others a one one-thousandth of a grain of corrosive sublimate. Give this individually. Then give the creolin and water to drink, and if the birds can be induced to eat, feed them bread that has been scalded with whole milk.

When they begin to eat, the feed must be good, not too bulky, and non-irritating. A little rolled oats and rolled wheat will be of much benefit.

NAMES OF EXHIBITORS ON COOPS TO BE RETAINED.

The executive committee of the San Francisco Poultry Association has adopted the plan recommended by George H. Croley, the show secretary of the Poultry Division, to place the name and address of exhibitors on the coops during the entire period of the annual show to be held in conjunction with the San Francisco Livestock Show, November 2-10. This feature will be welcomed by all experienced exhibitors, for the reason that San Francisco shows are known as the best at which to make sales of stock. This plan enables exhibitors to become acquainted with interested visitors from the moment the show opens. With few exceptions it has been the custom to omit the names of exhibitors on the coops until after the birds were judged. This precautionary measure is supposed to prevent the judges from knowing whose fowls he is judging, and thereby insure fairness. This method works a hardship on the exhibitors whose classes are judged long after the opening of the show; it also reflects on the honesty of the judges. The judges who will be employed for this show will be men with a reputation for integrity as well as ability, and who may be trusted to be fair under any circumstances.

Petaluma contemplates spending $50,000 on an egg fiesta to be held there some time during the last week of this month. The occasion will be known as National Egg Day.

Poultry Breeders' Directory

BABY CHICKS FOR SEPTEMBER—R. I. Reds, Barred Rocks, Black Minorcas, White-Brown Leghorns. Small or large lots by parcel post or express; safe arrival guaranteed. Fall chicks grow quickly, easily raised, and pay well for meat and eggs. Quality and price will both suit you. Send for free circular. Mission Hatchery, Campbell.

BARRED PLYMOUTH ROCKS—Winners at leading shows and wonderful layers. Choice stock for sale. "Nothing better in poultry." Catalog free. Chas. H. Vodden, Box 396, Los Gatos, Cal.

THOROUGHBRED MUSCOVY DUCKS—and ducklings for sale. Also Light Brahma chickens, Rouen ducks, and Bourbon Red Tom—all prize stock. Emma Miller, Farmington, California.

FALL CHICKS—Book orders now for your future meat and egg supply. Write for special circular on fall chicks. Stubbe Poultry Ranch and Hatchery, Palo Alto, Cal.

EASTMAN'S BRED-TO-LAY Barred Plymouth Rocks. Hatching eggs. Fairmead Poultry Farm, Fairmead, Cal.

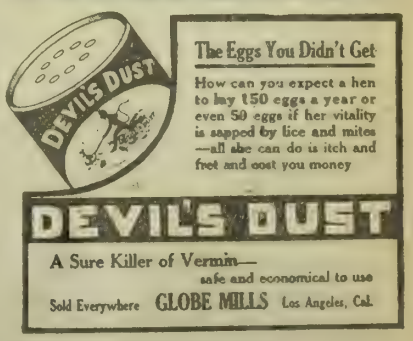
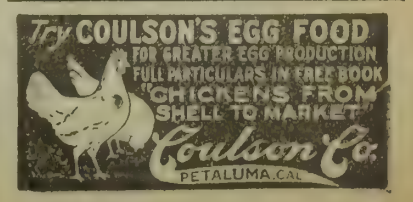
CHICKENS, DUCKS, GEESE, GUINEAS, Pea Fowl, Pigeons. Wm. A. French, 545 W. Park St., Stockton, Cal. Stamps.

ALBERT M. HART, CLEMENTS, CAL.—Breeder and shipper of bronze turkeys.





Mrs. Best's Letter.

HOUSEHOLD FURNISHINGS ON BARGAIN COUNTER.

My Dear Friends: Several of the good stores are having home-furnishing sales this month and the reductions in some lines are quite considerable.

BRIC-A-BRAC.

In ornaments, potteries, mirrors and similar type of furnishings reductions run as high as 50 per cent on discontinued lines. It should not be assumed that a much-reduced article is out of date or in any way undesirable, for that is not necessarily the case—many times it is because a line is being closed out or it is the policy of the house not to carry goods over from one season to another.

In one of the very large stores a full line of lamp shades in many different styles and practically all wanted colorings are being sold from one-third to one-half off.

CURTAINS AND RUGS DOWN

Remarkable price reductions prevail on certain lines of rugs, when you consider that many mills have already stopped their production and still more must ultimately do so. This includes Wiltons, Axminsters and Brussels rugs and Orientals, and the cheaper grass rugs are included, too. Carpet by the yard is correspondingly marked down and linoleums and oilcloth may be purchased much below the standard prices.

A sale of curtains might be of especial interest to housewives—some of them elaborate, but most of them of marquisette or scrim, either plainly hemstitched or with a lace edge, for as little as $1.75 a pair. These are substantial curtains that will wear well and launder well. Drapery and upholstery goods, ranging from tapestries and velours to cretonnes and linens, are included in these sales, and it is a wonderful opportunity to pick up these fabrics.

REPLENISH THE LINEN CHESTS.

Bedding is constantly increasing in price and if there are winter needs to be filled it would be wisdom to take advantage of the reductions in that line that are now in force.

One of the very best houses is having a sale of odds and ends in linens—odd tablecloths and napkins at about the price we will have to pay for all cotton damasks in the near future—broken lines of face and bath towels at less than present wholesale prices.

WINTER SHOWS ITS SHADOW.

More and more new fall and winter goods are displayed—in the new suits the slim silhouette is noticeable—skirts a trifle longer and coats as well. Belted effects are much shown and the tie-back is one of the new features. These are sash ends that cross in front and tie at the back in youthful fashion. The distinguishing mark of the new garments is simplicity—a simplicity that is charming.

A great many jersey dresses are being shown in combination with other materials, or heavily braided in self-color braids. These dresses seem to have been accepted as all-the-year-'round clothes, almost equalling serge in popularity.

The cape and cape-coat have been hovering in the background, but there do not seem many in evidence on the streets.

ROSABELLA BEST.

THE HOME CIRCLE

CLASSIFICATION OF FRUIT JUICES

Instead of filtering, fruit juices may be made clear by adding substances which will coagulate and settle, carrying with them to the bottom the material that causes the cloudiness. Pure clay, casein and white of egg are the most suitable materials for this purpose. Clay and casein are coagulated by the acid of the fruit juice. Egg white must be coagulated by heating.

A clay known as Spanish clay is considered best for this purpose. It is a medium grade of potter's clay. Mix with water at the rate of one pound to a gallon, soak for ten days and then work with the hands until it forms a smooth, thin mud.

To clarify apple juice, add one pint of the mixed clay to ten pints of juice; heat to 150 degrees F. while stirring. Let stand over night. The next morning pour off the clear juice and filter the sediment. Bottle the juice and pasteurize just as unclarified juice. For grape juice use three-quarters of a pint of the clay to each ten pints of juice and proceed as with apple juice.

Casein is a granular powder and may be bought at a drug store. To dissolve it, add to each three ounces of casein one tablespoon of sal soda and one pint of water. Boil till dissolved and then add seven pints of water. Casein is used for grape juice only. To each ten pints of juice add one-half pint of the casein solution. Heat to 150 degrees. Let stand over night. Pour off the clear juice and filter the sediment.

Mix the whites of two eggs with half pint of water. Add this to each gallon of grape juice. Heat, allow to stand 18 hours and proceed as above. Egg white gives good results with grape juice, but is not so satisfactory for most other juices.

LOOKING AHEAD TO THANKSGIVING.

In the effort to stop the wasteful practice of slaughtering broiler turkeys—those weighing from two to four pounds—the Food Administration is requesting farmers to raise their turkeys to maturity, thereby adding to the nation's meat supply. Dealers have been notified of the Food Administration's desire that they refrain from purchasing the immature birds. Hotels, clubs and restaurants, where most of the broiler turkeys are consumed, have been asked to discontinue serving them. It is pointed out that turkeys, unlike chickens, do not become plump and well-meated until nearly full grown.

CHILD WELFARE PROBLEM.

Mothers in California will be interested to know that Norway has recently enacted laws giving complete national recognition to illegitimate children. In doing so Norway takes the lead among modern nations.

The legislation establishes the responsibility of the state in providing for the protection and education of these children and holds both parents equally responsible for training and maintenance.

CANNING SWEET POTATOES.

Use freshly dug potatoes. Boil until the skin will slip from the potato easily. Peel while still hot. Pack tightly into cans or jars, pressing down to make the container as full as possible. Seal cans. Place caps and rubbers on loosely. Sterilize from three to four hours. Sweet potatoes should not be sterilized under pressure and the cans must be well filled to prevent darkening.

SUNFLOWERS FOR FUEL.

To the Editor: You asked someone, some time ago, what they were going to do with the sunflowers they were proposing to grow. I am growing a row across my back yard for a fence. When the heads are ripe I am going to put them in my coal hod and carry them to the furnace, also the stalks. A good, fat, ripe sunflower head makes good coal.—Mrs. E. P. Flint, Hartford, Conn.

JUST THINKING.

Standin' up here on the fire-step,
Lookin' ahead in the mist,
With a tin hat over your ivory
And a rifle clutched in your fist;
Waitin' and watchin' and wond'rin'
If the Hun's comin' over tonight—
Say, aren't the things you think of
Enough to give you a fright?

Things you ain't even thought of
For a couple o' months or more;
Things that 'ull set you laughin',
Things that 'ull make you sore;
Things that you saw in the movies,
Things that you saw on the street,
Things that you're really proud of,
Things that are—not so sweet;

Debts that are past collectin',
Stories you hear and forget,
Ball games and birthday parties,
Hours of drill in the wet;
Headlines, recruitin' posters,
Sunset 'way out at sea,
Evenings of pay-days—golly—
It's a queer thing, this memory!

Faces of pals in Homeburg,
Voices of womenfolk,
Verses you learnt in school-days
Pop up in the mist and smoke
As you stand there, grippin' that rifle,
A-starin', and chilled to the bone,
Wonderin' and wonderin', and wonderin',
Just thinkin' there—all alone!

When will the war be over?
When will the gang break through?
What will the U. S. look like?
What will there be to do?
Where will the Boches be then?
Who will have married Nell?
When's that relief a-comin' up?
Gosh! But this thinkin's hell!
—Hudson Hawley in the Stars and Stripes.

CANNING OF HOMINY.

Dissolve two level tablespoons of soda lye (commercial sodium hydrate) in each gallon of water in an agateware pot. Place dry white corn in this and boil hard for one hour. Place the corn in a wire basket or mosquito-netting bag and allow cold water to run through it for five or six hours. If this cannot be done, place in a large tub of water, change the water often and stir frequently for six or eight hours. This is to remove the lye.

After the lye has been removed, rub off the hulls and black-tip caps. This can be done by rubbing the kernels over a screen or colander. Separate the hulls and kernels by washing upon a coarse screen.

Fill into cans. Add a boiling hot brine of two tablespoons of salt per gallon of water. Cap and seal. Sterilize cans 45 minutes at 15 pounds pressure, or 1¼ hours on each of three successive days in a wash boiler. If jars are used, sterilize 1½ hours for three successive days.

Defective teeth reduce physical efficiency and are responsible for many cases of heart disease, rheumatism and other chronic affections. Parents who are doing their full duty by their children should see that their teeth are properly attended to.

MISS HEAD'S SCHOOL FOR GIRLS
Berkeley, California

A cheerful, home-like school that stands for earnest, honest work, and all that tends toward cultured, upright womanhood.

MARTINEZ, CAL.

Good Health.

Cathartics for Constipation.

Don't use them except in cases of emergency. Their constant use will in the end only confirm the condition they are intended to relieve. We do not believe a case of constipation exists, except where due to some malformation or misplacement of the intestines, that cannot be cured by dieting and proper hygiene. Drink plenty of water (the "universal solvent"), eat plenty of good fruit and vegetables, avoid foods too concentrated or too rich, go to stool at regular intervals, whether you feel the prompting or not, take plenty of physical exercise in the open, live and sleep in well-ventilated rooms only, and you will rarely or never be troubled with this ailment. Coarse grains, such as whole wheat or bran breads, are excellent. Don't be afraid of grain hulls or husks, but masticate them thoroughly.

The Baking Soda Habit.

Too much baking soda is harmful to the digestion. It is commonly used with sour milk in cookery. Being an alkali, it counteracts the lactic acid contained in such milk. Where the soda is taken to correct the eructations of a sour stomach after meals, its action is the same—the neutralization of the superacid contents of the stomach. The physiological objection to soda in cookery is that it neutralizes the hydrochloric acid of the gastric juice—a natural secretion—and thus disturbs normal digestion.

Sugar Crystals in Jellies.

The crystalline substances that occur occasionally in grape jellies and some forms of jam are either crystals of pure sugar or of dextrose, an antecedent of sugar. They occur when an excess of sugar is present. As a form of sugar they are a perfectly good food, but not as acceptable to the taste as when the sugar coalesces with the jelly mass.

Food Value of Nuts.

Almonds contain 21.4 per cent of protein, 54.4 per cent fat, and 13.8 per cent carbohydrates. Walnuts contain 18.2 per cent of protein, 60.7 per cent fat, 13.7 per cent carbohydrates. Nuts generally average 20.76 per cent protein, 53.08 per cent fat, and 18.23 per cent carbohydrates. But, after all, the chief value of nuts lies not in their chemistry but in their delicious savor.

Send for Our Catalogues

We carry the largest stocks of Player Music Rolls on the Pacific Coast. We have in stock all the new music. We get the hits as fast as the manufacturers make them into player rolls.

We issue a Monthly Bulletin listing only the real hits and the prices—the Bulletin is sent free and without obligation to purchase. We will gladly add the name of any Player Piano owner, upon request.

Write and ask us about our "On Approval" plan of buying Player Music.

When writing please state whether your Player Piano is a 65 note or an 88 note instrument.

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.

Stores also at Portland, Seattle, Tacoma, Spokane.

COOK WITH PEARL OIL

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

Keep Your Kitchen Cool

Your kitchen is always cool and comfortable even in the hottest weather if you use a New Perfection Oil Cook Stove.

No smoke or odor, no dust or dirt. None of the bother of coal or wood. All the convenience of gas. Better and more economical cooking all the year round.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

STANDARD OIL COMPANY
(California)

NEW PERFECTION OIL COOK STOVE

Agricultural Summary

Heavy Receipts and High Prices.

Statistics recently published show the cattle run of last month the largest of any July in history. There were 314,000 cattle and 54,000 calves. Over 600,000 hogs run through the pens was the largest July run since 1901. The average cost of hogs for the month was $17.75, second highest on record here. Near-record prices for hogs are ascribed to recent heavy Government orders. Also, in spite of the heavy receipts noted, the better classes of beef cattle have been steadily advancing in value, new records being made the last week of the month, $18.65 being paid for corn-feds weighing 1225 to 1350 pounds. The July top last year was $14.15.

Egg Prices the Coming Winter.

There is little doubt that the rules of the Food Administration which prohibits the making of more than a fixed profit on eggs is having a tendency to bring eggs out of storage earlier than usual. One result of this is likely to be a decided shortage when eggs become scarce, and the dollar a dozen egg is again predicted for the coming winter. Meantime some effort is being made to bring eggs into this market from the Middle West. Should this prove successful, it may tend to stabilize the market and prevent the withdrawal of the winter supply from storage before the winter arrives.

The 1918 Rice Crop.

The millers and the Food Administration have now signed up an agreement as to the price to be paid for the 1918 crop. The growers are not a party to the agreement, but a majority of them requested that such an agreement be drawn. The price under the agreement will be $4.32 per hundred for paddy and the price at the mills will be $7 per hundred for No. 1 clean rice. This means that the jobber will add one dollar as his profit and the retailer will add two dollars, making the price to the consumer 10c per pound.

Cattle Moving Eastward.

Good cattle continue to be scarce in the East and bring top prices—$17.75 to $18.25 being offered at some receiving points for extra choice lots. It is rumored there has been a big movement of beef cattle from California eastward. Some of our ranges are said to be overstocked for the amount of diminished feed available, and the record prices prevailing at Eastern markets are an attraction not to be ignored.

Bean Market Dormant.

It is difficult at the present time to force into sale the few shipments that are received. The period of most active demand is past, when large orders were filled by local dealers from foreign sources. On the whole, the immediate outlook for beans is not promising. Late forecasts of the U. S. Department of Agriculture indicate an increase of almost 5,000,000 bushels in the crop, with a total of 19,791,000 bushels.

Term Contracts on Fruit Permissible.

The Food Administration has announced that under its rules growers of dried fruits may enter into term contracts with packers if definite prices are not named and where the intention of the contract is merely to secure the crop. Such contracts must also include a provision stating that they are subject to the rules and regulations of the Food Administration.

Enormous Demand for Hog Products.

Tremendous exports of hog products are being made to our European allies. The last week in July 25,956,000 pounds of lard and 38,590,000 pounds of bacon were shipped, as against only 993,000 pounds of the former and 1,536,000 pounds of the latter a year ago.

Milk Goes Up.

Certified milk was advanced last Thursday in San Francisco from 17c to 20c a quart, cream from 26c to 35c a pint.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, August 14, 1918.

WHEAT.

Wheat is selling at the prices announced by the Federal Grain Corporation, and these prices will doubtless be maintained for the present crop. The prices quoted are for grain f. o. b. San Francisco, Los Angeles, Seattle, Tacoma and Portland, and guaranteed at least $2 per bushel f. o. b. shipping point. The price of sacks and sacking not included.

No. 1 hard	$2.20
No. 2	2.17
No. 3	2.13
No. 1 soft	2.18
No. 2	2.15
No. 3	2.11
Club or Sonora, No. 1	2.16
do, No. 2	2.13
do, No. 2	2.09

BARLEY.

While there was not much movement in barley this week, prices stiffened somewhat under the refusal of the growers to sell at the figure offered.

Choice feed, per ctl	$2.40@2.47½

OATS.

Oats are quiet at last week's quotations.

Red feed, per ctl	$2.50@2.65
Red seed	2.75@3.25

CORN.

There is no California corn on this market and very little Eastern. The market is dead.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked	$4.20@4.25
Milo maize	3.95@4.05
Egyptian	4.05@4.10

HAY.

The receipts of hay for the past week were 2509 tons, compared with 2422 the previous week. The market has been heavily stocked throughout the week. Demands have been light and it was only with difficulty that arrivals were removed from the tracks. Practically all the hay arriving is that which has been purchased by dealers at good prices in the country throughout the summer. Considerable alfalfa has arrived during the week from the river districts as well as from the interior. It is reported that, owing to the lack of water in many districts, and trouble with grasshoppers in others, later cuttings of alfalfa are liable to be short of former estimates.

Wheat No. 1	$23.00@25.00
do, No. 2	20.00@22.00
Choice tame oat	24.00@26.00
Wild oat, new	19.00@23.00
Barley, new	19.00@23.00
Alfalfa, first cutting	18.00@20.00
do. second cutting	22.00@24.00
Stock	18.00@20.00
Barley straw	50@80c

FEEDSTUFFS.

Rolled barley and rolled oats were again lower this week, but otherwise there were no changes in the prices of feedstuffs. The wheat by-products are now being quoted at the Government prices, which are for carload lots and without sacking. The demand for these feedstuffs is said not to have developed as yet to any extent.

New alfalfa meal, per ton	$33.00@34.00
Coconut cake or meal	44.50
Cracked corn	86.00@88.00
Oilcake	$75.00@76.00
Rolled barley	52.50@53.50
Rolled oats	55.00@56.00
Bran, carload lots in S. F.	23.75
Mixed feed, do, do	25.00
Middlings, do, do	25.75

POTATOES, ONIONS, ETC.

Yellow onions are in good demand and their price has advanced considerably. Potatoes are firm at last week's quotations. Green vegetables are coming in in large quantities and in most cases show a recession in prices from last week.

Peas	6@8c
String beans, per lb	3@4c
Wax beans, per lb	4@5c
Carrots, per sack	50c@$1.00
Rhubarb, San Jose, per box	$1.00@1.25
Summer squash	50@90c
Cucumbers (hothouse), per box	50@90c
do, Alameda, lugs	50@90c
Eggplant, per box	50@65c
Lettuce, Sacramento, crate	75c@$1.00
Tomatoes, per crate—	
Merced	50@75c
Bay	75c@$1.00
Potatoes—	
Garnet Chile, on street	$2.00@2.25
Whites	2.25@2.60
Sweets, per lb	4¾@5c
Onions	
River Reds	$1.50@1.65
do, Yellows	2.35@2.50
Garlic, new	12½@15c
Green corn, Alameda, per sack	$2.00@2.50
Okra	6@8c

BEANS.

Few sales are reported. Red kidneys are now practically off the market and garbanzos are becoming scarce. The price of the latter was advanced on account of some inquiry for the depleted stock. Cranberry and tepary beans were weak on offers of more than the market could absorb.

Bayos, per ctl	$ 7.75@ 8.00
Blackeyes	6.75@ 7.00
Cranberry beans	10.25@10.50
Limas (south, recleaned)	12.50@12.75
Pinks	7.00@ 7.10
Red kidneys	Nominal
Mexican Reds	7.50@ 7.75
Tepary beans	8.00@ 8.50
Garbanzos	8.00@ 8.75

POULTRY.

The general tone of the poultry market is firm, with an upward tendency for hens and small broilers. A temporary oversupply of 1¼ to 1¾ lb. broilers lowered their price. Fryers and young roosters are plentiful and their quotations were temporarily lowered.

Turkeys, live, per lb., young	28@30c
do, dressed	32@34c
Broilers, 1½ to 2 lbs	36c
do, 1¼ lbs	37@38c
do, ¾ to 1¼ lbs	42@43c

Squabs, per lb	42@45c
Ducks	25@27c
do. old	23@24c
Belgian hares (live)	15@18c
do, dressed	19@23c

BUTTER.

The butter market has been strong throughout the week, with very slight fluctuations in price. More or less butter is being constantly taken from storage and placed on the market and it is reported that the quantity now in storage indicates high prices the coming winter.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	52	52	51½	52	52	51½
Prime 1st	50	49	49	49	49	49
Firsts			Nominal			

EGGS.

Eggs took a decided jump since last Saturday, advancing 4½c for extras and 2c for pullets. The latter passed the 50c line today for the first time in the season. All business is at present concentrated on these two descriptions. The only suggested reason for the rapid advance in price of eggs this week is that the distribution has been poor. Arrivals have been about normal, but a few dealers seemed to have a monopoly of the receipts.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	50½	50½	50½	52	53	54½
Extra 1sts			Nominal			
Firsts	46	46	46	46	46	Nom.
Extra pullets	48½	48½	48½	49½	49	50½

CHEESE.

The cheese market is showing continued strength and advances of 1c a pound are noted in Fancy California flats, first California flats and cold storage Oregon triplets fancy. This latter cheese now sells at an advance of 2½c a pound over the same description of new cheese.

Fancy California flats, per lb	28c
First California flats	26½c
Oregon triplets, fancy	27½c
Oregon Y. A. fancy	27½c
C. S. Oregon triplets fancy	29c
do, Oregon Y. A. fancy	27c
Monterey cheese	21@23c

FRESH FRUITS.

The berry market was weaker this week. The demand was light throughout the period, and while arrivals were not heavy the prices had to be lowered to move the stock. Apricots are becoming scarcer and were advanced in price. Grapes are coming in in greater variety and quantity and seem to move readily.

Apples	$1.50@2.50
Apricots, per crate	1.25@2.00
Peaches, 4-box crate	.75@1.00
Figs, black, per box	None
do, double layer	$1.00@1.50
Strawberries, per chest	$7.00@9.00
Blackberries, per chest	6.00@7.00
Raspberries, per chest	9.00@11.00
Loganberries, per chest	8.00@10.00
Plums	$1.00@1.50
Cantaloupes, flats	75c
do, ponies	$1.50@1.75
do, standard	1.75@2.00
Watermelons, per lb	1½@2c
Pears, Bartlett, per box	$2.00@2.50
Grapes, seedless	1.00@1.25
do, Malaga	1.75@2.00
do, Fountainbleu	.90@1.00
do, Tokay	1.50@1.75

CITRUS FRUITS.

The citrus fruit market is in the same condition as last week, but no changes in quotations are reported. While some grapefruit has sold at $6, not enough has gone at that price to establish it as a market quotation.

Oranges:	
Valencias, fancy	$6.75@7.00
Valencias, choice	6.25@6.75
Lemons:	
Fancy, per box	7.00@7.50
Choice	5.50@6.50
Standard	4.00@4.50
Lemonettes	4.00@5.00
Grapefruit, fancy, new	4.00@5.00

DRIED FRUITS.

No market quotations have as yet been established on either apples or pears. There has been some buying of the former at 13c, but very few dealers are willing to pay this price. For pears the growers are demanding 10c and 11c for the class of stock they received 7c and 8c for last year. It is reported that some scattering sales have been made at 10c, but the local dealers decline to accept this as establishing a market price. The other crops have been pretty well bought up as far as is safe on the present status of the crops.

Prunes, graded, price to growers: gain in dip	11c
Prunes, graded prices to growers:	
20-30, inclusive, per lb	15c
31-41, inclusive, basis	10c
42-51, inclusive, basis	9½c
52-61, inclusive, basis	8½c
62-71, inclusive, basis	8½c
82-91, inclusive, basis	8c
92-101, inclusive, basis	8c
102-121, inclusive, per lb	4½c
122 and up, per lb	4c
Apricots	12@19c
Figs	12@16c
Raisins—	
Muscats	5½c
Thompsons	6¾c
Sultanas	6½c

HONEY.

The honey market is stagnant. There has been quite a movement, but at the present time no one seems to want to buy at the prices quoted.

White, extracted	21c
Light amber	18@20c
Amber	15@18c

RICE.

Paddy rice, 1918 crop	$4.32
Clear No. 1, 1918 crop at mill	7.00

HIDES.

Due to some confusion arising from Government regulation of prices, dealers are buying sparingly, or at prices sufficiently low to insure a safe margin.

Wet salted hides, per lb., taken off from August 1 to September 1, all weights: No. 1, 19c; No. 2, 17c; No. 3, 16c; bulls and stags, No. 1, 15c; No. 2, 13c; kips, No. 1, 21c; No. 2, 19c; calf, under 15 lbs., No. 1, 33c; No. 2, 31c.

Horse—Dry, per lb.: No. 7, large, $2.25@2.50; medium, $1.75@2.35; small, $1.00@1.50; salted, $3.00@5.00; colts, 25@75c.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, August 12, 1918.

Under increased offerings in most of the auction markets and due also to the fact that a greater proportion of the stock has been arriving ripe, there has been a decline in Bartletts. Sound stock not showing color has been selling equal to the week previous, but ripe stock has taken a slump. The arrivals of Northwestern pears have also had some effect upon the markets, but conditions will revert to normal as soon as the heavy movement of fruit now rolling has been disposed of. Sacramento river Bartletts will probably all have been shipped by the middle of this week. This applies also to plums.

Placer county plums and Elbertas will clean up by the end of this week and the later varieties of peaches will undoubtedly find a ready market. Northwestern peaches are arriving in some of the Eastern markets and the supply has had some effect upon the market.

A few Tokays from Winters and Vacaville have begun to move, but the quality is very poor. The Bartletts show lack of color and are undersized, due to the lack of moisture in soil. The unirrigated districts of the San Joaquin Valley will produce an inferior Tokay this season, but the irrigated stock will be of excellent quality. We look for the movement of Tokays from the Lodi section to begin about the 20th.

Early Thompsons from the Fresno district sold to good advantage, but shipments have practically ceased, giving way to Malagas. The shipments are heavy and will be for the next few weeks. At present the markets are in good condition, though we look for a decline shortly, though prices will probably hold to a satisfactory basis. If the distribution of Malagas is equalized and the auction markets not overloaded by uninformed speculators, there will be no difficulty experienced in disposing of the entire crop to good advantage.

The refrigerator car situation has improved considerably during the past few days and we do not look for any inconvenience for the balance of the season.

Transportation conditions, as a whole, are better than last season, and with the exception of a few instances the schedules are being maintained and diversions accomplished without much delay.

There is nothing to indicate that anything will interfere with any of the markets for the balance of the season, but conditions can be best regulated and satisfactory sales assured by careful distribution.

New York: Bartlett pears $3.24; Malaga grapes $2.84, Thompson Seedless $2.40; St. John peaches $1.37; Elberta $1.63, Tuscan $1.71, Crawford $1.27; American Blue plums $1.67, Yellow Egg $1.67, Wickson $1.93, Burbank $1.78, Diamond $1.80, Hiniori $1.70, Tragedy $1.65, Duane $1.40, Grand Duke $1.88, Kelsey $2.40.

Boston: Kelsey plums $2.19, Diamond $1.67, Yellow Egg $1.40, American Blue $1.55, Burbank $1.51, Wickson $1.81, Grand Duke $1.62, Tragedy $1.73, Duane $1.45, Bradshaw $1.50, Giant $1.70, Standard $1.42; Crawford peaches, 99c, Elberta $1.17, Tuscan $1.26, St. John $1.16; Malaga grapes $2.87, Thompson Seedless $1.73; Bartlett pears $2.60.

Chicago: Bartlett pears $3.33; Elberta peaches $1.46, Tuscan $1.41, Crawford $1.24, St. John $1.29, Foster $1.35; Malaga grapes $2.54, Thompson Seedless $1.44, Tokay $3.15; Nectarine $2.14; Tragedy plums $1.87, Burbank $2.06, Wickson $2.18, Diamond $1.91, Giant $1.70, Grand Duke $1.80, Kelsey $1.98, Sugar $1.74, Gaviota 2.19, Satsuma $1.94.

Shipments, by cars, from August 3 to 9, inclusive: 778 peaches, 121 plums, 564 pears, 206 grapes.

Total shipments to date, 1918—6635 cars.
Total shipments to date, 1917—5909 cars.

LOS ANGELES

Los Angeles, August 13, 1918.

BUTTER.

There was quite a falling off in the receipts the past week, but as the high prices had commenced to tell on the demand the market lost tone and the middle of our review week extras on 'change broke 2c and the demand was not strong at this decline. Receipts for the week were 246,000 pounds, against 371,100 pounds the same week last year. There was taken into cold storage 15,372 pounds, which had a bearish influence. Cold storage stocks now being 211,545 pounds heavier than this time last year.

We quote:
California extra creamery..............48c

Extra	50	50	50	48	48	48
1917—						
Extra	44	44	44	44	44	44

EGGS.

A snappy market continues to be had for what few fresh eggs are coming in. The receipts for the week by rail were 952 cases, against 1080 cases the same week last year. The truck receipts continue to run about four times as large as the arrivals by rail, which would make the supply for the week 4760 cases against 5400 cases the same week last year. The cold storage stocks had to be drawn on to the extent of 507 cases to make up the shortage in the fresh receipts.

POULTRY.

A good deal of young stuff coming in and demand is only fair. There is no life for anything at the high prices.

The following prices were agreed upon last Friday, August 9, and hold good until the coming Friday:

Broilers, 1@1¼ lbs. 30c
Broilers, 1½@1¾ lbs.......................33c
Fryers, 2@3 lbs. 31c
Roasters (soft bone), 3 lbs. and up.....31c
Stags and old roosters, lbs.............19c
Hens ....20@27c
Tom turkeys ....30@33c
Ducks ....22@28c
Geese 15c
Squabs, live, per lb. 30c
Squabs, dressed, lb. 40c

VEGETABLES.

There are but few changes in this market the past week. Offerings pretty good of most everything. Demand fair for all fresh stuff, but stale and poor hard to move. Only local potatoes are on the market, and receipts light, hence a higher market and good demand. The best onions are in fair request and prices steady. Cabbage scarce, steady and firm. Peppers slow sale and a little lower. Tomatoes steady and the best are in fair demand. String and lima beans steady. Cucumbers, corn and summer squash steady but dull.

We quote from growers—
Potatoes, new, per lug............75c@$1.00
New potatoes, per cwt..........$2.25@2.50
Sweet potatoes, per lb.................4@5c
Garlic, per lb. ....5@6c
Onions—Stockton Yellow Danvers, cwt. ....$2.00@2.25
Onions—White Globe, per cwt.. 2.00@2.25
Onions—Small Bermuda, per crate..80@90c
Garlic, lb. ....5@7c
Cabbage, per 100 lbs. ....$2.00@2.50
Bell peppers, per ....3@3½c
Chile peppers, per lb.................3@3½c
Peas, Northern, per lb. ....10@12c
Summer squash, local, per lug.....25@30c
String beans, per lb. ....4½@5c
Tomatoes, home-grown, per lug....30@75c
Eggplant, Imperial Valley, per lb....4@5c
Cucumbers, home-grown, per lug..25@40c
Corn, per lug of 3 doz. ....65@75c

FRUITS.

With abundant stock on the market the past week, the market was dull. Black Spanish figs, being in light supply, showed the most life. Nectarines sold fairly and so did fancy pears. Grapes were both dull and lower.

We quote from growers:
Figs, Black Spanish, 7-lb. box.....75@85c
do, White, 7-lb. box..............60@70c
Peaches, freestone, per lug......$1.00@1.35
do, clings, per lug............. 1.25@1.50
do, Northern, freestone, lb.........3½@4c
do, do, clings, lbs.................3@3½c

Apples, Red Astrachan, per lug....65@80c
do, White Astrachan, per lug....65@80c
Banana apples, per lug ....90c@$1.00
Apples—Alexanders, 4-tier............$2.25
do, 4½-tier 2.00

BERRIES.

There were more strawberries and blackberries in the past week than for some little time, and the market was slow and lower for both. There is too much other fruit on the market. Raspberries in light supply and firm, while loganberries have been all marketed.

We quote from growers:
Strawberries—
Fancy, per 30-basket crate....$2.00@2.25
Poor to choice, 30-basket crate 1.50@1.65
Blackberries, 30-basket crate.... 1.80@2.00
Raspberries, 30-basket crate..... 2.50@2.85

MELONS.

Cantaloupes are now coming to market freely; quality is good. Under increased offerings the market ruled lower the past week, but at the decline there was a very good movement. Watermelons have been dull under the influence of cooler weather, but prices hold steady.

We quote from growers:
Cantaloupes—
Tip Top, home-grown, standard crate ....65@75c
do, do, pony crate ....40@60c
do, do, jumbo crate...........$1.50@1.75
Columbia, jumbo crate........ 1.75@2.00
Casabas, per lb.........................2½@3c
Pineapple, standard crate..........65@75c
do, jumbo crate ....$1.50@1.75
do, Paul Rose, standard crate.75c@$1.00
Watermelons, per 100 lbs. .... 1.00@1.25
Honeydew melons, special........... 2.00
do, do, flats........................ 1.25

HAY.

Receipts the past week were in excess of the demand, though not especially heavy. Buyers holding back and only taking what was needed from day to day. Hence a draggy and weak market for barley hay and alfalfa. Oat hay rather firm under scarcity.

We quote f. o. b. Los Angeles—
Barley hay, per ton ....$24.00@26.00
Oat hay, per ton .... 25.00@27.00
Alfalfa, northern, per ton .... 21.00@22.00
Alfalfa, local, per ton .... 22.00@24.00
Straw, per ton .... 9.00@10.00

BEANS.

It is too early yet for new crop beans and there are not many old ones on hand. But few are wanted. Only a few small lots being taken by the home-consuming trade.

We quote from growers:
Limas, per cwt.....................$12.00
Large white, per cwt................ 12.50
Small white, per cwt................ 12.50
Pink, per cwt......................... 7.50
Blackeyes, per cwt................... 7.00
Tepary, per cwt...................... 8.50

COTTON.

There was less excitement in the market the past week. Realizing by some longs and reported showers in some sections of the cotton belt caused the market to weaken a little early in the week. It recovered on the report of continued dry weather in Texas. The annual report of the New Orleans Cotton Exchange Monday gave the annual crop for the year marketed up to the first of August, 11,906,973 bales, or 1,033,961 bales less than the previous year. This started speculation again and there was very good buying Monday both in New York and New Orleans. August closed in New York, Monday, at 29.43c, and October at $29.53c. Spot middling in New Orleans, 28.75c.

Special Citrus Market Report

Los Angeles, August 12, 1918.

The feature of the citrus market this last week is the lemon situation at Eastern points. The exceptionally hot wave which wilted down the Eastern seaboard and prompted parched throats to yearn for deep draughts of citrated relief, sent the lemon market skyward, prices reaching above $10 a box at several points of distribution. Of course, prices will fall with the subsidence of the hot spell, though a healthy level will be maintained doubtless until about the middle of next month, when the distinctively summer demand for the fruit ceases. There are fairly heavy arrivals of foreign lemons, but their generally inferior quality declasses them as competitors of the California article.

Valencia oranges have it all their own way. The demand so greatly exceeds the supply that unprecedentedly high price levels prevail. It is reported that the fruit sells higher in the auction markets than at private sale, and therefore the bulk of the stock is moving that way. The New York market has ranged from $4.15 for poorer grades up to $9.75 for fancy, Philadelphia $6.55@8.75, Boston $7.30@8.25. F. o. b. quotations are around $7 for good stock.

Seasonal shipments are approximately: Oranges, 12,900 boxes (against 35,600 last year); lemons, 5000 boxes (against over 7000 last year).

Special Livestock Market Report

San Francisco, August 14, 1918.

CATTLE—In the East, owing to the heavy call for meats for foreign export, and the scarcity of feedstuffs, the demand for meat animals of all kinds is unprecedented and prices range around the record level. The movement of cattle from the West has slackened up somewhat. Local conditions are not greatly affected by the Eastern situation. There is a plentiful supply of cattle in the market here, such as they are, though a great scarcity of choice stock persists and the latter commands premium prices.

Grass steers—
No. 1, weighing 1000 to 1200 lbs.11½@12c
No. 1, weighing 1200 to 1400 lbs.11½@12c
Second quality ....10@11c
Thin ....8@9c
Cows and heifers—
No. 1 ....8@8¼c
second quality ....7@7½c
Common to thin ....4@5½c
Bulls and stags—
Good ....6@7c
Fair ....5@6c
Thin ....4@4½c
Calves—
Lightweight 11c
Medium 10c
Heavy ....8@8½c

SHEEP—There is a free supply of mutton sheep in the San Francisco market at the present time, with a very limited demand from the retail trade, people preferring to buy the more substantial and lower priced beef instead.

Lambs—
Yearlings ....12@12½c
Milk ....14@14½c
Sheep—
Wethers ....11@11½c
Ewes ....9½@10c

HOGS—Owing to the continued and growing scarcity of hogs, coupled with the poor quality of most of those offered, prices for good stuff have made another slight advance. Stubble hogs have not yet begun to move.

Hogs—
Hard, grain-fed, 100@140.....17¼@17½c
do, do, 140@300...................17¾c
do, do, 300@400...................17¼c

Los Angeles, August 13, 1918.

CATTLE—A good many thin cattle are being offered, forced to market by the high price of feed. They were both dull and weak. Choice fed steers are scarce and meeting with ready sale.

Per cwt. f. o. b. Los Angeles—
Beef steers, 1000 to 1100 lbs. $10.00@12.00
Prime cows and heifers........ 8.00@ 9.00
Good cows and heifers......... 7.50@ 8.00
Canners, per cwt............... 5.50@ 6.00
Calves, per cwt................ 8.50@ 9.50

HOGS—A firm and fair market was had the past week. Not many coming in and what few arriving only half fat. Yet under scarcity prices are being held steady at quotations, as all killers wanted a few for their fresh meat trade.

Per cwt. f. o. b. Los Angeles—
Heavy, averaging 275@300 lbs..$15.00@16.00
Mixed, 225@275 lbs. .... 16.00@17.00
Light, 175@220 lbs. .... 16.00@17.00

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—Not many coming in and very few wanted. A dull mutton market causing killers to handle but few.

Per cwt. f. o. b. Los Angeles—
Prime wethers ....$9.00@10.00
Prime ewes .... 8.50@ 9.50
Yearlings .... 9.50@10.50
Lambs ....13.00@14.00

North Portland, August 12, 1918.

The run of livestock at the North Portland yards today consists of 1400 cattle, 125 calves, 900 hogs, and 1100 sheep.

CATTLE—What few choice to prime steers we are receiving are selling upon a fully steady basis, some changed hands today at 13c, which is the mark for grass cattle. The bulk of the cattle are selling strong as quoted. Prime steers, $11.75@12.75; good to choice steers, $10.75@11.75; medium to good steers, $9.50@10.75; fair to medium steers, $8.50@9.50; common to fair steers, $5.50@8.00; choice cows and heifers, $8.00@9.00; medium to good cows and heifers, $6.00@7.50; fair to medium cows and heifers, $5.00@6.00; canners, $3.00@5.00; bulls, $5.50@7.50; calves, $8.50@11.50; stockers and feeders, $6.00@8.00.

HOGS—What hogs we have today on the market are of good quality generally. The call is good and the market shows an advance of 10c, with indications strong for further advances before the market closes. Prime mixed, $18.95@19.25; medium mixed, $18.75@18.95; rough heavies, $17.25@17.65; pigs, $16.50@17.00; bulk, $19.10@19.15.

SHEEP—The lamb market is showing some life and we are able to quote valley lambs up to 14c. However, the general sheep trade is steady as quoted. East of the mountain lambs, $13.50@14.50; valley lambs, $13.00@14.00; yearlings, $9.50@10.50; wethers, $8.50@9.50; ewes, $6.00@8.00.

COUNTRY LANDS.

BE PATRIOTIC—Raise stock on productive Government land, plainly marked on county sectional maps; $2.50 any county; booklet. Particulars for stamps. Write Joseph Clark, Sacramento.

BEAUTIFULLY LOCATED INCOME HOME—67 acres. Nuts, fruits, alfalfa, etc. Full equipment. Horses, tractor, etc. Terms. Good schools, roads, and conveniences. Box 163, Elk Grove, Cal.

FOR SALE—A bargain; ten acres desirable cherry land in Atascadero colony, California. Paid principal and interest, $5,400. Present price, to get money quickly, $4,000. Carl Storla, Paso Robles, California.

400-ACRE IMPROVED stock and grain ranch, 3½ miles Pleasant Valley R. R. station, Mariposa county, Cal. 100 acres cleared and tillable; nearly all could be farmed if cleared of large oak and other trees; 3 and 6-room house, large barn and outbuildings; blacksmith shop and tools; fenced and cross fenced, part hog tight; nice family orchard and garden irrigated from springs. Average rainfall, 29.88 inches. Grapes, olives, almonds, etc., grow without irrigation. No alkali or hardpan. Feed in pastures and free outside range adjoining, knee high. Elevation, 1500. School and church, one-half miles. Price, $30 per acre, including 300 goats, 3 horses, 3 head cattle, turkeys and chickens, and all farm implements. $3,000 cash, balance long time, 7 per cent. Fred B. Palmer, owner, Coulterville, Calif.

FOR SALE—Eighty-acre wheat ranch, Monterey county. Good house, 5 rooms, porches, furniture and piano. Barn for 8 horses and hay, wagon shed, blacksmith shop, engine house and small engine, windmill and tank. Three chicken houses, other buildings. Two good wells. Fine water and climate. Price, $3600. Mrs. Ida L. Young, 1920 Sutter street, Vallejo, Cal.

FOR SALE—Best cattle alfalfa ranch proposition in San Joaquin Valley. Half section, 220 acres. A1 stand of alfalfa, 25 acres corn. Abundance of electric pumped water. 300 tons alfalfa in stack. S. P. main line siding on ranch. State highway passes through ranch. Will give terms; deal direct with owner. J. S. Going, Quail Ranch, Pixley, Cal.

FOR SALE—By owner, 19 1/10 acres, fine improved alfalfa ranch. Best water rights, bearing family and grape orchard. In a fine location. For price and information, address Robert Meyers, R. B. 12, Los Molinos, Cal.

ALFALFA RANCH IN FRESNO COUNTY—50 acre alfalfa ranch, subirrigation, with substantial improvements, work stock and implements. Price, $20,000. $6,000 cash, balance long time. J. Hargeshimer, Sanger, Cal.

WANTED.

WANTED—Foreman for large ranch in upper San Joaquin Valley. Grain and fruit. Steady position, good wages for honest, experienced, intelligent, and energetic man. Give full information, references, and salary expected. Address Superintendent, Box 1220, Pacific Rural Press, San Francisco.

WANTED TO RENT—An orchard or combination ranch, either shares, cash or salary with percentage. Have had years successful experience, with modern agricultural training. Best references furnished from percentage concern. Box 1210, Pacific Rural Press.

WANTED—To rent, a ranch suitable for hogs, about 60 acres farm land, part in alfalfa. Hans Duveneck, Ukiah, Cal.

A Message from the Secretary of Agriculture to American Farmers

TO THE PATRIOTS ON THE FARMS:

You are asked to undertake another offensive—to go "over the top" this fall for a great harvest of wheat in 1919. I need give only a few figures and facts to impress you with the increasing and urgent need of our people, our armies, the allied peoples and their armies for large supplies of American wheat.

Our reserve supply or carry-over from the 1917 crop is practically exhausted and is the smallest on record. The need of building up reserves of wheat is evident. Although this country produced a small crop of this grain in 1917, the total exports of wheat in excess of imports, including flour in terms of wheat, amounted to approximately 100,000,000 bushels for the year ending June 30, 1918. This is in comparison with 178,000,000 bushels exported in 1917, 236,000,000 bushels in 1916, and 331,000,000 bushels in 1915. It was possible for the United States to export wheat in large quantities in 1915 and 1916 only because of the large wheat crops of 1912-13-14-15, which gave this country an accumulation of stocks of this grain. Both the 1916 and 1917 crops were smaller than any crops since 1911 and besides this there was a greater demand for seed wheat and an increased population to be fed.

Moreover, it must be borne in mind that the carry-over in all the ten importing countries in Europe was practically exhausted this year before the new harvest; that the normal requirements of the exporting countries are increasing instead of diminishing; that some losses in storage and transit may be expected to continue; and that it is highly desirable that a surplus should be accumulated as insurance against partial crop failure next year.

You have been asked to sow to winter wheat this fall not less than 45,000,000 acres — an increase of 7 per cent over last year's sowing — and the Department has suggested that an even greater area, 47,500,000 acres, is desirable. The increased planting asked of each State has been carefully determined with regard to its local conditions and its reasonable capabilities. Your county agent can tell you the quota assigned to your State and you can apply the responsibility to your case.

You have occupied and do occupy the first line trenches of the food army. You have to fight difficulties too. I am not unmindful of these. In the Department of Agriculture we consider them daily, and daily we give our best efforts to help you meet them. You know of the difficulties in your community, but I know of them in many communities of many States, and so seriously do they impress me that I might almost consider them insurmountable had not American farmers last year, and again this year, revealed the true American fighting spirit and ability to meet serious situations. They will not let the war fail because of deficient food production.

Let us sow liberally for a big harvest in 1919. It has been called the Liberty Wheat Harvest. We all hope it will be. But let us undertake the task with the determination that we will sweat our blood for many more if need be before we yield one measure of our freedom to a Prussian domination. Let us fight in the furrows.

D. F. Houston.

Why I Want to Go to the State Fair

Written for Pacific Rural Press

I'VE JUST BEEN UP TO SACRAMENTO nosing about the State Fair grounds. You remember the main building that burned down two years ago. They are putting up a whale of a brick, concrete, and steel pavilion there for fruits, nuts, field crops, and the like. Several of the counties will display the best of their agricultural resources. There's been a fellow here trying to sell fruit land in Paradise Valley. Maybe they will have an exhibit and we can see some one from there. Dry spraying has been boosted lately. Spray guns were advocated last winter. Probably some of these machines will be exhibited. It will be good to see all the different power spray rigs together, too, and get a line on other developments.

I'm worried about my trees. They need water and next year's crop may be shy unless they get it pretty soon. It will be safest to see the various kinds of pumps working together at the State Fair before selecting one. Maybe folks will tell the good points of each and defects of the others. Secretary Paine says they are going to put pumps with their engines and other noisy machinery outdoors. They are building a pit beside the tractor tents so the pumps can be working. There will be all kinds of heavy subsoilers, land levelers, disks, plows, harvesters, threshers, and machinery in and around the tractor tents. It's wise now to keep posted on easier ways of getting the farm work done.

Grandstands at the State Fair are being enlarged. Marines and marine bands will drill twice or more daily at the State Fair this year.

New $300,000 Agriculture-Horticulture Pavilion at the State Fair, Sacramento.

Getting the Right Tractor.

Jones bought a tractor awhile back, but he says it was built for his brother's farm over in the valley and isn't what he wants here. He is going to see the tractor exhibit and pick the one he wants. The California Tractor Association will have two big tents and most every kind of tractors there are in the West. The Pacific Rural Press says there are more improvements on tractors this year than ever before, but no one tractor has most of them. I need one that will help in silage cutting pretty soon and will cultivate the orchard, too. Maybe the right machine is there.

The milker has worked me several times for a raise. He has a tendency to break the camel's back. If in that long line of dairy machinery by the cow barns a suitable milking machine can be found, I may get one and run it myself. It's easier to get field hands than milkers. A separator that doesn't leak butterfat for hog feed might save some coin on our farm, too. Some cream came on a bucket of old skim milk the other day. There are improvements in silage cutters also that it might pay to know about; and the articles printed lately about chopped hay and straw make a fellow interested in that machinery. An electric power line is coming through this neighborhood pretty soon, but they say electricity costs more than gas engines and is less convenient in some ways but more convenient in others. There will be a chance to look that up.

We Need Better Stock.

I had a notion to buy some registered cows two years ago. Makes you kind of sick to milk common cows after you see those at the Fair. But purebreds cost a lot of money. Still, neighbor Smith is making money and getting pretty well known all over the West. He bought his first registered females a few years ago and people called him a fool for paying so much money. But when the heifers freshened it didn't take him long to kick the scrub cows out of the herd. Wish I had at the same time.

Uncle Sam wants us to raise more pigs. But he doesn't like us to feed good grain into these broken-backed, cat-legged, common hogs. The sort they show at the Fair is the sort that makes the most pork per pound of grain. They say that skim milk is worth 75 cents a hundred pounds for hog feed along with other stuff at present hog prices. Maybe I'd better quit raising dairy steers and give the skim milk to hogs. Governor Stephens is going to auction some hogs and beef cattle for the benefit of the Red Cross. That would be a patriotic way to start. Those beef cattle at the Fair made me discontented with dairy steers anyway and if I raise any more cattle for meat they had better be that kind.

Wife and the kiddies will enjoy the horses and the horse show and the

TO HELL WITH THE KAISER!

JOIN THE MARINES!

—U. S. Navy Placard.

WE ARE adding fifty per cent to our usual mid-summer dimensions this week that we may more fittingly exalt an opportunity which California will have during the next few weeks to temper anew the blade and whet the edge of her lofty purpose for mankind and to lay fresh hold upon it with her strong arm of national patriotism!

A million and a quarter American soldiers are now in France aiding and supporting the allied movement which is resistlessly rolling back the hordes of inhumanity and outrage and twice as many more within a half year are decreed by Congress to stand beside their brothers in the war for human rights. It is a time to fill the soul with high resolve: to fan the flame of patriotism into a roaring conflagration of devotional ardor before which all petty doubts and disputes shall perish, that we may pour forth a pure stream of service and sacrifice to save the world! It is a time when every American should rise to his full height, fling out his arms to the sky and cry aloud:

Good Lord! look down from the windows of Heaven upon us! Fill us with Thy Spirit! Make us men in Thine Own Image—and watch us put up the best fight for righteousness which has been pulled off since Thine Own: of which Thy servant Milton wrote:

The infernal Serpent * * * what time his pride
Had cast him out from Heaven, with all his host
Of rebel angels: by whose aid aspiring
To set himself in glory 'bove his peers,
He trusted to have equall'd the Most High,
If he opposed: and with ambitious aim
Against the throne and monarchy of God,
Raised impious war in Heaven, and battle proud
With vain attempt. Him the Almighty Power
Hurl'd headlong flaming from th' ethereal sky,
With hideous ruin and combustion, down
To bottomless perdition—there to dwell
In adamantine chains and penal fire,
Who durst defy th' Omnipotent to arms.

* * * * * * * * *

—but that the will
And high permission of all-ruling Heaven
Left him at large to his own dark designs,
That with reiterated crimes he might
Heap on himself damnation, while he sought
Evil to others, and enraged might see
How all his malice served but to bring forth
Infinite goodness, grace and mercy shown
On Man, by him seduced: but on himself
Treble confusion, wrath and vengeance poured.

And to this end, O Lord, give Thy servants of today wisdom and force to fight for Man once more. Grant that once more "treble confusion, wrath and vengeance" shall be poured upon the enemy of all mankind who aimed "to set himself in glory 'bove his peers" and impiously claimed his right from Thee! "To hell with the Kaiser": that once again thy "infinite goodness, grace and mercy" by him denied may shine upon mankind!

TRAINING FOR ARMAGEDDON.

AT LEAST two things are essential in equipment for Armageddon—knowledge and spirit. No matter how brave the heart and alert the conscience to discern virtue, victory for the right requires the science to fight and the strength of soul to wield it. These are the possessions and attributes which are now enabling the forces of humanity to roll back the Huns from their barbaric invasions and their devilish outrages upon peaceful peoples. The continuous advance to victories on the fronts which shall rescue civilization from unspeakable barbarism, depends not alone upon the science to fight well and the valor to keep on fighting on the fronts, but upon the fullness of knowledge, courage, spirit and force in all the allied nations which are sending not only munitions and supplies to their heroes on these fronts but are adding strength to their arms and courage to their hearts by their own unyielding spirit of service and sacrifice. It seems to be the opinion of the world that it is the force of America which will enable those nations which sprang first to the defense of humanity to realize victories for which they braved destruction and subjugation. It is our duty, then, to keep our courage and resolution fresh and our strength from staling. This is best secured for some by serious meditation—by fighting weariness of soul and infirmity of purpose with soulful self-scourging in the solitudes of the seashore or in the recesses of the mountains. If such there be, to them we say: go to it—hard and long! Possibly there are other patriots who really feel that they ought to put on sack-cloth and ashes and repent of the colossal sins of the world before they can make a good fight for the right. To such we say: go to it—even at the present prices of burlap and potash. It may needs be that your patriotic salvation shall thus be achieved. We are quite sure, however, that most people are not that way. Solitude makes them afraid of themselves. Individual repentance is wholesome for their souls, but national repentance means to them infirmity of purpose. As for the sins of the world: only one man in the history of the race has ever felt sufficiently bad about them and during the war at least it is just as well to leave repentance for world-sin to Him who has the only antitoxin, and do your duty in enforcing obedience to His simple laws upon manifest transgressors thereof—for by their works shall ye know them. For these reasons it seems evident to us that the best way for most people to awaken and to keep clear-eyed and whole-souled in patriotic thought and deed is to seize all possible opportunities for coming together for demonstration, for conference and for exhortation. It is in this way that new thoughts are conceived, new emotions evolved and new deeds inspired. This is true in affairs of individuals: it is indispensable in collective action toward the attainment of great purposes. Wisely the Government is encouraging such action on the part of the people. Everyone, from the President to the newest farm adviser, is officially enunciating principles or demonstrating practices of patriotic significance and importance. All fountains of unofficial eloquence are also flowing free and all ink-wells of patriotic script are uncapped. It is well nigh one's patriotic duty, therefore, to refuse the sweetness of solitude for a season and nerve himself anew by contact with his fellowmen. For, "as iron sharpeneth iron, so a man sharpeneth the countenance of his friend." And what we need now is iron—red-hot iron for Armageddon!

WHAT FAIRS CAN DO IN WAR TIME.

THE OPPORTUNITY which we had in mind when we first struck the kaiser's goose-step in this writing is that which our agricultural fairs afford for the promotion of patriotism. On the many pages which we add to this issue to give other writers space to suggest what our readers can do for themselves at the fairs and what the fairs can do for them and their industries, there are many intimations of edification, enrichment and entertainment which are to be derived from attendance upon these exhibitions and seeing and hearing what is shown and said in farming lines. Our suggestion is that over and above all single words which our associates give as sufficient to the wise, and above all prolonged verbal wanderings which they indulge in to meet the requirements of the unwise, our general exhortation to make the best of this year's fairs is to recognize them as promoters of patriotism and as inspirers of states of mind fit to cope successfully with the many problems which are now pressing in our farming industries, the successful handling of which is itself practical patriotism. There can be no doubt that as demonstrators of what it is profitable to do in production, how to do it and what to best do it with, the fairs are our best educators in the line of quick wisdom and quick riches—to the limit to which either of these things is attainable in farming. It is that aspect of a good fair to which our associates chiefly address themselves. And all these things are practical patriotism because of their relation to increased and continuous production, which is the basis of the national strength to win the war. But it must not be forgotten that a farmer needs a continuous spiritual strengthening to keep him at his task in the face of the difficulties which surround his effort. He has good prices to aim at, it is true, and sometimes he gets considerable stimulus from hitting them right, but he is still largely at the mercy of everybody, whether he hits these prices right or wrong. Therefore he needs a freshening of spirit to face the risks and to endure the ceaseless effort which his work requires under the war conditions now prevailing. Wisely this fall's fairs have been planned largely along the line of patriotic stimulation and recreational contribution. The oratory will be mainly patriotic; the music grandly martial and profoundly stirring; the displays smothered in bunting, and the farcical affairs suggestive of the confusion of our national enemies. All these things will be in their several ways uplifting to the heart of a man and stiffening to the upper lip of him, and after a few days at whatever fairs are within the contents of his purse or his gasoline tank any farmer will surely return to his work and his worry with increased courage and endurance. And this is what the world now needs from the farmer as it never needed it before. From the State Fair (which will open on August 31 at Sacramento and fill the following week) onward for three months there will be fairs at intervals in California cities and rural communities in all parts of the State. Their success will be indication of our producing force and patriotic fervor which will in turn be stimulated and increased by them. Read what is said about the State Fair elsewhere in this issue and go to see how true it is!

THE MORNING AFTER.

AND NOW, having tried to impress the solemn world duty of ending the war aright and of resolute persistence to that end alone, it is perhaps permissible to forecast the things to follow such an ending. None save those upon whom judgments must fall for cruel purposes and inhuman deeds can doubt that the world will be the better for its cleansing of colossal crimes and errors, but none can clearly see along what lines of social readjustment the betterments will come. That may be a problem over which a generation or two may labor for solution. Economic adjustment must be first achieved as a foundation for new social structures in all countries, and already economic forecasts are being keenly scanned. While suffering and sacrifice are still in progress and possibly have not yet reached their depths, courage to endure them may be summoned by recreative thought about the speed and completeness of the economic recovery which it is reasonable to expect. A confident prophet in that line seems to be William B. Joyce, president of the National Surety Company of New York, who, in a forecast of conditions after the war, declares that the United States seems likely to enter the most prosperous period of its history. Our readers may be interested to examine the grounds upon which this prophet of prosperity proceeds. We condense them from another writer, who has apparently seen the original statement:

The export trade of the United States will greatly develop, in gross value of goods, in the extent of territory served, and in variety of goods sold abroad. Pre-war competitors will, for many years, be handicapped by home conditions.

Agricultural development will keep pace with

manufacturing expansion. Foodstuffs will be sought by most of Europe. The farm labor problem will be solved by returning soldiers, who will prefer to continue a healthy, physically active, outdoor life. Farm land will be forced into high production by the energy and modernized methods of returned soldiers.

After-war taxes will be heavy, but will constantly grow lighter. Most other great nations will suffer from still heavier taxes, without compensations of the almost limitless and wholly unimpaired natural resources of the United States.

Fear of wide after-war unemployment, through our returning armies and European immigration, is groundless. Bringing back our millions of soldiers will be a two-year process, allowing ample time for economic absorption. Instead of a large European immigration after the war,' experts expect that there will be a large emigration of foreign-born workers to their home lands.

Increased understanding and co-operation between capital and labor will also undoubtedly assist prosperity.

So far as the general prediction that the United States will be very busy in helping to repair the frightful damages to the physical and economic structures of the old world, we presume Mr. Joyce is right. The way the United States can meet the hunger of Europe is not so clear—even if the requirement to do so with common staples should continue long, which is itself somewhat doubtful. It may tax our resources to give Europe a new start with animals and some other agricultural things, but it must be remembered that the war has taught Europe to eat less and to produce a greater portion of her requirements than she has done for half a century perhaps. Nor is it at all clear how our farm labor supply is to be adequately increased even to meet the food needs of our own increasing population. Returning soldiers who choose the rural districts are more likely to increase our number of employing farmers than of farm laborers, and there will be huge efforts to help them to get land with inadequate help to handle it—especially if there is to be the movement of half-baked Americans to the older countries, as so confidently expected. We apprehend that the close of the war will not settle our farm labor problem, but it surely will bring us a lot of joy in other ways.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

Aphis on Corn.

To the Editor: I notice in the Rural of August 10 that F. W. of Oakland has the same trouble with aphis and ants on his corn that I have had here. I used the squash bug dope—whale oil, soap, kerosene, etc. I mixed it according to directions and sprayed the aphis with a quart hand sprayer. I mixed this dope for squash bugs and sprayed them, and so far as I could see, it did not seem to kill them, at least not in the five minutes I waited to see its effect, though I tried it on the aphis and it killed them.

The first I ever saw aphis was on some Egyptian corn quite late last fall. The heads were just filling out but those that had aphis on did not mature. This fall the same bug is on ear corn, spread, no doubt, by the ants. We have given up trying to kill out the little black ant for this valley seems over-run with them.—J. M. R., San Jose.

It is easy to kill aphis with any insecticide. It is only necessary to get it onto them and to do it early and often enough. Egyptian corn has been subject to head-lice in this state for many years. They are usually kept down by their natural enemies—ladybirds, etc.—which seem to be rather scarce this year. As for ants, they can probably only be controlled by systematic co-operative effort to apply modern ant-killing methods, of which full information can be had by application for the University publication on that subject.

Lake County Dried Pears.

To the Editor: I notice in the market reports on dried fruits that Lake county pears are always quoted much higher than any other. Would you please give reason for this?—P. M., Colfax.

Lake county dried pears are famous, just as Lake county canned string beans have been for years, chiefly because growers have made a strenuous and intelligent effort to produce a distinctively and uniformly good product. In the case of pears this result is promoted by the fact that dried pears in that county are a primary product. They do little with sales to canners and shippers and therefore dry the best pears they have and by holding for just the right ripeness after picking and by adequate sulphuring they produce a dried pear which looks like a slab of amber and tastes like ambrosia. If you should see their pears in contrast with the dried culls from other districts you would need no farther explanation.

Bluestone for Nematodes.

To the Editor: Last year I had four three-year-old apricot trees on which the leaves curled up and looked sick. I found what they told me was nematode disease on the roots. Last March I dug circular trenches around the trees 18 inches from the trunk and others back of those 18 inches apart until all the ground between the trees was included. Then I sprinkled 20 pounds of powdered bluestone in these trenches and filled them with water—refilling them twice more as the water soaked away. When the ground had dried sufficiently, I cultivated and did nothing more until the time for the next irrigation. After a few weeks I dug down and saw the affected roots were apparently healing over. They showed a bluish color from the treatment. This year the trees bore a good crop and look very healthy.—C. J. Ostwald, Bakersfield.

This account is interesting and others who have trees showing nematode injury, or what is often called "beaded root-knot," may like to try the treatment. It should, however, be noted that pure bluestone solution will kill roots under certain conditions and some care must be taken in such applications.

Flea Beetles and Mites.

To the Editor: What will help my bean plants? The leaves are covered with tiny black insects that jump like fleas, the leaves drop and the plants don't bear any beans. There is also another kind of insect on the bean leaves. These are a yellowish red, but they do not jump like the black ones. What will help the plants?—Reader, Coulterville.

Your first offender is the flea-beetle, which attacks many garden plants—sometimes eating holes in them, sometimes only corrugating the surface. The treatment for them is spraying with arsenate of lead. Generally this has to be begun as soon as the plants get out of the ground. Probably it is the second pest which is now doing most harm. It is the red spider or yellow mite—one or both of them. The treatment is thorough sulphuring. In a garden they can be kept down by frequent spraying with water, if you have water under pressure. You ought to have tackled these pests a month or two ago.

Red-humped Caterpillar on Walnut.

To the Editor: I am sending you caterpillars from my walnut trees. They have completely stripped the leaves from several of the largest branches and are still working. What is the name of these worms and what can be done to get rid of them?—C. V., Galt.

It is the "red-humped caterpillar" (Œdemasia concinna). It is a beast with a tremendous appetite which usually appears earlier in the season on fruit and other trees, but is liable to appear in good eating trim even as late as September. Fortunately it is not a great pest because our method of thorough cultivation destroys the pupæ, which are located near the ground surface. Therefore, one way to keep the pest down is to stir all the ground—close up to the trunks of the trees. The caterpillars can be killed by spraying the foliage with lead arsenate as soon as the first injury is seen. The insect cannot do much more harm this season.

Bean Rust.

To the Editor: My bean crop is beginning to get full of a yellow color on the leaves, and we know around here that when it gets that way it's ruined. I am sending leaves. Please tell me what to do and how—if sprayed with liquid or with dust of some kind.—T. R., El Monte.

It is bean rust and it is capable of being checked from invading clean leaves by spraying with Bordeaux mixture; but if many of the leaves are like those you send it is unlikely that you can catch up with the trouble. Fortunately this disease is not common in California and its game is to find a lot of bean plants which are unthrifty from some cause and then it goes after them the way the kaiser goes after Russians. That is probably the reason why your local judgment is that when the rust hits the beans they are ruined. They were probably already started on that road.

FIELD MEN WANTED

Seems a shame, doesn't it, that the Pacific Rural Press is not read by every farmer in our territory?

It would be if they knew its real value, and to introduce the paper to those who do not know about it we need a few more live-wire field representatives.

No objection to men along in years, and experience is not absolutely necessary. The chief requirements are an admiration for the paper, an earnestness of purpose, and a willingness to learn.

Straight salary with advancement; permanent work; no investment except that you must have an automobile.

If you are a convincing talker and are not afraid of hard work, write us for full particulars and tell us a little about yourself. We are just starting a big campaign, and this is the time to make big money. Let us hear from you at once.

Mustard in Salinas Valley.

To the Editor: Is it feasible to grow mustard in the Salinas Valley? Some are contemplating raising mustard and would like to know if it is suited to these conditions and what the market conditions are; in other words, they want to know if it is profitable to grow mustard in this valley.—Reader, Salinas.

We have no definite record of mustard in Salinas Valley at hand, but have no doubt of its cropping well on land which gives good beets or wheat or potatoes. Your conditions resemble those of the Lompoc Valley, where it is a considerable product. The price has advanced over peace values, but inasmuch as no special appeal has been made for mustard, the inference is that the supply is adequate and that it is safer to grow wheat or sugar.

White Fly on Garden Plants.

To the Editor: I am enclosing some insects which are destroying all my vegetables. I would like to know how to destroy them.—J. F., Sonoma.

You have the common white fly to deal with and the method is practically the same as used in fighting thrips and aphis, viz.: soap-tobacco spray—repeated until they are knocked out.

Thrips on Cantaloupes.

To the Editor: What is the matter with my musk melons, as shown by the leaves I send? The ends of the vines seem thrifty and they are full of bloom, but the leaves are all drying up. What is the remedy?—C. S., Vacaville.

The leaves are attacked by thrips, which make them look much as if infested with mites; but in the case of thrips the leaf surface shows multitudes of small black specks wherever the insects have been feeding. Just as soon as this infestation appears the plants should be sprayed with the soap-tobacco wash (described for aphis on page 723 of our issue of June 8). By deferring action as late as this you are taking up a stern-chase which no insect-fighter should ever wait for.

Almonds Gumming.

To the Editor: What causes almonds to exude gum, the kernal being shrunken or completely dried up?—J. H. S., Kelseyville.

There is a gumming of the hull caused by the attack of the peach moth. There is also a gumming causing the flooding of the kernel with gum and ruining its substance which is believed to be analogous to the split-pit of peaches and as in the latter case believed to be caused by some abnormal growing condition, for no specific parasitic agency has been demonstrated, as was stated on this page in our issue of August 17.

Fruit for Cows.

To the Editor: Will feeding a cow pears and apples be liable to dry her up or will it have any effect on her?—Subscriber, San Jose.

Fresh fruits are wholesome for cows and will produce no ill effects unless eaten in quantities sufficient to cause systematic derangement. To get the best results they should be fed in connection with dry feeds—grain or hay.

California Weather Record

The following rainfall and temperature record is furninished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., August 20, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm
Eureka	.22	.42	.14	64	50
Red Bluff	.12	.12	...	90	58
Sacramento	...	...	...	90	54
San Francisco	...	...	.01	68	55
San Jose	...	...	.02	84	48
Fresno	...	...	...	92	56
San Luis Obispo	.01	.01	.03	78	50
Los Angeles	...	.11	...	78	58
San Diego	...	.03	...	72	60

Dairying Still the Farmer's Best Bet

Written for Pacific Rural Press by R. H. Whitten

KAISER BILL certainly has kicked up some fuss over there on the other side of the Pond, but many dairymen seem to feel that Feed Bill, Labor Bill and other Bills are causing almost as much trouble here at home.

Conditions at present are rather discouraging for the dairymen, but why think of the present only? Dairying is a real business and all of its problems should be considered in a business-like way. We should follow the suggestion of one of Chicago's most successful manufacturers, who said: "A successful business man is like a successful billiard player—he has to think two shots ahead." So let's study the situation at close range and see what the future has in store for us.

PROBLEM IS ONE OF SHIPS.

Never before have conditions been so complex. We have a surplus of dairy products here in America, yet in the allied countries the supply of milk is so short that in some sections none is issued to persons over six years old without a physician's prescription. The situation may be summed up in one word—ships. If we had plenty of ships to send to the allies, all of the dairy products they need, there would be a shortage in America today.

Up to last March we were shipping 24,000 tons of condensed milk monthly, this being equivalent to about 50,000 tons of liquid milk. But at that time the situation of the allies became critical and they asked for troops in preference to food. We certainly hustled the troops across, but to do it we have had to cut the shipments of condensed milk to 6000 tons per month, with corresponding cuts in butter and cheese.

However, this situation is only temporary. The submarines have practically been put out of business. Two-thirds of them are already at the bottom of the sea, and we are destroying them twice as fast as the Germans are building them. The U. S. Emergency Fleet Corporation launched 94 new ships, July 4th, and built 629 during the first five months of 1918—a grand record; yet they tell us that it will soon be eclipsed. Already dairy products are being shipped in larger quantities, and before many months the allies will be taking all that we can ship and will be crying for more.

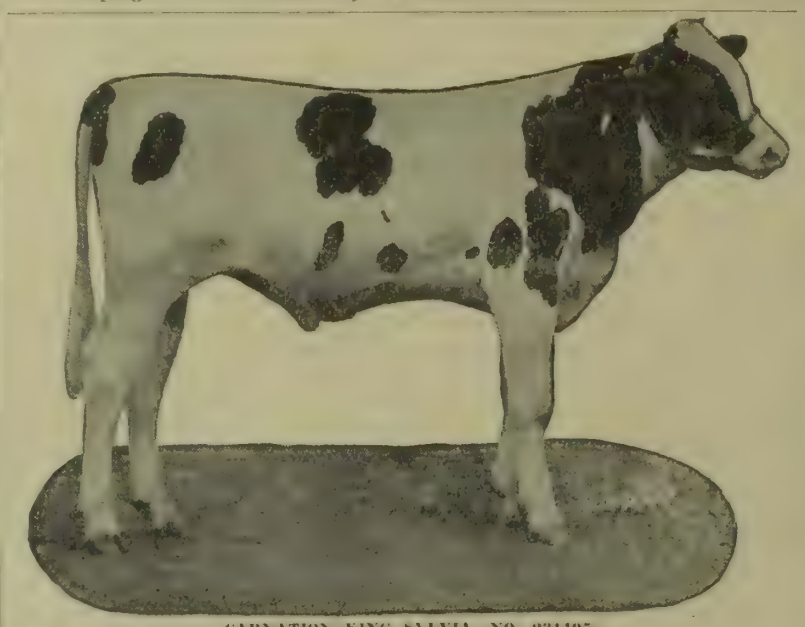
They will continue to cry for dairy products long after the war is over, too, for Europe already has a shortage of 30,000,000 dairy cows—almost one and a half times the total number in the United States—and this process of depletion will continue until we remove the germ from Germany. After the scrap is over the demand for dairy cattle will begin; in fact, France and Belgium already have commissions in this country looking for stock, and Holland has sent word that she wants 5000 cows just as soon as conditions make it possible for her to get them.

EDUCATIONAL CAMPAIGN WILL HELP.

Here at home the demand for dairy products was lessened for some time because of the mistaken idea that the Food Administration wanted us to eat less of these products in order to conserve them. But the Administration is now endeavoring to correct this erroneous impression, and is even conducting an educational campaign to encourage the liberal use of dairy products.

Furthermore, Dr. McCollum of John Hopkins University has put an end to all worrying over the problem of substitutes for butter by discovering that dairy products alone contain a vitamine which is absolutely necessary to the proper maintenance of human life, and that persons, when deprived of it, become weak, torpid and prone to disease. Consequently, not only does the dairy cow produce a cheap, palatable food, but she supplies one for which there is no substitute—a food which constitutes an indispensable part of our diet, and without which we cannot develop properly.

A campaign is now under way to place before the consuming public the value of milk and its importance in the physical welfare of growing children, as well as its value in the daily diet of adults. This must necessarily increase the consumption of milk and other dairy products, and with the demand bound to increase both abroad and at home, the question arises: "Are we prepared to meet the increased demands for dairy products? Have we enough cows? Will our present cows return a profit at the present high price of feed and labor?"



CARNATION KING SYLVIA, NO. 231405.

If you have any doubts about the future of the dairy industry, just follow the sales and notice the prices that are being paid by shrewd, far-seeing, successful business men who never invest a dollar unless they see several dollars coming back. E. A. Stuart, president of the Carnation Milk Stock Farms, paid $106,000 for this six-months-old bull calf in the auction ring. Holstein experts claim that he will pay for himself out of his first crop of calves.

DON'T GET PANICKY.

Perhaps your own answer to the last question is "No," but is that a sufficient reason why you should sell off your entire herd? Perhaps you could make more money this year if you sold your crops direct instead of feeding them to the cows, but how about the future?

In the midst of all the uncertainties of the present time one thing remains sure, and that is the fact that there will always be a good demand for dairy products. Other industries crop up now and then, and for a little while seem to overshadow the faithful cow, but sooner or later she emerges from under the cloud more illustrious than ever. She is the one best bet on the farm, and those who have pinned their faith to her and who, through thick and thin, have given her a fair chance to make good have not failed.

Aside, then, from the patriotic reasons why farmers should produce all the dairy products possible at this time, there is the all-sufficient reason that, in the long run, there is more money in cows than in crops, and the dairyman who sells good producing cows now is paving the way to great prosperity for those who decide to surmount the present difficulties and hang on.

MUST MEET CHANGED CONDITIONS.

But to "hang on" does not mean to stay in the old rut and make no changes. It does not mean to keep all of the cows and feed and handle them in the same old way. The cow that was fairly profitable two years ago may be losing you money today. Feeds that you could use profitably before the war may be too high priced today, or perhaps not obtainable at all. The men who worked for you so satisfactorily then may be at the front today, and you find it impossible to fill their places with experienced men.

Discouraging? Yes. But not a knockout blow by any means. It does not mean that you cannot make a satisfactory profit from dairying right now. It simply means that you must recognize the conditions that exist and adjust yourself to them.

DON'T KEEP BOARDERS.

First of all, weed out the slacker cows. On account of the shortage of help probably you are tempted to neglect your farm records, yet there never was a time when they were so necessary as right now. Don't guess at what your cows are doing. Keep books for them and know for a certainty just what each one is producing. If there is a testing association in your neighborhood, join it. If not, do the weighing and testing yourself. An outfit costs very little, the work is easily learned and the results will show you which cows are paying you a profit and which are expense items.

Beef prices are good and there never was a better time to cull the herd. Sell all light producers, all old cows, all that have defective udders, and all that will not breed regularly.

USE A HIGH RECORD BULL.

Then be sure that your bull is good enough for the job he holds, for if you depend upon the elimination of poor cows alone the next generation will be liable to contain as many inferior producers as the present one. The bull is half the herd, and as there is just as wide a variation in the value of bulls as there is in cows, you should be sure that your bull comes from a higher producing strain than your cows, or you will be breeding downward instead of upward.

CONSERVE THE CALF CROP.

Raise all good heifer calves. No farmer who kills a heifer calf with the idea that he is saving for himself or anyone else has looked very far into the future. The dairy industry is one that cannot be increased quickly, because it requires two years to raise a producing dairy cow and five years to bring her to her maximum production. In 1920 and 1921 the demand for young cows is going to be enormous, but those cows must come from this year's calf crop, and if heifer calves are vealed there is no power on earth that can make up the shortage. There will be a sure market. Prepare now to get your share of the business.

STUDY YOUR FEEDING PROBLEMS.

Perhaps you can substitute a liberal percentage of straw, stover and cheaper feeds for high priced hay. A silo will enable you to provide succulent feed for your cows at times of the year when no green feed is available, and at a minimum cost. If you chop your hay you will be able to increase its feeding value at least 25 per cent by eliminating the waste.

MILKING MACHINES GIVE SATISFACTION.

If you are having trouble with milkers, consider a milking machine seriously. It has passed the experimental stage and may now be regarded as a necessity. There are several makes on the market that are giving entire satisfaction, even with cows on official test.

We shall have more to say about mechanical milkers in later articles; also about silos, hay choppers and other labor-saving devices and methods. In fact, we are planning a series of practical, common-sense articles, based upon experience, and covering every phase of your work. Instead of merely urging you to do certain things and leaving it to you to devise your own ways and means, we are going to give you actual working plans, described so clearly that you can put them right into operation and carry them through to success. We shall show you new ways of cutting costs, saving time, increasing efficiency and enlarging profits.

The Table Grape Situation in California

Written for Pacific Rural Press by John J. Fox

CALIFORNIA, amongst her other virtues, is pre-eminently the home of the grape. The whole world looks to her for raisins, and, since the organization of this industry, its markets have extended beyond any former demand, which still exceeds the supply. The whole world knows and recognizes the excellence of California dry and light wines that have been perfected with the aid and application science has to offer. The whole United States depends upon California for an early and bountiful supply of table grapes—a supply to which there is no limit so long as the consumer is willing to pay a profit on the cost of production.

Just so long as the market offers a remunerative price to the grower, he will meet the demand with fruit that cannot be surpassed for flavor and quality—fruit well handled and carefully packed.

ATTRACTIVENESS OF GRAPE CULTURE.

To the vineyardist and to every person who labors in a vineyard there is a sentimental attraction in all phases of the work that is probably greater than in any other industry. For it is surely the oldest culture we know of, its history fading back into the mist and glamor of tradition many hundreds of years before the time of Christ. It is a calling that always presents a mental picture of sunny skies and smiling faces. Yet the man versed in viticulture approaches the subject with a reverence known in no other branch of commercial horticulture. He knows of its mysteries without being able to explain them all. He knows broadly of the vagaries that attach to different varieties and by experience has decided which variety is the most successful in the different localities. And by aid of this cumulative experience certain areas are given over to their respective varieties.

RESULTS OF EXPERIENCE.

Thus we find the Tokay a leader in the Lodi district for table grapes and the Emperor and Malaga farther south in the San Joaquin. Also the San Joaquin Valley has become the center and scene of the raisin industry. Here, in land so sandy that it is difficult to establish a stand of alfalfa, the Thompson's Seedless and Sultana thrive at their best and produce two and three tons of raisins to the acre in their third and fourth years of growth. The Muscat, on the contrary, does better on strong soil and must be headed quite close to the ground, while the Sultanina and Sultana are caned up on a wire or trellis.

Experience has taught us which varieties should be headed high and which headed low; what varieties require caning and tying and others that are cut entirely to the spur; localities that need an open head or a compact one; number of spurs to the vine and number of eyes to the spur. It has taught us that each year we have to deal with some problem and that obtaining a continuous good crop of clean, healthy fruit and a strong, healthy vine need never-ending vigilance and continuous care and individual judgment.

MARKETING.

In past years practically all second crop table grapes of a late season or any that were not packed for the market for any reason were shipped to the wineries. These grapes helped pay the cost of production and harvesting of the main crop. At present the condition of the industry reminds one of the old man who, when asked how he was, replied: "Well, I'm better than I were, but I baint so well as I were afore I were as bad as I am now."

Usually, so long as the price of grapes shipped East is remunerative to the grower, they continue in an unending flow to this distant market. When the demand declines, and drops below cost, this shipment to the wineries takes place. Two years ago some 40 per cent and last year 60 per cent of the crop in the Lodi district was thus disposed of. The increased amount last year was, however, largely owing to car shortage. This year growers are hoping for better service. Out of 40,000 acres in the above section, 18,000 acres are in table grapes, Tokays in the lead, and the balance of the acreage is in wine grapes. Most of these have been sold or contracted for subject to pending legislation and, as may be surmised, growers are apprehensive over the possibility of measures that may result in the loss of their crops. Small lots of wine grapes have been sold to independent buyers outright as high as $25 and $30 a ton. One man, who estimated his crop at six tons to the acre, sold his crop for $22.50 a ton. These were Tokays and this price was obtained on the vine.

Of course, if prohibition comes along it will not only mean tearing out the wine grape vineyards, but many of the table grapes will have to go, too. This will not prove so great an injury at Lodi, because, though the loss would be grievous, those who can pull through can plant something else and make good. But in the hill sections of Napa and Sonoma and other wine-grape sections it will be fatal for those who can plant nothing else profitably on their land. And table grapes are not profitable in these two counties, which are not suited to these. If wine grapes are all crushed this will be a record year, apparently, for price and crops throughout can be said to be good.

STANDARDIZATION.

Standardization has helped the shipping-grape business and has buttressed a market in Eastern cities that had been weakened by the early shipments of fruit sent out in former years.

As soon as grapes were large enough, no matter how green and immature, some growers, to catch the early market, used to ship them by the carload. Up to three years ago leading growers were complaining, and quite rightly, that their markets were being spoiled by these early shipments of grapes deficient in sugar and otherwise out of condition. And standardization was the outcome. The matter was threshed out at innumerable meetings and fruit growers' conventions and resulted in an organization that works a hardship on none and which has created a condition whereby our grapes are reliable, both in quality, pack and sugar content.

Many years ago I remember seeing grapes unpacked at the grocers' —grapes that came from Spain. They were Muscats and Malagas and were shipped practically green. They came in sugar barrels, packed in cork dust, and sold at about 10 cents a pound retail in London. Spanish grapes came to be regarded as German kultur is today — all right if you let them alone. The sawdust barrel was a good place to keep them out of sight. Again, like boche kultur. Our own table-grape business would doubtless have languished if we had not had standardization, though not to the extent that the Spanish trade did. Our inspections are carried out with vigilance and with the least possible inconvenience to the grower or packer. Some districts inspect the fruit right in the vineyard, others inspect before the fruit is packed, and others again after it is packed; but in any case the sugar content will be up to standard, the fruit free from mildew, and the pack reliable and correctly marked.

EXTENT OF THE INDUSTRY.

In 1912 California vineyards covered about 385,000 acres. Of this area 180,000 acres were producing wine grapes. The raisin grape vineyards amounted to some 130,000 acres and the table or shipping grapes to 75,000 acres, of which last 40 per cent is in the Sacramento Valley, 40 per cent in the San Joaquin, 6 per cent in Southern California, and 4 per cent in the coast ranges. I take these figures from a leaflet of Prof. Fred T. Bioletti.

This past dry year has been very hard on vines where no irrigation is practised, excepting on the best land and where first-rate cultural methods are followed. It so often happens that in a dry year sucking insects seem to be a little overabundant. The two conditions together make a good team—for the undoing of tree or vine. Vine leaf hoppers have been quite bad this year, making some vineyards look rusty and patchy by the first week in August.

On the other hand, mildew has been more or less partial according to locality, but the hopper in the north is ubiquitous. It is strange how we sort of forget about him every year till he shows up in sufficient numbers to mar the vines, and by that time it is difficult to do anything.

Sulphuring in the spring, when the shoots first put out, is, I think, more thoroughly carried out than any other operation and by methods vastly improved in the last two decades. I hope in some future articles to give results that have been obtained by vineyardists using late winter sprays of (1) bluestone, (2) Bordeaux and (3) copperas, the amounts used and when; also results obtained by the use of atomic sulphur when the weather has been too dull to make dry sulphuring of any use.

These magnificent clusters of Tokays show the great prolificacy of California's grape lands.

WEEDLESS ALFALFA VALUABLE.

Foxtail and weeds are kept out of alfalfa by R. J. Merrill & Son of Morganhill. They sow about half a sack of rye per acre before rains begin and springtooth it in. The grain smothers the weeds, makes good early feed, and the alfalfa stretches right up among it in a surprising way.

Study the Purebreds at the State Fair

Read this article whether you attend the State Fair or not. It will tell you why purebreds are the common-sense animals for business farmers—why YOU ought to have them

[Written for Pacific Rural Press by R. H. Whitten.]

HOW MUCH are you going to bring home from the State Fair? Probably you are figuring on how much you should take with you, but there is a still more important problem. The cost of the trip should not be considered an expense item, but rather an investment, and the interest that it can be made to pay is almost entirely up to you. You may return home without a red cent in your jeans, yet have your mind filled with facts which will be worth hundreds of dollars to you. It will all depend upon how you use your faculty of observation. Don't be like the young reporter who was engaged by the Cincinnati Enquirer to report a week's religious convention in Newport, Ky. The reports came in all right for two days, but on Wednesday nothing was heard. Thursday the editor received a note from the cub reporter that the religious convention had broken up in a fight and he couldn't get any news. The poor fellow couldn't realize that the report of a fight at a religious convention would be, from the newspaper's standpoint, the most interesting news he could get.

We hope that there will not be any fights at the State Fair, yet there are always plenty of lively discussions among breeders, and from these and various other sources much helpful information can be secured if you will keep your eyes and ears open.

You know Emerson said, "Every man is my master in at least one thing, and in that I hope to learn from him." At the Fair you will find the leaders in different lines—men who have made a success of livestock raising. In all probability they have solved the very problems that are causing you so much trouble. Get acquainted with them. You will find them most likeable fellows, and they will be glad to answer your questions and give you the benefit of their experience. You can put in many profitable hours sitting on a bale of alfalfa, listening to the breeders and herdsmen as they discuss problems and swap experiences.

STUDY THE PRIZE WINNERS.

Take with you mental pictures of the animals you have at home and compare them with the prize winners. See in what respect your own stock needs to be improved. Perhaps you have not been using purebred sires. If so, study the results from their use. Find out the ages and the weights or productions of different animals, compare them with animals of the same age in your herd, and see what scientific breeding will accomplish.

Farmers used to think that purebred animals excelled common stock only in show qualities, and that for utility purposes they had no additional value. But it has been proved that every show point has a vital connection with utility qualities, and after all is said about the uselessness of fancy points, the folly of fine pedigrees, and the absurdity of high-priced ancestors, the fact remains that the purebred animal is the common-sense animal for the business farmer.

PRACTICAL VALUE OF PUREBREDS.

Meat-making animals—beef cattle, hogs and sheep—have been selected and mated so as to increase the production of high-class cuts; the breeds of dairy cattle have been improved by selecting those producing the highest yields of milk and butterfat; and draft horse progress is estimated by the ability to pull heavy loads. Consequently, if a breeding animal is able to impress upon its offspring the ability to make more meat or milk, or to generate more power than the unimproved part of the ancestry could do, then that breeding animal has demonstrated his worth over the grade or scrub that cannot do this.

At the Missouri Experiment Station lambs sired by a registered mutton ram and out of Western range ewes weighed four pounds more each at three months of age than lambs out of the same kind of ewes by a scrub ram weighed at four months. The well-bred lambs were ready for market one month earlier, ate only about one-half as much feed, and sold for nearly $3 more per hundred than did the lambs by the inferior ram.

Two Utah ranchmen sold their beef cattle in the same market on the same day. Both used the same amount of Government forest range per head and paid the same grazing fee. One had used purebred bulls to produce his cattle, the other had not. The good cattle brought $40 more per head than the poor cattle.

A practical, systematic hog feeder, who handles over 1000 hogs yearly, formerly bought common stock to fatten. He was not satisfied with his profits, so changed to purebreds. He kept an accurate account of the cost of production and found that the purebreds averaged him from $4 to $6 extra profit per hog.

At the Iowa Experiment Station scrub cows were bred to a registered bull and the resulting heifers were bred to another registered bull of the same breed. The average yearly results were as follows:

	Milk.	Butterfat.
Dams	3,255 lbs.	161 lbs.
Daughters	6,311 lbs	264 lbs
Grand-daughters	11,295 lbs	431 lbs.

The per cent increase in production of the first and second generation grades over the scrubs was:

	Milk.	Butterfat.
First generation	94	62
Second generation	245	168

PUREBREDS TRANSMIT WITH CERTAINTY.

Why is it that a purebred is valuable for breeding purposes while a scrub is not? Because the first has his good points bred in him and can be depended upon to transmit them to his offspring, while if the second has any good points he got them by chance and there can be no certainty about the quality of his offspring.

But perhaps you are already using purebred sires on grade herds. If so, why not take the next step and get purebred females? There is one serious objection to a grade herd, even when headed by a registered sire. It is that no matter how fine the offspring may be, or how nearly they may approach purebreds in size, type, markings and production, they never can be registered and sold for breeders at high prices.

BIG PROFIT IN REGISTERED HERDS.

Consider this matter seriously as you look over the fine stock offered for sale at the Fair, for the difference between a grade and a purebred herd marks the difference between good success and "great" success. You can make good money with grades, but why stop there? Why not make double the money from the same number of animals, with no more work? You can do it with purebreds.

The Government and the State Agricultural Colleges are impressing upon farmers the importance of breeding up. County advisers are conducting their better sire campaigns, and are urging farmers to give more attention to livestock. The different breed associations are conducting extensive advertising campaigns. The Government, States, county authorities and banks are helping to organize calf and pig clubs among school children. And the result is a big demand for purebred stock, not only for males but also for females, as many farmers are now buying purebred females after seeing what can be gained by using a purebred sire on grade stock, and realizing how much more profit can be made by having an exclusive purebred herd.

Money can hardly be invested where it will bring greater returns than in registered stock. And there is no danger of the bottom ever falling out of the purebred industry either, for Government records reveal the astounding fact that less than 2 per cent of the farm animals of the United States are registered. The demand for purebred stock is increasing faster than the supply, and it will be years before this demand is satisfied. Even then the purebred business will be a most profitable one, for the poorer animals can be marketed at more profit than grades, and there will always be a good demand for tops from other breeders who find it necessary to introduce new blood into their herds to avoid inbreeding.

START WITH HIGH-CLASS STOCK.

It is highly important to start with high-class stock, and if your capital is limited you should get a few very choice animals rather than a larger number of ordinary quality. The better the stock you get in the beginning, the greater your profits will be, the quicker they will come, and the more rapidly they will increase from year to year.

As a rule, those who claim to (Continued on page 179.)

YOU CAN'T AFFORD TO MISS THE STATE FAIR.

THE STATE FAIR this year will reflect public opinion on the engrossing subject of winning the war. The livestock department will exemplify breeding to increase our meat and milk foodstuffs. Soil products will follow much the same lines. The National Food Administration will visualize its teachings in practical conservation. The tractor and implement exhibit will demonstrate the nation's effort to plant and harvest increased acreage with reduced manpower. The model encampment of 300 sailors from Mare Island, the navy's exhibit and the huts of the Y. M. C. A. and Y. W. C. A. will present actual war conditions, while aviators from Mather Field will add to the realism. A "Better Babies" demonstration will feature advanced social work.

Entertainment and practical benefit will be combined to a degree that will make the Fair of inestimable benefit to almost every man, woman and child in our State. Come expecting the best time of your life. You won't be disappointed. A right royal welcome awaits you.

CHAS. W. PAINE, Secretary.

Count Glory, the noted Shorthorn bull. Money invested in a sire of this kind represents an investment that will pay handsome dividends.

More Grain, Fewer Men, in Bulk Handling

Written for Pacific Rural Press by R. E. Hodges

I DREAM of the near future. The fields of California are dotted with bins for temporary storage of life-giving grain. Railway stations and steamboat landings are marked by towering batteries of silo-like tubes. Tidewater has multiplied batteries of similar tubes. In the fields of early autumn, combined harvesters, tractor pulled, are stopping occasionally to let cataracts of golden grain plunge into tight wagons. On many fields near the local elevators there are no field storage bins, but the wagons have been collected into trains to be hauled by smaller tractors to the shipping points. Where field bins are, the loaded wagons are quickly dumped and bucket elevators run by small motors or engines put the grain into storage until after harvest, when there is more time and help for hauling. At the elevators the wagons are dumped in two or three minutes without shoveling. Cataracts of the same grain are plunging from the tubes into freight cars and barges. It is borne away to the tidewater elevators and transferred to them, again without hand shoveling. American ships pull up on the opposite side of the elevators and the cataracts flow again.

But not all of the harvest goes to tidewater. All of the wheat goes to local mills which have enlarged and to new ones that have sprung up. More of the barley than ever before is put into farmstead storage bins and run at leisure through grinders or rollers to feed a splendidly enlarged dairy, and hog, and beef, and hen industry. Much local labor is employed at the mills. Wheat by-products are fed within the State and all of the milled barley is here made by the livestock into food, or into fertilizer to produce more food.

Coming back to 1918, the Government wants more wheat to be produced next year with less manpower. If that can be done for wheat, it can also be done for barley in California. It means some changes; but the obstacles are more in a few people's eyes than in the grain business. We say this advisedly. The Pacific Coast, Australia, and the Argentine are the only sections in the world that use sacks extensively for grain; and had not the war interfered, these sections would now be well along in the change to bulk handling.

California mills already handle more wheat than California raises. They have long since exhausted last season's crop and have been running for months on Australian wheat. Moreover, they are already equipped to handle most of our crop by bulk if it should be shipped that way.

We had the distress last week of seeing seven men at the Sperry Flour Mill unload a grain-tight car of sacked wheat at a cost of $3.50 per hour. Two men emptied sacks and one stacked the empties. The hopper into which they were dumping was not working at half capacity. Grain was spilled all around. If the car had been loaded with bulk grain, it would have been unloaded by two or three men with a power shovel much faster and with less spillage. Their wages would have been $2 an hour less for twice the work accomplished.

MILLS HANDLE BULK GRAIN.

On the wharf side of the same mill we saw a bargeload of bulk grain being unloaded at full capacity of sixty tons per hour, grain being scraped to the foot of the "marine leg" of the elevator by two men with power shovels pulled by a donkey engine on the wharf. Chief Millwright J. T. Herbert said they had found it cost not over two cents per ton to unload grain from the barge, elevate, and convey it across the street into steel and concrete bins over 50 feet tall.

There are terminal elevators at Vallejo to unload Australian wheat 175 tons per hour. The storage consists of 60 bins 15 feet inside diameter, about 84 feet tall and holding 1,000,000 bushels at once. Bins holding 400,000 bushels were used for last year's crop. Terminal facilities for handling bulk grain offer no difficulty except multiplication of similar elevators.

SHIPS CARRY BULK GRAIN.

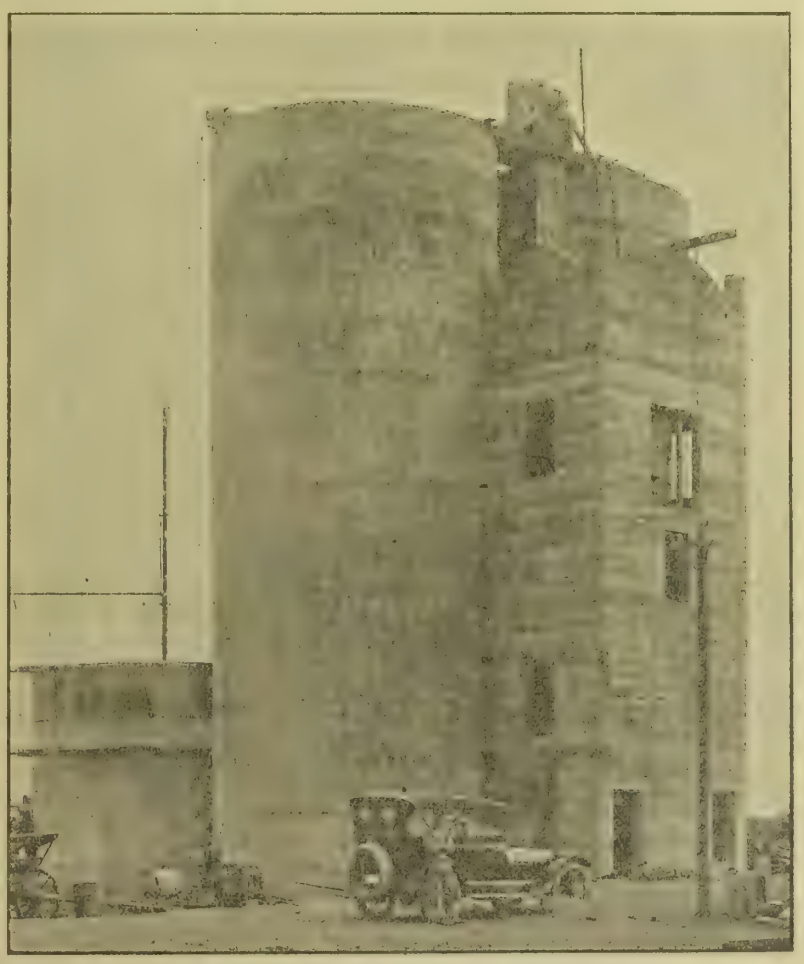
Marine shipping of grain in bulk is successfully carried out wherever tidewater elevators are in use. The Australian grain comes mostly in sacks for lack of terminal elevators there, but bulk shipments have been made and more will come in bulk when facilities at shipping points permit. It is mostly a matter of more partitions in the ships than some of them now have. There is no marine difficulty in the handling of bulk grain, according to J. E. Godley, the Vallejo manager.

RAILWAYS CARRY BULK GRAIN.

Grain in our Eastern States is handled exclusively in bulk in box cars, most of which are equipped and marked for the purpose. Those same cars are in use on Pacific Coast railroads. Railway facilities offer every advantage to the bulk handling of grain.

INTERIOR ELEVATORS IN CALIFORNIA.

Now, is it possible to build grain elevators at railroad points in the interior? Andrew Kaiser of Glenn county is filling the third and fourth bins of a 125,000-bushel elevator while the fifth and sixth ones are being completed. A number of grain growers in the same county have formed a co-operative elevator company and are storing their grain in wooden and corrugated iron field bins with small elevating machinery. Moreing Bros. of Sacramento county built grain bins in their sacked-grain warehouse under Mr. Herbert's direction and discharge directly onto barges on the Sacramento river. These were in use last year. The Chowchilla, Athlone, Merced, and other elevators in the San Joaquin Valley have been in operation one season or more before 1918. The one on the Ramina Ranch at Tehachapi has been in use several years. Interior elevators and field bins offer no difficulty to discourage the bulk handling of grain.



PARTLY COMPLETED BULK GRAIN ELEVATOR.

Six concrete grain bins like the two in the foreground have been completed this season by Andrew Kaiser of Glenn county to hold 125,000 bushels. The square annex contains practically all the machinery for elevating, cleaning, and weighing the grain from Mr. Kaiser's 9000 acres. Grain need never be touched with a shovel where hopper-bottoms are steep enough. The system saves 18 men's labor on this one crop. The elevator cost $18,000 and will pay for itself this first season by greater economies in handling, elimination of sacks, and less wasting of grain.

BULK HARVESTING SAVES LABOR.

Can the harvesters handle bulk grain economically? The writer last week rode around a field a mile long on three different combined harvesters belonging to Mr. Kaiser. Bins had been built on top of them. Bucket elevators had been set to catch the grain where it commonly goes into the sack hoppers and elevate it into the bins. One man watched the machine, one man tended the header, one man operated the tractor. Hopper-bottomed grain wagons drove up to the machines when their bins were full and the header-tender opened a chute which permitted the grain to slide down into a wagon in about three and a half minutes. Six horses hauled two wagons, each of 40 or 50 sacks capacity. A truck hauled 120 to 140 sacks per load. One of the drivers is 68 years old. The field was five miles from the elevator. Instead of using field bins, ten wagons were used besides the truck to haul the grain to the elevator as it was threshed. These were not kept busy by the three harvesters except where grain was especially heavy.

At the elevator a slide in the bottom of a wagon was pulled out and the grain ran into an underground hopper. When two wagonloads had been emptied an aged man pulled an electric switch and the grain was elevated to a cleaner on the fourth floor of the elevator annex to the bins. It ran by gravity into a weighing bin, whence it was elevated to the tops of the 50-foot tubes. Two men were saved on each harvester and a whale of a lot of hard lifting and slow handling of sacks was avoided. No man touched the grain at any time except to spread it out in the bins and wagons and to clean the last of it out of them, for their hopper bottoms are not quite steep enough. Mr. Kaiser saves the labor of 18 men. There is no field difficulty in the way of bulk handling of grain.

In all the steps of bulk handling, less manpower is used, less grain is wasted, less risk is run from weather, fire, mice, etc., and the cost and time of harvesting the entire crop is greatly reduced.

ECONOMIES PAY FOR ELEVATORS.

The only really pertinent question is this: Do the economies resulting from bulk handling at a time of stress such as the present amount to more than the cost in labor, freight hauling, and materials required to build the necessary elevators and equip them with what little machinery they require? The answer seems to be ready—both the first and the last field elevators completed in California will have paid for themselves by the economies in handling their first crops. The cost of terminal elevators will be quickly repaid by similar economies, besides saving of time in loading and unloading ships, releasing ships from the long haul bringing bags from Calcutta, when they could as well be bringing wheat from Australia in less time per trip, releasing freight cars from the dis-

(Continued on page 182.)

Price Fixing of Agricultural Products

Written for Pacific Rural Press by Thomas Forsyth Hunt

IT IS, of course, a matter of common knowledge that prices have risen. Perhaps, however, it is not equally well known that prices of nearly all important articles of commerce have risen in nearly all parts of the world. There are exceptions, as for example, coffee in Brazil, wheat in Australia, and horses in the United States.

So far as the United States is concerned, three statements may be made safely:

1. Commodity prices are approximately double what they were on July 14, 1914;

2. Most of this rise has occurred in the last two years;

3. Commodity prices have risen faster than wages.

During a period of inflation, commodity prices always rise faster than wages. Hence all persons who produce commodities with the same efficiency as heretofore obtain increased profits. They are neither to be blamed or praised for it. They simply can not help it.

The exchange value of different commodities remain about the same. It simply takes more dollars to effect the transaction. As an example, take the five great farm crops of the United States, which, stated in order of acreage, are corn, wheat, hay, oats and cotton. These five crops are the foundation on which the agriculture of our country is constructed. Two of them, corn and cotton, are not raised to any such extent either by our allies or our enemies. They enable us to live without wheat, pork products or even cane sugar. So thoroughly have the baker and the housewife been taught to use cotton seed and corn oils there is now difficulty in getting them to consume the surplus lard which our packing houses have accumulated. It will be just as easy, if ever it becomes necessary, to teach the housewife to use corn syrup in place of granulated sugar. It is because of corn and cotton that we shall win the war. Using the five years ending with the last April of peace as a basis, on April 1st this year, wheat had increased 128 per cent, corn 147 per cent, oats 120 per cent, hay 44 per cent, and cotton 157 per cent. The variation in exchange value might have been equally great had there been no war. However, certain groups of products have risen faster than other groups. Although there are some exceptions, primary farm products have approximately doubled in value since the outbreak of the war, while secondary, or animal products, have only risen about two-thirds in price.

Obviously what the producer of secondary products needs is a greater price for his product rather than a less cost of production, since he can not hope to reduce the cost sufficiently to offset the present lack of exchange value in his products. This increase in price will come about in due time, but this is not much consolation to the man who may be losing money while he waits.

It is the purpose of this paper to discuss three items: (1) What do rising prices signify? (2) If the price of a product, say wheat, is controlled, who suffers most, the producer or the consumer? and (3) If one agricultural product is controlled, is it in the interest of the industry or the nation to control other agricultural products?

THE EFFECT OF BUFFERS.

This discussion relates to the significance and not to the causes of rising prices. Nevertheless, it may be helpful to point out one rather important aspect of war-time purchases. In peace time there are buffers between the producer and the consumer. There are the wholesaler and the retailer. The wholesaler tries to buy from the producer at a price which he believes will permit him to sell to the retailer at a profit. The retailer tries to buy from the wholesaler at a price which he believes will permit him to sell to the consumer. In war time, however, there comes into the market a wholesale buyer who is not going to re-sell and who, therefore, will not be put out of business if he buys too high. Thus, for example, a year ago last April, at the most critical moment in the financial history of the war, our Government loaned the Allied Powers money with the understanding that the money should be spent in this country. The Allied Powers were in a panic over the need for wheat. They could pay any price necessary to secure it, because they were not going to sell it but were going to use it to feed their soldiers. What more natural than that they should pay whatever was necessary to secure it? Our American millers could not by themselves have run away with the market, because they had to sell their flour to the retailer, who in turn must sell it to the consumer. It will thus be seen that war removes some of the restraining influences to the rise of prices. It is equally true in the building of cantonments, the construction of ships, and the manufacture of munitions. The Government must buy materials for these things in a wholesale way at any cost. There is no retail customer to haggle over prices. This is a reason, perhaps ample reason, for a proper co-ordination and supervision of purchases by the Governments of the Allied Powers.

IF PRICE OF A PRODUCT IS CONTROLLED WHO SUFFERS MOST, PRODUCER OR CONSUMER?

Let us suppose that the price of wheat has been fixed by the legislative enactment or human fiat below what economic law would have fixed it? How will it work out in practice?

Cost accounting surveys have been made in many portions of the United States upon diverse farming industries. The fact determined by these inquiries is that the labor income is three to five times as great among one-fifth of the farmers of any given region as it is for the average of all the farmers of that region.

If a single industry, like wheat raising, is studied, it will be found that in some portions of the United States, no matter what the price of wheat, its cultivation will be profitable because of special adaptation of soil and climate. Such areas tend to the more exclusive production of this particular crop. No matter, therefore, what the price of wheat is, some farmers find its cultivation profitable, some just break even, while others lose money. The number of farmers which falls within each group varies with the price, but each group continues to exist, because before all farmers are forced out of business the price rises, while before the price rises to a point which makes unadapted land profitable the price falls again. The area of wheat thus expands and contracts as the price rises and falls, because of the status of the marginal man. If the area sown to wheat contracts sufficiently rapidly with the fall in price, the average cost of production is not necessarily any greater per bushel. If an increase in price causes a great extension of area, the average profit may not be any greater because of the use of the marginal land, although the man who has land well adapted to wheat will make unusual profits. If, however, increased production is caused by favorable climatic conditions, and hence unusual yield per acre, the situation is very different, such is the complexity of the problem.

What would be the tendency if the price of wheat were fixed below the proper economic price, assuming economic laws prevail for competitive crops? Where land is well adapted to wheat, and where for that reason it tends, as in certain parts of the Great Plains area, to be raised to the exclusion of other crops, it will continue to be grown not only because it is a profitable crop but because it is more profitable than other crops.

Wherever wheat cultivation is practiced largely because of the general effect on the farm scheme, as in the North Atlantic and Ohio Valley States, it is easy to change to the more profitable competitive crops. For example, in certain sections of the region mentioned, the rotation consists of corn, oats, and wheat one year, and timothy and clover two years, making one-fifth the cultivated area in wheat each year. If, however, corn or oats or both become a relatively better risk only patriotism will keep the farmer from following a rotation consisting of corn two years, oats one year, and hay two years. If, on the other hand, the farmer's patriotism is stimulated by a higher price on wheat, his rotation may become corn, oats, and hay each one year and wheat two years. In one case he omits wheat altogether, in the other he doubles his acreage. In either case he is not financially affected because of his ability to hedge.

But what happens to the consumer? Is he affected so long as the price of wheat is controlled? Should he worry? No, so long as there is plenty of wheat; but as soon as there is not enough wheat to go around he must buy substitutes at an increased price. The increased price is, in the long run, the measure of what he would have to pay to cause the production of a sufficient supply of wheat. I say "in the long run," because usual conditions can hardly provide for the wheat that has been sent to the bottom of the sea.

CONTROL OF OTHER AGRICULTURAL PRODUCTS

Why not, then, control the price of substitutes? If one agricultural product is controlled, is it in the interest of the industry or the nation that other agricultural products be controlled? I am not asking whether it is in the interest of certain individuals or certain groups of individuals, but is it in the interest of agriculture as a whole? How would it affect the national welfare? Would it help win the war?

Approximately one-eighth of the area of the United States is in cultivated crops. Approximately one-eighth of the cultivated area is in wheat. Let us suppose, for the sake of argument, that all the wheat in the United States is being raised for patriotic reasons without any profit. What would it signify? Assuming that the normal income from wheat is one-eighth of the total income (the gross income is considerably less than one-eighth), then the loss to the American farmer could not be more than one-eighth of the total income, a loss that the farmers could well stand and which they would willingly bear in order to win this war. But suppose the prices of the other seven-eighths of the products which the farmer produces were controlled, then what would happen? It is easy to foresee what the tendency would be.

If the farmer was a tenant, he would soon cast about for some occupation at which he could make a living, such as working in the shipyards or in the munition factories, or being employed as a fireman or brakeman on a railroad. The man who owns his farm could still make a living by turning off his hired help and reducing his activities to those which he himself could perform. His children as they grew up would get employment in the city as stenographers or as motormen or conductors on street railways. Because of his investment in his land, the farmer could still manage to live, providing his farm was free from debt. If, however, he happened to carry a considerable mortgage, the bank would finally get him unless death claimed him first. There are whole States in the Eastern United States where the farmers have had this history because of purely economic competition with the newly developing areas further west. It has taken place during the past generation under the eyes of all the people who have lived east of the Alleghany mountains.

It did not greatly disturb the denizens of the city because the opening of virgin areas and the development of rapid transportation assured an abundance of food. Sup-

Reduce "Overhead" by Machine to Win War

Written for Pacific Rural Press by R. E. Hodges

AS A BOY just leaving home, I received a bit of excellent advice from a successful business man. He said: "Young man, choose your life-work along a productive line. Do not get into the 'overhead.' For instance, a good salesman produces business—a bookkeeper employed by the same people is an overhead expense. His salary is paid out of the extra profits from the salesman's work. He grinds out his life, afraid to ask for a raise. The good salesman can talk like the boss of the business. Every good business man is everlastingly figuring to reduce the expense of the overhead and increase the expense of the productive end. Money that goes into the overhead is gone forever. Every coin that goes wisely into the productive end comes rolling merrily back with some little brothers that you are glad to adopt."

Now, Mr. Farm Operator, if you are a hard worker and a hard-upper, and if you have a prosperous neighbor, other things having been about equal, look at his operations and your own. See how much unnecessary overhead you are carrying that he is not. See how much of the necessary overhead you can reduce. This is peculiarly your duty in this time of world hunger and man shortage.

SAVE OVERHEAD ACRES.

When haying time used to come along, we filled the barns with a lot of sweating and hilarity. Then in the winter we pulled that hay out and pitched it to the horses. The corn we had plowed through weary days and each fall husked with frosty fingers, a lot of it went into the horses. Every morning, before daylight, we saw to it that the horses got this feed, that they were curried, harnessed, hitched up, and their stables cleaned out after they were gone. We were spending overhead, unproductive time on overhead horses to work and harvest a good many overhead acres to feed the overhead horses. Such a waste was bad then; it is worse now. The U. S. Department of Agriculture says that one-fifth of the crop acreage of the United States is devoted to the production of horse feed. A good bit of that might well be producing human feed by use of electric and gas power. Every month of the past few years has seen improvements made in tractors and engines which have brought them to a point where it is hardly necessary to ask whether they will work or will stand the strain they are built for, but simply to ask if they are of the best design and size for the conditions of one's own farm and work. There is no question that they may be used to reduce both man and horse labor.

UNNECESSARY OVERHEAD UNPATRIOTIC.

A farmer was feeding his hogs in a way that would cripple our armies if all farmers did likewise. The hogs were scattered in pens covering perhaps two acres, at least an eighth of a mile from the other farm buildings. Each pen had a loose trough in it. Our friend found a kerosene can with a wooden handle nailed across the top, pumped it about full of water, climbed over a fence, dipped out of a box three or four kinds of mill feeds one at a time, then mixed them into the water, climbed four fences with this slop, and got awful peevish because he had to kick the old sow brutally to make her let the pigs get some of it. He repeated the detailed waste of time for each pen, climbing all the fences necessary with each load. Now, why didn't he have a bucket with a handle that would permit him to mix that feed easier? Or why didn't he mix it all at once in a barrel on wheels (he said that each pen got the same mixture but a different quantity)? Why not mix it in a revolving barrel with projections in it, a little motor to run it, a faucet over it, and a handy platform from which skim milk could be easily dumped in? Why didn't he have all the troughs close to the fences? Why didn't he have all lots ending on a single alley? Why didn't he make a swinging panel that would permit him to pour the slop in the troughs, not on the heads of pigs? Why didn't he have the pigs nearer the other farm buildings? Why didn't he pump water by engine or motor into a tank, and pipe it to the feed mixer? He could have fed those pigs better in one-fifth of the time and could then have spent an hour a day more irrigating his beans, which would yield a bag or two more per acre if he had put water on them at the right time instead of later when he did. Uncle Sam needs those extra beans and they would be clear profit to my friend. A little simple planning and a few dollars invested in power would quickly pay for themselves by permitting this man to omit the unnecessary overhead and spend that time productively. On nearly every farm a lot of unnecessary steps are taken, unnecessary jobs are done, a lot of work is made twice as hard or takes twice as long as necessary. Such waste of energy is as unpatriotic as the waste of food, for it prevents that much production of food. A little planning could group many of the routine jobs about an engine or electric motor. A little tool shop could save many a trip to town while men and machinery waste time waiting. To avoid unnecessary investment in power machinery, many farms could use portable engines or motors and even portable pumps.

REDUCING NECESSARY OVERHEAD

Gasoline, kerosene, and distillate are about ten times as powerful as dynamite, and dynamite is at least ten times as powerful as manpower or horsepower. We have plenty of the fuel oils, but we are powerfully shy of men. Then let us make the most of our advantage by using fuel oils at home to release manpower to punch the kaiser. But if we want that punch to be more powerful than the kaiser's dynamite and other devilish explosives, we will have to give every Allied soldier a full tummy. With our best men stepping forward for the punch, there is only one way for us to fill their tummies—that is by using gasoline, distillate, kerosene and electricity to do the work they did before, and more. Every application of mechanical power as a substitute for man and horse power aids in bringing the war to a speedier end and in sparing our boys at the front.

On most every farm there are a lot of jobs now done by men that in the name of freedom should be done by power machinery.

MECHANICAL POWER AND PATRIOTISM.

Such man-labor as is possible to economically replace with tractors, engines, motors, automobiles, and motor trucks has passed from the sphere of productive labor to unnecessary overhead; and it is unpatriotic to use it. Such food crops as may be saved for human use by using machinery of all kinds to replace work animals are that much contributed to saving the world from savagery. Such crops as may be increased by machinery or used to better advantage after preparation by machinery for feeding are that much contributed to a needy, danger-menaced world. When our boys come home and ask us if we wasted acres, manpower, or opportunities for greater production while they were risking their lives and giving their flesh and blood, may we say that we lost no opportunity to perform maximum service in the homeland.

HOME-MADE WAGON JACK.

To the Editor: Please publish directions for constructing a wooden wagon-jack.—J. N. H., Ft. Seward.

A wooden wagon jack, according to Gion Gibson of Colusa county, must have either a common crooked iron pump handle for a lever, or a wooden lover with curved strap irons at one end, short enough so that when it is set and the wheel is lifted, the handle may swing enough past the vertical support so the weight of the main beam and wagon may rest directly on the vertical and not tend to fall until the handle is brought back again. The main beam to be shoved under the wagon is a 3x4 eight or nine feet long. An eyebolt through its end furnishes connection with the end holes in the pump handle to work on a bolt. The pump handle is used upside down. The vertical support is a 2x4 with strap irons projecting from the upper end. It is just long enough to stand under the rear axle. A bolt through holes in the strap irons and the other hole in the pump handle gives a bearing. With pump handle and main beam in line, shove the latter under the wagon until the eyebolt catches under the axle or provide a hollow on it to prevent the axle from slipping. Stand the vertical support sloping to the ground directly under it and push down on the lever.

A new piston is declared to be the first repair expense in eleven years on an Alpha engine operated by Mr. Sangers of Stanislaus county.

For this job of multiplied operations the farmer is saving much but still wasting one man, as he will learn when the man on the disk goes to war. A fine, well-finished seed bed is being made at one operation quickly after the plowing.

Factors in the Fall Seeding of Alfalfa

[Written for Pacific Rural Press by J. M. Bomberger, Modesto.]

Since the acreage of alfalfa has been considerably decreased during the past two or three years to make room for beans and grain; and since the shortage of alfalfa is now being felt generally and is being reflected in the high prices for alfalfa and dairy products, many farmers are interested in learning the quickest possibe way of securing a productive field of alfalfa. For those who have suitable conditions, fall seeding will accomplish the desired result at the earliest date.

Alfalfa seeded in the fall under suitable conditions usually produces much heavier crops during the first growing season than spring seeded alfalfa and sometimes, under very favorable conditions, fall seeded alfalfa will be so well established by the following spring that it will produce almost as well as two-year-old fields.

SUITABLE CONDITIONS.

When moisture conditions are favorable, between September 1 and October 15, most any kind of land may safely be seeded to alfalfa, as it will then have sufficient time to establish itself before winter weather begins. After October 15, fall seeding is doubtful on any but sandy or sandy loam soils where water does not stand on the surface during the winter months.

On very sandy soils and especially on blow sand, fall or winter seeding is usually more successful than spring seeding; first, because there is usually less blowing of sand during the fall and winter and secondly, because there is sufficient time later for re-seeding if the occasion demands it. Very sandy soil may be sown to alfalfa anytime during the winter. On his own ranch, the writer has always considered fall seeding advisable where the land is infested with water grass, as by so doing the alfalfa plants have an opportunity of becoming well established before the water grass starts growth in the spring.

Better results will almost always result from fall seeding on land that contains some alkali, as the young plants become better established while the weather is cool and while the alkali in the soil is diluted with moisture, at which time only a minimum amount of damage is done the young plants.

UNSUITABLE CONDITIONS.

Generally speaking, all soils that are not well surface-drained, being of a heavy, impervious texture and being quite flat, so that there may be water ponds on the surface during wet, cold winter months, had best not be seeded to alfalfa in the late fall at least. Neither is fall seeding advisable when the land is badly infested with winter growing weed seeds; where there is no fall irrigation and rains come too late nor where there is insufficient time to properly prepare the land for fall seeding.

THE FROST FACTOR.

It is often stated that young alfalfa plants freeze more readily before the third and fourth leaves appear than later. This is only true under certain conditions. On porous soils, alfalfa seeded as late as December will not be killed by freezing, even if the frosts are frequent before the third and fourth leaves appear, but if the surface inch of soil is completely saturated with water, so that the stem of the young alfalfa plantlet is surrounded by water, and the water freezes solidly, expanding in every direction as water does when it is freezing, the expanding, freezing water mechanically crushes the tender stem of the alfalfa plant and causes it to die. It is this mechanical action rather than the low temperature which actually damages the plant. When the stem of the plant is a little thicker so that it can make a very slight allowance for the strangling effect of the expanding ice, we do not find frost such a serious consideration.

The writer is firmly convinced that the danger of frost damage to fall planted alfalfa is more a question of proper drainage than a question of temperature.

ALFALFA

What makes the landscape look so fair;
What blossoms bright perfume the air;
What plant repays the farmer's toil,
And will enrich the worn-out soil?
Alfalfa

What is the crop that always pays,
And will mature in forty days,
Resisting drouth, the frost, and heat;
Whose roots reach down one hundred feet?
Alfalfa.

What grows in loam, and clay, and sand;
What lifts the mortage off the land;
What crop is cut three times a year,
And no foul weeds in it appear?
Alfalfa.

What makes theswine so healthy feel,
And never raise a hungry squeal;
The wholesome food that never falls
To put three curls into their tails?
Alfalfa.

What makes all other stock loow nice,
And bring the highest market price;
What fills the milk pails, feeds the calf,
And makes the old cow almost laugh?
Alfalfa.

—Better Fruit.

BAKER, HAMILTON AND PACIFIC CO.

OF SAN FRANCISCO

Are pleased to announce that they will exhibit their

Full Line of Implements

at the coming California State Fair to be held in Sacramento Aug. 31 to Sept. 8 inclusive

Your presence at our booth will be appreciated

What Are YOU Doing To Help Solve The Skilled Labor Shortage?

WE ARE DOING OUR BIT

To help this great problem. You will do yours if you will train yourself for more efficient, more essential, more profitable service. You owe this to yourself and your country. Select one of the following courses—the one best suited to your talents and inclinations—start NOW, with resolution and "the mighty hopes that make us men." BE AN ESSENTIAL MAN.

TRACTOR INSTRUCTION

We teach you Tractor Engineering—thoroughly, practically—affording you actual experience in operating various types of tractors, HOLT CATERPILLAR, INTERNATIONAL HARVESTER, and SAMSON SIEVE GRIP, on our demonstration field. This is a big, growing industry and offers wonderful opportunities to the trained Tractor Engineer, Mechanic, Demonstrator, and Salesman.

AUTO MECHANICS

We offer you a complete course in Auto Repairing and Driving. You will receive technical instruction and practical training in our public Repair Shop under experts. Over 5000 successful graduates. We fit you for the expert's position either in war duty or commercial lines.

IGNITION

We offer an advanced course in electricity and magnetism as applied to the Auto and Tractor, specializing in high and low tension magnetos, coils, dynamos, batteries, armatures, and wiring. Complete equipment for thorough training.

VULCANIZING

An easily learned and profitable trade, very attractive to one able to make the small investment necessary to own and operate his own plant.

MACHINE SHOP PRACTICE

To mechanically inclined boys or prospective Repair Shop owners, this course offers a profitable field. We give a practical course on lathes, shapers, milling machines, etc., including bench and vise work.

OXY-ACETYLENE WELDING

This course embraces Welding, Cutting and Brazing, practical work on cast iron, malleable castings, steel and aluminum. Our equipment includes Prest-o-Lite, Burdett, Davis-Bournonville and Oxweld systems. Thorough training for shipyard and commercial work. Day and night classes in this course.

We take pleasure in showing visitors through our School.

See our Exhibit in Tractor Section at California State Fair or send for FREE 84- page illustrated Catalog.

CHOPPED STRAW AND HAY REDUCED COST.

[Written for Pacific Rural Press.]

The Black Hawk Stock Farm of Diablo recently bought 100 tons of very choice third-cutting alfalfa at Dixon for $20 a ton baled f. o. b. cars. Last year they had 900 tons of hay, but the crop on their own ranch is less than half of that this year, all of their own raising being grain hay. It is easy to see why the Black Hawk people are chopping their hay to avoid any loss when it costs $20 plus the freight and hauling.

But chopping is not the only economy, as told us by Manager E. Lovell. Last year they baled 1200 bales of barley straw and fed it to their beef cattle, of which they have about 250 head, including a few registered Durhams. This year the straw from a 1000-sack barley crop will be used the same way.

Last winter the cattle and stock horses were carried over and the cattle fattened a little on a mixture of chopped straw and chopped alfalfa hay and half mixed in the mangers with more or less bran, according to the degree of increased weight desired, and moistened enough so the bran would be pasty with molasses water. Half a bucket of molasses would be mixed with a little salt in a barrel of water on wheels so it could be sprinkled over the chop in the mangers and mixed up. This was fed twice a day and the stock had free access to straw in racks in covered sheds. Work horses required additional feed. The salt kept the animals drinking well and regulated their bowels against the tendency of barley straw to bind them up.

STUDY THE PUREBREDS AT THE STATE FAIR.

(Continued from page 174.)

have been stung in buying registered stock are the ones who tried to get something for nothing. Their desire to get stock for less than its real worth was so great that they fell easy victims to unscrupulous breeders who offer special inducements to buy at what they call "greatly reduced prices."

Don't make this fatal mistake. In talking with the different breeders, if it is evident that one is breeding up to a standard, consider his stock seriously. But if he seems to be breeding down to a price, drop him as you would a hot poker, bearing in mind that the sweetness of low price never makes up for the bitterness of poor quality.

And remember Mr. Dooley's advice: "Whinivver annybody offers to give ye somethin' f'r nuthin', or somethin' f'r less than it's worth, don't take any chances. Yell f'r a policeman."

Take home a few purebred animals, or at least a registered sire, if possible. But if you can't do it, then at least take home a load of helpful facts and ideas—how the successful farmers breed, feed, house and care for their stock. Carry a notebook with you and jot down all sorts of things. Every hour of the day you will be able to imprison some fleeting germ of a plan, idea or bit of information that will prove helpful to you. Make notes freely and you will be surprised how the most trivial remark or occurrence may be forged into a strong link in the chain of your success.

TRACTORS TRACTORS

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Sonoma County Notes.

That $70 a ton f. o. b. that Sonoma County is getting for her shipping pears has been taken advantage of by a Chinese fruit buyer. He has paid James Keegan of Forestville $2,000 for a little over three acres of Bartlett pears on the trees. This bespeaks an extra fine crop of marketable fruit.

Sonoma County is progressive and up to date in orchard operations. Fifty-two new power spraying machines were bought last year, in addition to those provided by Horticultural Commissioner Bremner. It is becoming more and more recognized that an individually owned spray outfit is one of the first requisites of a well-managed orchard of any kind.

The new Farm Bureau in this county is in a very flourishing condition, as it should be. George E. Merrill, the County Agent, estimates the number of farmers in the county at 5,500, and there are 1,500 paid members in the Bureau and seventeen Farm Centers. The County Horticultural Commission and the County Farm Bureau occupy the same office in the Court House, which helps both offices in team work.

The Farm Bureau is busy with a sheep-keeping campaign now, particularly amongst small farmers.

Several hundred sheep have already been placed in small lots. A recent campaign for extending hog production resulted in placing 1,500 more hogs on farms.

Fred Grohe, the nurseryman, has brought out some new pink petunias. I saw some over 4 inches in diameter (superb issimas). He has sold the seed at $40 an ounce.

Miller & Gobbi, the nurserymen at Healdsburg, were very busy packing apples, so we did not go out to their nursery. They specialize on prunes and report having an increased demand for prune trees on the peach root. Sonoma county was lucky in getting rather more rain than some other sections, but this does not altogether account for the general good growth and condition of both fruit and foliage. The trees are singularly free from mites this year.

The apple pack is normal at Sebastopol and Forestville, which districts had a fine berry season. The entire crop was harvested in good condition at a renumerative price.

Lake County Notes.

This charming and romantic little county will be more than ever patronized when the State Highway (survey just completed) has been put through. This county's dried pears are in the market in a class by themselves. Last year the crop amounted to 8,450 green tons of Bartletts, of which 4,425 tons were dried. Only 425 tons were shipped green; 885 dry tons were shipped out.

This year's crop will amount to quite as much and perhaps more, as the young orchards are beginning to loom up. The crop will be 100 per cent.

The condition of the fruit is A1—scab being almost a curiosity. Growers are taking better care of their orchards year by year and we think they are to be congratulated on their Horticultural Commissioner, who is a pear man from the ground up, with a keen interest in the welfare of the whole county's fruit interest.

The effect of drought is not marked, except on gravelly land and where insufficient cultivation was given or where in some young orchards, grain had been grown too close to the trees. Young new-planted trees up here should have a couple of irrigations—say 10 gallons to a tree in basins the frst year—especially on adobe land—to establish them and settle the earth round them. Better cultivation is being practiced in Lake county year by year and returns warrant it.

Lake county is now in the midst of the pear harvest and drying is general.

The young prune and almond orchards in Los Molinas (Tehama county) are flourishing and this promises to become quite a center for prunes and alfalfa and possibly walnuts. Of the latter the Concord variety is the favorite. The supply and distribution of water here should build up an important fruit and feed industry and the holdings should not be made too small.

This is a promising section now under steady development.

San Joaquin County Notes.

Accompanied by Horticultural Commissioner Harry H. Ladd, we visited some orchards north of Stockton on August 10th.

The 500 acres of black walnuts in the Anderson orchard from seeds planted two years ago is so thrifty and strong that a number of the trees were budded this year. A good crop of beans was harvested from the land last year and there is a good looking stand of beans there again now. Ought to be good for 20 sacks to the acre.

In the Holden Drug Company's 20-acre orchard, which is 12 years old, there is a fine crop of nuts and the trees have made excellent growth except in one patch of about four acres still left in alfalfa. Here the trees show they are being robbed and the alfalfa will consequently be plowed out, as there is a lot of dead wood and poor growth in the trees. An orchard of this kind pays for the best cultivation it is possible to bestow. After an orchard has attained bearing age it seems inadvisable to intercrop with alfalfa. Not only because of its robbing the trees of moisture but it precludes the possibility of closely watching trees (or spraying them if need be) during the growing season, and it adds to the cost of harvesting a fruit crop.

Andrew Blossom in the Waterloo section near Calaveras River has 8 acres of walnuts 9 years old grafted high on California Black. Here again there is alfalfa between the trees, which look well so far. Mr. Blossom picked about a ton of walnuts from these trees last year, and there is a good crop and

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

growth on them now. He has a 12-acre cherry orchard adjoining, also 9 years old, that are as fine trees as one could wish—Bings, Black Tarts and Royal Anns. They are well trained, large, healthy trees, on real cherry soil and show no signs of the past two dry seasons.

We noticed a worked-over 40-acre almond orchard that was badly infested with red spider so that it looked more like early October instead of early August, except that the trees were bearing a good crop of nuts. This orchard was dusted three times with dry sulphur. A good spraying of lime-sulphur in January would have been better and then a spray of atomic sulphur the end of May.

Burton A. Towne of Woodbridge, who was the first grower in his district to use vetches in his vineyard as a cover crop, has probably the best stand of Tokays we have seen—80 acres of them on sediment loam soil. The vines are tied up to 8-foot stakes and carry an average of 65 per cent of a crop. In the first four rows last year the vines yielded from 400 to 600 crates to the acre. Grape picking will commence in earnest about the 26th. We found Mr. Towne in his packing house superintending the handling and shipping of peaches. He had a staff of women (local) picking the fruit and sending it in and found them diligent and satisfactory. The young orchard of 80 acres of plums, prunes and peaches is also on sediment loam—real peach or cherry land—most of it, and Mr. Towne told us that in future he should plant his trees on the peach stock instead of the Myrobolan.

NEW METHOD WITH BROWN APRICOT SCALE.

L. Woodard of Campbell, near San Jose, claims to have killed brown apricot scale by the use of dry sulphur.

He showed us a 6-year-old Satsuma plum tree with a little crop of good fruit on it and clean healthy foliage. Everything showed the outlines of a heavy infestation of brown apricot scale, where it had sloughed off.

We were told that the tree was apparently nearly dead from the infestation and the leaves small and smutty when Mr. Woodard had finished sulphuring his vines the latter part of April. Passing the tree he stopped and gave it a thorough good blowing of dry sulphur and has done nothing to the tree since then.

Well, seeing is believing. The tree is clean. We saw it. Now it is for others to try out and see whether the same effect can be accomplished at any stage of the scales' career. We shall be interested in hearing further of experiments along this line, especially where accurate data of dates, atmospheric conditions and amounts used are concerned.

The Tracy Irrigation District has been trying out their ditches and found most of them O. K. They are pumping river water to a maximum height of 90 feet. The acreage thus put under irrigation will be planted principally to grain, sugar, sorghums, beans and sugar beets. Water will make more successful the planting of windbreaks.

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. **Fertilize your land**—the increase in **yield** and **price** of crops will more than pay all the fertilizer expense—it will enable you to **farm with profit.** Don't spend your time working worn out land. **Make it pay—Fertilize with Hauser's Organic Fertilizer.**

Genuine Giant Powder bears *this* tradmark

GIANT FARM POWDERS

STUMPING — AGRICULTURAL

The Giant trademark is worth looking for, because it spells better blasting and more of it—done at lower cost. "Giant is powerful, nice to handle," writes Clarence Warner, Dayton, Ore., "and takes less powder to do the same work than other brands. I think Giant is just O. K."

Giant Farm Powders—Eureka Stumping and Giant Stumping—are made especially for western farm use. Every ounce of energy has exactly the right cracking, splitting and heaving action. More than half a century of such efficiency has made them so popular that other explosives are in error called "giant powders."

This indicates the superiority of the original. There is only one brand of Giant Powders. The Giant trademark is your sure protection against imitations.

The coupon (or a postal mentioning this paper) will bring you the big free book "Better Farming." It tells you how to do many kinds of farm work cheaper and better.

HORTICULTURAL EXHIBIT AT STATE FAIR.

The first State Fair exhibit ever staged by the State Horticultural Commission will be the one at Sacramento, August 31st to September 8th—a splendid example of what such an exhibit should be. The Commission will have ample space in the new Agricultural and Horticultural Pavilion. C. A. Wilkin is in charge.

Foremost in interest, probably, will be the rodent exhibit showing specimens of ground squirrels, gophers, moles, etc., and a collection of their natural enemies, alive. Such enemies include owls, gophersnakes, etc. The preparation and mixing of poison barley will be a feature. Charts will show the losses of various states by rodents.

Of nearly equal interest are the boxes and crates of fruit actually condemned by horticultural inspectors in many parts of the State for not conforming to the Standardization Law. Enough of these have been put into cold storage to replenish the exhibit throughout the Fair. They may shake one's faith in human nature, but the signs of progress will also be there in the form of standard-packed fruits for comparison. Charts will show average market prices during the year before standardization became statewide and the prices of 1917 and 1918.

The State Insectary will have lady birds working on live aphis, and beetles working on caterpillars, along with specimens of many other insects which help protect our orchards and field crops from injurious insect pests and suggestions as to how farmers may use the Insectary. The Horticultural Quarantine Division will show specimens of some of the dangerous foreign insects it has intercepted by searching incoming shipments and baggage, and will try to show forcefully the dangers to our fruit, cotton, and alfalfa industries which are ever threatening.

Numerous county exhibits are being prepared, largely under leadership of horticultural commissioners and farm advisers, to show the fruit resources of the greatest fruit State in the Union.

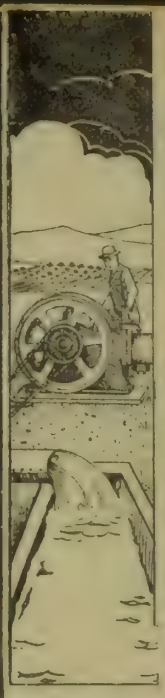
Thus all Divisions of the State Commission of Horticulture will be represented, the Executive Division, the Quarantine Division, the Standardization and Inspection Division, the Insectary and the Rodent Control Divisions.

MORE GRAIN. FEWER MEN. IN BULK HANDLING.

(Continued from page 175.)

tribution of the twenty million bags which would have been required for the 1917 barley crop alone, and something like that for the 1918 crop requiring a rail haul of 100,000 to 120,000 car-miles besides the hauling of bags for wheat and other grains, which would have required 20,000 to 25,000 additional car-miles. Put these costs into terminal elevators and they would soon be built.

The demand for seed of vegetables whose tops are to be cooked like spinach is greater than it used to be, according to a well-known seedsman.



Dependable Pumping Plants

When you install a pumping plant you want water—plenty of water—full rated production and more if possible. And that's what you get when you install

American Centrifugal Pumps

These pumps produce the full guaranteed amount of water and they keep power bills down to a minimum! That's more than a claim—it's a guaranteed fact.

EIGHTH AND IRWIN STREETS, SAN FRANCISCO, CAL.

RED SPIDER AND YELLOW MITE.

Both these pests have been a factor in reducing the vigor in prunes, almonds, plums and other deciduous trees this year, even nursery trees being not altogether exempt.

But the nurseryman gets to work and sprays or dusts them out of existence before their ravages have gone far, and we orchardists will have to follow suit a little more closely and give them a dusting as soon as they appear. Often the first hot days in May their work is apparent.

A dust, composed of half sulphur and half hydrated lime, is about the best remedy if you can reach all the foliage, though a good deal of milled sulphur or atomic sulphur is used in Tehama county—the latter from 16 to 20 pounds to the tank.

Bean thrips also work on prunes and pears and other deciduous fruit, but the discoloration of the foliage differs from the ashy grey that is the result of red spider and other mites' work.

Some years ago, the late Mr. Henderson had such a bad infestation of bean thrips in his pear orchard in Lake county that he was alarmed for the crop. He used atomic sulphur and blackleaf, I believe, and cleaned up the trees before serious damage was done.

The care of the foliage, its defense from the insidious attacks of these little pests, must in the future become a regular part of the business, especially in the warmer sections, with special regard to the almond tree.

NOTES ON PRUNES.

[Written for Pacific Rural Press by Samuel Haigh, San Jose.]

Our sugar prunes are very large and a heavy crop, although last year they bore so heavily that many of the limbs broke down, although they were propped and tied up. They were irrigated once; in April only, as also were the French prunes. About six weeks ago we picked off all the scabby prunes, which gave the others more room. Yet on some branches they hang like grapes. So far there are no split prunes.

The French prunes with exactly the same treatment are very small and dropped badly ever since 1st of July. These trees are also dropping their leaves and have made very little new wood, while the Sugar prunes have made a growth of 8 to 10 inches.

Several plum trees that were grafted over to Sugar prunes are in a yard that is used as a runway for poultry and has not been irrigated at all, yet the prunes are unusually large and clean.

Both the Imperial and the Sugar prune appear to stand the dry years better than the French prune. In fact, when irrigated up to July last year the fruit on these varieties lacked sweetness, while the French prune was intensely sweet.

SATSUMA NEEDS A POLLINATOR.

[Written for Pacific Rural Press by Dr. W. L. Howard]

In the issue of the Pacific Rural Press of August 8, 1918, page 123, a correspondent complains of having Satsuma plums that bloom profusely but bear no fruit. This variety is one of the distinctly self-sterile varieties and cannot be expected to bear profitable crops without interplanting with some congenial variety to pollinate it. We have been experimenting with the pollination of plum varieties at the University Farm at Davis and elsewhere in the State for the past five years. Our Professor A. H. Hendrickson has been conducting this work. By consulting his records I find that the Burbank has been consistently the best pollinator for the Satsuma year after year. While the Wickson, Kelsey and even the Combination will occasionally cause the setting of fair crops of fruit, the Burbank is far more reliable. One tree of the Burbank to every four or five of the Satsuma should be sufficient to supply plenty of pollen if bees are working in the orchard. University Farm, Davis.

PEACH PEELING PATENT.

California is divided against itself by its courts in the case of the Dunkley peach peeling patents. Not so long ago the Dunkley interests won their suit in Northern California to prevent use of the idea they had patented. This consists principally in the spraying of water to remove the skins after peaches are dipped in hot lye water. The Supreme Court upheld their victory at that time, but now a court in Southern California rules against them on almost every point after a much more complete trial in which it is said over fifty witnesses were brought from the East. They will appeal to the Supreme Court and if they win there will impose some thousands or even millions of dollars of royalties on the companies which use their patent. The C. F. C. A. has a special license by which it uses the patents regardless of the suits.

An Open Letter——
HENEY for Governor

MR. C. R. DETRICK, Campaign Manager.

For twenty years I have been in touch with the problems of the farmers and fruit growers of California. In the present war emergency we need more than ever an Executive in full sympathy with the farmers' problems of production, of distribution, and of irrigation.

I am closely in touch with many of these problems, as President of the Contra Costa Farm Bureau; of the Contra Costa Fruit Growers' Association; of the California Grape Growers' Association, and the California Pear Growers' Association; as a member of the California Development Board, and an officer of the State Viticultural Commission, and of the Prune and Apricot Association.

Knowing the splendid record of **FRANCIS J. HENEY** for twenty years, I feel that every farmer and fruit grower, registered either as Democratic or Progressive, should vote for him on August 27.

Heney has the confidence of Ex-President Theodore Roosevelt, of President Woodrow Wilson, and of the farmers of California. If he is elected Governor the producer will be protected in every legitimate need and we will have a Governor who will not fear to do what is right, regardless of political intrigue or the influence of those who seek to exploit both producer and consumer.

Frank J. Sweet

Bean Crops and Prospects

[Written for Pacific Rural Press.]

Overproduction of beans this year is not to be feared, notwithstanding the larger acreage planted in California than last year's record acreage and production per acre. President Geo. A. Turner of the California Bean Growers' Association finds by reports from hundreds of members that while the acreage in California is greater than last year, dry weather is making almost a failure of certain crops. Districts planted to pinks seem worst affected, and the acreage reduction also is greatest on this variety. Large whites show average condition in San Joaquin, Yuba, and Colusa counties, but under normal in Sacramento, Yolo, and Stanislaus. Red Kidneys and Red Mexicans, which are grown largely in Stanislaus, are reported about 75 per cent of normal. Blackeyes and Teparies, which are better adapted to dry conditions, show nearly normal condition. The vast expanses of bean fields in Sutter Basin and on the Natomas reclamation above Sacramento made almost a perfect stand and are in fine, thrifty condition matting the rows. Red spider has been reported less than usual and has become nowhere serious. A prominent bean dealer believes that all losses due to dry weather will be offset by the increased acreage so the crop will equal that of 1917. Last year's crop of large and small whites is already cleaned up and only pinks remain in the State in considerable quantity. There was an especially heavy crop of them last year. No demand for these is expected until the new crop comes in. Under Food Administration regulations, new crop dried beans may not be bought or sold until they are actually mature. It is too early to forecast prices, but the Food Administration is alive to the need of giving bean producers a fair return.

Mr. Turner has reports from Michigan, Oregon, and other competitive sections showing a reduction there by frost, pests and other adverse conditions.

The California Bean Growers' Association is the largest bean association in the world, and it expects to market many million dollars' worth of beans this year. It includes owners and managers of practically all of the big bean ranches in central and northern California and hundreds of smaller growers located from Salinas northward. Its offices are in Stockton.

Why I Want to Go to the State Fair

(Continued from first page.)

races. There are always several barns full of the heavy ones and a raft of the racers. But the ponies will take the kiddies' eyes. The horse show tent is being moved onto the five-acre alfalfa corner back of the horse barns.

Probably wife will spend some of her time among the manufactures exhibits, getting notions how to spend our money. But may she stay away from that automobile tent! It is always full of beautiful machines and all kinds of luxurious contrivances. It will pay better to spend the money for a good motor truck, for that will save time and horse flesh, which are both the same as money now. Trucks will have a special tent, and, judging by their exhibit at the Davis tractor demonstration, there will be plenty to choose from.

The old machinery building will be used for vocational and school exhibits that will interest the family, and maybe the family will spend most of their time among the poultry. When they get tired, the women's building is handy for them, and when we get hungry the big new cafeteria will give us a better feed than we ever had on the grounds before. Come on—let's go!

Thousands of people came to the State Fair last year in automobiles and parked them under the eyes of regular guards. Auto travel will be greater this year, both to relieve pocketbooks and to avoid overtaxing the railroads.

LEVELING FOR FALL ALFALFA.

Gion Gibson of Wililams has leveled 75 acres which he will plant to alfalfa after irrigation this fall early enough so the alfalfa will have several leaves and will resist the frost. The square check leveling has cost around $40 per acre, while contour leveling across the road for rice cost about $5 per acre. For this reason, contour leveling will be done for the 300 acres Mr. Gibson expects to plant to alfalfa later.

Potatoes are interplanted with carrots, parsnips, lettuce, and other vegetables in some war gardens. Rows are wider apart where the vegetables need more sun.

FRUIT-GRAIN-HOG RANCH.

A mammoth combination of fruits, grain, and fine hogs is working on the Jas. Mills Orchard Co.'s ranch at Hamilton City as well as possible with many of their men going to war. Over 600 acres of young orchards include oranges and lemons, as well as most commercial deciduous fruits and olives. Almonds, plums, prunes, peaches, apricots, pears, etc., are being budded this summer to the number of 250,000 trees for the nurseries on the ranch. Over 2,500 acres of grain were put in last season with tractors, and great subsoilers are tearing up unfarmed pastures for more grain. They had 2,200 hogs this spring, and will have sold 24 carloads of pork before October 15th. Their Durocs are on another ranch. Their Berkshires include the highest priced Berkshire gilt sold at the Western Berkshire Congress last spring and a sow on which they won reserve grand championship at the State Fair in 1916. Their herd boar Ames Rival 70th is a smooth big animal with a perfect back, great hams, and standing high up on all his toes. About 24 sows have been selected for prolificacy and type out of a bunch of more than 150 for the breeding herd along with about 20 of the best young sows. The rest are to be crossed with a Poland-China boar for pork. The average of 30 Berkshire litters last year was over nine pigs. Two of the Mills Berkshires sold at the Congress averaged 377 pounds at nine months old. About 25 head are to be shown at the State Fair.

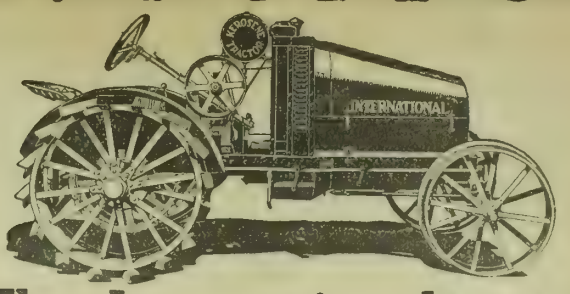
PRICE FIXING OF AGRICULTURAL PRODUCTS.

(Continued from page 176.)

pose this same test were applied to the country as a whole. Would the food come from Canada, Mexico, Central America, or Australia, or is the plan of controlling the price of all food products impossible?

It is, of course, well known that the control of the price tends to make the article so controlled scarce. It does not necessarily follow, however, that the scarcity of the particular article so controlled is due to the control. The control may have been due to its scarcity. It is a curious psychology that causes people to demand the control of a scarce article. The way to make a given article more abundant is to spend less work on the less essential articles. War makes new demands. The only way to meet these demands is to place more emphasis upon them and less upon old requirements. There are two general courses open to us. On the one hand to pay more for the essentials of war; on the other hand to pay less for the relatively non-essentials, or to prohibit altogether the production of the less essentials until the absolute essentials are supplied. Doubtless as the war progresses all of these factors will be employed to secure the desired end.

Old trees grafted over bear very large fruit for two or three years. We have an idea that it might be a good plan to cut back one-third of the limbs each year, because, on trees that we cut back a few limbs and grafted them over to better varieties, we find the fruit very much larger than that on the tree from which the grafts were taken. On the principle that you cannot spoil a bad egg, we intend to experiment on some trees that do not pay for the labor expended upon them.



The International 8-16
A Handy Tractor

A FEW minutes in the seat of an **International 8-16** gives you a new idea of the ease and comfort of doing farm work with a kerosene tractor. All the controls are right at hand — spark and throttle controls just under the steering wheel; clutch and brake operated by foot pedals; speed changing levers just where your hand falls on them — everything as handy as on an automobile.

International 8-16 has one reverse and three forward speeds: 1¾ and 2½ miles per hour for plowing, disking and other field work, and 4 miles per hour for road work and when traveling from one job to another.

You will like this tractor when you see it. When you run it you will like it better. When you find out how light your bills are for kerosene and for general upkeep you will like it best of all. Go to the dealer soon and see it or write us for information because it looks as though the demand for **International 8-16** tractors is going to be much heavier than we expected and we shall have to fill orders in their turn.

Field and Garden Suggestions

[Written for Pacific Rural Press.]

Measuring Hay in the Stack.

To the Editor: Please send me a rule for measuring a stack of hay by the overthrow method. The stack is 20 feet wide, 36 feet overthrow, and 128 feet long.—M. E. S., Marysville.

Get the cubic contents and divide by 450, more or less, according to the time the hay has settled, the kind of hay it is, the extent to which it was dried in curing, the amount of moist weather since stacking, the moisture in the ground, etc. The exact rule for getting the cubic contents of a stack like you have is too involved for practical use where so many varying factors are involved, and you are safe in taking a round number not quite what the stack would contain if its overthrow were an exact semicircle. The way we would work it out, your problem for an "average" stack of grain hay about this time of year would be thus: If it were a semi-circular overthrow, its cubic contents would be 20x20x .7854x128, which equals 40,212 cubic feet. Dividing 40,000 cubic feet by 500 would give 80 tons. The stack is a little too flat to contain 40,000 cubic feet, but the hay may not take quite 500 cubic feet per ton, and these factors will probably offset each other.

Why Early Seeding Is Best.

Highest yields of grain nearly always follow earliest, even dry seeding, especially on summer fallow, says Prof. B. A. Madsen of Davis. Barley or wheat mature at a time in spring without regard to the time they were planted, even if that is three months earlier or later. Early seeding enables the grain to develop a great root system and a large strong plant usually with a proportionate amount of grain. It is a growing practice to work down a fine seed bed and put the grain in dry. The first rains will wash soil particles close around the seed and hold moisture to germinate it. Later rains will pack the entire seed bed suitably. But spring seeding on spring plowing has no such advantage. The loose dirt if not deeply packed by rollers and other implements will lose moisture into its air spaces and if seed germinates it has a hard time avoiding dryness. The principal objection to early seeding on heavy soil is the chance that it may lodge. But fields seeded on the farm six weeks before a rain have been among the best ever raised. It is always likely that the loss will be less from lodging than it would be from late seeding.

Selects Blackeyes for Seed.

Special seed bean selection costs very little, but makes the seed sell at a cent a pound premium in the experience of R. H. Frazer with blackeyes in Stanislaus county, besides making a bigger crop per acre. He commenced selecting seed three years ago by picking plants in the field which bore a large number of the biggest pods and matured them early. The first selection made seed enough for eight or ten rows in the garden each about 100 feet long. The best pods raised in the garden from this seed were saved for the garden the following year, while the rest were planted in a field plot. Last season 40 sacks of the finest kind of extra large plump blackeyes were sold to neighbors at a premium for seed.

San Joaquin Delta.

Summer crops in the San Joaquin Delta will exceed all records this season, according to Farm Adviser Ralph D. Robertson. These include potatoes, corn, sorghum, grains, onions, and beans. Some 25,000 acres are growing potatoes. About 25,000 will yield heavy crops of corn next year where corn has not been planted before. Bouldin Island, with 6240 acres, is being reclaimed and will be farmed next year by George Shima. He will have a splendid opportunity to grow disease-free potatoes for seed if he does not introduce disease on this new land. Nearly 1000 acres of sugar beets are growing in the islands adjacent to Stockton, but the hemp acreage is not so large as last year, due to the pressing need for food crops.

Irrigation Means Great Crops.

What efficient irrigation means is illustrated by the Natomario Rancho, owned by W. F. Sandercock in Sacramento county. From 22 acres he baled this year 107 tons, 280 pounds of oat hay, after which he flooded the land and got a nice stand of beans. From another 40 acres, the harvest was 225 tons 630 pounds. The same land last year produced a crop of hay and then 22 sacks of beans per acre. The first two cuttings of alfalfa this year yielded 74 tons 425 pounds from 13 acres.

Broccoli on Potato Ground.

After potatoes are dug, Geo. Enos of Alameda county prepares the ground with his John Deere potato digger, which works it up smoothly and also brings any remaining potatoes to the top. Then he plants broccoli for a fall-winter crop.

Sugar for Beekeeping

To the Editor: I wish to learn what provision has been made to permit the use of sugar for beefeed during the coming winter. Last fall it was understood that sugar could not be had for this purpose and I did not feed my bees. If they had been properly fed it is quite possible that I would have gathered 1,400 pounds of extracted honey instead of about 400 pounds, which I estimate will be the total harvest for this season. This loss of production could have been avoided by the use of comparatively a small amount of sugar. In many parts of California the honey-producing blossoms develop early, and in abundance for a short time only, while later in the season the supply is greatly reduced. Except by the application of constant attention, warranted only in the operation of a commercial apiary, it is not practical to endeavor to estimate the quantity of honey that should be left for wintering and at the same time obtain the maximum yield because it is difficult to determine when the late and scattered supply of nectar will cease; to keep the bees at work and avoid various difficulties their surplus stores must be taken as the supers are filled.—Reader, Fruitvale.

[Answer by Prof. G. A. Coleman.]

By a recent ruling of the Food need the sugar for feeding their bees to carry them through a season where there is no flow from the native honey plants to get what they actually require. Beekeepers should not abuse this willingness of the Food Administration to furnish sugar by removing all of the surplus honey and selling it at a high price with the intention of substituting sugar at a much lower price for feeding their bees, as this would be plain profiteering.

In order to provide a supply of honey, which is the natural and best food for the bees, the bee-Administration, sugar for feeding bees is placed in "Group B" and classed with essential uses, entitling beekeepers to 100 per cent of their requirements. Beekeepers needing sugar should write direct to the State Food Administrator.

It is the intention of this ruling to enable beekeepers who actually keeper should supply an abundance of supers to take care of the entire season's crop. He can easily manipulate these supers to catch the flow from different honey plants and select at the close of the season the light honey for extracting and reserve the darker grades, either in the comb or after extracting, for feeding his bees, and so, by a little extra work, patriotically assist in the conservation of the sugar supply.

University of California, Berkeley.

SUBSOILING UNGRAINABLE LAND.

"I want to show you a field of about 300 acres we are subsoiling," said James Mills Jr. recently, on the Mills Orchard Co. ranch in Glenn County. "The land is like granite. Three men have given up trying to raise grain on it and it hasn't been farmed in the past 20 years."

A Caterpillar 75 was pulling a Killefer five standard subsoiler from which two standards had been removed. It was difficult to get them into the ground, but the whole acreage was being torn up in a way that would hold the winter rains and permit root penetration by grain plants to get the fertility previously locked up there.

"You have lots of faith in subsoiling, to go at it so thoroughly on so large a scale," we suggested.

"Well, we subsoiled four years ago about 500 acres that had been too wet to plow in winter and too hard to work in summer. Last year from winter sown grain on that land we took 13 sacks per acre. This year we took 15½ sacks per acre. Higher land subsoiled four years ago yielded 20 sacks per acre last year where it had been fallowed. We will subsoil a total of 500 acres this year."

The South San Joaquin Irrigation District has put 14,000 acres more under irrigation this season than ever before

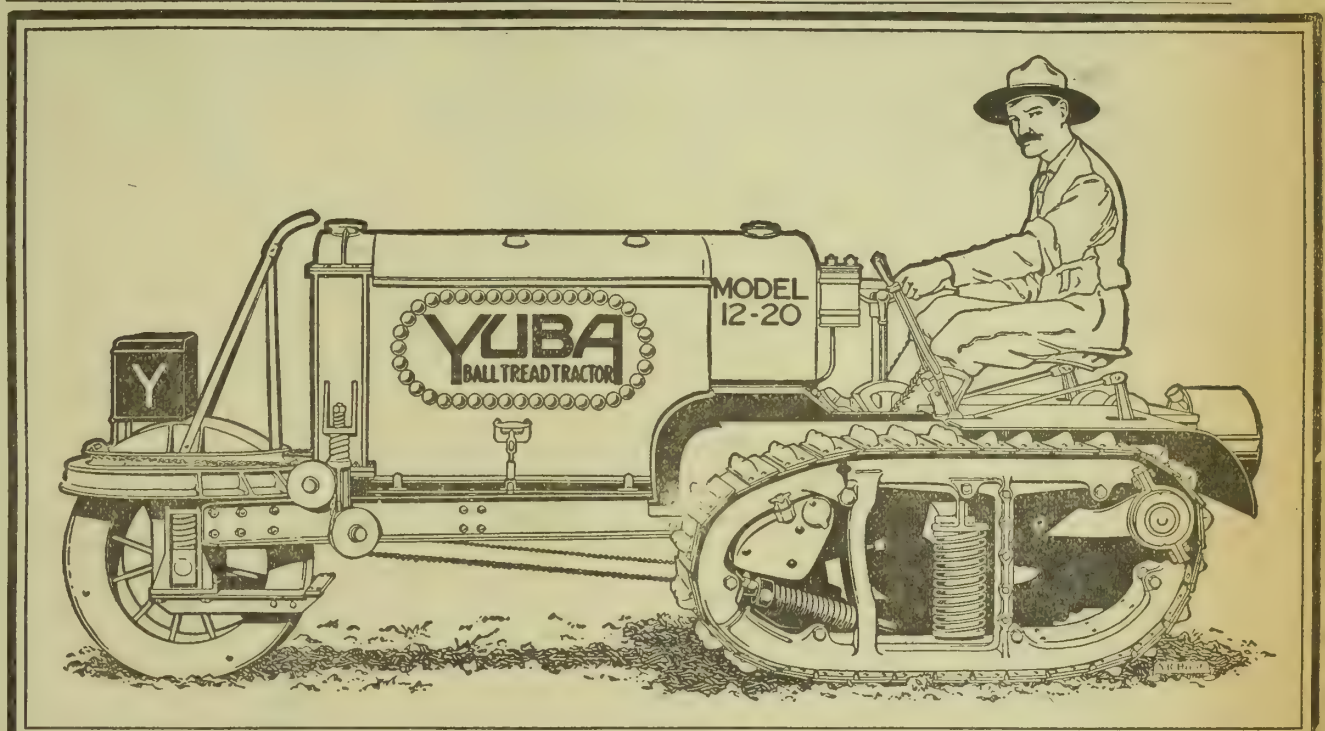
439 S. MAIN ST. LOS ANGELES, CAL.



IMMEDIATE DELIVERY

YUBA Ball Tread Tractors, Model 12-20, are now being delivered.

To relieve the shortage of labor—to hasten the planting—to insure the work done now, order a Yuba 12-20 for immediate delivery.

The price is $2750.00 cash (f. o. b. Benicia, California)—the number ready for shipment is limited—wire your order and put one to work.

PEACE—the only way to get it is to fight for it. We're doing our all—three shifts—every hour of the 24—turning out tractors for you.

Get one, put it to work—it will keep going day and night and rarely need repair.

Quick action in securing one of the Yuba Tractors means sure crops for you—and food for our soldiers.

SAN FRANCISCO

Mechanical Power on the Farm

Users of tractors, engines, pumping plants, motor trucks, automobiles, electric motors, and other mechanical farm power are invited to make this department an exchange of their experiences and troubles.

TRACTORS AND IMPLEMENTS AT STATE FAIR

You need a tractor; which one will be best for you? How will you find out? You will go to the State Fair and see there practically all of the leading models, so close together that when a salesman mentions a feature you had not thought of while looking at other machines, you can go back to the one that has impressed you most and see if it has this feature. Don't decide which you want until you have heard what every salesman has to say about his machine. Talk about tractor short courses! Almost every tractor has some points in which it excels all others. The ingenuity of mechanics has devised more good features for tractors than you ever dreamed of; and no half dozen tractors has all of the good features. Let each salesman or demonstrator tell you about his machines, while you make notes of their high points; for you can't keep them all in your head. The demonstrators don't expect you to buy without investigating the other tractors. That is why they are all grouped together in two big tents, one of 28,000 square feet. You don't have to travel to San Francisco, Stockton, Sacramento, Marysville, Chico, Modesto, Fresno, Hanford, and Los Angeles to see all of these makes if you look for them at the State Fair.

INVESTIGATE TRACTOR IMPLEMENTS

But be careful also about the implements you select to use behind the tractor. Many a failure has been made by selection of implements not designed to be pulled by tractors. Horse-drawn machinery is not likely to last long with a tractor. Nor would it last long if hitched behind as many horses as a tractor replaces. The machinery exhibit in the tractor tents will show you the difference. The salesmen will tell you where weak points have been made strong to do the faster, deeper, harder work that farm implements can and should do behind tractors. You may be surprised at the complexity of plowing problems and the ways manufacturers have devised of overcoming them. A disk cultivator is not just a disk cultivator in these times; it is a machine in which you may get many advantages over the old types. Men have watched the furrows turn for years without dreaming of the possibilities that will be disclosed reasonably by the attendants at the State Fair machinery exhibits. Don't fail to make them talk for you. Make them earn their salaries.

Have you heard of tractors or tractor machinery that might make a 40 per cent increase in your crops with the same man-labor? Look for them at the State Fair. We give a list as nearly complete as possible at the date of writing with statement of square feet of space occupied.

Avery, 2,000 square feet, ten tractors and a grain separator, exhibited by F. H. Poss Co.
Bates Steel Mule, 300 square feet, one model exhibited by the California Tractor Co.
Bean, 800 square feet, three tractors, three spray pumps, and several centrifugal pumps.
Beeman Garden Tractor, 200 square feet, one tractor and implements.
Best, 1,500 square feet, for 75, 40 and 25 h. p. tractors.
Case, 6,000 square feet, for fifteen tractors, five threshers, a silo filler, and other machinery.
Cleveland, 4,000 square feet, for ten tractors, exhibited by the F. H. Stow Tractor Co.
Holt Caterpillar, 2,500 square feet, two tractors of 75 and 45 h. p., plows and harrows.
International Harvester Co., 1,000 square feet, three tractors, two disk harrows, etc.
Lauson, 540 square feet, two tractors, exhibited by De Laval Dairy Supply Co.
Moline, 1,500 square feet, for two tractors and numerous implements, drills and binders.

BIGGEST TRACTOR AND FARM MACHINERY DEMONSTRATION

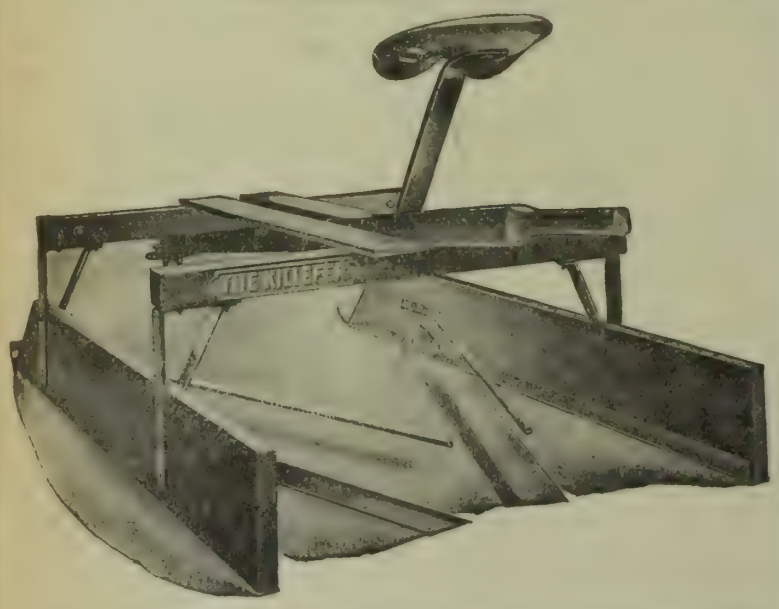
The biggest tractor and implement exhibit and demonstration ever held is promised for Los Angeles, September 17 to 21, inclusive, by the Traction Engine and Implement Dealers' Association of Southern California. Over 50 types and makes of tractors will be given daily "workouts" that will surprise even those best posted on recent tractor developments. In addition to the tractor concerns who have entered, over 50 leading dealers and distributors of farm machinery and equipment have applied for space, and a total of 60 acres will have to be devoted to exhibits alone. One of the most interesting features of the daily program of events will be that of the National Automotive School. Its students will demonstrate methods of repairing tractors, and two lectures daily will be given by members of the faculty for prospective tractor buyers and for those who already have machines.

KILLEFER QUALITY

BEAN CUTTER

KILLEFER EFFICIENCY

SEE CATALOG No. 281



There will be a big demand for Bean Cutters this year and when the time comes they will be needed quickly. Do not delay putting in your order for what you need right away.

We build two weights of sled cutter, the one shown above being our regular wood frame cutter. For heavy ground, where a strong cutter is required, we make a steel arch frame at an additional cost of five dollars. Give your order to your dealer and insist upon having the Killefer kind.

BEAN CUTTER BLADES

You will need extra blades and we can furnish 5/16 x 6 inch x 6 foot blades at $12.00 per pair f. o. b. Los Angeles.

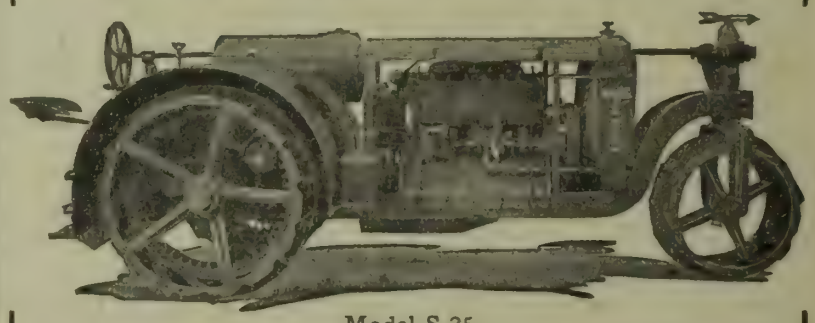
Samson

GMC TRACTORS SIEVE-GRIP GMC TRACTORS

Tractor



Model S-25

THE GMC SAMSON SIEVE-GRIP TRACTOR is pleasing thousands of owners. It will please you. For nearly two decades it has been subjected to acid tests and has met them all successfully. Designed for service, simply, correctly and honestly constructed, it has more than made good the claims of its manufacturers. As a result, the demand for **GMC SAMSON SIEVE-GRIP TRACTORS** is constantly increasing.

Why experiment when you can secure a tractor, time-tested, that has demonstrated its ability to meet any and all tractor requirements on the farm, from plowing and cultivating to the hundred and one odd jobs?

The **GMC SAMSON SIEVE-GRIP TRACTOR,** during its many years of service, has firmly established a record for strength, durability and economy, combined with great simplicity of construction and operation.

It performs the work of ten horses and does it better, more economically and quicker, in fair weather or foul, day in and day out.

We are sure the **GMC SAMSON SIEVE-GRIP TRACTOR** will please you. Ask the man who owns one or write for our booklet, "Better Farming."

Waterloo Boy, 1,000 square feet, one tractor, plows and harrows, exhibited by John Deere Plow Co.
Yuba, 2,500 square feet, for three tractors and three disk plows.
Baker, Hamilton & Pacific, 1,800 square feet, exhibiting about twenty implements, including ten models of P. & O. engine plows, and disk harrows, Imperial disk harrows, Western pulverizers, and Leam's spring-tooth harrows.
Schmeiser Mfg Co., 900 square feet, for two land levelers.
John Deere Plow Co., plows and harrows.
Pacific Inmplement Co., 800 square feet, for Sanders' disk plows, Farmers' Favorite seed drills with tractor hitch and power lift, harrows, etc.
Schmeiser Mfg Co., two or three different sized land levelers for tractors. Reed almond huller, and perhaps a steel checker.
Douglas Boswell, 1,500 square feet, three tractors, plows, harrows, implements.
Butler Veitch Co., 1,500 square feet, several motor trucks and trailers.
De Laval Dairy Supply Co., dairy machinery, silage equipment, pumps, alfalfa cutters and engines.
Oliver Chilled Plow Works, 800 square feet, for plows.
H. C. Shaw Co., 600 square feet, for implements.
W. G. Hansen Machine Works, 250 square feet, tractor and truck parts.
Plow Farming Co., 1,000 square feet, three tractors, plows, disk harrows.
Valvoline Oil Co., 100 square feet.
Standard Oil Co., 500 square feet.

FORDSON TRACTORS HERE.

Fordson tractors are coming to California in large numbers, a central agency for the Pacific Coast having been established with Wm. Hughson & Co. of San Francisco, and a large number of sub-agencies being already located about the State. Several carloads are expected soon and there will be an exhibit at the State Fair. No Fordson tractor will be sold without the plows specially designed for it by Henry Ford and Son and built by the Oliver Chilled Plow Works. Many thousands of these outfits have been sold in the East and in England since the war began, and much interest in California has been awakened. The first one to arrive here was a present from Henry Ford to Luther Burbank of Santa Rosa, a few months ago. The outfits cost less than $1,000.

BETTER CARE SAVES REPAIRS.

"Even though a tractor is made of steel you will occasionally have to buy parts. Very likely your parts bill will be a few cents an acre, but you can well afford to pay a dollar an acre and still make a large saving," says F. H. Stow, tractor man. "The parts bill will not be half so heavy however, if the tractor is not overloaded, if suitable implements are used with it, and if the ditch is made so the draft comes in the center of the tractor. Also, a farmer should spend in the care of his tractor at least a portion of the time he formerly spent in the care of horses. See that all nuts and bolts are tight; that everything is in alignment, the crank case washed every four or five days, and all parts where dirt may accumulate should be cleaned at about the same intervals."

PUMPS NEEDED FOR COVER-CROPS.

Orchard cover-crops are handicapped where irrigation is not available to give them an early start in the fall. If they do not get well started before cold weather, spring plowing-time finds them still undeveloped. If allowed to grow until they do develop, too much moisture is used, the ground is not worked fine enough to save what is left, and the trees suffer. Get a pump even if you have only enough water for the early starting of cover-crops. They will do to your land some things that even the best and most expensive commercial fertilizers cannot.

"Our Killefer tractor cultivator has done us more good than any similar implement on the ranch," said James Mills, Jr., of the Mills Orchard Co., in Glenn county, recently.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler of the "Giant" Type WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresnos to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL.

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

Send today for full information and our latest catalog of earth-moving machines.

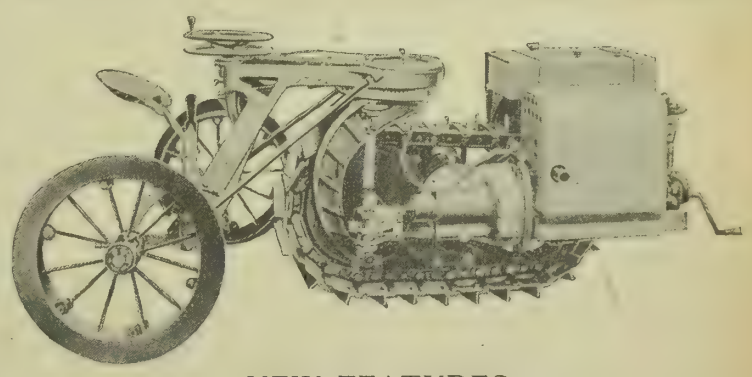
Manufacturers of
Sure Pop Almond Huller and Separator, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises; and Schmeiser Portable Automatic Hay Derricks. We sell the Martin Ditcher and Grader.



NEW FEATURES
1919 BEAN TRACKPULL TRACTOR

Important improvements embodied in the 1919 "Bean" increase its efficiency by adding from two to ten times the wear-resisting strength of the parts affected. The 1919 Bean Track-PULL Tractor is the same design as the 1918 model, save for these valuable new features.

These improvements, added to the long proved design of the "Bean" make it a marvel of reliability and efficiency.

1919 VALUABLE IMPROVEMENTS

1. Motor—Improved oiling system. Improved carburetor control.
2. Track Rollers—Provided with hardened steel thrust bearings.
3. Drive Sprocket—Solid steel ring, machine cut, hardened and heat treated, assures long service.
4. Bearings—Provided with improved dust protected greasing facilities.
5. Rear Wheels—Provided with dust cap, wear resisting bushings and improved greasing facilities.

These, and many other features, are fully described in our new tractor catalog. Send for a copy before selecting your tractor.

See the 1919 model "Bean" at the Sacramento State Fair, August 31st to September 8th.

BEAN SPRAY PUMP CO. DEPT. K SAN JOSE, CAL.

General Agricultural Review

FAIR DATES.

State Fair—Sacramento, August 31 to September 8.
Exposition—Oakland, September 9 to October 6.
Glenn county—Orland, September 15 to 21.
Kings county—Hanford, September 23 to 28.
Fresno county—Fresno, October 1 to 5.
Southern California Fair—Riverside, October 8 to 13.
Liberty Fair—Los Angeles, October 12 to 26.
Livestock Show—San Francisco, November 2 to 10.
Indio—Indio Fair, auspices Board of Trade, November 15-16.

Field Crops.

Grasshoppers have become rather serious near the hills in several of the northern mountain counties.

Long-staple Egyptian cotton grown in Tulare county seems to be making a good crop and is reported to have been contracted to the Government at 80c per pound.

Wild ducks are worrying Sacramento Valley rice growers, who want the hunting season to open earlier than usual. The Fish and Game Commission says that would result in hunters tramping the rice down.

Alameda county tomato growers object to the grading of tomatoes for size, on the ground that it is too much work. They forget that perhaps city people would pay more for tomatoes of uniform size in each package.

There are some 3000 acres of land devoted to hops in Sonoma county, located for the most part on Russian river, Mark West and Santa Rosa creeks. All this land is good for vegetables, truck or orchard and is of high productivity.

Deciduous Fruits and Nuts.

A new red raspberry, known as the Alton Improved, is being introduced in Southern California from Utah.

The California Peach Growers' Association at Turlock will be ready to receive fruit by September 1.

The Fresno district is sending East a heavy supply of Malaga grapes, which are sold there at excellent prices.

The celebrated Vrooman Franquette walnut orchard has a bumper crop of fruit. This seems to be a walnut year.

Chico has a fine full crop of prunes on the irrigated land. Where irrigation is not practiced, however, the drop was heavy and the prunes will not size up.

Pear picking about Lakeport is in full swing this week, and some of the farmers are quietly cussing and kicking themselves for signing up with buyers for $25 to $35 per ton.

Conditions in the fig orchards of Merced county look promising for a heavy crop. The Capri wasps required for the fertilization of the Calimyrna figs are available in plentiful quantity this season.

Some almonds grown on the Harry Dopkins ranch, near Dunnigan, are reported to be of a new quality, soft shelled and almost twice as large as the ordinary almond. They will become a part of the Yolo county exhibit at the California State Fair.

Mr. Miller of Lakeport, who has what his neighbors think the finest field of hops in two counties, found 40 acres of his hops laid flat on the ground in about five minutes by a whirlwind; but he soon had them propped up again and so there will be no loss.

Sheridan Baker of Santa Rosa has an avenue of walnuts with Eurekas and Franquettes grafted on the same trees. The Eureka looks the more thrifty and protects itself better, as the foliage is more dense, but both halves of each tree are carrying a good crop of nuts.

It is important that the early drop of immature prunes, deficient in sugar and "quality," be kept separate from the main crop, dried separately and marked when they are sent in to the warehouse. It is felt that the grower owes this to the industry he is helping to build up.

The J. D. Maddox prune orchard north of Santa Rosa is estimated to have nearly five tons of dried prunes to the acre. Some of these heavily bearing orchards will probably have a thoroughly good cultivation after the crop is off. It may help invigorate the trees and help fill buds before the dormant period.

Grapes.

It is stated that of the 20,000 acres of wine-grape land in Sonoma county, 75 per cent is unsuited to the cultivation of any other crop.

H. J. Baade, Farm Adviser of Napa county, is advocating the grafting over of some of the younger vineyards to the Zante currant by way of experiment and as an alternative in case of prohibition. Mr. Baade says they form a good union on the Rupestris St. George root—the one most largely used in Napa county.

Citrus and Semi-Tropical.

Large quantities of chicken manure are shipped from Petaluma to Los Angeles for the use of the orange growers.

Miscellaneous.

There was a light frost about Lakeport on the morning of the 16th.

July loans to farmers of the United States through the Federal Farm Loan Bank were $7,853,901, making the total outstanding loans $117,249,044.

The State Council of Defense has engaged Albert Lindley of Stockton to devote all of his time toward greater crop production in California next year. His office is at the Ferry building in San Francisco.

Estimates are being secured at the instance of the Sonoma County Farm Bureau for installing a portable crusher at a limestone deposit east of Petaluma. The limestone is to be used unburnt as a top dressing on the land.

Who Does Your Pumping?

If it is a windmill, what do you do when there is no wind?
If your hired man, what do you do when he is sick?
If yourself, what do you do when you have to make a trip to town?
Your thirsty cattle must have water just the same.

The FULLER & JOHNSON Farm Pump Engine

answers the question correctly. It will pump the water *any time, all the time.* It doesn't need wind, it doesn't get sick. It don't have to wait until you return. It is always on the job. It is so simple anyone can run it and is perfectly safe to handle.
Comes to you ready to run, no brakes, belts, or platforms needed. Don't wait until something happens. Get one NOW. *The price is very low and it costs very little to run one.*
Find out about it by writing for our Catalog No. 17. Will be GLAD TO SEND YOU A COPY.

Make the War Time Fair the Biggest Ever

UNITED STATES GOVERNMENT FOOD TRAINING CAMP.

Show what you have done. Learn what others have done. We need more Soil Products, Better Livestock. Exhibit your best to help solve the nation's food problem.

THE KEY NOTES OF THE 1918 CALIFORNIA STATE FAIR

PATRIOTISM - PROFIT - PLEASURE

Great Display of Vocational Work by School Pupils. Over 500 prizes, divided between city and rural schools for domestic arts and science, manual training and home gardens. Greatest incentive ever offered to California boys and girls.

BETTER BABY CONFERENCE—LECTURES AND DEMONSTRATIONS EACH DAY.
LARGEST LIVESTOCK SHOW IN THE WEST.
Over $40,000 offered in premiums.
EDUCATION AND AMUSEMENT COMBINED.

Bigger and Better Poultry Show
Special Pet Stock Show

Displays of horticulture, agriculture, viticulture, forestry, dairy products, dairy, farm and road machinery, tractors, etc. Daily program of high class amusements. Night Horse Show. Harness and Running Races. A tent city of carnival attractions.

New Agricultural and Horticultural Building. Great Annual Band Contest open to the entire State.

BE SURE AND VISIT THE STATE FAIR AND MATHER AVIATION FIELD.

Send for Premium List.

Geo. C. Roeding, President Chas. W. Paine, Secretary
SACRAMENTO, CALIFORNIA.

DON'T FORGET THE LIBERTY FAIR.

Endorsed by the Government and backed by the approval of the President, the directors of the California Liberty Fair, to be held at Los Angeles, October 12 to 26, intend to make of it something different from anything heretofore attempted outside of a great world exposition. There will also be features that have not been possible even in world fairs, as the fact that the nation is at war will be brought home to visitors in a manner that will emphasize the true conditions across the water, and at the same time show the part California is taking to help make the world safe for democracy.

The Government is to send a great exhibit direct from Washington, demonstrating methods of food production and conservation.

The resources of the State will be brought out in a way that will impress upon visitors the wonderful possibilities of our soil and climate

The livestock show will be so extensive that it will almost constitute a course in animal husbandry.

No matter what you may be interested in, you will find here what it would take months of travel and thousands of dollars to see in any other manner.

Come, see, and you will be well repaid.

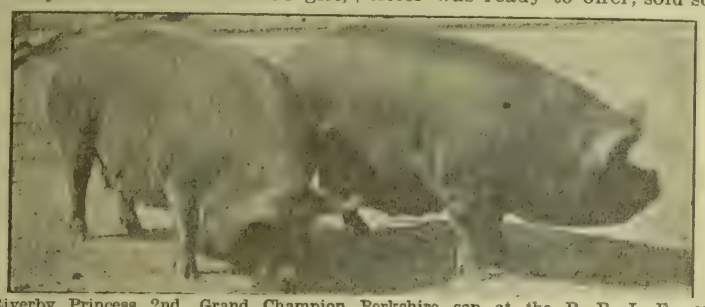
C. R. THOMAS, Manager Livestock Department.

BERKSHIRES PROVE THEIR MERITS.

Less than three years ago a newcomer in the Paso Robles district sent away for a bred Berkshire gilt, paying what seemed to the old settlers an enormous sum. There were the usual comments—questions as to the man's sanity, prophecies that he would soon go broke, and so forth.

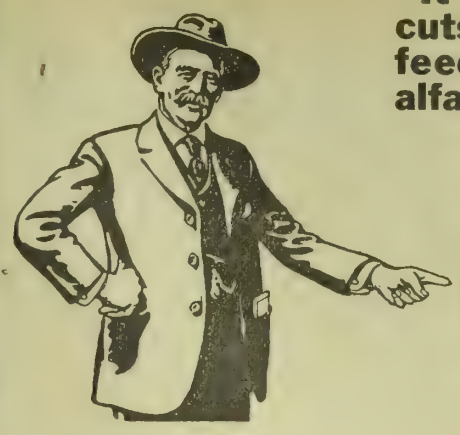
But this did not discourage Mr. Newcomer. He waited until the first litter was ready to offer, sold some of the pigs for enough to pay for the sow, and had the sow and two gilts left. In a few months he bought a Berkshire boar, which won over all other breeds at the Community Fair. Then the neighbors began to sit up and take notice. One by one they fell in line and purchased registered Berkshires for themselves. Finally the man who laughed the loudest when Mr. Newcomer made his first purchase, bought this same animal at one-third more than the original purchase price.

Now practically every farmer in the community has been converted to the practical, money-making value of purebred Berkshires, and owns a few choice animals.



Riverby Princess 2nd, Grand Champion Berkshire son at the P. P. I. E., and her sister, Riverby Princess 3rd. The former owned by Frank A. Brush, Santa Rosa; the latter owned by Sandercock Land Co., Sacramento.

J. H. Hackett of Ceres will show 8 head of Jerseys, including most classes.



"It fills my silo, cuts all my dry feed and makes alfalfa meal."

ACME Feed Cutter

IT'S STEEL FRAME and 3-bearing cutter shaft mean durability, reduced vibration and economy of power.

The shearing stroke of its SPIRAL KNIVES produces a clean cut silage of even lengths that packs properly.

PLAN TO ATTEND THE CALIFORNIA INTERNATIONAL.

IT AFFORDS me much pleasure to extend an invitation to the readers of the Pacific Rural Press to visit and exhibit at the California Livestock Show, to be held in San Francisco, November 2 to 10.

Nowhere can the stockman, breeder or agriculturist take his family and spend a week more profitably than by attending an up-to-date show, where the finest examples of improved livestock can be found. Comparisons can be made between the various animals and methods, thus affording an educational advantage that it is not possible to gain elsewhere.

The world faces a livestock famine of such magnitude that none of us can comprehend it. Day by day it becomes more evident that it is our duty to double our energies and bridge the tremendous gap by producing more and better livestock.

For this purpose the California International Livestock Show Corporation was organized. Join us and assist in the good work. Let us all pull together for our country and for humanity's sake in this hour of need.

JOSEPH E. PAINTER, Manager.

MILK PRODUCERS' ASSOCIATION GROWING.

When electric cars were being introduced, a crowd gathered in a certain town to see the first car start out. In the crowd was a skeptical old dame who kept constantly crying out, "They can't start it! They can't start it!" But pretty soon the car did start, and it quickly developed considerable speed. Then she changed her tune and cried still louder, "They can't stop it! . They can't stop it!"

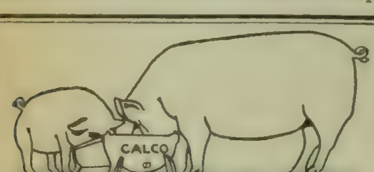
Months ago, when the Milk Producers' Association was in the embryo, many people said that it was a visionary scheme and couldn't be put across. But anyone who will consider the motives back of the movement, together with the results already accomplished, must admit that it is moving successward with an irresistible force that cannot be stopped.

Think of it! In the Imperial Valley 95 per cent of the dairymen have joined the movement. Over in the San Joaquin Valley Association, comprising the counties of Tulare, Kings, Fresno, Merced and Madera, the membership reaches only 40 per cent at the present time, but plans which will soon be put into operation are expected to more than double the membership. The Central California Association, which includes Stanislaus, San Joaquin, Alameda, Contra Costa and other counties, includes 85 per cent of the dairymen. The same applies to the Northern California Association, which includes Sacramento county and the thirteen counties north of it. And the Associated Dairymen of San Francisco, including the bay counties, caps the climax with a 100 per cent membership.

And yet the work has only begun. At present the movement is being launched in Marin and Sonoma counties, in the section on the west side of the San Joaquin Valley, and in the South Bay counties. This organization work will keep up until every dairying section of the State is included.

Mention has already been made of the new $150,000 plant for Sacramento. A similar plant is to be erected in the Imperial Valley, and at Modesto the Modesto Creamery will be enlarged at an expense of over $100,000, so as to manufacture sugar of milk, dried milk, casein and other dairy products in addition to butter.

J. M. Henderson, Jr., of Sacramento is still giving the movement his personal attention, visiting different sections of the State and addressing gatherings wherever organization work is being done. Prejudice and opposition melt away before his strong fire of convincing reasons why the association should be supported, and when dairymen understand the real motives back of the movement and see the benefits that they will derive from it, they decide to support it almost to a man.



use calco troughs - *and increase hog profits*

It's not the cost of the equipment that counts—it's the profit you make from the equipment.

Calco Hog Troughs will reduce dirt and filth—prevent disease—help you make more money from hogs.

Yet Calco Troughs—of Armco and Cast Iron—cost less than the cheapest wooden disease traps.

Hinman Milkers

Banish Dairymen's Labor Troubles

READ THIS

CRESENT CREAMERY COMPANY
MILK, CREAM, BUTTER AND ICE CREAM.
241-249 Winston St.,
Los Angeles, California.
June 26, 1918.

Mr. Charles F. Daniells,
Hughson, Cal.

Dear Sir:

We have been using Hinman Milking Machines since June 28, 1915, with excellent results on our herd of 250 milking cows.

The cows stand more contentedly for the machines than for hand milkers and are not injured in any way by machine milking if competent operators are in charge.

Low bacteria counts are readily obtainable if all rubbers and parts are thoroughly washed and sterilized daily.

The Hinman Milking Machine is permanently established with us.

Yours very truly,
CHENEY W. CARVER,
Supt. Dairy Dept.

See the Hinman work at the State Fair Aug. 31 to Sept. 8

The Hinman is used as extensively by owners of the most valuable purebred cows, as well as in ordinary grade dairy herds. In California such well-known breeders as McAlister & Sons, Chino, and Toyon Farms Association, Los Altos, have solved their labor troubles with the Hinman. It will solve yours also.

SEE ME AT THE FAIR OR WRITE FOR FULL PARTICULARS.

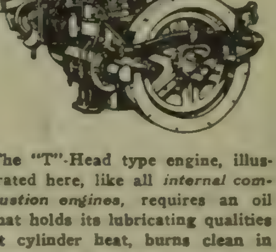
Experts Say
"ZEROLENE IS BETTER"

—because it holds better compression, gives better protection to the moving parts and deposits less carbon.

Zerolene is the correct oil for *all types* of automobile engines—the correct oil for your automobile.

Get our Lubrication Chart showing the correct consistency for your car.

STANDARD OIL COMPANY
(California)



The "T"-Head type engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the cylinders and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

ZEROLENE
The Standard Oil for Motor Cars

CALIFORNIA BLOODED STOCK FOR SOUTH AMERICA.

The two-months-old Holstein bull calf shown herewith will make the trip to Peru, South America, this week. He was bred on the Palo Alto Stock Farm and sold by M. H. Tichenor to Rafael Larco, and is one of the highest priced youngsters ever sold on the Coast. He is by King Segis Pontiac Korndyke, the young herd sire of the Palo Alto Stock Farm, who has already 20 A. R. O. daughters to his credit. His dam, Laurameka, is the former State record four-year-old. She is now on test and has made 33.90 lbs. butter in 7 days, 140 lbs. butter in 30 days, 275 lbs. butter and 6400 lbs. milk in 60 days.

Mr. Larco has been a very large breeder of beef cattle and recently decided to start a dairy herd. After a trip of investigation through this country, he decided on the Holstein breed. The performance of the daughters of the Palo Alto Stock Farm herd sire and the records established by the cows of the herd decided Mr. Larco's choice of the future sire for his foundation. He secured a number of females from the Palo Alto herd; also, through Mr. Tichenor, two registered Percheron fillies and a stallion.

Besides these he bought three head of purebred Shorthorns from Ormondale Farms and three head of Herefords from D. O. Lively Stock Farm. Mr. Larco has heretofore secured his breeding stock in the East, but has now found that he can get as good or better blood in the West and can get good shipping facilities.

California is surely destined to become the livestock center for the countries bordering on the Pacific. Something of what this will mean to the State is indicated by the fact that Mr. Larco's entire purchases in California, including livestock, tractors, combined harvesters and other farm machinery, will, according to W. R. Grace & Co., make up a good part of a shipload.

YORKSHIRES GREAT FOR BACON.

The large Yorkshire hog is especially valued for bacon production, where a long side abounding in lean meat and a light shoulder and neck are especially desirable.

Although the large Yorkshire grows rapidly and develops bone and muscle more readily than it develops fat, it is capable of giving as good results from food consumed as any other breed. It will reach desirable market weight for the bacon trade as quickly as any other breed, and for quality of bacon it can hardly be surpassed.

Large Yorkshire sows are very prolific, and are excellent nurses. The boars are exceptionally prepotent, and stamp their character and color on their progeny to a marked degree.

ANOTHER HANFORD POLAND-CHINA SALE.

The best recommendation for the stock offered at the sales of the Kings County Poland-China Breeders' Association is the fact that a large percentage of the purchasers at each sale are farmers who have bought before and are so well pleased that they come back for more.

Kings county is the fountain-head of the state for Poland-Chinas, and at these semi-annual sales some of the very best animals from the leading herds are offered.

The next sale will be held October 9, when 80 head of registered sows and boars will be offered. Send to F. D. Ross, Hanford, for a catalogue, and plan to attend. Remember, a pig will not only pay but help to keep the Huns away.

BERKSHIRE SALE AT STATE FAIR

The Western Berkshire Congress will hold a donation sale at the State Fair. Each breeder has been asked to donate two sow pigs of any age. They will be exhibited and judged first; then the grand champion will be auctioned off and the proceeds turned over to the Red Cross. The returns from the balance of the stock will be used by the Congress to provide funds for promotion work, prizes at shows, etc. James Mills of Hamilton City will act as auctioneer.

The University of Nevada will exhibit Corriedales at the State Fair from their very good herd.

Mrs. Best's Letter.

FALL FASHIONS REVIEWED.

My Dear Friends: More and more each week the stores are showing the new Fall goods and garments. Jersey cloth seems very much used for street dresses, sometimes in two contrasting shades, but more often in one color with embroidery, heavy braiding or fringe for decoration. These dresses are simplicity itself in design, slim, youthful lines with narrow shoulder, close-fitting sleeves, and featuring unusual neck lines.

Another popular garment for street wear is the satin frock. This with a fur collar, scarf of plush or velvet makes a costume you could wear anywhere, especially as the darker shades are the most popular.

HOMESPUNS IN GOOD STYLE.

The homespuns and two tone tailor suitings will be good style for the Fall and there is almost no wear out to a homespun, so it is a good investment. In semi-sport suits there is shown a new knit cloth in solid colors and heather colors that is very attractive. Semi-military in cut, with belted coat and patch pockets on the skirt, it gives promise of being worn well through the winter.

NEW STYLES IN SUITS.

The newest model suits are developed in soft suede and duvetynes in plain tailored styles and also in more dressy fur trimmed models. One of the exclusive shops is showing a new line of velveteen suits, which they advertise as being very up-to-date.

Coats are very high this year—much higher than last—and any of us who have left-over garments we can make answer are fortunate. They seem luxurious in style, full roomy models, beautifully lined in soft velours or similar fabrics and all of them with large collars. In the handsomer coats, these collars are of fur and in many cases button snugly around the throat in new designs.

CORDUROYS SERVICEABLE AND POPULAR.

Corduroy seems to be very popular for lounging robes for women—it is shown in several styles, either lined or unlined and in soft color tones of rose, blue and yellow. The prices range from about $4.00 for plain models up to $15.00 for those with contrasting collar and cuffs and silk linings.

CHIC MILLINERY.

Fall millinery is being exhibited in many of the windows and a great many of the hats both large and small are trimmed in ostrich of one kind or another. Feather bands both wide and narrow, usually of the color of the hat are employed. That is good news, for most of us have some ostrich tucked away and we shall be glad to resurrect it. Trimmings are very simple, sometimes a large hat will have no decoration but worsted embroidery and a touch of grosgrain ribbon. And again the only trimming may be a smart military pom-pom of uncurled ostrich.

One sees more mourning millinery on the street than formerly but a less sombre tone is noticed in many of the good models.

ROSABELLA BEST.

THE HOME CIRCLE

FOLLOW DIRECTIONS.

War demands alertness, a ready response to leaders, prompt action. Food problems are constantly changing and call for the immediate response of all America. Conservation is democratic, all may share, all may help. Three times a day every American can say when he sits down to the table: "This is my chance to serve. Directions are given me by the Food Administration that I should follow and follow at once, like a good soldier. If I fail, whether selfishly or ignorantly, I desert the colors of the nations fighting for democracy—I stab in the back the men we have sent to France."

WAR-TIME GINGER BREAD.

(Original—Good).

One egg, ½ cup cooking molasses, ½ cup corn syrup (white), 4 tablespoons melted shortening, ½ teaspoon cinnamon, 1 teaspoon ginger, 1 teaspoon soda, ¼ teaspoon salt, 1 cup "Gyp" corn flour, 1 cup barley flour, 1 cup fresh figs (chopped), and 1 cup boiling water. Beat egg, add molasses, syrup, and shortening. Beat together. Add spice, soda and salt to the flour, sift, mix, then add figs and a cup of boiling water. Bake in well greased pan or gem pans. Figs may be omitted.—Mrs. J. W. M., Earlimart.

MACARONI PRODUCTS.

On account of a surplus of macaroni products—spaghetti, macaroni and noodles in packages, the housewife is given permission to use these products as though they did not contain wheat flour. This special order will continue until the supply is exhausted and is issued to prevent the manufactured macaroni products from spoiling.

CULINARY NOTES.

Try steaming green vegetables instead of boiling them.

Soak wilted vegetables in cold water until they are crip and fresh.

Cook beets, carrots and parsnips before peeling. The skin comes off after cooking in a very economical and easy way.

Potatoes, too, may well be cooked in their jackets.

CLEANING GREASY BOTTLES.

Editor Home Circle: In answer to Mrs. E. L. R., Oroville, who wishes a cleanser for oil bottles, will say that kerosene is the best substance to cut grease and plenty of warm soap suds will remove the kerosene.—C. M. T., Lancaster.

Glass bottles used for oil containers can be cleaned with sawdust and water.—P. L., Denair.

NOTICE TO WOMEN.

Almost 70 per cent of all the sugar consumed in this country is used in the households. So it is up to the women to make the sugar go around.

Western Electric
POWER and LIGHT

Let the Western Electric man show you the kind of plant you need

THERE is as much difference in electric light plants as there is in automobiles or gas engines. No one type is equally suited to all farms, and your power and light requirements may be different from your neighbors'.

Like every farmer, you want electric power and light, but you don't want an outfit either too large or too small for your needs. Start right! Get all the facts! *Let the Western Electric man show you the kind of plant you need!*

Our business is bigger than the mere selling of any particular electric plant. We sell electricity for the farm. There are all sizes and types of Western Electric outfits. We are not forced by policy to sell one type for every purpose. We can sell you an outfit with or without a gas engine.

If you have a gas engine, it may be a needless expense to buy another engine as a part of an outfit. On the other hand, if you want an outfit with built-in engine, the Western Electric man will tell you about a new outfit of this type ready for delivery this Fall. In any case, it is just a matter of fitting our equipments to your needs.

More than forty years of electrical manufacturing experience is back of all these Western Electric Power and Light Outfits.

Make your entire equipment "Western Electric." You can get Western Electric Motors, Water Systems, Milking Machines, etc., to save labor on the farm; as well as Irons, Vacuum Cleaners, Washing Machines and other electrical helps to save time and labor in the home.

There is a Western Electric man near you. Mail the coupon for Booklet No. PRR-7, *and we will tell him to get in touch with you.*

Good Health.

[By H. E. Pastor, M. D.]

Are Cucumbers Poisonous?

Occasionally this question is asked. We are not aware that cucumbers contain any distinctively poisonous substance. It is true that cholera morbus sometimes follows their ingestion, but we believe this trouble is due to the indigestibility of this vegetable relish rather than to any noxious principle contained. If well masticated and the digestive organs are in normal condition, and especially if the sliced vegetable is previously soaked in a salt solution for an hour or so, cucumbers are not likely to be harmful.

The Best Beverage for Soldiers.

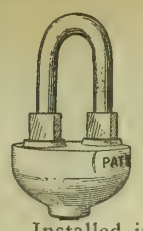
We have said many times in these columns that cow's milk, when fresh and pure, is one of the best forms of food available to hungry humans, whether in swaddling clothes or soldiers' uniforms. Of course, it may well be fed to the latter more sparingly, but with no less care as to sources of supply and sanitary handling. It is gratifying to learn that the U. S. Department of Agriculture is supplying milk-market specialists to aid local health authorities in insuring wholesome supplies for men in army cantonments. If these officials work in co-operation with the dairy farmer, the result will be equally beneficial to our soldiers and the dairy industry.

Nasal Catarrh—What It Is.

The ordinary cold is a transient invader, but catarrh is an uninvited guest that has come to stay. It entrenches itself deeply in the mucous membrane and surrounding tissues, and it taxes the ingenuity of the most resourceful physician to dislodge it; and during its stay, always more or less prolonged, it saps the strength and slowly undermines the constitution of its host. A change of residence to some more elevated location, where the air is purer and the atmosphere drier, will sometimes work an almost miraculous change and is more effective than volumes of learned advice or barrels of molodorous medicine. This is not intended as a reflection on professional treatment, which should always be sought in refractory ailments of any kind.

Catarrh a Refractory Ailment.

Innumerable remedies and modes of treating are offered for this very prevalent disease, and innumerable failures to effect relief, to say nothing of cure, are recorded. Whenever a disease has a wide variety of popular remedies for its relief, you may depend upon it that it is very refractory to treat. Catarrh falls in this class of ailments. It is usually the sequel of a long train of hygienic neglect and the average sufferer seeks some sovereign remedy that will cure his trouble over night. Having been brought on through a long period of hygienic neglect, it generally calls for a long period of personal care and intelligent treatment. The different forms of catarrh cures on the market are, as a rule, merely palliatives or makeshifts, and if any relief is derived from their use it is of a very temporary kind.



FUEL RELIEF PERMITTING THRIFT

It has always remained for the simple little things to solve the big problems. It's the "Now, why didn't I think of that myself" sort of thing that is always doing the wonderful that seemed so impossible.

That is how "the simplest thing in the world" was discovered—the Premier Burner—and now after all these years of effort and "false alarms" in home gas makers, it has remained for this simplest of them all to solve the problem.

Installed in the stove without the aid of a plumber or any changes being made, operated on gravity feed and producing a clean gas that results in a bright, clear flame carrying the highest degree of heat units—all from just common kerosene oil and a simple little $5 burner—is it any wonder that people marvel, that users are our best advertisers and that it has been necessary to increase our output many times?

Those interested in real fuel thrift—more heat for less money—avoiding a difficult situation and accepting one of clean abundance furnished by kerosene and a **Premier Burner,** write for Free Circular "C." Burner for cook stove or heater by parcel post prepaid to any address upon receipt of $5. Full instructions and a wide-open guarantee with every burner.

Poultry for Profit

[Written for Pacific Rural Press by Susan Swaysgood, Pomona.]

JUMP IN AND TRY IT.

Those who never had the privilege of keeping poultry, have never really tested their natural aptitude for such work. To them I would say, buy a few chickens and try it out. You mothers who have sent sons to defend their country get a few chickens to occupy your hands and minds; then write the boys about all the fun and pleasure, to say nothing of profit you are getting out of these chickens. Some of these self-same boys are writing home about how the army is building them up. Why should not the parents start out to build up physically, mentally and financially with a good flock of chickens? There is no reason why the boys should have all the fun. I propose that we old boys and girls have a little of it.

Hatching time is on this Coast at its best from September 10 to October 13. These two months are ideal for hatching and raising chicks. The warm sunshiny days and mild nights are just what chicks need. But I would not hatch later unless very well prepared.

Broilers will be very high about January 1, and the supply will not begin to keep up with the demand, so that anyone who can possibly take care of a few chicks will be working in their own interest.

HELPING THE MOLT.

Those who want to make most out of their hens the coming winter must take extra care during the trying time of the molt. Carelessness then keeps hens idle longer than they should be. Indeed, if hens are well fed they rarely stop laying for the molt until the finishing touches are to be made; then nature demands a rest. The treatment given the hens during the molt determines the length of the rest, so that this is a question every poultryman can control for himself. Plenty of mineral in every conceivable form is all that is necessary for a quick, healthy molt that will enable hens to shell out eggs all winter. When the molt is finished and the hens are resting give them a little powdered sulphate of iron about three times a week in a small quantity of moist mash, about a tablespoonful to a dozen hens is enough mash for them to clean up quickly and leave none over.

IDEAL WINTER FEED.

This tones them up and it can be given for a month to very good advantage; after that give only occasionally. Some people use mustard, but it is too laxative, often causing diarrhea in hens, that continues until exhaustion takes place, so unless one has the green mustard I prefer to let it alone. For winter use, green mustard is the one ideal green feed for laying hens, it fills the egg basket all winter long, provided that you feed enough grain with it. Green mustard is a stimulant to the nerves of the digestive tract, while at the same time warming and soothing. In the dry powdered condition it acts as a laxative, a purgative, or a diuretic, according to quantity given. We all know that such substances as saffron, valerian, mustard, dandelion and senna, and others we could mention, are yellow or orange color, and in powdered form, enter into the composition of purgative medicines, while they can be eaten with impunity in the green condition. There is nothing better than dandelion greens or mustard salad in quantity, but when we come to use the concentrated powder, a very little serves us.

PREPARE AT ONCE FOR FALL HATCHING.

Fall and winter were formerly seasons of loss to the average person who kept poultry, but thanks to the few intrepid souls who dare, the poultryman of the present day looks towards winter as his harvest season. And from all indications, this winter will be the best harvest of all for those who dared, last spring and early summer to hatch all the chicks they possibly could; and for those who did not, but are intending to hatch this fall, it is not too late to be in at the spread.

Feed is certainly high, if it was not, people would not be willing to pay fifty cents a dozen for eggs in August. Feed is high, but it is not likely to go much if any higher, while eggs and poultry are sure to go higher, for meat of all kinds is high and getting higher because of its increasing scarcity.

OATS FOR EGG PRODUCTION.

To the Editor: Are oats, fed once a day the year around, good for laying hens? We have raised several hundred pounds of oats and would like to feed it instead of corn.—Mrs. P. V. D., Live Oak.

Oats are excellent for egg production. Nothing that is grown excels them, but as California oats have a strong fibre it is a good idea to soak them in water a few hours.

Poultry Breeders' Directory

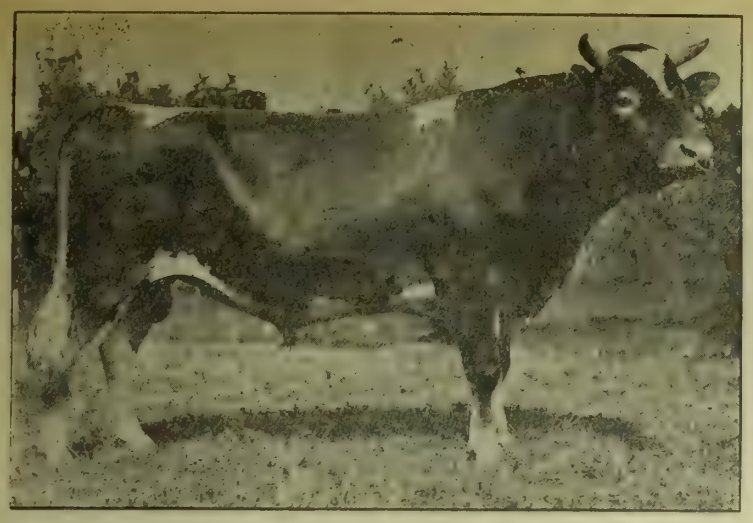
Government Instructs S. F. Poultry Show Managers

The U. S. Government has addressed a letter of instruction to poultry show managers relative to "Poultry Displays in War Time"; and, as particularly desired by the Government, the San Francisco Poultry Association will, at its annual show, to be held in conjunction with the San Francisco Livestock Show in San Francisco, November 2-10, bring the Fancier (or Standard) breeder and the Commercial (or Utility) breeder together. To this end, George H. Croley, show secretary of the Poultry Division, has formulated a system that will admit of the joint entry of purebred fowls in the Standard class and the Utility class, and at the same time avoid any chance of confusion on the part of the public in distinguishing the winners in each class—standard or Utility. Heretofore there has been much dissatisfaction on the part of exhibitors when attempts have been made to hold a "double entry" show. In reference to the acceptance of fowls that are not of Standard breeds, the instructions from the Department of Agriculture state: "There should be no display of fowls that have not distinctive character, but occasionally a person has non-Standard poultry which in appearance or performance is better than the ordinary, and such exhibits may well be solicited. This is not only the appropriate way to recognize the person who has done something well—if not on usual lines—but it is from this class of exhibits that the new things in the poultry world come." In other words, the exhibits, if not of Standard breeds, must be fowls with breeding sufficiently established to reasonably insure the transmission of their desirable qualities to their progeny. Ordinary scrub fowls and first crosses will not do so, therefore these will not be accepted. This joint entry plan will in a great measure provide a protection for the inexperienced buyer, who too often pays a very large sum for birds that have won Standard prizes, thinking that such winning is an assurance that the fowls are equally as good in Utility qualities.



Pencoyd's Golden May Secret 39626, the $10,000 Guernsey bull recently purchased by Walter H. Dupee of Edgemoor Farm, Santee.

RECORD-PRICE GUERNSEY FOR DUPEE HERD.

Walter H. Dupee, owner of Edgemoor Farm of Santee, San Diego county, has purchased from W. G. Jamison & Sons of Appleton, Wis., the three-year-old Guernsey bull, Pencoyd's Golden May Secret 39626, for $10,100, this being the record price for the breed.

Four years ago Mr. Dupee purchased the great sire, Itchen's May King, at what was the record price at the time. Recently he has felt the need of a new sire to use on the daughters of this bull and others that have been used in the Edgemoor herd. He was anxious to find one of the most fashionable blood lines, combined with the heaviest production, and he finally found what he wanted in Pencoyd's Golden May Secret. This bull was sired by Langwater Pencoyd 21830, and is out of Nellie Jay 4th 38233, who holds third place in Class A with a record of 20,709.9 pounds of milk and 1019.25 pounds of butterfat. Her milk record has been exceeded only by the famed Murne Cowan.

Through Mr. Dupee's purchase the Guernsey business in this State is substantially enriched.

GUERIN BUYS NEW HERD BULL.

Remember the name—King Sadie Vale Idyl Segis—for this bull is destined to play an important part in the future of the Holstein industry in this State. He was recently purchased from McAllister & Sons of Chino by R. F. Guerin of the Sunnyside Holstein Farm at Visalia.

When Mr. Guerin held his dispersal sale he reserved a large number of daughters of Sir Veeman Korndyke Pontiac. They are an exceptionally fine lot of individuals, and it was difficult for Mr. Guerin to find a good enough bull to use on them. However, he finally found just what he wanted in this new sire, as he is one of the best bred bulls in the West, being sired by King Korndyke Sadie Vale 27th, whose five-months-old daughter sold at Sacramento last winter for $1400. His mother is a daughter of King of the Pontiacs and has a seven-day butter record of 35.57 pounds.

CREAM CUP HERD

M. M. HOLDRIDGE

Route "A." P. O. Box 437. **San Jose, Cal.**

WINIFRED HOTALING 2D No. 133785

Butter, 7 days	33.82 lbs.
Butter, 30 days	131.94 lbs.
Milk, 30 days	3054 lbs.
Butter, 1 year (in string)	874 lbs.

Grandsons of this wonderful cow for sale at farmers' prices. Fine, large, serviceable bulls at $200 to $300 and down to bull calves at $75, according to ages.

These youngsters are mostly white, large boned and fine type, just what you need to improve the blood of your herd. We sell females also.

Visitors welcome. Better to call and make personal selection than to write for pedigrees.

Supreme Glista Pietje

HIGHEST PERCENTAGE BUTTERFAT OF ANY SIRE IN THE WEST.

SUPREME GLISTA PIETJE.

His dam is a 32.39-lb. cow. Her full sister has a record of 35 lbs. and both are daughters of a 31.60-lb. cow.

Nine nearest female relatives have records which average 4½ per cent fat.

Seventy-five per cent of daughters of the dam's sire are 30-lb. cows. This is a high percentage. He is a young bull and developing in great prominence.

Will sell his sons at reasonable figures and on easy terms.

All light color.

7-day Butter, 15th. 7-day Milk, 7th.

Aged Class:
7-day Butter, 9th, 38th, 41st.
30-day Butter, 13th.
7-day Milk, 25th, 26th, 29th.
30-day Milk, 14th.

King Segis Alcartra Prilly is being bred to the above enumerated cows, also about fifty more just as good. Young Bulls from High Record Dams for Sale.

BRIDGFORD COMPANY Knightsen, Contra Costa Co., Cal.

PUT YOUR HERD ON THE PROFIT SIDE

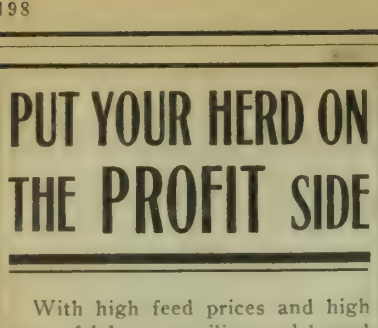
With high feed prices and high cost of labor prevailing and bound to prevail for some time to come, you must either bring up the production of your herd or go out of business.

Breed up with sires who have back of them big production and who will transmit that production to their offspring. Such sires are to be found in sons of

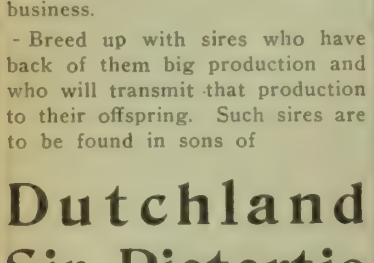
Dutchland Sir Pietertje Creamelle

He is by a grandson of the great transmitting cow, Changeling, and out of a daughter of the world's record cow, Creamelle Vale. He has proven his worth and transmitting power with 18 A. R. O. daughters in my herd with records up to 30 lbs. butter in seven days and averaging 20 lbs. at two years or younger. **All are high testers.**

Below are a couple of Dutchland Sir Pietertje's daughters and their records.



MARIE CLOTHILDE PONTIAC CREAMELLE,
Junior two-year-old. Record: Milk 391, butter 22.52, test 4.6 per cent.



PAULINE INTA DE KOL CREAMELLE,
Senior yearling. Record: Milk 423.4, butter 24.43, test 4.62 per cent.

Have for sale a few young bulls of serviceable age sired by him and out of big producers in my herd. I have sold a large number of them and they have all proved satisfactory. Many have come back for their second and third bull.

Write or call and see them.

F. STENZEL,
San Lorenzo, Cal.
Breeder of high test Holsteins.

WHEN THE SHORTHORN COMES TO TOWN.

[Written for Pacific Rural Press by Frank D. Tomson, Editor The Shorthorn in America.]

It is with the approach of the State fairs and expositions that one's interest in improved livestock is rekindled. The perfected animal, or the animal that is the result of the skillful breeder's efforts, never fails to arouse enthusiasm and admiration. It invariably creates a desire for ownership—for equal achievement.

Looking back through the years, one is impressed with the close identity which the Shorthorn has had with the advance of American agriculture, for it has been a factor in every step of progress for more than one hundred years. The Shorthorn has responded to the needs of the farmer and the ranchman. It has fitted into varying environments with an adaptability that is distinctly a Shorthorn characteristic, for it possesses the ability to make beef and milk from the farm and ranch products as no other breed can do. There is something appealing about a Shorthorn with its variety of color—red, white and roan—its quiet temperament, its ample bulk, its refinement. No wonder its advocates come from all walks of life. No wonder the tillers of the soil and the graziers rely upon this versatile bovine for their financial accumulation. No wonder men of wealth incline to the Shorthorns and students look forward to the day when they can include them in their possession. The Shorthorn combines efficiency and the power to hold the affections of men.

But, more than these, it was the ability to work improvement on the native stocks that long ago added prestige to the breed. A noted authority wrote recently: "The Shorthorn is the ever-efficient missionary of the bovine heathen of the earth, and as far as may now be seen will continue to bear the burden of that responsibility."

It is with the increasing numbers of Shorthorns in California and the Pacific States that mixed husbandry will reach a higher standard and yield a more generous return in money and contentment.

ALEXANDER & KELLOGG DAIRY SHORTHORNS.

The Dairy Shorthorns are very profitable cattle. For beef they rank high, having a big, smooth frame that is easy to fill. They fatten quickly and sell on the market as tops. Their milking ability can be proved by the records made on the Alexander & Kellogg ranch of Suisun. They have about 60 very fine Dairy Shorthorns, including nine cows on official test. Six have completed their yearly tests with an average of 9766 pounds of milk.

Few breeders take as much interest in their stock as do the Misses Alexander & Kellogg, and they are to be complimented on their excellent success. They will show 16 head at the State Fair, including their herd sire, Glenside Royal.

PREMIUM LIST READY FOR CALIFORNIA INTERNATIONAL LIVESTOCK SHOW.

The premium list for the first annual exhibition of the California International Livestock Show Corporation has just been issued in attractive form. It contains complete information regarding the show, including classifications, premiums, rules and regulations. Send for your copy to Jos. E. Painter, manager, Merchants' Exchange building, San Francisco.

J. H. Harlan Co. of Woodland will be back at the State Fair with a herd of Holsteins headed by Prince Butter Boy Walker, senior champion last year. The animals are in fine condition and should win a good share of the ribbons.

Highest Record Calf to be at State Fair

The highest average yearly milk records of the two nearest dams of any calf are those made by the dams of a junior calf grandson of Tilly Alcartra by her only proven son, our 40-pound herd sire, Prince Alcartra Korndyke, and out of Winnie Korndyke Cornucopia De Kol, whose record is 31,034.2 lbs. milk and 1201.0 lbs. butter. The two nearest dams' records averaged 30,749 lbs. of milk in a year. This calf will be shown as one of our ten Holsteins to be shown at the State Fair. Look at him and see how type and production are combined.

Grandsons and Granddaughters of Tilly Alcartra.

Two other sons, two daughters, and a granddaughter of Prince Alcartra Korndyke will be in our show herd. This bull's dam, Tilly Alcartra, has broken several world's records. In five years she produced 4819 pounds of butter, the greatest long-distance record in the world. She is adding new laurels in her present test, during the first six months of which she produced 775 pounds butter and 18,750 pounds milk, including over 40 pounds of butter in seven days.

DAIRY NOTES

C. D. Hayworth of Modesto will show 14 head of Jerseys, including all classes except the calf classes.

Maé Walker Gelsche Korndyke, the two-year-old heifer bought by J. D. Patterson of Patterson, has dropped a fine heifer calf sired by King Pontiac Netherland Seegis 3d.

Guy Miller of Modesto will have his usual good showing of Jerseys. His show herd will be headed by Altama Interest, and will include a number of young animals sired by him.

W. G. Gurnett of Orland will not show his Jerseys at the State Fair this year. He is busy as Director of Livestock at the Glenn County Fair. He has some splendid King's Valet and Empress Lass stock.

Green corn with ears scarcely started has been supplementing the dry pasture of Marin County hills for M. Pedrotti's herd of Brown Swiss dairy cattle. It is fed lightly, is cleaned up with a relish, and does the cows no harm.

The Santa Margarita Farm showing of Jerseys will number 14 head, and will include most of the classes from the string of milking cows to calf herd, excepting the Senior bull class. Mr. Conant's herd is in fine condition and will make a very creditable showing.

S. F. Williams of Orland will show the Jersey bull Golden Maidikin's Boy and one of his two-year-old sons Alva Lady's La Foss Boy, at the State Fair. Both bulls have been local grand champions. Other entries are an aged cow, junior yearling heifer, senior bull calf, two senior heifer calves, and two other Jerseys.

A beginner with registered Jerseys who is content with nothing but the best is M. Fortini of Orland, whose wife knows as much about the stock as anybody. They have only four head registered, but these include the 1914 State Fair grand champion cow and a R. M. cow with a record of 434 pounds butter from 6,595 pounds milk, testing as high as 7.14 per cent.

Gotschall and the Dairy Magruder of Ripon, have a heifer calf out of K. P. Tola Joe and sired by Pride Fain Faldessa, which makes her a great granddaughter of the first 40-lb. cow. She will make a good show record sometime if properly handled, and if she stays at Ripon you will hear from her.

The Greatest Holstein Blood Combination in the West

PRINCE RIVERSIDE WALKER

The cow making the highest official yearly butter record for 1917-1918, as shown by the report just issued by the Holstein-Friesian Association of America (and it is the world's official record for one year), is Aaggie Acme of Riverside 2nd. She is out of the same dam as our senior herd sire—

Prince Riverside Walker.

The junior three-year-old heifer making the highest yearly butter record for 1917-1918, as shown by the report just issued by the Holstein-Friesian Association of America, is Miss Valley Mead De Kol Walker. She is by the same sire as our senior herd sire, **Prince Riverside Walker.**

KING KORNDYKE PONTIAC 20th

Daughters of Prince Riverside Walker are being bred to our junior herd sire, **King Korndyke Pontiac 20th,** secured by us for the highest price ever paid for a bull in California public sale, and the only bull in California in service whose dam as a heifer made above 36 lbs. butter in 7 days and above 1100 lbs. in one year. She is a daughter of Prince Gelsche Walker and of De Kol of Valley Mead 2nd, who formerly held the world's record for two years' product won by a heifer.

His sire, King Korndyke Pontiac, is conceded to be the best individual son of King of the Pontiacs in the West, and he is out of a half sister to Prince Gelsche Walker.

Keep your eye on this breeding and make up your mind early to have a bull of this great combination.

At present we have for sale a few young bulls sired by Prince Riverside Walker.

WRITE, CALL, OR SEE US AT THE STATE FAIR.

TULARE HOLSTEIN FARM

W. J. Higdon, Prop., Tulare, Cal. H. L. Redd, Herdsman

SON OF MODEL FRANCIS GLISTA 173142

From a daughter of Prince Riverside Walker. Model Francis Glista's first seven dams average 4.25 per cent fat. The A. R. O. records of his dam, grand dam and of his sire's dam and grand dam average 30.70 lbs. in seven days. His sires in the first four generations have 17 daughters with records over 30 lbs., the average being 32.14. Forty-six of his near relatives average over 30 lbs. and their average test is over 4 per cent. This includes every dam in the first four generations of his pedigree. This son of Model Francis Glista is almost entirely white, has a perfect back line, and is a splendid typey individual. He will be registered and named to suit the buyer. This and other young stock for sale. Write or come and see.

W. G. GURNETT

ORLAND, CALIFORNIA

J. E. Thorp of Lockeford, has entered 17 head of Jerseys that will make competition keen in their classes. They are right to win.

George Murphy of Perkins will show a classy herd of milking Shorthorns. They are in fine condition. Be sure to see them.

The annual meeting and election of officers of the California Jersey Breeders' Association will be held Wednesday evening, September 4, at the Fair Grounds. A large attendance is desired.

The Ayrshire ranks at the State Fair will be invaded by the J. Henry Myers Company of Watsonville, with a herd of fine animals well worthy of comparison with the finest specimens of the breed in the State.

The Ayrshire herd on the B. D. Weeks ranch, at La Honda, San Mateo county, has registered the name, "The Redwoods Ayrshire Farm," with the Secretary of State at Sacramento, in accordance with the Farm and Villa Name Act.

The California Jersey Breeders' Association will have a meeting, with banquet and program, at the Travelers Hotel, Sacramento, Tuesday, September 3, at 8 p. m. All breeders and owners of Jerseys are urged to attend. The assessment will be $2 per plate.

Holstein breeders will be disappointed to learn that Santa Anita Rancho will not show at the State Fair. Col. Anita M. Baldwin is devoting practically all of her attention to war work. Superintendent Taylor will fit a few animals for the Liberty Fair at Los Angeles.

The Jersey Breeders have been assured a sufficient sum to purchase a very handsome silver cup to be offered in the State Fair class for five Jersey cows in milk, and it is expected that the cup will be on exhibition during the Fair. There have been a large number of entries made in this class, and a fine showing is expected.

Mrs. W. C. Curtiss of the Glorietta Stock Farm, Woodland, has recently purchased a new herd bull, King Dollar Glorietta Pontiac, a grandson of King of the Pontiacs. He will be used on a fine lot of heifers sired by Pietertje De Kol Alka Peterbass, and the calves from this cross will no doubt be in demand in the future.

With his brother in the army, Jas. McAlister, Jr., of McAlister & Sons, Chino, finds himself too busy to show his Holsteins at the State Fair this year. But things are humming at the ranch just the same. The test cows are making good records, and some fine young stock is coming on. A milking machine is being installed to solve the labor problem.

The Bridgford Company of Knightsen will show 15 head of Holsteins, including the junior herd sire, King Segis Alcartra Prilly, four of his get as get of sire, and a calf herd by him. This bull was junior and grand champion last year. He is by King Segis Pontiac Alcartra, the $50,000 bull, and out of Prilly Princess Julia De Kol, with a world's record of 30.44 pounds of butter in seven days as a four-year-old.

Guy H. Miller is greatly pleased at the result of tests in his Venadera herd of Jerseys at Modesto. Blanda of Venadera, starting at two years and ten months, gave 5619 lbs. milk, making 311 lbs. of fat. Catalina of Venadera, at three years and one month, gave 7403 lbs. of milk and 456 lbs. of fat. Gazelle of Venadera made a record of 8257 lbs. milk and 439 lbs. fat as a five-year-old, and Signora of Venadera 7752 lbs. milk and 427 lbs. fat as a four-year-old.

Eight mature cows have been given records above 30 lbs. during the past year by the Bridgford Company of Knightsen, the highest being 37.60 lbs., made by the famous cow, Boweda. Nine two-year-olds were given records—all but one above 20 lbs. The highest, 26.58 lbs., was made by Tulip Walker at two years and one month. All of these cows and about fifty others just as good are being bred to the junior herd sire, King Segis Alcartra Prilly.

Revada Farm GUERNSEYS

Bred in the Purple

Pearl King of Revada.

Every cow on this ranch imported and carries the blood of such sires as Governor of the Chine Sequel's Monogram, Governor of Gree, etc.

PRETTY PRODUCTIVE PROFITABLE

A Few Animals of Either Sex For Sale

SANTEE, CALIF.

H. F. SCRIBNER
Supt.

W. H. DUPEE
Pres.

J. W. Benoit has now on test Vera Volhalla who won the butter-fat contest at 1917 State Fair.

Toyon Farms Association now have on test Albina DeKol Hartoz 3d, one of the cows secured recently at auction in the state of Washington. She has a record of 18.8 lbs. at 22 months old, and her dam's record is 24 lbs. They also have on test two heifers with first calf, secured at the same sale.

R. L. Holmes will show a good herd of Holsteins, including Riverwild Bracelet Britt who was first in her class last year, and other prize winners at last year's shows. Mr. Holmes now has on test Rosa Burke who won first prize and Junior Champion at the California Land Show last winter.

Dean H. E. Van Norman of the University Farm School has been called to Columbus, Ohio, to direct the educational work of the National Dairy Show, to be held there October 10th to 19th. The chief aim of the show will be to impress upon farmers the importance of maintaining an adequate milk supply, both from the standpoint of human welfare and because of its influence on a stable agriculture.

One of the finest members of Chas. Whitsett's herd of 17 registered Jerseys at Orland is Foxy's You'll Do. She is of fine Island type, has a beautiful head, and pin bones as high as her hips, and her production equals her type. When fresh she made 40 pounds of milk per day testing 5.6 per cent, and now after seven months of milking she is still giving nearly three gallons per day.

W. J. Higdon will show his junior herd sire, King Korndyke Pontiac 20th, whom he bought at public auction for $6,500 last spring. He will show Mosel Bonnie Echo, who has a record of over 30 lbs., and her senior yearling son by Mutual Fobes Longfield De Kol. This youngster will in our estimation come very near the top in his class, if not of the entire Holstein bull show. Mr. Higdon will also exhibit a number of young animals by his senior herd sire Prince Riverside Walker.

A worthy dual-purpose dairy-beef breed that has received but little notice in California is the Brown Swiss. A fine herd of 39 head may be seen on the M. Pedrotti ranch near Ignacio. We do not know of another such herd in the State, but Mr. Pedrotti has sold registered stock to a considerable number of dairy men in Siskiyou, Lake, Sonoma, Mendocino, Marin, and Kings counties. Among Brown Swiss owners are Robert Dunlap of Pleasanton, and A. Sartori of Petaluma, who have registered females.

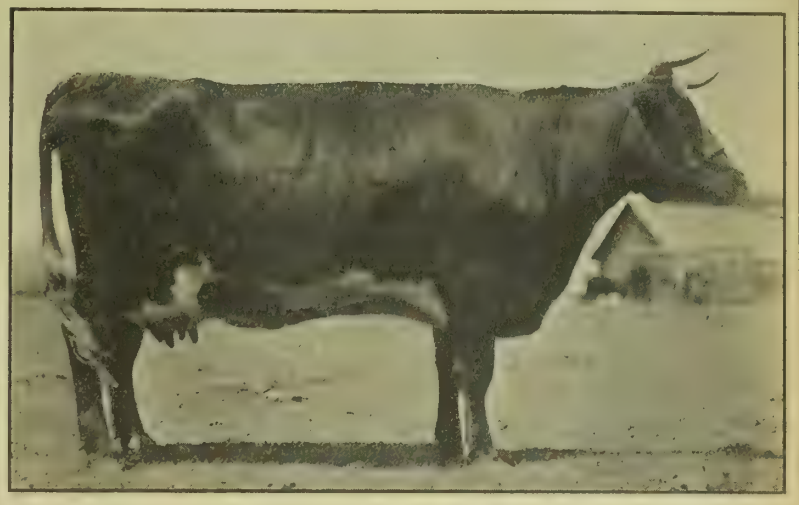
The J. S. Gibson Company of Williams has entered ten Holsteins at the State Fair. A star among them is the senior bull calf whose nearest two dams average more milk in a year than those of any other calf, according to John Self who has charge of the herd. Junior and senior yearling bulls, a junior yearling heifer, two junior heifer calves, and a 30 months' cow in the butter-fat competition are other animals entered. Three sons, two daughters, and a granddaughter of Prince Alcartra Korndyke, the son of Tilly Alcartra heading Gibson's herd, will show what blood will tell.

"Here is Foxhall Sweet Blossom, second prize Jersey at the State Fair last year," said Dr. H. W. Hand of Orland. "We also have the one that beat her, Imp Brilliant Spray. She has three times been grand champion at California State Fair, twice at Oregon State Fair, and once at the Northwestern Livestock Show. She is the highest-priced Jersey cow in California. I also have her daughter and I think she is a better individual. I will show these and another cow at Sacramento with several other Jerseys."

Innisfail Dairy Shorthorns

Will exhibit 16 head at the State Fair, including a group of five cows in milk, among them

BELLEVUE DAISY—Record: 8480 lbs. milk, 322 lbs. butterfat.



PRINCESS CLAY.
Record: 10,249 lbs. milk, 382.2 lbs. butterfat.

HERD BULLS—Glenside Royal, Grand Champion, State Fair, 1916; Kelmscott Viscount 19th, Imported.

FOR SALE—A limited number of young bulls.

BEMMERLY'S HEREFORDS SATISFY.

Red Cross Hereford heifer, donated by Wm. Bemmerly, Woodland.

"Herefords — the kind that satisfy," was the answer William Bemmerly gave to a friend when asked the kind of cattle he raised. And if one is hard to please he will find what he wants on Mr. Bemmerly's ranch at Woodland, as he has some of the best. Of his three herd sires Mr. Perfection, who is by Perfection 2nd, is thirteen years old, yet he is still a sure breeder, having produced 28 calves from 32 cows. New Eria 2nd, who was bred by George Chandler of Baker, Ore., is a very fine bull and has size and quality. Bonnie Brae 96th, who is by Bonnie Brae 2nd and was bred by William Andrews & Son of Morse, Iowa, is a fine bull and is producing some wonderful calves, one of which was donated to the Red Cross auction to be held at the State Fair and is a sample of what can be found in every field of the 1400-acre ranch. Her picture is here shown.

There is a bull calf from Princess Rainier, who is by Bodonal 31st and is sired by Mr. Perfection, that will be hard to beat if he is ever entered in the show ring. Unfortunately, Mr. Bemmerly will be unable to show at the State Fair this year, but let us hope to see him in some of the later shows.

BEEF CATTLE NOTES.

H. M. Barngrover recently bought of Peter & Church, Chico, 24 head of Hereford calves for his Veramont Stock Farm in Plumas county.

The Hopland Stock Farm will show a good herd of Shorthorns, including their first prize junior yearling bull at last year's Fair.

T. S. Glide of Hillcrest Stock Farm, Davis, will show eleven Shorthorns at the State Fair if help is available to take and feed them. They include two junior yearling bulls, two senior bull calves, a two-year-old heifer, two senior heifer calves, a junior heifer calf, get of sire one entry, breeders young herd, calf herd, and produce of dam two entries.

The Ormondale Farms report sale of Shorthorn bull sired by Golden Goods Jr. to R. B. Clemens of Roseville. The young bull dropped last May by Mayflower 4th of the Ormondale Farm and sired by Radium is developing wonderfully. He will be shown at the San Francisco Livestock Show. We are sorry that he will not be in the ring at the State Fair.

J. A. Bunting of the Mission Hereford Farm at Mission San Jose, will show 8 head at Sacramento, Los Angeles and San Francisco, and is determined to excel the good record he made last year. Showing only 3 head he won 5 prizes, including 3 firsts, junior champion and reserve grand champion. He has a great herd headed by California Prime Donald, purchased from the University Farm.

The show herd at the Pacheco Ranch is ready for the final test and will be on hand at the State Fair with some of last year's blue ribbon winners leading the string. This ranch, like many others, is feeling the help shortage, but they are learning to use machinery in place of labor, and are getting along nicely. The hay stacker and buck rake take the place of four or five men and do the work in half the time.

Livestock Notes

F. Stenzel of San Lorenzo is making some more good Holstein records with daughters of Dutchland Sir Pietertje Creamelle.

Fred Johnson of Napa lost his Duroc boar, Johnson's Defender, who was junior champion last year; but he will have a strong showing this year.

W. F. Mitchell of Visalia, proprietor of the Packwood Farm Holstein herd, expects to hold an auction sale of registered stock some time this fall or winter.

The J. H. Harlan Co. will show eight head of Holsteins. Mr. Harlan carried off some of the most desirable awards last year and may be expected to repeat.

Roy Dawson of Gardena will show six head of Hampshires at the State Fair. Mr. Dawson has some very fine specimens of this breed that is becoming so popular.

M. Bassett and A. L. Bassett of Hanford will show 27 head of Poland-Chinas, most of them sired by Model Fellow, a big-type boar who has proved a wonderful sire for Mr. Bassett's medium type sows.

W. L. Haag & Son of Hanford will show their $400 Poland-China boar, Young Jumbo, secured by them at the auction sale of Wm. Bernstein last spring, and a young herd headed by him.

The well-known Holdridge herd of registered Holsteins is now comfortably located in its new home near Santa Clara. Miss Holdridge is installing milking machines.

The Diamond G Ranch, which had the grand champion Hereford bull at the State Fair last year, will not show this year. Mr. Gable reports that he could not get help to fit his herd.

L. De Smith will have a fine herd of Guernseys at the State Fair. His show herd includes some great producers, such as Mysie Babe of Claremont, whose excellent record was recently reported.

The Jack London Ranch will not show their Shire horses and Shorthorn cattle this year. Shortage of help and desire to increase productions are the reasons, according to Manager Eliza Shepard.

Conejo Ranch will show both Durocs and Hampshires at the State Fair. They have recently imported a large number of outstanding animals from the East and are expecting to capture a good share of the ribbons.

A. A. Jenkins recently lost his senior herd sire. He found him lying in the center of his pen with his neck broken. His junior sire, Gertie's Golden Victor, has developed into a great bull. He is a fine individual and is getting splendid calves.

B. E. Nixon of Revada Farms, Napa, has offered a Guernsey heifer bred to his $10,000 herd bull for the best Berkshire barrow farrowed after March 1, 1918, the award to be made at the meeting of the Western Berkshire Congress, which will be held at Davis in February, 1919.

Dairy Shorthorns for Milk and Beef

Dairy Shorthorns lead in butterfat production in many cow-testing association reports. Their calves make fine beef more economically than other dairy breeds. Dairy Shorthorns are the best breed to range hills and stubble for roughage where help is scarce. My young bulls can increase the production of your herd when their calves come to milking age. Write for details of a few bulls I have to sell.

In the Swine World

BERKSHIRES. THE STANDARD BREED.

[Written for Pacific Rural Press by F. S. Springer, Secretary American Berkshire Association.]

The rightful function of hogs is to make pork. The greatest amount of highest quality meat, produced most economically at the earliest age, is the real pork maker's ideal. Abundant evidence is at hand to show the ability of the Berkshire hog to fill the pork maker's ideal. At the last International Livestock Exposition Berkshire barrows won more prizes in competition with all the breeds than was ever won by any other breed. The grand champion barrow, grand champion pen of barrows, and grand champion carload were all Berkshires. In the carcass contest, with 41 animals of all breeds competing, first, second and third prizes in the heavy class went to Berkshires. One of these barrows dressed 88 per cent.

The champion carload of Berkshires sold for $21.25 per hundred pounds, the highest price ever paid for a carload of hogs in the Chicago yards. On the same day the average price for hogs was $16.90—a difference between the best and the average of $4.35. Why not breed the best?

The carcass of a Berkshire is better marbled with fat and lean than that of any other breed; hence the superiority of Berkshire hams and Berkshire bacon. As beef and mutton become scarcer, the demand for choice hams and bacon grows more insistent. Berkshires are the logical meat producers of the future.

The market for the breeder of Berkshires for breeding purposes is unlimited. It is the cosmopolitan breed and is found in every State in the Union, the Philippines, Cuba, South America, Mexico, and Canada. Breeders of Berkshires on the Pacific Coast are beginning to realize this, as is evidenced by the increased sales to Corn Belt and Eastern and Southern breeders. And the interest taken in Pacific Coast breeders in the Corn Belt shows where they are taking off the highest honors.

Breed Berkshires. The lively, hustling pigs develop rapidly into hardy, strong-limbed shoats. These shoats are splendid grazers, converting forage crops into good, solid flesh at small cost.

STRICTLY A COMMUNITY BREEDING CENTER.

The advantages of a community breeding only one kind of hogs, dairy cattle, beef cattle, etc., have long been preached and for some years have been practiced more or less in various communities. They have proved so desirable that the settlers on the California State colonization tract at Durham agreed to breed only those kinds of stock selected by the majority. There are 47 farm settlers' and 12 or 15 farm laborers' allotments already made, according to Miss Marshall of the Land Settlement Board's office at Durham, with five farms yet unallotted. All of the settlers will probably have both cattle and hogs. They expressed their preference of breeds in their applications for the farms. Nearly all wanted Duroc hogs and about three-fourths wanted Holstein cattle, so these were made the official and only breeds of hogs and dairy cattle for the colony by action of the Land Settlement Board. Their success in making Durham known as a Holstein-Duroc center is awaited with interest.

Carruthers Farms

LIVE OAK CALIFORNIA

Many of Carruthers Farm bred Berkshires will be seen in other breeders' show herds, demonstrating they have made good.

CARRUTHERS FARMS

SHORTHORNS

will be shown at California State Fair this year, at which time our two herd bulls,

COUNT GLORY

and

HALLWOOD VILLAGER

will be on exhibition.

Call around at our stalls and look over our entries and discuss the future of the Shorthorn in California.

NOW Is The Time!

THERE never was a time in the history of the breed that good Shorthorn cattle were more needed to build up the range cattle business than at present. Good grass cattle have been bringing 17c per pound on the hoof at Eastern markets. The trend of the market for good beef is working westward and is knocking at our door. High priced beef can only be had by using the very best of bulls. Range men buy the good sires. It will pay you to do it. Good steers will always bring their value. Poor steers have always dragged the market down.

CARRUTHERS FARMS

BERKSHIRES

will have a small exhibit of Berkshires at California State Fair. We invite all prospective buyers to visit our pens and look our hogs over before purchasing.

The Exhibit of Berkshires at the STATE FAIR will be one of the largest ever seen at Sacramento.

Note Our New Location. Better Equipped than Ever to Serve You.

STATE FAIR EXHIBITS TO BE CARRIED FREE.

Several weeks ago it was announced that there would be no special freight rates for the State Fair, but since then the Federal Railroad Administration has decided to handle all exhibits on the same basis as in former years. This means that the full one-way freight must be paid in shipping to Sacramento, but it will be rebated when the exhibits are returned to point of origin. This makes free freight both ways.

Exhibitors shipping in carload lots should take notice of a change in the switching charges of the Central California Traction Company. This year the charge will be $10 per car each way for switching to and from the Fair Grounds, but the Southern Pacific has a long siding and stock corral one-half mile from the gate, and there is no extra switching charge to this place, which is known as Homestead. A great deal of stock can be led that distance to reduce expenses, or motor trucks can be procured for $3.50 per hour.

Ship early and avoid the rush.

POLAND-CHINAS POPULAR WITH FARMERS.

The chief demand of the practical farmer is now for size. Big foundation stock means big pigs at farrowing time; big pigs grow faster and make greater gains; and economical gains are what every man in the hog business today wants. For this reason Poland-Chinas are great favorites, as they may be forced for early marketing yet do not stop growing until they have attained an enormous size.

The Poland-Chinas breed very true to type, the litters are quite uniform, and little culling is necessary. They have quiet dispositions, and consequently take on fat readily. They have great constitutional strength, which fortifies them from disease and enables them to make profitable gains under the most unfavorable conditions. The pigs when farrowed are exceedingly strong and active, are easy to rear, and will thrive with little care.

A recent investigation showed that 162 Poland-China sows farrowed 1677 pigs, or an average of more than ten to the litter. The sows are excellent sucklers and very quiet, careful mothers, and they raise a very high percentage of their pigs.

Poland-Chinas are exceptionally good for crossing and grading up. They have the hardiness, docility and good feeding qualities that breeders like, and the boars transmit these qualities to their get from sows of any other breed.

As a natural consequence of these merits there is always a good demand for Poland-Chinas, and breeders have no trouble in disposing of their surplus stock at good prices.

CHESTER WHITE CHARACTERISTICS.

Unexcelled in prolificness and per cent of farrow raised; unequaled in disposition and in adapting themselves to their environment; a breed that will mature to the most desirable market condition at the earliest age with the least feed and supply the highest class pork with the least waste—these are the claims that the Chester White breeders make for their hog.

Furthermore, they base their claims upon facts, and point to the winnings of the breed at the Chicago International, where the Chester Whites have captured a large number of the most coveted prizes, especially in the dressing out classes.

There's no getting away from the fact that the Chester White is a great hog, and he is becoming more and more popular in California every day.

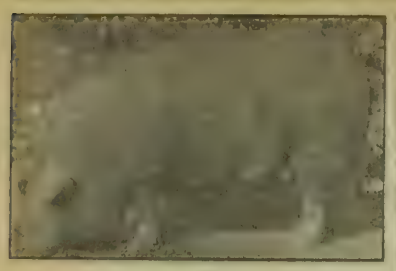
James Mills Orchards Corporation

HAMILTON CITY, CALIFORNIA



Poland-China sow donated by M. Bassett, of Hanford, to the Red Cross Sale to be held at the State Fair.

In the Swine World

(Continued.)

Young & Clark of Lodi report the sale of a Poland-China boar to Mills Orchard Company of Hamilton.

The Castleview Ranch of Santa Rosa, owned by J. Francis O'Connor, recently sold six sows and a young boar by Baron Duke 201st, to F. J. Kindle of Santa Rosa.

J. H. Minton of Patterson is a new Duroc breeder, but he has made a fine start, having bought a grand lot of foundation animals from J. M. De Vilbiss. He will be at the Fair with 10 head that would do credit to an old timer at the game.

C. G. De Raad of Lemoore reports recent sales of registered Poland-Chinas as follows: boar and gilt to W. M. Sutherland, Lemoore; boar to Dyxsell Bros., Hardwick; gilt to A. M. Mason, Lemoore; two sows and a boar to J. D. Van Huevel, Hanford.

Through an ad in the Pacific Rural Press, Hewitt and Hewitt of Dixon recently sold several Poland-China sows to A. C. Harding of Lincoln. Mr. Harding wrote a two-page letter expressing his delight over the sows and the courteous treatment received. That's the way to do business.

W. F. Sandercock of San Francisco, owner of the Natomario Rancho, is building up a fine herd of Berkshires, and will make a good showing at the State Fair, including a boar and a sow by Baron Duke 201st, and out of Rookwood Lady 100. Both sire and dam are national grand champions.

The James Mills Orchard Company will show about 25 Berkshires, including four Laurel Champion sows whose equals are mighty scarce. The get-of-Laurel-Champion entry will include Laurel Compton Champion, now 23 months old and an exceptionally broad, big, square-built hog. The reserve grand champion at the State Fair in 1916, Forest Grove Laurel 8th.

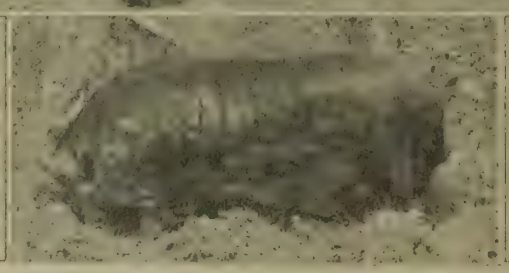
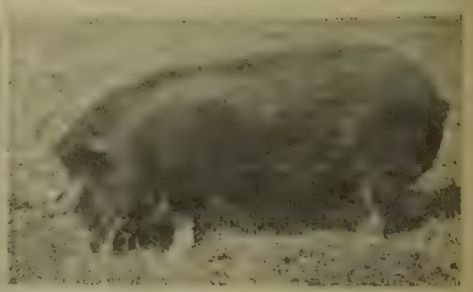
BERKSHIRE · HOGS ·



NATOMARIO · RANCHO ·



A great herd of the best Berkshires on the Natomario Rancho, located on the Natomas Lands, adjoining the city of Sacramento. These are the lands that produce as high as 12 tons of alfalfa an acre a year. A crop of barley, followed by a crop of milo maize, can be grown on the same piece of land the same year. Hundreds of these acres have produced 40 sax barley. Twenty sax of wheat is not unusual. Five ton of oat hay, followed by a crop of beans averaging 22 sax to the acre, has been harvested on the same land. See the thousands of acres of beans now growing. See the Natomario Berkshires out Twelfth street to the Natomas concrete boulevard.

While at the State Fair, see Princess Leader, the only Berkshire in the world sired by the World Champion Boar, Grand Leader 2nd, and from the World Champion Sow, Riverby Princess. See the pigs whose sire and dam are the Grand National Champions.

Before or during the State Fair we will be glad to show you Natomario Berkshires and the wonderful Natomas Lands, where farmers are making fortunes. It is only a ten-minute ride from our office, 906 K street, Sacramento, and a few minutes from the Fair Grounds. Natomas Lands have concrete and macadamized roads and it will not take long to show one of the best Berkshire herds and the most wonderful body of farming land that has ever been opened for sale in California.

SANDERCOCK LAND CO.
906 K STREET, SACRAMENTO

Make a memorandum of the address now for a free trip

Dr. H. J. Hammond of Sacramento has donated a Berkshire boar pig, sired by Hedgemere Star, to the Red Cross Auction to be held at the State Fair.

Elmer Lamb of Ceres has sold to Donald Graham of Lancaster the great sow Ceres, that was champion sow bred by exhibitor at the 1914 State Fair; also the show sow, Rosemore Ruby, to Miss Lydia G. Weld of Lancaster.

John M. Bernstein will show 22 head of Poland-Chinas, including his great young boar California Smooth Jumbo, recently imported from the East. Mr. Bernstein has entered 12 head sired by President in the Futurity.

Frank A. Brush of Santa Rosa, who had the unusual distinction of showing the grand champion Berkshire boar and also the grand champion sow at the National Swine Show last year, will show a complete herd at the State Fair.

A. B. Humphrey of Grapewild Farms, Escalon will take 20 head of Berkshires to the State Fair, determined to win his usual share of the ribbons. These will include animals by Grand Leader II, grand champion at the P.-P. I. E., and Royal Superbus, the great boar purchased in the East.

Pressure of Government duties, combined with a severe illness, will prevent C. B. Cunningham of Mills from showing his Chester Whites this year. Mr. Cunningham is one of Uncle Sam's dollar-a-year men and is doing most effective work on the Livestock Commission of the Food Administration.

River Bend Farm of St. Helena has completely sold out its stock of young pigs, as its Duroc-Jerseys have been in heavy demand in the West. Owing to the lack of help on the farm, it is not showing at the fairs this year, but in 1919 hopes to be able to display a herd which will make the Duroc breeders sit up and take notice.

Owing to other business, I am compelled to close out most of my herd of tried

POLAND-CHINA SOWS

I will sell at auction 60 head of tried sows, bred and open gilts. These sows and gilts are from the best herds in the United States, a great many of them are from J. W. Pfander's herd of Clorinda, Iowa, who sold the highest priced Poland-China sow ever sold in America. If you want the best, come or send your bid.

I will also sell my three herd boars—all Eastern bred.

W. D. TREWHITT **HANFORD, CAL.**

WRITE FOR CATALOG.

In the Swine World

(Continued.)

Dimmick Bros. of Lemoore will show 12 head of Poland-China hogs. They have a fine futurity herd.

C. R. Hedges and John McMartin of Willows will show an aged Duroc sow, a junior yearling, and futurity pigs by Uneeda Wonder and out of a sow brought from the East. They have about 30 head of registered Durocs.

Alfalfa on half an acre pastured by 20 mature hogs has grown faster than they could eat it on the Natomario Ranch near Sacramento, and it had to be cut to keep tender growth coming. The hogs receive nothing else except a millfeed slop twice a day. The afalfa is somewhat subirrigated.

F. A. Langdon, the Hampshire breeder of Perris, has 120 sows that have averaged 8½ pigs to the litter. Many of these pigs are sired by the famous boar Gold Mine. Mr. Langdon recently sold 100 head of choice foundation stock to W. J. Morrow of Downey, who is starting a high-class herd.

N. K. Horan of Lockeford has about 70 head of Poland-China pigs by Big Bone Bob and out of I. B. A. Wonder sows. Mr. Horan has picked up some of the best stock that has been sold this year, and plans on having one of the finest herds in the state. He certainly has made the right start.

J. H. Cook of Paradise has been called to the colors, and offers his entire herd of Poland-Chinas for sale, including his two grand Eastern boars of Big Bob and Gerstdale Jones breeding. The brood sows and gilts represent the best of Corn Belt breeding. Mr. Cook will be at the State Fair with a herd of fifteen choice animals.

Young & Clark of Lodi will be at the State Fair with a fine lot of Poland-Chinas, headed by their new herd sire, Golden State King. This grand boar will be shown to a disadvantage, as he had one foot injured while en route from the Corn Belt, and is still quite lame. They have a futurity litter that they will bank their last dollar on.

Five pigs sired by a noted Duroc boar were lost by W. T. Hollingshead and Sons of Orland, because they got to fighting over the teats and their sharp teeth started canker sores followed by blood poison. Since then, the four teeth that are found in a pig's mouth at birth are cut off with a pair of pincers and the trouble has been overcome.

H. I. Marsh of Modesto will show 20 head of Poland-Chinas. His aged herd will be headed by I B A Wonder, reserve champion at the P.-P. I. E., and will include a Big Knox sow weighing 800 lbs., and one of the smoothest big-type sows we have ever seen. He will show a number of sons and daughters of his great breeding boar Model Major.

FOREST VIEW RANCH

Closing Out Entire Herd
of Registered

Big Type Poland Chinas

On account of my entering the army this fall, I am closing out my entire herd of three years' selection and breeding. I offer herd boars, bred and open sows, and gilts and spring pigs of both sexes.

The big, prolific, easy-feeding kind.

HEWITT & HEWITT

DIXON CALIFORNIA

POLAND-CHINAS FOR SALE

Do not fail to see the get of **BIG BONE BOB** at the State Fair. We will have for sale about 15 head of very fine boar pigs weighing 240 lbs. and better at six months old. Also two from **BIG CORVER**, the great boar owned by **C. H. Porter** of **Eagle Grove, Iowa.**

These pigs have for dams such sows as Black Beauty 4th, weighing better than 600 lbs. as junior yearling, and other sows bought last year from the best herds in the East at long prices.

We will also have 12 head of gilts about ten months old. Will sell you these open or bred to the great **GOLDEN STATE KING**, just recently from the Severe herd of sows, Iowa.

We will show the best lot of pigs this fall that we ever raised. Great size, with quality, and prolific.

W. A. YOUNG

GEO. V. BECKMAN & SONS

Lodi California

J. M. De Vilbiss of Patterson will be back at the Fair this year with 14 corking good Durocs. He has a Mary Jane Pathfinder gilt 11 months old that weighs 400 lbs. and is good enough to win in the hottest competition.

Frank Brush will show a great herd of Berkshires this year. His 28 entries include Silberfa Bernice, a prize winner from the Northwest; Mayfield Laurel, who was grand champion last year; also pigs by Baron Duke, the National grand champion boar, and pigs out of Rookwood Lady, the National and Western Berkshire Congress grand champion.

H. P. Slocum & Sons of Willows will show Durocs in all classes at Sacramento, Oregon, and Washington. Notable in the exhibit will be Uneeda Wonder, their senior herd sire. This is the third time he has been fitted in three years, having been shown at the Nebraska State Fair, the National Swine Show, and last year at the State Fair. They will also show the $1,000 sow, Model Lena.

V. F. Dolcini of June Acres Stock Farm, Davis, will make a good showing of Durocs. He has some great young stuff sired by Model Colonel, a grandson of King the Colonel; Great Wonder's Model 3d, by Great Wonder, grand champion at the Iowa State Fair; and University Wonder, out of the noted show sow, Bessie Wonder, twice grand champion at the Nebraska State Fair.

The following Tulare Duroc breeders, A. Thompson, Tulare; R. C. Sturgeon, Tulare; C. E. Ellis, Tulare; H. Cummings, Goshen; R. S. Clifford, Strathmore; I. O. Williamsen, Visalia; W. J. Fulghan, Visalia; J. L. Dickenson, Visalia; W. J. Stewart, Visalia; J. Chenoweth, Visalia, will make up a futurity show at the Fresno County Fair. They also intend holding a consignment sale this Fall.

The Duroc-Jersey herd of W. P. Andrews, Modesto, is now headed by A's Crimson Monarch, son of Crimson Monarch, the grand champion at the State Fair in 1917. The sows of this herd are line-bred from Crimson Wonder Again and H A's Queen. Mr. Andrews prepared for the Futurity Show at Sacramento this year 4 boars from a litter of 11 pigs raised (14 farrowed) but on account of lack of help will not be able to show.

Elmer Lamb of Ceres is fitting twelve head of Durocs for the State Fair—seven in the junior pig and futurity classes, an under one-year herd and senior pig classes, and a junior yearling sow. Two of the senior sow pigs are out of Ceres, champion sow bred by Exhibitor at the 1914 State Fair. The sow and boar to make up the herd are out of Bettie A 2d, the junior champion at the P. P. I. E. These dams are line-bred top-notcher sows and the pigs are sired by Orion Model, the giant son of Orion Cherry King Jr., grand champion at the National Swine Show in 1916. Some swell breeding.

Frank B. Anderson, Berkshire breeder of the Natomas district, near Sacramento, has entered 14 head for the State Fair, and will show in all classes except aged sows and senior yearlings. Anderson recently bought from Dr. Chas. Keane, former State Veterinarian, Columbia Leader, one of Grand Leader 2d's outstanding sows, and a prize winner last year as a junior boar. Columbia Leader is a grand individual, standing well on his feet, having a broad, square body, good hams and a strong arched back. He will be used to head Anderson's herd.

Mrs. E. A. Hardy of Anchorage Farms, Orland, will show locally but not at the State Fair this year. She has 300 spring pigs of which she is going to breed about 100 gilts sired by Iowana Champion Peer to Anchorage Leader 1st and other sons of Star Leader. Fifty Star Leader gilts will be kept, along with about 50 of the mature sows, for next season's breeding herd. Star Leader is a magnificent animal, 73 inches from between the eyes to the base of his tail, standing on his toes almost like a pig, square built and with a back that can't be beaten. His son, Anchorage Leader 1st, was a year old in June and weighed over 500 pounds last month. The average litter from 50 sows last spring on Anchorage Farms was 8½ pigs. Mrs. Hardy established this herd two years ago with 25 sows and a boar.

JUNE ACRES FARM
Breeders
DUROC
Jersey Hogs
Holstein Friesian Cattle

Offering spring pigs, both sexes, by such boars as Model Colonel, Great Wonder's Model 13th and University Wonder and out of well-bred sows. Model Colonel is considered by experts to be the best boar in California. He is a grandson of King the Colonel, who has more sows and grandsons heading good herds than any other boar of the breed. Great Wonder's Model 3rd is by Greater Wonder, the Iowa Grand Champion, and out of one of the best Golden Model sows. University Wonder is out of a great show sow, Bessie Wonder, twice Grand Champion at Nebraska State Fair, and he is a full brother to the junior champion at the same fair.

The breeding of our sows is of the best. All of them have produced or are sisters of show stuff.

We will also sell some of our foundation sows bred for fall farrow. If you want good Durocs, get some of this stock.

Will exhibit at the State Fair and will be pleased to have all interested parties look up the stock.

V. F. DOLCINI, Prop.
DAVIS. CAL.

These are typey, square-built, growthy boars, standing splendidly on their toes. They are sired by UNEEDA KINGS COL. and are out of UNEEDA ALBERTA 5th, who is by WESTERN CRIMSON WONDERFUL. They are out of a litter of mine and will be for sale at the Fair. We also have sons of BATES ORION KING that will improve your herd if you give them a change. Mention Pacific Rural Press.

VALLEY VIEW FARMS, W. T. Hollinghead & Sons, Orland, Cal.

TREWHITT HERD TO BE DISPERSED.

For several years young Poland-China breeders have pointed with pride to the fact that they had Trewhitt stock in their herds, and now the public will be given an opportunity to buy the foundation stock from this noted herd. The pressure of Mr. Trewhitt's contracting business makes it necessary for him to close out nearly all of his herd, and he announces a sale at the Hanford Fair Grounds, September 26th. Sixty head of tried sows, bred and open gilts, and the three herd boars will be offered. A large number of the sows and gilts were purchased in the east at long prices, and all represent the best big-type blood lines. The boars, all of eastern breeding, are too well known to need any comment. Here is a chance to buy the best at your own prices.

LIVESTOCK NOTES.

W. B. Bennett of Nord will show a junior yearling Duroc boar at the State Fair, besides his futurity litter.

Ruby & Bowers of Davis will show about 50 head of horses, ponies and jacks at the State Fair. They recently received a carload of three-year-old jacks from New Mexico.

George V. Beckman & Sons of Lodi have another car of Poland-Chinas finished off for market and intend to ship them to San Francisco to be sold on the dressing-out plan. They are confident of getting a premium for an unusually high dressing percentage.

The California Jersey Breeders' Association will hold a banquet at Sacramento during the State Fair. A full program of prominent speakers will be provided. Dr. H. W. Hand, president of the association, is trying to get a representative of the American Jersey Cattle Club to address the meeting on "Jersey Type."

The California Livestock Show to be held in San Francisco in November is to include a horse show. A feature of the show will be the string of thoroughbreds recently acquired by John H. Rosseter, which includes 12 mares and a stallion. Besides horses, the show will include cattle, pigs, poultry, sheep, goats and other animals.

Hidden Valley Farm Guernseys will not be at the State Fair this year. Mr. Welch has all his cows that are in milk on yearly test. Last month they averaged 57.5 pounds of fat after being on test an average of 155 days. Over 25 per cent are heifers with first calf. Imp. Acadia of Lynwood made 84.74 pounds fat, completing 117 days' test, with a total of 307.67 pounds.

Specialist in Registered Beef Cattle

I am a firm advocate of the use of better sires—Registered Bulls—reflecting through concentration of breeding a high standard of early development in weight, quality and finish, insuring most satisfactory results.

I devote my entire time keeping in touch with the Registered Beef Trade, much of it among Eastern breeders, which enables me to save time and other expenses when buying.

I will deliver at this end for less money than a stranger to the trade can buy at the other end. So let me quote you prices on

REGISTERED BEEF BREEDS DELIVERED.

I was born among Shorthorns and have been among Beef Cattle ever since. My thirty years' experience in California has taught me just what the State needs in

CROLEY'S BALANCED DAIRY FEED—The cheap milk producer; and Croley's Calf Meal the best California calf raiser. Geo. H. Croley Co., Inc., Eighth and Townsend streets San Francisco, Cal

MULE FOOT HOGS, large type; booking orders for spring litters. These are the farmers' easy feeding, profit-producing kind. Meet me at the Fair. H. T. Bailey, Box 37, Lodi, California. "The Blue Gums."

CARRUTHERS FARMS TO MAKE GOOD SHOWING.

A visit to Carruthers Farms reveals the fact that their new property at Live Oak is fast being developed into a real stock farm. Seventeen head of Shorthorn cattle have been entered at the State Fair. Count Glory, who was the grand champion of California in 1916 and 1917, will be seen again, even though he has been used on sixty cows.

Hallwood Villager, the white two-year-old, will make a good showing, and is destined to become one of the great breeding bulls of the Coast. The junior yearling bull, Count Glory 3rd, is large for his age and will make a better showing in another year. The two senior bull calves and the junior bull calf are a little short in age but good in conformation.

The females are a good lot, especially the two-year-old heifer, junior in age, which weighs close to 1600 pounds, and her great wealth of flesh and depth of body are rarely seen in a Shorthorn cow. Also, the senior yearling heifer, Lady Ruberta, purchased in the East this year, will be hard to beat.

Carruthers Farms will also show six head of Berkshires. Their senior yearling boar, Live Oak Champion, is one of the best the breed has produced on this Coast, and it will take a good one to turn him down.

THE OLD RED HOG A WINNER.

From the standpoint of adaptability the Duroc has proven his value as a producer of cheap pork in California. As a follower of feeding cattle, as a grazer in forage lots, or for dry lot feeding, he has made an enviable reputation for himself in the amount of pork returned for the feed consumed.

The Duroc has been bred for business. Everything regarded as of no cash value has been eliminated and there are no marked features for fanciers to haggle over. But every point which the intelligent buyer demands for a profit-making hog is found intensified in the Duroc.

The breed matures early and the sows breed young, farrow easily, and have large litters of very uniform pigs. The prolificacy of the Duroc is well known, and we must not forget that it's the extra pigs a farmer raises from the litters that make the extra profit.

At the Michigan Experiment Station a feeding test was conducted for 168 days. The Durocs gained 2.50 pounds per day at a cost of 4.65 pounds of grain for each pound of gain. Their nearest competitors gained 2.11 pounds per day at a cost of 5.22 pounds of grain for each pound of gain.

HAMPSHIRE HOGS GAINING IN POPULARITY.

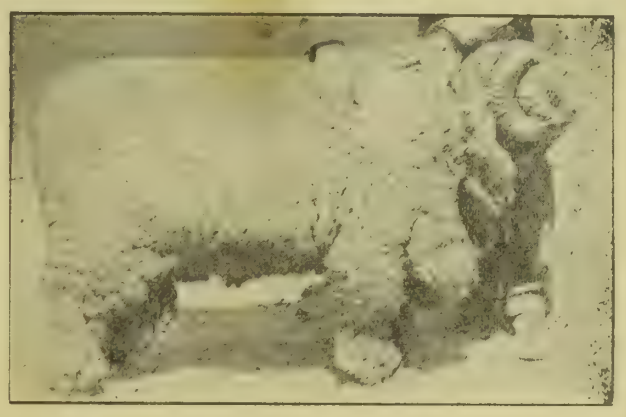
The Hampshire hog is forging his way right to the front by sheer force of merit. He is of good size, an excellent grazer and of good fecundity. The sows make kind mothers and good sucklers. The pigs grow rapidly, mature quickly and have excellent feeding qualities.

In quality of flesh the Hampshire has an enviable reputation. It has made an excellent record in the dressed carcass competitions at the International Livestock Exposition at Chicago, and the packers regard it with high approval, particularly on account of the large proportion of lean meat.

Bullard Rambouillets

Will be at

State Fair



Representing a range class and also a Reg. class. Practically sold out now but have 1000 head of lambs for next year.

BULLARD BROS.

WOODLAND CAL.

KIMBLE'S CALIFORNIA

RAMBOUILLETS

Are large and smooth, with heavy fleece of fine, long staple white wool.
Yearling Rams and Ewes, individual or car lots.
Special offering of several thousand Ewes on account of reduction in range.

Prices reasonable. Correspondence solicited.

D. E. KELLIHER,

Breeder and importer of sheep, offers for sale a choice lot of Hampshire Yearling Rams sired by Walnut Hall and Butterfield Rams purchased at Salt Lake in 1916. Also, 12 head of purebred Rambouillet Rams. Inspection and correspondence invited by

D. E. KELLIHER, :: Eugene, California

Protect Your Sheep from Parasites

An ounce of prevention is worth a pound of cure, and now is the time to prevent sheep from being infested with parasites.

A great deal has been written about stomach and lung worms, but there is another bothersome hun in sheepdom and that is the head worm. Little seems to be known about it, yet a great many sheep are affected every year and the results are generally fatal.

The head worm is a grub that bores its way into the brain of the sheep. The sheep remains away from the rest of the flock, turns its head to one side somewhat the same as an animal does when it has foxtail in one ear, grits its teeth, loses its appetite, and becomes very sluggish.

Unless the grub can be removed, the sheep will die, and it is difficult to remove it because it is generally beyond reach by the time the symptoms are noticed. If the sheep can be made to sneeze it will often expel the grub, and both snuff and tobacco dust have been injected in the nose with good results. A 5 per cent solution of Kreso or other coal tar disinfectants will sometimes aaswer.

The head worm develops from a fly blow on the nose, so nip the trouble in the bud and keep the quarters so clean that they will not be a swarming place for flies. If cleanliness alone is not sufficient, keep a little pine tar on the noses of the sheep during fly season. It will pay you. Sheep are so valuable nowadays that you can't afford any when ordinary sanitary measures will prevent it.

SHEEP NOTES

John E. Marble of Pasadena will make a combined showing of Dorsets and Romneys.

Calla Grove Farm of Manteca will exhibit some choice animals from its fine herd of Hampshires.

J. R. Bloom of Dixon is sold down close on Shropshires, but will make a creditable showing at the State Fair.

Bishop Bros. of San Ramon, who won high honors for California sheep at the International Livestock Exposition at Chicago, will show a complete herd of their noted Shropshires at the State Fair.

Bullard Bros. of Woodland have entered a large flock of Rambouillettes, which will be up to their usual high standard. They will show about three head in each class. They report a very heavy demand, and are about sold out of surplus stock.

The average weight of the wool in the State is the same as a year ago. With the increased number of sheep on hand January 1, 1918, over that of a year ago, this yield, plus the prevailing high price, will give the State very substantial returns from this industry.

Herding sheep—the loneliest job in the world—is the latest industry to attract women. Wyoming ranchers have given so many men to the war that sheep herders are very scarce. Hence Misses Lulu Munson, Belle Pattison and Grace Keenan, Campbell county lassies, have become shepherdesses at a wage of $50 a month and "found."

E. C. Spear of St. Helena is a constructive breeder of Rambouillettes. He has used nothing but registered rams for years, and has aimed to develop a distinct type. This year his flock sheared better than 10 pounds to the fleece. Mr. Spear owns one of the prize winning rams at the P. P. I. E. that sheared 36 pounds at 11 months.

A total of 3617 decks of sheep were loaded in California during the three months ending June 30, 1918, according to reports of livestock loadings received from railroad division superintendents by the Bureau of Markets at Chicago. Of this number 1851 decks were loadings for market centers and 1768 decks were destined to miscellaneous. The total of loadings for market centers west of the Rocky Mountains was 1389 decks, 1051 of which were destined to San Francisco.

Sales and show barn in Hanford.

Home of Champion Percherons

Many of our readers will be glad to learn that Londrecitos, the greatest living Percheron, will be found at John Matley's, Reno, Nev.

Matineaux.

Mr. Matley has been breeding registered Percherons for many years. His former stallion was Matineaux, whose picture we reproduce. This stallion was champion at the P.-P. I. E. and has sired some very promising mares that Mr. Matley expects to breed to Londrecitos. Naturally, he expects some great colts from such a cross. With a fine selection of mares, headed by such a stallion as Londrecitos, Mr. Matley expects to soon have one of the greatest Percheron breeding establishments in the country.

Good Future for Draft Horses

A farmer's horses should be just as valuable an asset as his cattle, his sheep and his hogs. And to be such they should be bred with just as much care. Yet what do you find? Why, any four-legged beast in the guise of a horse which will stretch a trace satisfies him.

Generally he doesn't breed mares when he has them, or, if he does, any old stallion will do. Consequently the colts are of inferior quality and do not bring good prices, so he decides that it does not pay to raise horses.

Then again, most farmers have always used small or medium-sized horses and they do not realize how much better big drafters would do their work. But the war has brought thousands of horses of all sizes into use, and careful records of work accomplished per horse and per dollar of investment have been kept. These records prove conclusively that big draft horses are the most profitable from every standpoint.

The Government is buying heavily of drafters, dealers admit that good, big horses are scarce, and this proof of a future shortage is sufficient reason for breeding all suitable mares to high-class registered draft stallions.

The Indiana Stallion Enrollment Board collected data on the prices received by farmers for their horses, and found that the offspring of registered stallions sold for an average of $76 more per head than the offspring of grade stallions.

Suppose it costs $10 extra to patronize a purebred stallion. This means that there will be returned a clear profit of $66, or 660 per cent upon the $10 invested. And these figures are very conservative—too much so for California, as grade draft mares weighing 1600 pounds or over will bring from $500 to $600 per pair, while common stock can be bought for half these prices.

The day is fast approaching when farmers will realize that heavy drafters will pay them best. Then they will weed out their small horses and scrubs, and the one who has good stock for sale will make a handsome profit. Will it be you?

HORSE NOTES

H. G. Learned of Stockton will show Percheron mares one, two, three, and four years old, also produce of dam and get of sire entries.

M. Bassett of Hanford will show at the State Fair his great Percheron stallion, Isos, who was grand champion in 1916 and 1917. He will also take along a number of his get.

Ruby & Bowers are preparing to show about 50 head of their fine Belgians, Shires, ponies and Jacks at the State Fair. Their famous Belgian mare, Raby, has foaled another fine horse colt, and she, with her three sons, will be in the show string.

John Burrell, who won most of the prizes for registered Jacks and mules last year, will not show at the State Fair this year. Mr. Burrell, on his farm near Hanford, has the largest herd of Jennets in the State. He reports a good demand for both mules and Jacks.

You Want Real Horses

Ithos, Grand Champion at Sacramento, 1916.

One real good horse will do as much work as two ordinary scrub horses and will eat only half as much. Replace your present stock with real horses and release half your land for the production of food for the Allies and thus help win the war.

Will exhibit Ithos and his get at the State Fair.

THE MARKET REPORTS

Figures Given are Independent and Reliable.
Prices Quoted as Paid to Producers.

SAN FRANCISCO

San Francisco, August 21, 1918.

WHEAT.

Wheat is selling at the prices announced by the Federal Grain Corporation, and these prices will doubtless be maintained for the present crop. The prices quoted are for grain f. o. b. San Francisco, Los Angeles, Seattle, Tacoma and Portland, and guaranteed at least $2 per bushel f. o. b. shipping point. The price of sacks and sacking not included.

No. 1 hard....$2.20
No. 2 .... 2.17
No. 3 .... 2.13
No. 1 soft.... 2.18
No. 2 .... 2.15
No. 3 .... 2.11
Club or Sonora, No. 1.... 2.16

do, No. 2.... 2.09

BARLEY.

Little demand has developed for barley this week and prices are reported unchanged.

Choice feed, per ctl....$2.40@2.47½

OATS.

While there were some sales of oats during the week, they were so inconsiderable that dealers report the market as dead.

Red feed, per ctl....$2.50@2.65
Red seed .... 2.75@3.25

CORN.

While lower prices in the Eastern market would naturally affect the local market, there is so little corn on hand and so little business that quotations remain nominal.

(First-hand prices on strictly first-class grain, San Francisco.)

California sacked ....$4.20@4.25
Milo maize .... 3.95@4.05
Egyptian .... 4.05@4.10

HAY.

Receipts of hay for the past week were 2184 tons, compared with 2509 tons the previous week. The market is still heavily stocked and it is difficult to dispose of arrivals satisfactorily. Considerable has been left on the tracks longer than the free time allowed and has been subject to demurrage charges. Trade is dull. The city warehouses of the dealers are crowded to capacity and hay is being moved from cars to consumers direct where practicable. This naturally caused a lull in buying in the country districts and some holders are finding that they cannot now get for their hay the prices offered earlier in the season. Considerable newspaper reports have appeared regarding a demand for straw during the week, but as far as this city is concerned there is practically no straw being used or sought.

Wheat No. 1 ....$23.00@25.00
do, No. 2 .... 20.00@22.00
Choice tame oat.... 24.00@26.00

FEEDSTUFFS.

The market for feedstuffs was quiet this week and the only change in price was for rolled barley, which is quoted 50c below last week.

New alfalfa meal, per ton....$33.00@34.00
Coconut cake or meal.... 44.50
Cracked corn .... 86.00@88.00
Oilcake ....$75.00@76.00
Rolled barley .... 52.00@53.00
Rolled oats .... 55.00@56.00
Bran, carload lots in S. F.... 23.75
Mixed feed, do, do.... 25.00
Middlings, do, do.... 25.75

POTATOES, ONIONS, ETC.

Potatoes were somewhat higher this week, but the advance in price is regarded as temporary, as potatoes from the north will soon begin to arrive. Onions are weaker as the season's crops comes into the market more strongly. Sweet potatoes are slightly higher and are in fine condition. There is little or no change in the prices of green vegetables, which are arriving in quantities and for which there is an excellent demand.

Peas ....6@8c
String beans, per lb....4@5c
Wax beans, per lb....4@5c
Carrots, per sack....50c@$1.00

BUTTER.

Butter remained firm, with slight fluctuations, during the week and closed at the top for extras. Prime first remained unchanged. During the latter part of the period Firsts were again dealt in on the exchange.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	52	52½	52	52	52½	52½
Prime 1st	49	49	49	49	49	49
Firsts	—	—	—	49	49	49

EGGS.

Both extras and extra pullets continued on their upward course this week. The first going 3c above last week's close and the latter 2½c. While the receipts as a whole show no unexpected diminution, they have been rather irregular and this has caused some uneasiness. A good demand has arisen for shipment to Alaska, and the high prices on the New York market has taken a good number of eggs off the local market, resulting in higher prices.

	Thu.	Fri.	Sat.	Mon.	Tu.	Wed.
Extras	54½	55½	56	57	57½	57½
Extra 1sts			Nominal			
Firsts	46	46	46	46	46	Nom.
Extra pullets	49½	51	52	53	52½	53

CHEESE.

Cheese has been strong on the local exchange for some time and has shown a steady upward tendency. This week, however, prices of all descriptions, except Oregon Y. A. Fancy, began to soar, and closed at the top. The cheese manufacturers are making much less cheese this year and several of the largest factories have closed down, as they could not compete for butter fats with the dairies and sell their product at the prices quoted. It is reported that much of the cold storage of last year has been disposed of and when the members began to bid up the price of cheese there was hardly any cheese in storage to take its place. Oregon Long Horn Fancy C. S., has been given a regular place on the call of the exchange. Monterey cheese has been advanced to 23@25c for the full cream.

Special Deciduous Market Report

By J. L. Nagle.

Sacramento, August 20, 1918.

Probably the heaviest offerings of the season were unloaded in all of the auction markets the past week. The result of these increased sales, however, had little effect upon the market, as the demand was unusually heavy. A large percentage of the offerings of Bartlett pears developed ripe stock and this condition, together with the extreme heat that prevailed generally throughout the Eastern States, resulted in a noticeably declining market on unsound Bartletts.

The offerings of plums were fairly liberal and met with a ready market.

Sales of Elbertas increased over the week previous and though a few cars of uncolored stock failed to realize satisfactory prices the majority of the cars sold to advantage. The Elberta market has held steady on account of the distribution of a good proportion of the stock in the Western markets.

There was quite a falling off in the demand for Thompsons and for some unaccountable reason quite a percentage of the stock arriving has been showing wasty.

The Malaga market has returned fairly satisfactory prices, but the demand has not been quite up to expectations. We look for somewhat of a decline during the next week under heavier receipts.

But few Tokays have been shipped to date. The season will practically open this week. Florin Tokays are now moving, though none have reached the Eastern markets. The stock from Florin is up to standard, with good-sized berries and showing excellent color, while the stock from the San Joaquin Valley, especially in non-irrigated districts, is below the average. We predict a wide range in the market on Tokays this season on account of the great variance of quality from different sections.

El Dorado and Placer county mountain Bartletts are rolling and the stock is of excellent quality and should meet with an active demand.

As a whole, last week's general market on all varieties can be considered as highly satisfactory and, with the exception of Malagas, we look for a noticeable increase on all other varieties during the next two or three weeks.

Following are the averages for the week:

Boston: Pears—Bartlett, $2.88. Grapes—Thompson Seedless, $1.37; Malaga, $2.14. Peaches—Decker, $1.16; Crawford, $1.18; Tuscan, $1.47; Elberta, $1.22. Plums—American Blue, $1.64; Tragedy, $2.05; Wickson, $1.74; Grand Duke, $2.30; Giant, $2.20; Kelsey, $3.08; Diamond, $2.03; Burbank, $1.87; Gros, $2.44; California Red, $1.65; Egg, $1.87; Duane, $2.11.

New York: Peaches—Tuscan, $1.40; Elberta, $1.19; Crawford, $1.17; Foster, $1.70; Decker, $1.27. Grapes—Thompson Seedless, $1.18; Malaga, $2.33; Muscat, $2.65; Tokay, $3.64. Pears—Bartlett, $3.86; B. Hardy, $3.00. Plums—Wickson, $2.10; Grand Duke, $2.23; Diamond, $1.96; Tragedy, $2.00; Kelsey, $2.47; Burbank, $1.62; American Blue, $1.84; Gros, $2.65.

Chicago: Plums—Satsuma, $1.90; Grand Duke, $2.51; American Blue, $2.15; Diamond, $2.30; Tragedy, $2.30; Giant, $2.28; Kelsey, $2.46; California Blue, $2.15; Gros, $2.53; Yellow Egg, $1.68. Pears—Bartlett, $3.35. Peaches—Elberta, $1.34; Crawford, $1.24; Tuscan, $1.37; Foster, $1.21; Lovell, $1.09. Grapes—Thompson Seedless, $1.33; Malaga, $3.15.

Total shipments, by cars, from August 10 to August 16, inclusive: 539 grapes, 379 peaches, 196 plums, 508 pears.

Total shipments to date, 1918—8680 cars. Total shipments to date, 1917—7709 cars.

LOS ANGELES

Los Angeles, August 20, 1918.

BUTTER.

The lower prices noted at the close of our last review caused a little better demand, and as the receipts were again light prices were bid up during the week 2c, and demand was fair at this advance. Receipts for the week 285,400 pounds against 395,950 pounds the same week last year. There was taken into cold storage during the week 43,866 pounds, mostly Eastern butter drawn from the Central West by the high prices. The cold storage holdings now are 260,206 pounds heavier than this time last year.

We quote—

California extra creamery....50c

EGGS.

The fresh receipts continue to fall short of the demand. Not only was a good local demand reported, but a good many were taken by nearby out-of-town points and prices were advanced 3c on extras up to Monday and 2c on case count. Pullets unchanged. Receipts for the week by rail 771 cases against 961 cases the same week last year. The truck receipts continue to run four times as heavy as the arrivals by rail, making the supply for the week 3855 cases against 4805 cases the same week last year. The receipts of fresh eggs caused cold storage to be withdrawn to the extent of 1800 cases, to help out.

POULTRY.

The market as a whole continues quiet. There was a light supply of light broilers in the past week, they were in good demand and sold higher. Heavy hens also steady. Fryers and young roosters coming in more freely, dull and lower. All else steady but slow sale.

The following prices were agreed upon last Friday, August 16, and hold good until the coming Friday:

Broilers, 1@1¼ lbs 33c
Broilers, 1½@1¾ lbs. 32c
Fryers, 2@3 lbs 29c
Roasters (soft bone), 3 lbs and up 29c
Stags and old roosters, lb. 19c
Hens ....20@27c
Tom turkeys ....20@22c
Ducks ....22@28c
Geese 15c
Squabs, live per lb 20c
Squabs, dressed lb 40c

VEGETABLES.

There is not much new to note in this market from a week ago. Offerings pretty good and most prices held steady. Potatoes were in light supply, good demand and held firm. Some northern stock was in and it met with ready sale. Onions, too, showed a little firmness and the best were in very good demand. Cabbage scarce and sharply higher. String beans were in light supply and higher. Tomatoes steady and good demand. Corn firm. Cucumbers and summer squash steady.

We quote from growers—

Potatoes, local, per lug....75c@$1.00
do, do, per cwt. ....$2.25@2.50
do, northern, per cwt.... $2.00@2.40
Sweet potatoes, per lb. ....4@5c
Garlic, per lb. ....8@9c
Onions—Stockton Yellow Danvers, cwt. ....$2.00@2.25
Onions—White Globe, per cwt.... 2.00@2.25
Onions—Small Bermuda, per crate..80@90c
Cabbage, per 100 lbs....$4.00@4.50
Bell peppers, per lb.... .3@3½c
Chile peppers, per lb. ....3@3½c
Summer squash, local, per lug.... 25@30c
String beans, per lb ....6@7c
Tomatoes, home-grown, per lug....30@75c
Eggplant, Imperial Valley, per lb....4@5c
Cucumbers, home grown, per lug 20@40c
Corn, per lug of 3 doz ....65@75c

FRUITS.

There was a better tone to the market the past week. Offerings very good and so was the demand for all fancy stock. Not many changes and what made generally favored holders. Apples met with a better demand and peaches and pears also sold more readily. Grapes were also in fair request. Figs coming in more freely and market slow and weak. Seedless grapes dull and lower. Others unchanged. Some Tokay now arriving and selling fairly well. A few quinces were in but they were slow sale.

We quote from growers:

Figs, Black Spanish, 7-lb. box..50@75c
do, White, 7-lb. box....50@60c
Peaches, freestone, per lug....$1.00@1.50
do, clings, per lug.... 1.25@1.60
do, Northern, freestone, lb....3½@4c
do, do, clings, lb....3½@4c
Pears, local, lb ....3@3½c
Crabapples, per lug....$1.00@1.25
Satsuma, lb ....4@4½c
Nectarines, per lb. ....5@7c
Grapes—Imperial Valley Malagas, per lb. ....3@3½c
do, Muscat, per lb....3@3½c
do, Thompson's Seedless, per lb....2@2½c
do, Tokay, per lb. 6c
Banana apples, 4-tier $2.25
Apples—Alexanders, 4-tier....$2.25
do, 4½-tier 2.00
Plums, per lb. ....5@7½c
Quinces, per lug $1.00

BERRIES.

There was quite a drop in the receipts the past week and the market in consequence was higher both for strawberries and raspberries, and what coming in found very fair sale.

We quote from growers:

Strawberries -

Fancy, per 30-basket crate.....$2.50@2.75
Poor to choice, 30-basket crate. 1.80@2.00
Blackberries, 30-basket crate.... 1.80@2.00
Raspberries, 30-basket crate..... 2.75@3.00

MELONS.

Receipts and demand very good, both for cantaloupes and watermelons. Their cheapness, encouraging consumption. Honey dew melons are now coming in quite freely and slow sale. Casabas were also dull under freer offerings. Watermelons are also lower. Cantaloupes show no change.

We quote from growers:

Cantaloupes—
Tip Top, home-grown standard crate .....70@75c
do, do, pony crate .....40@60c
do, do, jumbo crate:.....$1.50@1.75
Columbia, jumbo crate ..... 1.75@2.00
Casabas, per lb. .....2@2½c
Pineapple, standard crate .....70@75c
do, jumbo crate .....$1.50@1.75
do, Paul Rose, standard crate..75c@$1.00
Watermelons, per 100 lbs.....75c@$1.10
Honeydew Melons, 16 in crate....90c@$1.00

BEANS.

Very little doing in this market the past week. The new crop is now being harvested and buyers are holding back. The crop is said to be good. Whites have been dropped to $10 per cwt., the price that is being bid for the new crop. Other varieties unchanged.

We quote from growers:

Limas, per cwt. $12.00
Large white, per cwt. 10.00
Small white, per cwt. 10.00
Pink, per cwt. 7.50
Blackeyes, per cwt. 7.00
Tepary, per cwt. 8.50

HAY.

The past week was another dull one in this market. Alfalfa and barley hay continue to arrive quite freely and sales very slow and prices weak at quotations. Buyers only taking such lots as needed for immediate use. Oat hay is scarce, in good demand and $1.00 a ton higher.

We quote f. o. b. Los Angeles—
Barley hay, per ton .....$24.00@26.00
Oat hay, per ton ..... 26.00@28.00
Alfalfa, northern, per ton.... 21.00@22.00
Alfalfa, local, per ton..... 22.00@24.00
Straw, per ton ..... 9.00@10.00

COTTON.

There was less speculative life in this market the past week. At the same time, prices worked higher. At the opening of our review week, there was some selling by longs on private reports of rains in Central Texas. But as these were not confirmed, the market was bid up again and the last half of the week there was better trading and higher prices. On Saturday, October sold in New York as high as 32.60c, making the highest price for this option yet obtained. This caused some realizing and the market closed lower than the high point. The current week opened Monday with October closing at 31.45c and December at 31.85c.

Special Citrus Market Report

Los Angeles, August 19, 1918.

The Eastern market is practically unchanged on Valencias. The abundance of deciduous fruits at this season of the year modifies the demand considerably for citrus fruits of all kinds, and at the high prices ruling Valencias have not been easy to move. It is reported that the Valencias favorite is becoming popular as a substitute for lemons in the making of citrus drinks, owing to the scarcity of sugar, and the practice promises to become permanent. There are about 1100 boxes of Valencias still on hand, which are bringing from $7 to $7.50 f. o. b. The fancy article is bringing as high as $9.60 in New York. The Philadelphia market is temporarily cleaned out. Boston has but little stock and a strong market.

A modification of the hot weather in the East has caused the lemon market to slacken up and prices are on a basis of $7 to $8 for choice to fancy stock. Few foreign lemons are arriving.

The local market shows an upward trend on oranges, owing to increasing scarcity. Lemons are somewhat easier.

Special Livestock Market Report

San Francisco, August 21, 1918.

CATTLE A new high point has been reached in the Eastern markets on beef animals, a record of $18.85 having been reached for choice steers. Locally the situation has experienced no change, except that thin, unfinished stock is more abundant and prices have sagged slightly. Calves are in good demand and holding their own.

Grass steers—
No. 1, weighing 1000 to 1200 lbs..11@11½c
No. 1, weighing 1200 to 1400 lbs..11@11½c
Second quality .....9@10½c
Thin .....7½@8½c
Cows and heifers—
No. 1 .....7½@8c
Second quality .....6@7c
Common to thin .....3½@5½c
Bulls and stags—
Good 6c
Fair .....5@5½c
Thin .....4@4½c
Calves—
Lightweight 11c
Medium 10c
Heavy .....8@8½c

SHEEP—Lambs have made a record for the month in the East, an Idaho shipment bringing $17.65. All Western stock is readily taken up at advancing prices. The local market has risen a fraction in sympathy with the Eastern situation, as will be noted in the quotations below:

Lambs—
Yearlings .....12@12½c
Milk .....12@14½c
Sheep—
Wethers .....11@11½c
Ewes .....8½@9½c

HOGS Choice hogs have gone up to $20.15 in the Chicago market recently. The late hot weather caused a light run, and traders became somewhat panicky, pushing the top price up to the above figure. While the local supply is also light, there has been practically no change in quotations this week.

Hogs—
Hard, grain-fed 100@140.....17½c
do, do, 140@300.....17¾c
do, do, 300@400.....17¼c

DRESSED MEATS.

Steers, No. 1 .....18½@19½c
do, second quality.....15@18c
Cows and heifers .....10@16c
Calves, as to size, etc.....15@19c
Lambs
Suckling .....23@25c
Yearling .....22@23c
Sheep—
Wethers 21c
Ewes .....18@19c
Hogs .....25@26c

Los Angeles, August 20, 1918.

CATTLE—The weakness in this market last week for cows and thin steers culminated in a decline of 50c per cwt, and market dull at this reduction, a good many being offered. At the same time choice fed steers were scarce, firm and in demand. Calves steady and selling fairly.

Per cwt. f. o. b. Los Angeles—
Beef steers, 1000 to 1100 lbs.....$9.00@12.00
Prime cows and heifers..... 7.50@ 8.50
Good cows and heifers ..... 7.00@ 7.50
Canners, per cwt. ..... 5.00@ 5.50
Calves, per cwt. ..... 8.50@ 9.50

HOGS The run of hogs continues light and with a little better demand for pork under cooler weather, the market was advanced 50c per cwt. Killers all wanted a few and the Eastern markets continue high, which had a sympathetic influence.

Per cwt. f. o. b. Los Angeles—
Heavy, averaging 275@300 lbs..$15.50@16.50
Mixed, 225@275 lbs. ..... 16.00@17.00
Light, 175@220 lbs. ..... 16.50@17.50

Rough docked 20 pounds, piggy sows 40 pounds and stags 40 per cent.

SHEEP—There was a little better demand the past week for both sheep and lambs, and killers had to bid firm prices to get what they wanted. As it was they had to draw supplies farther away from home, most of the arrivals coming from Northern California and Nevada. Lambs higher.

Per cwt. f. o. b. Los Angeles—
Prime wethers .....$9.00@10.00
Prime ewes ..... 8.50@ 9.50
Yearlings ..... 9.50@10.50
Lambs .....14.00@14.50

North Portland, August 19, 1918.

With a moderate run of livestock at the North Portland Stock Yards over Sunday, the market is a mass of strength in all the divisions. Taking quality into consideration, the cattle market is a quarter higher. Quotations:

CATTLE—Prime steers, $12.25@13.25; good to choice steers, $10.75@11.75; medium to good steers, $9.50@$10.75; common to fair steers, $5.50@8.00; choice cows and heifers, $8.00@9.00; medium to good cows and heifers, $6.00@7.50; canners, $3.00@5.00; bulls, $5.00@7.00; calves, $9.00@12.00; stockers and feeders, $6.00@8.00.

HOGS—Great strength continues in the hog trade today. The run is not heavy, the quality is good and hit the high mark of 20c early. Quotations: Prime mixed, $19.50@20.00; medium mixed, $19.00@19.50; rough heavies, $17.50@18.50; pigs, $16.75@18.00; bulk sales, $19.25@19.50.

SHEEP—The sheep market has gotten out of the old rut and is showing considerable life. The trade is strong, with prices 25c to 50c over last week's quotations. Quotations: Price lambs, $14.00@15.00; fair to medium lambs, $11.00@13.00; yearlings, $10.00@11.75; wethers, $9.00@10.50; ewes, $7.00@9.00.

HAVE WE MADE GOOD?

Last week we told you about our new plans and gave you reason to look for a big improvement in our paper. We started right out to make good on our promises, and in this issue we feel that we have.

Naturally, as it is a special issue, you expect it to be a little better than the average, but isn't it a "great deal" better?

Don't merely glance through the pages. Don't confine your reading to the articles along your particular line. If you are a swine breeder, you may find a plan in the article on the grape industry that will be worth hundreds of dollars to you. And if you raise grain, you may get profit-producing ideas from the article on dairying. There is hardly an article that cannot be read with profit by every subscriber.

That's the way it's going to be right along. On account of the shortage of paper, we can't give you as many pages each week, but you don't value a magazine by its bulk. It's real worth lies in the way you can adapt the articles to your own needs and profit by their money-making value.

Next week we shall have a splendid article on the first page devoted to prunes. Also, there is being prepared for that issue a special article on grain growing in California. Then, too, Mr. Whitten has one of his great dairy stories already in hand for the next paper.

As the weeks pass, there will be plans that have increased production, solved the labor and feed problems, cut costs, found better markets, and improved farm management in general. Every branch of farming will be included, and you can't afford to miss a single issue of the paper. We are going to make it just as indispensable to you as your daily food. Food for the mind, you know.

Just watch our smoke.

Sons of
KING PONTIAC SEGIS KORNDYKE

GREAT HEAD OF THE PALO ALTO STOCK FARM HERD

Represent the best producing Holstein blood lines. Inherited both from their great sire and from their high-producing dams in the **Palo Alto herd,** including such cows as Laurameka, State record four-year-old, with a record of 33.90 lbs. in seven days, 140 lbs. in thirty days and 275 lbs. butter and 6400 lbs. milk in sixty days; Finderne Alexis, 38.2 lbs. butter in seven days as a three-year-old; Roxie Hengerveld De Kol, 25,300 lbs. milk in 365 days and 1188 lbs. butter.

HIS SIRE:

King Segis De Kol Korndyke, 59 A. R. O. daughters, including Mabel Segis Korndyke, butter 7 days 40.32 at four years (world's record when made). Three other daughters over 30 lbs. Twenty-one daughters from 20 to 30 lbs. Grandsire of 40-lb. three-and-a-half-year-old. His sire's sire, King Segis, 59 A. R. O. daughters. **Dam,** Pontiac Clothilde De Kol 2nd, butter 7 days 37.21 lbs. butter 1 year 1271.60 lbs (world's record when made).

KING PONTIAC SEGIS KORNDYKE

HIS DAM:

Beauty Rauwerd De Kol, butter 7 days 30.54 lbs., milk 709.90; butter 30 days 120.98 lbs., milk 2914.40. His dam's sire, Pietertje Hengerveld Count De Kol, 99 A. R. O. daughters, 8 with records for 28 to 33 lbs., 39 with records for 20 to 28 lbs.

His first seven sires have 492 A. R. O. daughters. Four over 40 lbs. in seven days, 33 over 30 lbs. and 207 over 20 lbs. His grandsire, King Segis, and his great grandsire, Pontiac Korndyke, are two of the greatest transmitters of great production in the breed. The latter has 141 A. R. O. daughters and 84 A. R. sons.

King Pontiac Segis Korndyke has to date 22 daughters in milk, their records averaging over 20 lbs. in seven days as two-year-olds.

A bull calf sired by King Pontiac Segis Korndyke goes to South America this week. He was selected as future head of the Holstein foundation of Rafael Larco, one of the largest plantation owners and breeders of Peru. After careful investigation all over the country, Mr. Larco chose this youngster largely on account of the production and breeding back of his sire.

His sons are coming in *in fine shape* and will be in big demand.

The established sales policy of the Palo Alto Stock Farm is reasonable prices and easy terms.

Prune Conditions in Sonoma County

Written for Pacific Rural Press by Jno. J. Fox

WE HAVE reported prunes in various other sections of the State as being disappointing after the spring promise. Sonoma county, on the other hand, will have a 100 per cent crop, or pretty close to it. At this date (August 16) the first drop of inferior prunes is being cleared from the ground and will be kept separate, it is hoped, so that it may not mar the excellence of the fully ripened and matured fruit.

The efforts of the Prune and Apricot Growers' Association have resulted in establishing a reliable pack, in extending and developing new markets and in giving its members all the money the prunes bring after deducting the cost of administration expenses only. The reliability of the fruit sent in should be carefully seen to by every member, in loyalty to the association, for one sour prune in a plateful is likely to put a new consumer out of conceit with the fruit, and every prune lover "counts" in this business. It is, therefore, most important that all these early, leaden-colored prunes be set aside—redipped if need be and sent in marked sacks to the warehouse.

Eight-year-old prune orchard of E. D. Seaton near Santa Rosa. These trees have responded to proper treatment.

Russian River Prunes Run Heavy.

I think that in many orchards the fruit is the largest that has ever been produced here. There are two orchards side by side near Healdsburg, on the borders of the Russian river, that look as though they would run 40s—mixed French and Imperial, but mostly French. One belongs to Sheridan W. Baker & Co and the other to James Petray. We weighed some Imperials that ran eight to the pound, and French, picked up off the ground (selected), that went twelve to the pound. Both these orchards are the same age—nine years old—and they are estimated to run four tons of dried fruit to the acre this year.

Care of Breakage.

Although these trees have been heavily propped, several had split and fallen with the weight of fruit. The splits were well painted over with asphaltum paint and then, with the aid of a block and tackle and gin-pole, were pulled up into place again, a few ¼-inch bolts run through the trunks and the seam painted over. It is quite an achievement to get half a tree back into place, but it was done promptly, and, except for the streak of asphaltum, the join could not be distinguished a row away. Where thorough spraying had been done there was very little thrips injury in this county; also red spider and mealy plum louse were inconspicuous. The young orchards were a good deep green and in all of them one notices about an average amount of new growth.

Fred L. Wright's 100-acre young prune ranch on Mark West Creek is one of the promising groves of four and five years old. A lot of interplanting of tomatoes is seen here, with a good set on them; but the young trees show promise of a fine set of fruit next year. They will be sprayed again this fall, he says, with a miscible oil spray. This place was formerly all in hops and is therefore ground eminently suited to the prune. The hop kilns he contemplates fitting up some time with drying units that will serve as an insurance against a poor drying season and also for evaporating vegetables or other fruits if need be.

Results in Spraying.

Where thrips were bad two years ago Sheridan W. Baker sprayed the larvæ just after the blooming period, then sprayed with Zeno in October and November of last year and did some spraying with lime-sulphur in the spring. Less thrips damage is noticeable where the spring lime-sulphur was used, but the miscible oils certainly seem to leave the prune trees in good condition.

We also saw two orchards side by side—trees probably thirty-five years old—that had never been sprayed. One of them is still innocent of spray and its twigs bear moss to the tips, while the branches and trunk are in some places venerable with gray lichen. The sprayed orchard has clean healthy bark, a nice thrifty annual growth and twice the crop of fruit. These two orchards were one before the estate was cut up. The clean one was sprayed a year ago last March (early) with a miscible oil, 15 to 1, together with 8 pounds of lye to the tank—the latter for the purpose of destroying the lichen and the moss, which provides such splendid protection and shelter to mites and scale insects. These trees will be sprayed again this coming season, minus the lye this time, and the mossy ones across the alley will receive their baptism, too. The effect of cleanliness and freedom from parasites on the vigor of the tree is cumulative. There is a bloom and a sheen to the foliage of clean trees lacking in others under equal conditions in other respects. Just as a pig, dog or horse are feverish, out of condition and lack-lustre under an infestation of parasitic insects, so is a tree a sufferer. Besides, a tree cannot rub or protect itself, and it is a well-known fact that wherever animals or trees or vegetables are cultivated in large areas there will their enemies, in course of time, congregate, too, and it is our business in the fight against pests not only to destroy them at the least cost or injury but even to invigorate the tree in the process, as has been done with nitrate sprays.

Another Precocious Young Orchard.

George E. Merrill, Sonoma County Farm Adviser, took us out to the E. D. Seaton orchard, just opposite the Vrooman walnut grove. We were chiefly interested in the prunes, though Mr. Seaton has 1600 young Gravenstein apples eight years old that have made phenomenal growth. The soil in this orchard is adobe from 16 inches to 24 inches deep and then

WHO ARE THE PROFITEERS?

FOR ONE reason we are very glad that the Bulletin of this city is undertaking an expose of the relation of the price the consumer pays for food to the price which the producer receives for it. This reason is that such an expose must remove from the public mind the erroneous impression that the farmer is profiteering. Such an impression injures the farmer in public opinion and though it is impossible to state in just what relation such ill-feeling may hit him it is unquestionable that it does him wrong—in fact, may hurt him in all his relations—and it is important to him to have his innocence of profiteering widely recognized. In the course of its pursuit of food articles from the producer to the consumer the Bulletin has shown beyond question that in the case of at least one fully traced food article, the grower, the transportation company and the wholesaler in the city all together received sixteen cents for the very stuff for which the consumer paid one dollar: that is the retail distributor received 84 per cent of the consumer's dollar. This is surely a notable distinction in San Francisco distribution, for if we are not mistaken it beats the record in that line about 20 per cent. The country was somewhat excited when it was demonstrated in New York some time ago that the producer received only about one-third of the consumer's dollar, and the country is up for a new thrill when it learns that the producer supplying San Francisco receives only about one-sixth of it. This fact, if it be fully established, may go far to explain why San Francisco has such a poor reputation among producers—for they have long known that our city markets were a poor reliance for producers, who have been forced to take the position that they will never ship hither if they can do anything else with their produce. It may explain also the complaint of city people that they always get the worst there is of everything because the best is shipped out of the State, either in cans or otherwise. Naturally this must be so if it is true that city profiteering only allows the producer to get one-sixth of the final selling price.

A CITY SET TO BE WELL-FED.

WHAT CAN be done to make San Francisco a better selling place for producers? It is very important that something should be done, because San Francisco is a good buying community. Probably the people of no city in the country are such free spenders and live better. They pay enough for what they get. It is probably true also that no city is better situated and environed to get the best foods fresh from the soil and with the least delay between the soil and the table. Not only has the city an environment of market gardens on the peninsula and even within the city limits, nearer than other great cities and with a cool air which lengthens the delicious life of fresh stuff, but the city has a vast producing area reached by trucks and boats by very short hauls. California's two great cities, San Francisco and Los Angeles, are really metropolises in the midst of gardens, and yet in the case of San Francisco at least the eater could hardly pay more or the grower get less if they had a Saharan environment between the two. A Bulletin writer puts the facts in this way:

San Francisco has the cheapest transportation of food products to market possessed by any large American city. The freight rate on the great waterways leading from the very sides of the gardens in which the vegetables and much of the fruit consumed here are grown is remarkably low. From Sacramento to San Francisco a rate that runs close to 12c per 50-pound box is maintained. From Stockton the price per package is 14c. There is a veritable fleet of small river boats and of barges, all of which ply in and out among the islands, carrying produce, supplies, laborers and all essentials to a highly developed commercial gardening system. Organized for the best operation at least cost, the river transportation system makes it possible to deliver a 50-pound box and place it on sale within a few minutes after its arrival at the bay side and at a cost of a very small fraction of a cent per pound.

This paragraph is delightful to reprint because it gives a true picture of the cities environment as related to the subject of "good eats," which we have recently learned to recognize as a more important factor in joy-living than we ever thought before Mr. Hoover taught us how to defy the submarine. San Francisco's Edenic environment would draw people from all the skyscraping world were we not forced to admit that there is a snake in it. And the environment itself would develop concurrently with the city were there fairer return to those who would be attracted to extend production for the city's use. As it now is, the industry in that environment would perish were it not for distant shipment of fresh truck constantly in competition with the canners' demand—and the city itself would starve were it not for shippers' and canners' cullings, for which the grower gets only a part of sixteen cents on the dollar! The situation is simply suicidal to both city and country.

WHOSE BUSINESS IS THE CURE?

NATURALLY the subject goes to the State Market Director, and Col. Weinstock says of it:

There is an unexplained gap between the prices paid the producer and charged the consumer which should be run down and, if actual profiteering exists, it should be stopped at all hazards. Unfortunately the State has no means either of assisting in this investigation or of correcting errors should they be discovered—except through the organization of producers. It has no authority to compel retailer, middleman or producer to show his books, and an investigation by this means (the only certain and accurate one) would have to be conducted through or by the aid of the Food Administrator, who has such authority.

The retailer must be given credit for considerable loss through spoiling on his hands of perishable food, for delivery service which is now very expensive, for charge accounts on which there is both delay and loss. Yet 84 per cent seems too large a profit to be absorbed by such means.

The remedy would lie in free markets, which, however, as municipal experiments seem foredoomed to failure. This has been the case in many California cities; neither the farmers nor the housewives seem to appreciate the advantages they present—probably because telephones and highly developed delivery service have made personal marketing unpopular.

We give this alleged quotation from Col. Weinstock because it has much wider bearing than its relation to the situation disclosed in San Francisco and suggests work for the coming Legislature. We have learned so much about regulating distribution-profits at the school of Professors Hoover and Merritt that it can no more be truthfully said that nothing can be done about it. The question now clearly is: What should be done?

IS IT UP TO THE PRODUCER?

AS Col. Weinstock says, the only way the subject can be approached by State law is through organizing producers to protect themselves from commercial outrage. Such organizations have no power, however, to compel a show-down of books, etc., though if producers were organized with sufficient strength they might get from the Legislature some sort of a commercial and price-fixing tribunal which could be given such power. The producer is deeply interested, of course, for he might be made able to sell more good stuff and we can conceive that he might, by loosening the grasp of the retailer, market twice as much stuff and in that way get 32c from the consumer's dollar, and might be a little better off, for, by increasing production, he might net two of the consumer's cents instead of one—which is probably all he nets now. But it is not the producer who is in to win most from fair trading. The consumer's chance to win as compared with his is six to one, which is probably as good as house-breaking. Therefore, it is up to the consumer by appeal to the Legislature or by commercial annexes to city charters, or otherwise, to create some judicial organism which shall have power de ventre inspiciendo — which, being liberally translated, may mean to inquire how much what he has in his tummy ought to cost him. It is quite true it is to the producer's interest to make retailers' prices reasonable and to prevent profiteering, but to expect him to mount guard on the consumer's purse while he is vainly trying to get something into his own is not a business-like requirement. What, therefore, is the matter that the swindled consumer does not try to do a little something for himself? Why does he not do a little ward politics to see if he can get supervisors who will pay more attention to suffering humanity which goes empty-pursed from the front doors of the corner groceries and less attention to hilarious humanity which rolls out full as ticks from the back doors? Though the country is interested deeply in the matter and may draw prosperity instead of bankruptcy from it if properly regulated, it is still overwhelmingly a city question and must be regulated by city people.

PUBLIC MARKETS A VAIN RECOURSE.

WE QUITE agree with Col. Weinstock's implied conclusion that municipal markets can avail but little in curing city profiteering. They are desirable as far as they go and are worth establishing and encouraging. They will help small producers whose places are within mule or gasoline distance from them to add a day's wages to a fair grower's profit on the produce sold. They may help old-fashioned housewives and boarding-housers to make a day's wages out of what they take away from the city profiteers. But the farmer who has considerable of a producing enterprise cannot, and the housewife who has money enough to hire a telephone will not, take a day's wages for the time consumed in hawking a little jag of produce nor in yanking home portions thereof. Mankind nowadays seems built for more pleasurable work or for less irksome fun. In our youth it was different, and both the work and the fun of it seemed very enjoyable. The old farmer took great delight in driving to town on market day, spending the long morning in bantering conversation with the sprightly village dames and, after a late dinner at the tavern, taking a nap on the wagon seat while the old skates brought him safely to the farm gate. And he felt that he had done a great day's work if he could count out coppers and dimes to the amount of $3.50 for a load of stuff for which a wandering buyer for a store would have paid him $2 at the farm! It was all right in its way and in its time, but not now for most people.

CITY HOUSEWIVES ARE TOO BUSY.

AND THE buying side has also changed quite as much. The village dames of the long ago gained a headful of gossip, which was good stuff before the "society column" dawned on the editor's consciousness and when war news fell from the tongue instead of flashing from the leased wire, and it lightened the household drudgery of the olden time not a little no doubt. But what time or need has the modern housewife for self-marketing now? Is she not put to it sorely to get off the kids to the one-session school and iron up a dress for the baby in time to reach the picture palace before the seven-reel melodrama starts at eleven? And is it not nip and tuck to run those reels off fast enough to get home before the kids arrive at two, get them their lunch and dinner ready for the old man when he is through his day's work at four, so that he can have a smoke before he has to start out with the older kids for the circus—so that she, having retired the baby, can sit down for a quiet two hours with the comic supplement—a quick lunch of art and

poetry for the soul of a weary woman. No, indeed: there is no time in our crowded modern life for haggling with rural hucksters over things to eat. And what is the telephone for if not to save wastes of time? That is the way it earns its pay—paying eighty-four cents to the retailer for bringing sixteen cents' worth of food.

But this is, of course, only one phase of the unwillingness of people to put in half a day's time in personal buying and homeward carriage of the food they eat during the other half of the day. Some refuse self-buying because they can make more money in home-ordering than they could save by giving the time to shopping, and so they are really saving by deciding not to save. Nothing can change the accepted method of those who are wasting or saving either time or money. Therefore, to exalt public markets as a cure-all and self-marketing by consumers as a way out of extortion is to roll out a lot of bread-dough pills, as the harmless doctors of the olden time are said to have done. We do not know what the answer to the question is, but we are sure of two things: organization of farmers cannot cure city robbery; organization of consumers can cure it, if it can secure laws or ordinances to specify what percentages of profits shall go to distributors and a court to enforce such laws.

WELCOME TO DR. WHITTEN.

CALIFORNIA fruit growers will extend a cordial welcome to Dr. J. C. Whitten, who arrived in Berkeley last week to assume leadership of the pomological work of the University of California. Dr. Whitten is of a type of manhood for which Californians always have a cordial greeting and delight in acquisitions of the type—content even to loot the outside world to get possession of it. He is alert, magnetic; scholarly and yet incisive and practical; straightforward and frank and yet full of grace of manner: silvered a little in personal adornments and yet youthful in the freshness of his thought and the cordiality of attitude. California fruit growers will take to him like a debutante to a doughboy. Dr. Whitten is what may be called a progressive American: his course has always been westward. Born in Maine in 1866 and graduated with honors from the agricultural college of his native State, he pursued advance studies at Cornell University and at the Missouri Botanic Garden, subsequently taking a German doctorate and finally settling down to mid-Western life in instruction and research at the University of Missouri, where his work brought him recognition in both lines as a leader in American pomology. And now he comes to California, thoroughly equipped and experienced therein, to do his best work in California, where American pomology has reached its greatest development and its richest variety, and is waiting for scientific achievement commensurate with its commercial importance. In California Dr. Whitten returns to association with Dr. Howard, who came from Missouri University to California University four years ago and is already widely known to our readers for his good work in fruit lines. With these two men in the lead and with a squad of thoroughly trained younger men to assist them, California is now thoroughly equipped for progressive work in deciduous fruits as she has been for several years past in semi-tropical lines, and we understand that such an advance in the interest of what are sometimes called "common orchard fruits" is now contemplated by the University in response to manifestation of desire in that direction by the commercial growers thereof. In such a drive Dr. Whitten will be the allied commander.

WE NEED YOU

to represent us in the field in place of those who have been called to the "colors." The work of securing new subscriptions and collecting on renewals is pleasant, dignified, and healthful, and the salary is ample.

Experience is neither essential nor objectionable. If you have an automobile, and are not afraid of hard work, we can use you.

No objection if you are along in years, provided you haven't lost your pep. If you really like the paper and think you can convince others of its merits, your first step toward Greater Success will be to write us a little about yourself, and give us an opportunity to tell you what we have to offer.

Only a few positions open. Better write today.

QUERIES AND REPLIES

By the Editor.

Inquirer Must Give Full Name and Address.

What to Do for Borers Now.

To the Editor: I find that a considerable part of a few hundred plums on myrobalan are badly infested with borers which enter through dead or badly sunburned bark. Can anything at all practical be done on these trees, which were budded in nursery and planted out this past winter? The trees were planted in good soil and, so far as I know, there has been no orchard there for a long time, if ever. Where could the borers come from? They are not all through the soil, are they? I am almost afraid I will have to replace the infested ones and try to give them a little better treatment.—H. L. D., Colusa.

Trees which are badly sunburned and full of borers should be pulled up and burned now: good, clean trees should be planted next winter and thoroughly protected by "protectors" or whitewashing—extending the protection downward a few inches below the surface. Do not wait for hot weather: get on the protection as soon as the trees are planted and make it good again if removed by rain. Borers get into nursery stock and you should plant nothing which has discolorations on the stem. But these borers are everywhere in many kinds of trees and though the worms are not "all through the soil" the small, bronzy beetles are all through the air looking for injured bark to lay their eggs on. It is not too late to begin hunting the grubs. If trees are still looking well above, they may be saved by cutting into blackened spots in the upper roots or lower stem disclosing the burrow in the wood and pushing into that with a piece of pliable wire, which will follow the hole and pierce the worm. Do not delay to do that on trees which you wish to save because the borers will be increasing their injuries all through the fall and early winter and trees which look fairly well now may be worthless later if left to the worms.

Beans Partly "Damped Off."

To the Editor: What is the matter with these beans? Moisture seems to enable them to overcome it early. These did not at all. It seems the same trouble that my blackeyes have and you called that "wilt"; yet I have never heard of bluepods having wilt. I am puzzled.—D. B. S., Santa Cruz.

The "wilt disease" of the cow pea (the "blackeye" is a cow pea) is different from the trouble which your specimens show—which is apparently the after effects of a damping-off fungus. The attack comes early in the season and on plants in which it was checked by increasing dryness of the air and soil-surface before it could kill the plant the growth may continue and yet the roots and lower stem are sufficiently weakened by it so that the plant cannot stand the strain of later development and the pods are apt to ripen only small and deformed beans—as your samples show. No treatment would probably be effective after damping off got in its early work. A preventive would be wider planting and better chance for the soil surface to dry off around the plants during their early growth. Too thick planting and too dense a shade at this time favors damping off—especially near the coast or on river bottoms where damp air is apt to prevail.

Passivism on Squirrel Question.

To the Editor: It is impossible for me to get rid of squirrels with poison or bisulphide of carbon. If "mustard gas" is fine for Germans, why not for squirrels? Can you do something in this line?—D. B. S., Santa Cruz.

If you cannot poison squirrels it is because you have poor poison or do not use good poison right. If you cannot get them with carbon bisulphide it may be that you are using it during the dry season. It should be used after the rains have closed up the soil cracks, etc. The only way to protect yourself against squirrels is to keep killing them, and that seems to be the present case with Germans but will soon be unnecessary, we hope. The only way for a district to get squirrels below the point of much injury is to get everybody to fight them and to have power to fight them on open lands and to assess the cost against such lands. That is the purpose of recent laws the execution of which rests with the State Horticultural Commissioner, and he has a staff of expert assistants for that work. Everyone who has nerve to make a fight against ground squirrels and will not allow him to drop into a ruinous passivism on that subject, should enlist for the drive which the county horticultural commissioners are authorized by law to push forward.

A Peach-Almond.

To the Editor: I send sample of some fruits from a tree which was supposed to be an almond; but the fruit is quite different. It tastes and looks more like a peach, but the covering cracks open like an almond. What would you call them?—Grower, Arbuckle.

The fruit is a peach-almond. Trees bearing such fruits have appeared here and there in California ever since pioneer days and have been known abroad for a long time. Darwin speaks of it as known in France, where it was called the peach-almond, and several varieties of it were noted, which are held to be "varieties which connect the peach and the almond." There are not only different varieties, which are distinguishable by size of pit and external appearance, but even single trees have a way of varying widely in their fruits — sometimes producing peach-like fruits, sometimes regular almonds. In short, it is a very sporty affair—not seeming to know itself whether it is a peach or an almond. It is of no commercial account except that the nuts have been used to some extent for many years to grow seedlings for budding both peach and almond upon—but no superiority of them over peach and almond seedlings has ever been clearly demonstrated.

Subterranean Inhospitality.

To the Editor: I am sending twigs of French prunes. Growth seems to start well in the spring, but afterwards it stops, the twigs become thin, the leaves small and brown around the edges, and the wood dies back. Some trees recover by sending up new shoots near the trunk, though it may take several years. Can you tell me what is the trouble? It's not quite so bad on deep sediment soil as the lighter hill soil, though it favors certain spots. Though the trees never get large, they bear very heavily and unusually large prunes, some 20s and 30s.—Grower, Santa Margarita.

There is no disease-causing agency present. You have to deal with an underground trouble. It is more probably involved in irregular and insufficient soil moisture than in any other cause, though this may act through concentration of some unwholesome soil substance as well as by direct famishing for lack of moisture as the season advances away from the spring supply which starts the growth. Naturally the trees do better on the deeper soils both because of the better soil substance and of the greater amount of soil moisture which they are able to retain. But even they would show more growth and promise better for long life if they had more summer and fall moisture. Irrigation, to be used more or less according to the seasonal rainfall and the retaining capacity of the soil in different parts of the area planted, would be the first aid in such cases of injury.

Pink Bean Root-Rot.

To the Editor: What is the cause of pink bean roots rotting? The vines turn yellow, then wilt and die.—R. A., Atwater.

If the plants wilt yellow and die without appearance of spots or blotches on the leaves, pods or stems, the trouble is in the root and it may be due to a fungus which works into the substance of the root or lower stem from the soil, which in such cases usually has too much moisture at the surface—or the root may be rotted by alkali. In both cases the visible effects on the plants are similar.

California Weather Record

The following rainfall and temperature record is furninished the Pacific Rural Press by the United States Department of Agriculture Weather Bureau at San Francisco for the week ending at 5 p. m., August 27, 1918:

Stations—	Rainfall Data: Past Week	Seasonal To Date	Normal To Date	Temperature Data: Max'm	Min'm
Eureka	.01	.43	.15	66	50
Red Bluff		.12	...	106	68
Sacramento		...	...	102	56
San Francisco		...	.01	72	53
San Jose		...	.06	92	50
Fresno		...	...	104	62
San Luis Obispo		.01	.03	84	50
Los Angeles		.11	...	90	58
San Diego		.04	...	78	62

Farm Products Must Increase

If we are to win the war and win it quickly our soldiers and our allies must be well fed. We cannot expect them to do their best to win unless we do our best to back them up. How are you going to make every acre of your farm produce to its utmost? Just as our army must be well fed so your soil must be fed. You must supply it with the elements necessary to produce crops.

GOLD BEAR FERTILIZERS

are scientifically manufactured to meet California soil conditions and crop necessities. They are made from animal products that contain the necessary elements to feed your crops.

Evaporation of Fruits and Vegetables

[Written for Pacific Rural Press by John J. Fox.]

IN MOST sections of the State of California a dry atmosphere and a hot sun make the curing of fruit by exposure the natural and the cheapest method.

There are certain localities, however, where an artificial evaporating plant is advisable to save fruit in a late or unfavorable season and others where it is a necessity in order to deal with the bulk of fruit to be cured.

The drying plant illustrated in this article belongs to the latter class, where apples only are considered at present, though there is no reason why the plant could not be adapted to other fruits as well. It has been installed by the owners for the purpose of dealing with their entire crop if necessary and with more even than they grow themselves.

In early days, when apples were dried in the open entirely, so many trays and so much ground space was necessary and the handling was so expensive that it cut a big hole in the profits of the growers, though many apples are still sun-dried. Then came the box evaporator, which is still in use and is a very efficient one. In fact, most of the small dryers are practically variations of the chambered dryer designed and patented by W. L. Parsons of Santa Clara county and which has been described already.

Hop kilns are being converted into fruit-evaporating houses.

Rodgers Brothers of Watsonville converted their hop-kiln into an apple dryer and used it last year. They, however, had considerable trouble with the furnaces, which were not large enough and would not stand up under the heat. Also the overhead room was insufficient to deal with the fruit as they desired to handle it. So this year they are building a new dryer, keeping the old one intact to be used in emergency.

NEW STANDARD PROCESS.

The new plant is the standard form of dryer used in western New York. It is 80 feet long by 38 feet wide and has two floors. The receiving (ground) floor is on a level with the unloading height of a truck and here the apples are pared and cored, after which the whole operation is automatic except the shoveling.

The waste is carried to the rear end of the building and dumped into receivers. This waste — parings, cores and trimmings—is sold to a vinegar works in Watsonville at $1.20 a ton at the ranch.

The cored and pared apples are conveyed on an elevator to the second floor, where they are run through the sulphuring chamber whole. This process takes 40 minutes and they are then sliced and placed on the drying floor from four to six inches deep and are left there for from four to six hours before being shoveled over. Sometimes they are shoveled over twice or even a third time, according to humidity of the outside atmosphere, but the complete drying takes about 12 hours in the kiln. The temperature is kept at 160 to 165 degrees Fahr. The dried fruit is then shoveled out into the cooling room and left in heaps for two or three days to equalize the moisture, being shoveled over if necessary, and they are then ready to pack. The press is in this room.

FURNACES AND FLOORS.

The furnaces are 12 feet long by 4½ feet wide and 4½ feet high, with 7 runs of 12-inch sheet-iron pipes running parallel about 4½ feet below the drying floor, in order to distribute the heat evenly. The draught is regulated below and above. Ray oil-burners are used.

The drying floors, of which there are four—one for each furnace—are 20 feet square. They are slatted with spruce strips 1 inch by ¾ inch, the narrow end resting on the joists, leaving a ¼-inch crack between each slat. This allows the heat to circulate through the cut fruit without danger of any slices being lost through the cracks.

The floor is scrubbed every few days and then slightly oiled to prevent the fruit from sticking on.

There is room in every department for dealing with the full drying capacity without overcrowding. This dryer will turn off an average of two tons of dried fruit per day. This means dealing with some 14 tons of green fruit each day, as it dries away about 7 to 1. The slicing machine will slice up 1000 boxes of apples a day.

MARKETING.

Carroll Rodgers, the manager, handles his entire crop, including the marketing of both green and dried fruit, and he is assisted by his brother, Marion Rodgers. Should apples go below $1 a box green, he dries them and is now equipped to dry his entire crop and more.

PRUNE EVAPORATION.

The few localities where prune evaporators are used are where conditions of climate or altitude or both make it safer for the grower to have access to one, even though he does not need to use it more than once in three years. In these localities, where the fruit does not mature so early because of great summer heat or any other condition, the harvest season runs into shortened days, moister nights and a less powerful sun, whereby the drying process is delayed to such an extent that early rains may cause quite a loss of fruit, and the same reason

Here and There in the Fruit Business

[Written for Pacific Rural Press.]

Growers Operate Drier.

The West Side Fruit Growers' Association is operating a large drying establishment on Stevens Creek road, near Cupertino. It is offering specially attractive terms to association members only who desire to have their fruit drying done for them economically. Members of the California Prune and Apricot Growers' Association will avail themselves of this opportunity. This association expects to pay its members at least a 6c base on delivery for their prunes and possibly more if arrangements can be made to secure something on account from the Government.

Co-operation Pays.

E. A. Smith of Concord, member of the California Pear Growers' Association, sold his dried pears last week at 12½c a pound. Two days previously his neighbors had closed sales at 10½c and 11c. Mr. Smith kept closely in touch with the association by telephone, and when the price suddenly jumped he was advised. On his twenty tons of pears it made a difference of just $600—just one example of the benefits of organization.

Increased Freight Rates on Fruit.

Thousands of California fruit and vegetable producers are suffering losses as a result of increased freight and express rates. These rates have displaced the Western fruit and vegetable producers in the market east of the Mississippi river. They have been forced to market their product cheaper than formerly in order to compete with other fruit and vegetable producing territories, according to a complaint recently filed.

Wages for Almond and Grape Labor.

Wages fixed at Roseville by almond and grape growers provide for an eight-hour day and the following prices are reported: $2.50 and board, almond pickers; and $1.50 to $2 and board for hullers and sorters—the latter work being mostly done by women and girls. Grape growers are to give $2.50 a ton for picking wine grapes.

Expanding the Prune Market.

Some 50,000 acres of young prune orchards will be coming into bearing in the next few years, and for the first time in its history the prune market is being extended and established in new regions all over the world—not only to maintain a remunerative price for the present but to establish a stable outlet for a vastly increasing production.

Grape Driers Advance Rates.

Raisin-grape driers in Yuba City are reported to have announced that growers will be charged $70 a dry ton for drying grapes this season. The price in 1916 was $37.50 a ton. In 1917 it was raised to $42.50, and as a result of the new high scale some of the larger vineyardists are said to be installing their own drying plants.

California's Grape Industry.

One hundred and forty-eight thousand tons of grapes were crushed for dry wines and 200,000 for sweet wines in California during 1917. Five hundred thousand tons of fresh grapes were dried for raisins during the same period and 174,500 tons of table grapes were shipped from the State.

Peach Peeling Patent.

Various canning concerns in the State are affected by a suit filed in the United States District Court by Dunkley & Co. of Kalamazoo, Mich., who claim the patent rights to a peach-peeling machine and now seek to enjoin its use by certain firms named.

Prune Conditions in Sonoma County

(Continued from first page.)

strata of clay loam, sandy loam, gravel, etc., deposited in layers, and is well drained though hard to work because of the adobe surface. Over the whole 50 acres planted holes were dug 4 feet across and 4 feet deep—Mr. Seaton preferring the extra expense involved because, as he pointed out, this ground never gets dry enough to blast without creating a pot hole. The trees responded to this treatment to the extent shown in the accompanying photograph and the trees are of very even size for such a large orchard. When the trees were planted the holes were filled into with surface soil, giving the young roots a plentiful supply of readily assimilable plant food to start with. This year the crop will probably exceed four tons of dried prunes to the acre and it has cost about $100 an acre for props this year. The fruit looks as though it would average 60s. In addition to this remarkable crop, a goodly growth of new wood is evident. The trees are on the square, 28 feet apart, mostly French.

Cultivation is now carried on by the use of a tractor, which plows the ground to a depth of 7 inches, and whole place was subsoiled this year to a depth of 18 inches. The subsoiler made three deep breaks between every tree row and this will be crossed next year.

We noticed a force of men making up new trays to deal with this crop, which should gross somewhere in the neighborhood of $15,000 on an 8½c basis. The writer remembers 15 years ago that a number of prune orchards were ripped out in disgust. The base was about 1½c and growers were disgusted at not being able to scratch through. Of course, the high cost of labor naturally makes the present high price, but the united efforts of the associated growers will preserve an equable return based on cost of production as well as supply and demand as it has already cut the speculative element down.

EVAPORATION OF FRUITS AND VEGETABLES.

(Continued from page 220.)

may be applied to sections where pears are late in ripening. The pear industry is a growing one and there is still much waste that might be mitigated by the use of a small evaporator or even a community one.

CULTIVATING TASTE FOR DRIED FRUIT.

Our boys in France are not only going to learn how to like stewed dried fruits, they are going to ask for them when they return to their homes. The British, French and Italian soldiers also, who have never intimately known dried prunes, apricots, peaches and raisins as a dessert, will create a new market for our fruits in the remotest sections of their respective countries that must prove a big boost to the dried fruit business of California. We shall have to be prepared for it. We must not merely dry our fruit—we must cure it, taking pains to obtain the best color, flavor and texture possible. We must grade it so that our grades shall be reliable and our dryers and our methods of handling must be up to date to get the best quality at the least expense.

Under new methods not only delicious fruit but equally delicious vegetables will be available in a dried, easily stored form that will take a lot of labor from the shoulders of our women folk.

Farm for Profit

and help U. S. win the war

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

of Eureka Stumping Powder and now I want to sell a lot of other powder that I have," writes Rudolph Stadeli, Silverton, Ore. "The other powder makes me terribly sick when I try to use it, but Eureka does not give me the least headache."

Eureka Stumping Powder is one of the two

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Eureka goes further and costs less for all agricultural blasting than ordinary powder or dynamite.

Eureka and Giant Farm Powders are made especially to meet western farm conditions. They are made by a Pacific Coast Company, with more than a half a century of experience—the company that originated all "giant powders." Your dealer can supply you. If he does not, write us and we will see that you get the genuine, which has the Giant brand on every box.

Save money on farm work. Send this coupon for our big free book, "Better Farming." It tells you how to do scores of farm jobs cheaper and better.

Patriot FARM Truck

Built for Country Roads
Built for Country Loads

The Patriot is the first Motor Truck built especially for farm work. ***It is equipped with a practical farm body,*** similar to what you have always used on your farm wagon.

It saves horses and high-priced feed. ***It brings better markets nearer,*** for with a Patriot you can readily drive loads to a market 100 miles distant.

It lays down 15,000 to 20,000 pounds at market in practically the same time that a team will deliver 5,000 pounds, literally bringing the farm to about one-fourth its actual distance from market.

Business farmers can easily see how such perfect transportation greatly increases the value of their farms, to say nothing of the convenience in being master of roads and weather. Every farmer with 160 acres or more should find out what a Patriot Farm Truck will save. Write for information.

HEBB MOTORS COMPANY

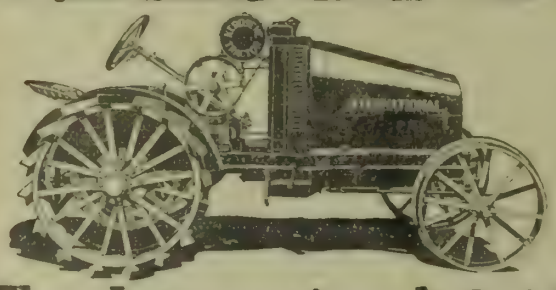
Manufacturers of Patriot Farm Trucks

1375 P Street **Lincoln, Nebraska**

Lincoln Model Capacity 3000 lbs. Washington Model Capacity 5000 lbs.

Powerful Patriot Hand Hoist by which the body, when loaded, may easily and quickly be elevated to dump its load.

(16)



The International 8-16

Titan 10-20

and

International 15-30

Will be on Exhibition at the State Fair at Sacramento, August 31 to September 8.

The New International 8-16 has one reverse and three forward speeds: 1¾ and 2½ miles per hour for plowing, disking and other field work, and 4 miles per hour for road work and when traveling from one job to another.

You will like this tractor when you see it. When you run it you will like it better. When you find out how light your bills are for kerosene and for general upkeep you will like it best of all. Go to the dealer soon and see it or write us for information because it looks as though the demand for **International 8-16** tractors is going to be much heavier than we expected and we shall have to fill orders in their turn.

Woman's Land Army in the San Joaquin

[Written for Pacific Rural Press.]

What the women are doing throughout England and France is now being carried out in the rural fruit districts of California. Ralph D. Robertson, Farm Adviser of San Joaquin county, after setting forth at his various centers the results that were being obtained, visited the Vacaville camp and studied the whole system of its management and then reported to a mass meeting of grape growers and fruit men at Lodi. A committee of growers was appointed as a result of the report to go to Vacaville and observe the plan for themselves and to ascertain whether it would apply to their needs at Lodi. These gentlemen, to whose enterprise was due the successful consummation of the scheme, are W. D. Swim, W. H. Thompson and M. E. Angler.

They returned very favorably impressed and immediately set to work to obtain the co-operation of their brother growers to adopt the plan of installing a section of the Woman's Land Army to assist in harvesting the Lodi fruit and grapes, and it was decided to establish a camp completely equipped to care for 100 women and girls. This has since been extended for the accommodation of 150.

A CAMP SITE.

The City Trustees granted the farmers the privilege of using the municipal park as the most central and convenient place for the camp. It is now being constructed. The advantages of this site are many. It is well shaded with wide-spreading trees and is adjacent to the handsome and commodious municipal swimming baths, to which the workers will have access. It is also well lighted with electricity and the whole camp is being enclosed with a board fence to insure privacy.

WAYS AND MEANS.

After the camp was decided on, an estimate of the cost of installation was made, the farmers themselves backed the scheme and contributed to the cost, with the understanding that the expenses of the camp would be later apportioned among those farmers who benefited by the scheme. The enthusiasm amongst "doubters" was aroused that eight young ladies who had worked at Vacaville in the Woman's Land Army came over to work in the Frank H. Buck orchard of 560 acres at Acampo. Directly they arrived at the Buck orchard, they went to work with the ladders and buckets in such workmanlike manner that the Lodi growers are convinced of the practicability of the plan.

WAGES AND LIVING EXPENSES.
